In amending the Atomic Energy Act to remove the concept of a finding, the bill clarifies and revises the present provisions of subsection 105(c) of the act, relative to prelicensing antitrust review of applications for nuclear facilities for commercial or industrial purposes. The revised subsection 105(c), as spelled out in section 6 of the bill and as further explained in the report accompanying the bill, represents many hours of careful consideration by the committee and its staff. Particularly close attention was devoted to all the ingredient details. In the committee's unanimous judgment, the procedure set forth in section 6 of the bill is reasonable, fair, and workable. It subjects applications for nuclear powerplants to a process involving a review by the Attorney General and then a finding by the Atomic Energy Commission as to whether the activities under the license would create or maintain a situation inconsistent with the antitrust laws. The Attorney General has up to 180 days to render advice to the Commission, and if the Attorney General recommends that there may be adverse antitrust aspects and recommends that there be a hearing, the Commission must conduct a hearing and give due consideration to the advice received from the Attorney General and also to such evidence as may be provided during the proceeding; and the Commission must then make a finding as to whether the activities under the license would create or maintain a situation inconsistent with the antitrust laws as specified in subsection 105(a) of the Atomic Energy Act. Additionally, if the Attorney General does not so advise and recommend, but antitrust issues are raised by another in a manner according with the Commission's rules or regulations, the Commission would be obliged to give such consideration thereto as may be required by the Administrative Procedure Act and the Commission's rules and regulations. In the latter regard, the committee intends that, in any event, the Commission's rules and regulations will set a fixed period in which such issues may be raised. It is hoped that this period will coincide with and not extend beyond the specified period in which the Attorney General's advice may be rendered. The bill contemplates that all aspects of the antitrust considerations constituting part of the Commission's total licensing procedure, including the ultimate findings by the Commission, would be dealt with in such a way as not to impose an additional delaying factor. We believe a separate board can be utilized by the Commission in connection with such antitrust considerations. This feature of the total licensing process should be completed by the Commission before the radiological health and safety matters are concluded in the licensing procedure.

I must emphasize, and it must be borne in mind, that this whole antitrust feature of the Atomic Energy Commission's licensing procedure will be completely separate and apart from the application of the antitrust laws now on the statute books. The antitrust laws, and the authorities and responsibilities of the Attorney General and others by virtue of these laws or in connection therewith, and the implementation of these laws, remain completely unaffected by the antitrust review dealt with in section 6 of the bill. The antitrust laws referred to in subsection 105(a) of the Atomic Energy Act are not qualified, limited, extended, or interfered with in any way whatsoever.

The second main feature of the bill is the amendment to the Atomic Energy Act contained in section 8 of the bill. When I use the word "amendment" I

overstate somewhat, because the committee's recommended change in language as set forth in section 8 merely is intended to assure that the original intent of Congress underlying the present wording of the statute will continue to be complied with by the Atomic Energy Commission.

Section 8 of the bill amends subsection 161(v) of the Atomic Energy Act which was added by the Private Ownership of Special Nuclear Materials Act of 1964. It relates to the furnishing by the AEC of uranium enrichment services—increasing the percentage of fissionable isotopes in natural uranium so that the enriched material can be used as fuel in nuclear reactors. The 1964 amendment provided that the AEC was to establish prices for that service "on a basis which will provide reasonable compensation to the Government." It further provided that the AEC was to establish written criteria for the furnishing of that service and the prices to be charged. The legislative background clearly indicated that it was intended that the basis for the charges would be the Government's costs.

In compliance with the statutory mandate and in keeping with the legislative history, including hearings and the joint committee report accompanying the statute, the AEC proposed and the joint committee after further extensive hearings concurred in, criteria which provided for prices based on the recovery of appropriate Government costs over a reasonable period of time. These criteria were formally established and remained in effect. In June of this year, the AEC proposed radically revised criteria which are not based on the recovery of the Government's costs. AEC has proposed shifting from pricing based on recovery of Government costs to charges based on a hypothetical, privately owned plant of the future, using assumed factors for construction costs, capital structure, operating costs, and profits that are not pinned down in terms of numbers or dollars. In other words, the new criteria are completely rubbery and can serve to justify whatever prices AEC may decide on from time to time.

The process for enriching uranium is under Government monopoly. There is no similar commercial operation. The concept of charging for enriching services performed by the Government on the basis of appropriate cost recovery is consistent with traditional methods of Government pricing for materials and services made available to others. The U.S. Government is not a profitmaking operation, and neither the joint committee nor the Congress, in authorizing the AEC to perform this service, intended to create a profitmaking operation.

The committee has consistently obtained the advice of the General Accounting Office on this subject. In 1966, the GAO reported that the then proposed and subsequently adopted, criteria relative to pricing provided a reasonable basis for recovering the Government costs. In 1967, after reviewing the actual price to be charged, the GAO reported that such price—$26 per unit—was adequate to recover appropriate costs and was consistent with the established criteria. In response to the joint committee's request for a review of AEC's proposed change in criteria, the GAO reported that the revised criteria do not appear to be consistent with the intention of the Congress. GAO also expressed the opinion that there is doubt that AEC's revised criteria are authorized.

Before I end my brief discussion of this feature, I would like to emphasize the amendment in this bill may not prevent price increases. AEC's new price may also be justified on the basis of the old criteria. The amendment will assure that any price charged is on the basis of recovery of the Government's costs—factors which at any point in time are known or ascertainable—concrete factors—not hypothetical, assumed factors which can easily be twisted and stretched to conform to any intended price. Just, fair and reasonable criteria can assure not only the validity of the price, based on the recovery of appropriate Government costs over a reasonable period of time, but also reasonable price stability so essential to reliable, long-range planning necessarily employed in the electric power industry. This is what Congress intended in 1964 and this is what section 8 of the bill will assure—no more and no less.

Section 11 covers the third principal feature of the bill. This section of H.R. 18679 would enlist the preeminent scientific talents of the National Council on Radiation Protection and Measurements and the National Academy of Sciences in a comprehensive and coordinated effort to review the presently applicable basic radiation protection standards, and the scientific bases therefor, pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use, or control of atomic energy.

Any Government agency designated by the President would be authorized and directed to enter into and administer arrangements with two uniquely qualified bodies under which they would conduct full-scale reviews on a continuing and comprehensive basis, furnish annual and other reports of their findings, and submit their recommendations. The National Academy of Sciences would conduct a comprehensive and continuing review of the biological effects of radiation on man and the ecology in order to provide information pertinent to basic radiation protection standards. The arrangement with the National Council on Radiation Protection and Measurements would essentially focus on radiation protection standards. Pursuant to section 11, the arrangements would provide for the conduct of the activities of the National Council on Radiation Protection and Measurements and of the National Academy of Sciences in accordance with high substantive and procedural standards of sound scientific investigation and findings; among other things, this should assure that all interested and qualified individuals and groups would have the opportunity to present information and views to these bodies.

If Reorganization Plan No. 3 becomes law, the President could, for example, designate the Environmental Protection Agency created by that plan as the contracting or administering agency for the Government. Both the National Council on Radiation Protection and Measurements and the National Academy of Sciences have advised the joint committee informally that they would be pleased to enter into the arrangements contemplated by section 11.

Under the bill, reports by the National Council on Radiation Protection and Measurements and the National Academy of Sciences would be promptly published, and all recommendations in such reports pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use or control of atomic energy would have to be carefully considered by any Government agency having authority to establish such standards. Additionally, within a reasonable period of time, each of such Government agencies would be required to submit a report to the Congress setting forth in detail its determinations respecting the recommendations by the National Council and the Academy, and the measures, revisions, or other actions it plans to take, adopt, or effect in relation to the recommendations. Such agencies would, of course, be free to continue to avail themselves of any expert outside advice.

The Joint Committee believes that the public can only be reassured by the knowledge that the finest scientific brains in the country are keeping abreast of scientific developments on a continuing and comprehensive basis, and providing recommendations in regard to basic radiation protection standards. The Joint Committee unanimously believes that such a solid basis incident to the establishment of basic radiation protection standards would be invaluable.

I should like to have inserted in the RECORD at this point the section-by-section analysis of the bill, as contained in the committee's accompanying report. This material, together with the remainder of the report—all of which should be perused by anyone deeply interested in all the aspects of the bill and its background—elaborates on each section. The section-by-section analysis also contains a paragraph which the committee specially wished to add to lay to rest any concern that section 272 of the Atomic Energy Act, which relates to commercially licensed nuclear powerplants, was intended to modify or affect in any way the provisions of the Federal Power Act. It was not so intended, and the committee unanimously reaffirms this. Incidentally, this explanatory paragraph, which appears on page 27 of the report accompanying the bill was intended to precede the paragraph starting with the words "section 4 of the bill."

The material follows:

SECTION-BY-SECTION ANALYSIS

*Section 1* of the bill amends paragraph (4) of subsection 31 a. of the Atomic Energy Act of 1954, as amended, which now reads as follows:

"(4) utilization of special nuclear material, atomic energy, and radioactive material and processes entailed in the utilization or production of atomic energy or such material for all other purposes, *including industrial uses*, the generation of usable

energy, and *the demonstration of the practical value of utilization or production facilities for industrial or commercial purposes;* and" (italic added)

The italicized portions would be re-worded to accord with the subsequent provisions of the bill respecting the elimination of the concept of a finding of "practical value" and concerning the licensing of utilization and production facilities for industrial or commercial purposes. The phrase "including industrial uses" would be revised to "including industrial or commercial uses" and the phrase "the demonstration of the practical value of utilization or production facilities for industrial or commercial purposes" would be changed to "the demonstration of advances on the commercial or industrial application of atomic energy." These changes are essentially technical in nature; they do not effect any major substantive alteration of subsection 31 a. of the Act.

*Section 2* of the bill amends the second sentence of section 56 of the Atomic Energy Act of 1954, as amended, which now provides:

"The Commission shall also establish for such periods of time as it may deem necessary but not to exceed ten years as to any such period, guaranteed purchase prices for uranium enriched in the isotope 233 produced in a nuclear reactor by a person licensed *under section 104* and delivered to the Commission within the period of the guarantee." (Italic added.)

The italicized phrase would be revised to "under section 103 or section 104". With respect to guaranteed purchase prices for U233, which the Commission has recently established for a 5-year period, it is appropriate and advisable that these apply to licensed nuclear facilities, including, as provided for in the bill, those licensed under section 103.

*Section 3* of the bill amends section 102 of the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding by the Commission "that any type of utilization or production facility has been sufficiently developed to be of practical value for industrial or commercial purposes" as a condition precedent to the "commercial" licensing of such type of facility under section 103.

Under the revised section 102, all utilization and production facilities for industrial or commercial purposes, with two exceptions, would be subject to licensing under section 103. The two exceptions would be (1) facilities constructed or operated under an arrangement with the Commission entered into under the cooperative power reactor demonstration program, unless the applicable law required licensing under section 103, and (ii) facilities covered by a subsection 104b. construction permit or operating license before and at the time the bill is enacted into law. In regard to (i), the bases for arrangements under the cooperative power reactor demonstration program, which program has for many years been separately covered in the AEC's authorization acts, are carefully reviewed by this committee. Should it be desirable in the case of any contemplated future cooperative demonstration project to require that the nuclear facility involved be licensed under section 103 instead of subsection 104b., this could be done in the enabling statute. In regard to (ii), the committee believes it would impose an unnecessary hardship on subsection 104b. licensees to compel them to convert their permits to section 103 licenses; the matter of potential antitrust review of certain subsection 104 licenses is specifically dealt with in section 6 of the bill, and is discussed below, and it appears to the committee that no useful purpose could be served by compelling any conversion to section 103. The committee here visualizes that amendments, as such, to an existing subsection 104b. license will not affect the exception to section 103 licensing. If, however, the facility is to be modified to such a degree as to constitute a new or substantially different facility, as provided in a regulation or order issued by the Commission, the exception to section 103 licensing is not intended to be applicable to the necessary license amendment. Aside from these two exception categories—demonstration facilities under the cooperative power reactor demonstration program and previously licensed 104b. facilities—any license for a utilization or production facility for industrial or commercial licenses would be issued under section 103, unless some future law otherwise specifically provides.

*Section 4* of the bill amends the first sentence of subsection 103 a. of the Act which now reads as follows:

During the hearings pertaining to this legislation there was a suggestion that there ought to be a clearer indication of Congressional intent that section 272 of the Atomic Energy Act did not constitute a modification of the Federal Power Act. The Joint Committee very carefully considered this item and concluded that the legislative history of section 272 indicated quite clearly that the committee and the Congress had not intended thereby to modify or affect in any way the provisions of the Federal Power Act. The committee unanimously reconfirms this intention. In effect section 272 should be read as if the clause "to the extent therein provided" appeared at the end of the text.

*"Subsequent to a finding by the Commission as required in section 102,* the Commission may issue licenses to transfer or receive in interstate commerce, manufacture, produce, transfer, acquire, possess, use, import, or export under the terms of an agreement for cooperation arranged pursuant to section 123, such type of utilization or production facility." (Italics added.)

The italicized clause would be deleted, since the requirement for a "practical value" finding would be eliminated. The concluding clause "such type of utilization or production facility" would be changed to "utilization or production facilities for industrial or commercial purposes." The revised version would provide for the issuance to persons of "commercial" licenses with respect to "utilization and production facilities for industrial or commercial purposes."

*Section 5* of the bill would revise subsection 104 b. of the act to authorize the issuance of licenses under that subsection for utilization or production facilities for industrial or commercial purposes (i) where specifically authorized by law, or (ii) where the facility is constructed or operated under an arrangement with the Commission entered into under the cooperative power reactor demonstration program, and the applicable statutory authorization does not require licensing under section 103, or (iii) where the facility was theretofore licensed under subsection 104 b.

In revising the text of subsection 104b, the committee has retained the present requirement that "the Commission shall impose the minimum amount of such regulations and terms of license as will permit the Commission to fulfill its obligations under the Act," but deleted the balance of the present text because subsection 104b licenses would not be convertible to section 103 licenses under the bill, and because there is no longer any need to provide for priority of licenses "to those activities which will, in the opinion of the Commission, lead to major advances in the application of atomic energy for industrial or commercial purposes."

In retaining the present language respecting the imposition of the minimum amount of regulations and terms of license, the committee wishes to emphasize that the only purpose here was to reiterate, not to make new law; thus, requirements of applicable laws, such as the National Environmental Policy Act of 1969 (Public Law 91–190) and the Water Quality Improvement Act of 1970 (Public Law 91–224), enacted subsequent to the Atomic Energy Act of 1954, remain unaffected by the reiteration of this feature of the present provisions of subsection 104b.

The bill does not affect in any way subsections 104a, 104c, or 104d, or the caption of section 104, "Medical Therapy and Research and Development."

The committee is aware that university-licensees under subsection 104c, and other licensees under subsections 104a or 104c, sometimes use these reactors for industrial or commercial purposes. It is the intention of the committee that such insubstantial use not affect licensing under section 104; however, should the Commission find that any facility so licensed is being used substantially for industrial or commercial purposes, then the Commission shall determine whether such use is sufficiently substantial to entail licensing under section 103.

*Section 6* of the bill clarifies and revises subsection 105 c. of the act. The bill does not affect in any way the important features contained in the provisions of subsections 105 a. and 105 b. of the 1954 act. These subsections remain separate, distinct and wholly unaffected by the proposed revised subsection 105 c. For example, the Attorney General's advice under the new subsection 105 c., and the participation by the Attorney General or his designee in the proceedings referred to in paragraph (5) of the subsection, would be completely separate and apart from any actions the Attorney General may deem advisable in relation to the antitrust laws referred to in subsection 105 a. Also, under paragraph (1) of the new subsection 105 c., the Attorney General may, in his discretion, should he consider that his advice might prejudice planned actions under the antitrust laws referred to in subsection 105 a., or for any other reason, render no advice to the Commission.

*Paragraph (1)* of revised subsection 105 c., requires the Commission promptly to transmit to the Attorney General a copy of any license application to construct or operate a utilization or production facility under section 103. Paragraph (1) also requires the Commission promptly to transmit to the Attorney General written requests for potential antitrust review which are made by persons who intervened, or who sought by timely written notice to the Commission to intervene, in the construction permit proceeding for a facility licensed under subsection 104 b. prior to the enactment of the bill into law.

The Attorney General would have "a reasonable time, but in no event to exceed 180 days after receiving a copy of such application or written request" to "render such advice to the Commission as he determines to be appropriate in regard to the finding to be made by the Commission" with respect to antitrust considerations. The committee expects full and expeditious cooperation by the applicant, the Commission and the Attorney General. To facilitate an early review by the Attorney General, the committee suggests that, promptly upon enactment into law of this bill, the Commission and the Attorney General work out a suitable understanding in regard to the nature of the the information the Attorney General would wish to have at the outset; the Commission could then plan to obtain the information from the applicant at the same time that the application is submitted to the Commission.

The advice which the Attorney General may provide would be advice which he "determines to be appropriate in regard to the finding to be made by the Commission." The advice need not necessarily fall within the orbit of the present clause "tend to create or maintain a situation inconsistent with the antitrust laws." If the Attorney General deems it to be appropriate, he need not render any advice, in which case he should

so inform the Commission. If he renders advice, subparagraph (1) requires that it include "an explanatory statement as to the reasons or basis therefor"; this requirement is only fair and reasonable, and it should help facilitate and expedite the subsequent procedure.

*Paragraph* (2) of revised subsection 105c. provides that the potential antitrust review shall not apply to an application for a license to operate a utilization or production facility for which a construction permit was issued under section 103 "unless the Commission determines such review is advisable on the ground that significant changes have occurred in the licensee's activities or proposed activities subsequent to the previous review by the Attorney General and the Commission under this subsection in connection with the construction permit for the facility." The committee sees no sense in two such exercises unless there have been significant intervening changes. The committee expects that the Commission will consult with the Attorney General in regard to its determination respecting significant changes. The term "significant changes" refers to the licensee's activities or proposed activities; the committee considers that it would be unfair to penalize a licensee for significant changes not caused by the licensee or for which the licensee could not reasonably be held responsible or answerable.

The committee recognizes that applications may be amended from time to time, that there may be applications to extend or review a license, and also that the form of an application for a construction permit may be such that, from the applicant's standpoint, it ultimately ripens into the application for an operating license. The phrases "any license application", an application for a license", and "any application" as used in the clarified and revised subsection 105 c. refer to the initial application for a construction permit, the initial application for operating license, or the initial application for a modification which would constitute a new or substantially different facility, as the case may be, as determined by the Commission. The phrases do not include, for purposes of triggering subsection 105 c., other applications which may be filed during the licensing process.

*Paragraph* (3) provides that with respect to any Commission permit issued under subsection 104 b. before enactment of the bill into law, any person who intervened or who sought by timely written notice to the Commission to intervene in the construction permit proceeding to raise the prelicensing antitrust issue will have the right to obtain an antitrust review under this subsection; to do this, such person must make a written request to the Commission within 25 days after the date of initial Commission publication in the Federal Register of notice of the filing of an application for an operating license for the facility or the date of enactment into law of this subsection, whichever is later. It is the committee's intent that such potentially eligible intervenors must be persons who could have qualified as intervenors under the Commission's rules at the time of the initial attempt to intervene if prelicensing antitrust review were then properly for Commission consideration.

*Paragraph* (4) provides that, upon the request of the Attorney General, the Commission shall furnish or cause to be furnished "such information as the Attorney General determines to be appropriate" for the advice he is to give. The committee expects that the Commission will make every reasonable effort to provide information sought by the Attorney General.

There is an important aspect that the committee considers must be recognized and especially dealt with in a prudent and responsible manner, and that is the matter of proprietary information or data. The system in subsection 105 c. as in connection with other aspects of the licensing procedure, should be such as to provide reasonable safeguards against any leaks or unwarranted dissemination of information or data of a proprietary nature provided by or in behalf of the applicant, and whether or not the applicant is the proprietor.

*Paragraph* (5) requires that the Commission promptly publish in the Federal Register the advice it receives from the Attorney General. It further provides that if the Attorney General "advises that there may be adverse antitrust aspects and recommends that there be a hearing" that the Attorney General or his designee may participate as a party "in the proceedings thereafter held by the Commission on such licensing matter in connection with the subject matter of his advice." Such proceedings must be held by the Commission if the Attorney General advises that there may be adverse antitrust aspects and recommends a hearing. Also, if he does not so advise and recommend, but antitrust issues are raised by another in a manner according with the Commission's rules or regulations, the Commission would be obliged to give such consideration thereto as may be required by the Administrative Procedure Act and the Commission's rules or regulations. Paragraph (5) requires that the Commission "give due consideration to the advice received from the Attorney General and to such evidence as may be provided during the proceedings in connection with such subject matter." Whether or not the Attorney General appears as a party, all advice and information provided by the Attorney General that is utilized by the Commission in arriving at its finding must be made a matter of record. Paragraph (5) further requires that the Commission "make a finding as to whether the activities under the license would create or maintain a situation inconsistent with the antitrust laws as specified in subsection 105a." This finding by the Commission is required only in those cases where the Attorney General advises there may be adverse antitrust aspects or antitrust issues are raised by another in a manner according with the Commission's rules and regulations.

With respect to the above finding, although the words "reasonable probability" do not appear in the standard, the concept of reasonable probability is intended to be a silent partner to the factors in the standard. The standard must be considered in the focus of reasonable probability—not certainty or possibility.

The standard pertains to the activities of the license applicant. The activities of others, such as designers, fabricators, manufacturers, or suppliers of materials or services, who, under some kind of direct or indirect contractual relationship may be furnishing equipment, materials or services for the licensed facility would not constitute "activities under the license" unless the license applicant is culpably involved in activities of others that fall within the ambit of the standard.

*Paragraph* (6) provides that if the Commission finds "the activities under the license would create or maintain a situation inconsistent with the antitrust laws as specified in subsection 105 a." that the Commission "shall also consider, in determining whether the license should be issued or continued, such other factors, including the need for power in the affected area, as the Commission in its judgment deems necessary to protect the public interest." On the basis of all its findings—the finding under paragraph (5) and its finding under paragraph (6)—the Commission would have the authority "to issue or continue a license as applied for, to refuse to issue a license, to rescind a license or amend it, and to issue a license with such conditions as it deems appropriate." While the Commission has the flexibility to consider and weigh the various interests and objectives which may be involved, the committee does not expect that an affirmative finding under paragraph (5) would normally need to be overridden by Commission findings and actions under paragraph (6). The Committee believes that, except in an extraordinary situation, Commission-imposed conditions should be able to eliminate the concerns entailed in any affirmative finding under paragraph (5) while, at the same time, accommodating the other public interest concerns found pursuant to paragraph (6). Normally, the committee expects the Commission's actions under paragraph (5) and (6) will harmonize both antitrust and such other public interest considerations as may be involved. In connection with the range of Commission discretion, the committee notes that pursuant to subsection 105 a. the Commission may also take such licensing action as it deems necessary in the event a licensee is found actually to have violated any of the antitrust laws. Of course, in the event the Commission's finding under paragraph (5) is in the negative, the Commission need not take any further action regarding antitrust under subsection 105 c.

*Paragraph* (7) of revised subsection 105c. substantively carries over from the present text the exception that the Commission "with the approval of the Attorney General, may except from any of the requirements of this subsection such classes or types of licenses as the Commission may determine would not significantly affect the applicant's activities under the antitrust laws."

*Paragraph* (8) endeavors to deal sensibly with those applications for a construction permit which, upon the enactment of the bill into law, would have to be converted to applications under section 103. In some cases, there might well be hardships caused by delays due to the new requirement for a potential antitrust review under revised subsection 105 c. Paragraph (8) would authorize the Commission, after consultation with the Attorney General, to determine that the public interest would be served by the issuance of a permit containing conditions to assure that the results of a subsequently conducted antitrust review would be given full force and effect. Paragraph (8) similarly applies to applications for an operating license in connection with which a written request for an antitrust review is made as provided for in paragraph (3).

*Section 7* of the bill effects a perfecting change in subsection 161 n. of the act to delete the reference to a finding of practical value.

*Section 8* of the bill changes several words in the first proviso of subsection 161 v. to support the intention of the Congress when this subsection was enacted into law. The clarified provision expressly indicates that the prices for enriching services "shall be on a basis of recovery of the Government's costs over a reasonable period of time." As the legislative history of this statute discloses, and as the Comptroller General has discerned in his report to the Joint Committee on July 17, 1970, it was intended that the price to be charged by the AEC for toll enrichment should be based on the recovery of appropriate Government costs averaged over a period of years. Under the clarified version of subsection 161 v., the committee intends that the criteria in effect since 1966 will continue to be in effect subject to any Commission proposed revisions thereto that conform to the requirement of the statute and are submitted to the committee for its review. The committee expects that the Commission will consult with the General Accounting Office in regard to any such proposed revisions.

*Section 9* of the bill amends subsection 182 c. to delete the phrase "within trans-

mission distance" and to amend the general notice provision.

*Section 10* of the bill amends the first sentence of subsection 191 a. which now requires that of the three members of any Atomic Safety and Licensing Board two members "shall be technically qualified," and the third "shall be qualified in the conduct of administrative proceedings". Section 10 would permit two members to have "such technical or other qualifications as the Commission deems appropriate to the issues to be decided"; the third member would continue to be one "qualified in the conduct of administrative proceedings."

*Section 11* of the bill revises the present text of subsection 274 h. to abolish the Federal Radiation Council and to provide for contractual arrangements with the National Council on Radiation Protection and Measurements and with the National Academy of Sciences. Under the revised text, any Government agency designated by the President for the purpose would be authorized and directed to enter into and administer an arrangement with the National Council on Radiation Protection and Measurements for a comprehensive and continuing review of basic radiation protection standards, and the scientific bases therefor, pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use or control of atomic energy. Any Government agency designated by the President for the purpose would also be authorized to enter into and administer an arrangement with the National Academy of Sciences for a comprehensive and continuing review of the biological effects of radiation on man and the ecology in order to obtain information pertinent to basic radiation protection standards. The revised subsection 274 h. specifies that the respective arrangements shall require the conduct by the National Council on Radiation Protection and Measurements and by the National Academy of Sciences, respectively, of a number of functions relative to the fields of radiation and the biological effects of radiation. Under the arrangements the National Committee on Radiation Protection and Measurements and the National Academy of Sciences will concern themselves essentially with information and matters relative to the "hard" sciences, as distinguished from sociological or "soft" science considerations. The latter considerations would be identified and dealt with by the Government agency having authority to establish radiation protection standards. All matters pertaining to basic radiation protection standards pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use or control of atomic energy would be promptly reported to the Joint Committee. The contracting Government agency may, in the discretion of the President, be any Government agency or agencies; the contractual arrangements may be administered by any Government agency or agencies designated by the President.

At this point I want to depart from my prepared script to say that this country is facing a crisis in electrical energy. We must double the electrical generating capacity of this country within the next 10 years, and then double that again in the succeeding 10 years.

We Members in this Capitol know that just a week ago we had half of the lights turned off in the Capitol because of reduced availability of power in this area. I am telling you that this whole country faces that situation; we are facing brownouts and blackouts unless we get these electrical plants into operation—these new additional generating capacities.

Now, I am speaking today for nuclear power alone. I am saying that we are going to have to have electricity from uranium, from coal, from oil, and from gas. We are going to need every kilowatt we can produce from all of these substances, and we are going to have to revise our methods so that present contaminating effluents are removed.

Now, the public is going to have to pay for that, and they will pay for it. If we want a clean environment we are going to have to pay for it, and the public will pay for it through increased rates, and I think they will want to pay for it.

Already we have had brownouts and blackouts.

I tell you, we will never—never solve the problem of pollution itself without adequate nonpolluting energy. I do not care whether the problem is cleaning up our water, or taking the particulates out of smokestacks so we can have clean air, or whether it is solidifying old automobiles into small masses to be disposed of properly or recycled for some reuse of material—it does not make any difference what field of pollution we face, we are going to have to have adequate, economical, and clean electricity to solve that problem. We are just kidding ourselves if we overlook this basic fact.

This is one of the reasons we are here on the floor of the House today—to see, in connection with this bill I am explaining, that we do have an adequate chance to get these plants into operation without a lot of interference from people who do not have a sufficient understanding of the technical problems involved or about the technical safeguards that have been engineered into nuclear plants.

These people, who are ignorant in some instances and misinformed in many cases, do not realize the obstructive harm they are doing.

Seventy percent of electrical energy is used in industry which provides their jobs.

Thirty percent of electrical energy is used for local and residential services. It runs their appliances, their refrigerators, and their air conditioners.

When the brownouts and blackouts hit their communities they will suddenly realize the foolishness of their actions. Then it may be too late. It takes 4, 5, and 6 years to build a modern generating plant. You cannot wave a wand and create electricity.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman.

Mr. EDMONDSON. Mr. Chairman, I want to commend the chairman of the committee for what he has just said, and said very forcefully and very honestly, as to the energy crisis confronting this country.

The chairman of the Joint Committee on Atomic Energy has demonstrated to me through the years the capacity and the ability to see down the road as far as anybody I know in the House. When the gentleman tells us that our power requirements are going to double in 10 years, I think he is, if anything, understating what the situation is.

Mr. HOLIFIELD. The gentleman will agree with me, coming from a gas-producing area, that there is going to be a shortage of gas this winter.

There is already a shortage of coal and delays in the delivery of coal. You cannot get a contract today for coal longer than 1 or 2 years. The customary time used to be 5 and 10 years for coal contracts for delivery at a specified time.

On the average, the cost of coal has gone up about 56 percent in the last 18 months. The cost of imported residual low sulfur content oil has almost doubled. So these are some of the factors that are building up to an actual and serious scarcity of energy.

The fact that the coal is not being delivered, pursuant to contracts to these electrical plants, as it has been in the past, is another factor.

These are the factors that make me believe we are going to have serious blackouts and brownouts in this country before we realize it.

Mr. EDMONDSON. We are already having them, as the chairman well knows, and we are going to have more of them this winter and next summer, regardless of what we do.

What we must do is to address ourselves to this problem as rapidly as possible.

I know that the chairman did not intend to omit, when he listed the principal sources of power, another source, which he has always supported vigorously, and that is hydroelectric power.

Mr. HOLIFIELD. That is right. Let me say, I did not mention it because it only amounts to a very few percent of the total electrical supply. It is important as it can be, because it is clean and because it is cheap. Every hydroelectric facility in the Nation should be utilized because we are going to need every kilowatt that we can get.

Mr. EDMONDSON. I agree wholeheartedly with what the chairman is saying. I think he has emphasized it at a most appropriate time. I congratulate the gentleman on his presentation.

Mr. HOLIFIELD. I will append to my remarks some very pertinent excerpts from national papers and magazines on the national fuel shortage:

NATIONAL FUEL SHORTAGE

I. COAL

TVA had invited coal supply bids at the same time as the nuclear but none were forthcoming, and apparently it wouldn't have mattered anyway. TVA said its cost analysis showed that a coal-fired plant would have had to have coal at 19c/million Btu to be competitive with the nuclear power-production costs. This would have been the equivalent of about $4.30/ton of average coal and TVA said recent coal bids it has received have been about twice that price. ("Nucleonics Week," September 3, 1970.)

During the 3½ years elapsing between our studies, the change in the cost of coal as burned completely negates any assertion that "coal alone could provide the nation with economical and dependable fuel for generation." In March 1966, our system average coal cost was 26.9c per million Btu. By December 1969 it had increased to 30.9c. By July, 1970, our coal cost had reached 42.1c. (Duke Power Company—letter of August 31, 1970 in response to Sporn Report.)

TVA reports that its coal delivery schedules

are not being met. It says stockpiles to feed the coalburning generating plants that produce 80 per cent of the system's electric power are reaching critically low levels.

The utility, which has already established a priority schedule for winter "brownouts," reports that unless coal deliveries are increased and the decline in stockpiles halted, sharp power cutbacks are inevitable.

Dover, Ohio registered a 65 per cent increase in its coal prices in the first six months of this year.

In Hamilton, Ohio, the electric company a year ago paid $4.97 a ton for coal, plus $3 transportation. Last month, the utility received bids of $10.25 and $11.25 a ton, plus $4.20 for transportation. ("New York Times"—September 28, 1970.)

II. OIL

Braintree Electric Light Department's shortages started a few weeks ago when its old contract for oil expired. Braintree had been paying $1.78 a barrel for oil. Now its oil is supplied on a day-to-day basis at $3.65 a barrel, and there is no guarantee of delivery.

Braintree has appealed to 25 oil firms all the way down to New Jersey to bid on a new contract. But no one is interested.

In Montpelier, Vt., Alan Weiss, the superintendent of schools, says that the schools' supplier makes no guarantee that he can provide enough oil this year. To conserve fuel, Montpelier schools may have to hire a custodian to keep thermostats down at night.

Changes in the international situation started price soaring in May this year. By September 1, 1970, the price has zoomed to $2.72 a barrel; and the spot (non-contracted) price had risen to as much as $3.85 a barrel—almost double the price in May ($1.80). ("Christian Science Monitor"—September 28, 1970.)

During the past year, the city of Vineland Electric Utility converted to oil to meet state air pollution regulations. We now use 90,000 gallons daily. The supplier has cut back delivery to 50,000 gallons daily September 1 and will promise no oil whatsoever after October 1, 1970. We have contacted six or seven of the biggest suppliers. None will offer any oil in October. Coal is also unavailable. Unless the U.S. Government orders priority to utilities for oil deliveries after October 1, we face shut down of 80 per cent of our plant production which will mean most of our customers will be without light and power service. (Vineland Electric Utility Company, Vineland, N.J. telegram of August 21, 1970 to American Public Power Association.)

The "Inflation Alert" reported that prices of industrial fuel oil rose at an annual rate of 48% during the first half of 1970, and bituminous coal prices increased at an annual rate of 56%. ("Inflation Alert"—August 7, 1970 published by President Nixon's Council of Economic Advisers.)

Mr. JONES of Alabama. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman.

Mr. JONES of Alabama. Mr. Chairman, I, too, want to commend the gentleman from California and particularly for the knowledge the gentleman has about the energy situation which confronts us, and which will be with us certainly for the next decade.

At the present time, the building or construction period is some 6 years that it takes to build a plant producing say, 500,000 kilowatts. So there is need for great haste. I am pleased that the chairman of the committee, the gentleman from California (Mr. HOLIFIELD) has pointed out to the committee the dire necessity of hastening the production of atomic energy and fissionable material that is going to be required along with other impediments that face us in supplying the fuel that is necessary for the generation of power.

Certainly, if we are going to live in the comfort of the past, we are going to have to recognize and confront the problem, and the sooner the better.

Again I want to express my appreciation for the vast amount of work that you have done in the past in accumulating the knowledge, practices, and policies that have been sound and rewarding to the American people.

Mr. HOLIFIELD. I thank the gentleman from Alabama.

Mr. WOLFF. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from New York.

Mr. WOLFF. I thank the gentleman. I wish to join in the statements that have been made in congratulating the gentleman in the well for his leadership in this field. However, I feel there are one or two points that should be given consideration in addition to the great need for power in this country. I am sure the gentleman is, and always has been, a champion of the protection of our environment at the same time as an advocate of nuclear power. Serious questions have been raised regarding the effect on our environment and our ecology that nuclear power presents. On this score I have wondered if the gentleman in the well would comment on Reorganization Plan No. 3, which has just passed the House, which actually separates the functions of the AEC. This is a development I have been trying to achieve in Congress for some time. I believe it is important that we separate the functions of the AEC which in the past has had the responsibility for both promoting nuclear power as well as acting as the policeman of nuclear power.

According to the Environmental Protection Act, which is established under the Reorganization Plan No. 3:

There are hereby transferred to the Secretary to be administered by him through the Administrator of the Environmental Protection Administration all functions, powers, and duties—

. . . consist of establishing and enforcing environmental standards and safeguards for the protection of the general environment from radioactive material which standards are defined to mean: limits on radiation exposures or levels, or concentrations of or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

Mr. HOLIFIELD. The answer to the gentleman is "yes." The gentleman knows that I handled Reorganization Plan No. 3 on Monday of this week. The gentleman has read a section from the plan. It does transfer people who set the environmental radiation standards over from the Atomic Energy Commission into the Environmental Protection Agency. I was just about to address myself to the third section of the bill having covered the first two, because it deals in substance in this area.

The gentleman from California knows of the gentleman's longstanding interest in this matter, and the gentleman I think can feel today quite satisfied that the changes that are proposed to be made by the Presidential reorganization plan are along the lines that he has been advocating.

Mr. WOLFF. I thank the gentleman.

Mr. HOLIFIELD. I will address myself to that section which pertains to the radiation protection of the people. Section 11 covers the third principal feature of the bill. This section of H.R. 18679 would enlist the preeminent scientific talents of the National Council on Radiation Protection and Measurements and the National Academy of Sciences in a comprehensive and coordinated effort to review the statutorily applicable radiation protection standards and the scientific bases thereof.

The National Academy of Sciences, by the way, was established in 1863 under President Abraham Lincoln's administration. That is how old that institution is. The National Council on Radiation Protection and Measurements was established in 1929. It is composed of some 65 or 70 distinguished scientists from all over the United States, from the universities, fields of medicine, and many other fields.

These people serve without special compensation. They serve as members of an honorable body chartered by Congress, they are most knowledgeable in the field of radiation and its biological effects.

The National Academy of Sciences has an equally distinguished list of scientists. They are particularly interested in the effects of radiation on humans. Their recommendations will have to be considered and I hope the agencies will be guided by them.

We want to allay forever the fears of the ignorant and uninformed as to the source of recommendations for the standards of allowable and permissible radiation from any of these reactors. We want the people to know what the expert bodies recommend and not have to rely only on bureaucrats or administrators in Government. We want to go to the source of the greatest fund of wisdom in this field that there is in the world, because some of these people are also members of the International Commission on Radiological Protection and these bodies work in harmony. So, we can go no further than that toward protecting the people of the United States.

I believe the people will place their trust in the most eminent bodies of scientists that exist in the world.

I hope they will refuse to be scared and deceived by the few sensation-seeking, biased pseudo-scientists that are obstructing and delaying the production of electricity.

I also wish to say to many of the new converts to antipollution causes that they should weigh carefully their opposition to generating plants whether they are fossil fueled or nuclear. They should consider the futility of solving all of our environmental pollution problems without an abundant supply of electrical energy.

Mr. MIZE. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from Kansas.

Mr. MIZE. Mr. Chairman, coming from the State of Kansas, I can say we are quite interested in the disposition of atomic waste, as it appears possibly one of the best places to put these atomic wastes is in the saltbeds, which quality as a sort of garbage pail for this material.

My question is, when a license is granted one of these privately-owned nuclear powerplants, who has the responsibility of determining where that waste material will be taken?

Mr. HOLIFIELD. The Atomic Energy Commission has the responsibility for the health and safety of the people of America in that respect as in other radiological respects. The responsibility has been placed in them by statute.

Mr. MIZE. With the AEC?

Mr. HOLIFIELD. Yes.

Mr. MIZE. I thank the gentleman from California.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I appreciate the gentleman yielding.

Mr. Chairman, I believe the accolades and commendations to the members of the committee are deserved for bringing in these changes in the Atomic Energy Act of 1954. They are well deserved.

I have studied the bill, and I have read the report. I am personally interested in this, and I admire the work of the committee. There is just one thing that bothers me a little about this, and I wonder if the gentleman would expound on it a little more than he did in his obvious haste to dispatch our business today. That is, the first concept, the finding of practical value. This committee and this House are very familiar with the need and the formulae for developing cost-benefit ratios. I full well understand the exclusions that are earned in many of the research and development projects for the Atomic Energy Commission and laboratories and so forth, but it would seem to me on the face of it, reading no deeper than I have and not being privy to an intense study of the hearings, that a little explanation is in order as to why we are eliminating the practical value concept right at the time when we should be applying it to each commercial firm that we want to license.

Mr. HOLIFIELD. It is a little difficult to explain, but I think the gentleman will understand. Congress is eliminating the need for an administrative finding of practical value. We are not waiting for the AEC to make this finding. We are eliminating the necessity for making a finding of practical value, because in the judgment of this committee, in a real sense, these nuclear reactors have achieved practical value. They are being bought, without Government subsidy, by utilities all over the Nation, and therefore we feel these reactors should come under regular commercial practices.

It is a little bit confusing, because it was a part of the act of 1954, which did not envision arriving so soon at the point we are now at. It is in effect a stamp of approval by the Congress that no longer should these reactors be considered as research and development reactors and therefore potentially eligible for research and development subsidies. Light water reactors have arrived. They are now of utility and commercial value.

Mr. HALL. The gentleman is convinced that he has, in the wording of the legislation before us, done just that?

Mr. HOLIFIELD. That is right.

Mr. HALL. The gentleman has explained it adequately to me. As I understand it, we are eliminating the double negative, having proved through the years since 1954 that this is of commercial value, and hereafter licensing will be direct but they will still be subject to the antitrust laws, et cetera.

Mr. HOLIFIELD. Yes. It will take its place in private industry.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I have just one point. In making this change in the law the committee is not recommending and the Congress is not in any way relaxing or lifting any of the safety requirements which are in the law?

Mr. HOLIFIELD. No. The gentleman makes a valuable contribution. The AEC is still responsible for the radiological safety and health of the people and will continue, under this committee's jurisdiction, to watch that very closely. I am glad the gentleman brought up that point.

Mr. Chairman, I reserve the remainder of my time.

Mr. HOSMER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the distinguished chairman of the Joint Committee on Atomic Energy has ably summarized the principal features of H.R. 18679. I would like to add a few brief comments.

In my judgment, each of the three principal features of this bill is timely and important.

The advisability of removing the requirement of a finding of practical value before nuclear powerplants can be commercially licensed has been endorsed by every single witness who testified before our committee during the hearings held last year and this year on this subject. No one needs it or wants it. There is simply no reason to retain it. It is not only useless, but has grown into a major source of irritation and controversy—preventing, as it has, the commercial licensing of nuclear facilities that are being industrially or commercially employed. The bill excises this licensing wart.

Opening the door to routine commercial licensing involved a close look at a related provision of the Atomic Energy Act of 1954; namely, subsection 105(c). This provision, normally characterized as prelicensing antitrust review, is written simply in terms of advice from the Attorney General. And the nature and scope of the advice are described in a broad-brush, imprecise, clause. The committee concluded that it was imperative to clarify and revise the present text of subsection 105(c). H.R. 18679 does this. The proposed revision of subsection 105(c) in the bill clarifies the antitrust review standard and explicitly describes the Commission's authority and responsibility in relation to advice from the Attorney General. The committee and its staff spent many hours on the standard and the procedures described in the clarified, revised version of subsection 105(c). The resulting product is a fair, reasonable compromise which the committee unanimously approved. Frankly, I do not like each and every ingredient aspect of subsection 105(c) in the bill, and I do not know a single committee member who does. However, there are many aspects which I do favor, and this, too, represents the opinion of each of my colleagues on the committee. In its totality—as a package product—revised subsection 105(c) represents a desirable improvement of the present provisions, and I, together with all the members of the joint committee, support it.

As for the aspects that I favor, let me briefly point to a few:

First. Paragraph (1) of subsection (c) provides that the Attorney General's advice must include an explanatory statement as to the reasons or basis therefor.

Second. Paragraph (2) of subsection (c) calls for the antitrust review in connection with the application for a construction permit, and provides that it is not to be repeated at the operating license stage "unless the Commission determines such review is advisable on the ground that significant changes in the licensee's activities or proposed activities have occurred subsequent to the previous review by the Attorney General and the Commission under this subsection in connection with the construction permit for the facility."

Third. By virtue of subsection 102(b), AEC licenses issued prior to enactment of the bill into law maintain their status as 104(b) licenses.

Fourth. The report accompanying the bill clearly expresses the important intention that the standard applies to the activities of the license applicant. As stated in the report:

> The activities of others, such as designers, fabricators, manufacturers, or suppliers of materials or services who, under some kind of direct or indirect contractual relationship may be furnishing equipment, materials or services for the licensed facility would not constitute "the activities under the license" unless the license applicant is considerably involved in activities of others that fall within the ambit of the standard.

Thus, unless the license applicant is seemingly in a collusion or conspiracy situation with respect to suppliers or others, its license application would not be encumbered or held up by any antitrust considerations pertaining to the activities of others.

Fifth. Paragraph (8) of subsection (c) enables the Commission to avoid delaying the issuance of licenses in certain cases, pending the antitrust review. The committee intends that this flexibility be benevolently and sensibly used to help avoid unnecessary delays in the scheduling of needed power plants. In connection with paragraph (8), I must mention for the record another important com-

mittee concern and related intention. It is not intended that a construction permit proceeding that is in progress at the time the bill becomes law be begun anew procedurally because of the new section 103 status. That would be foolish and self-defeating in this time of power shortages, or for that matter at any other time. We want to see this licensing procedure as an aid in obtaining a safe and adequate supply of power to the people—not an impediment. We want no snags whatsoever to cause delay because of licensing. We expect no lack of attention to this matter whatsover on the part of the Atomic Energy Commission. Rather, it is intended that the Commission, by rule or regulation, provide for a sensible transition into the section 103 licensing posture so that, to the fullest extent reasonably practicable, the measures and substance of the licensing proceeding theretofore conducted will continue to be recognized and utilized and delay held to a minimum.

The purpose here is to avoid hardships as specified at the top of page 32 of our report on this bill. Now, hardships are not limited to, say, situations where the utility involved might risk bankruptcy by any delay. What the committee is talking about here is things that might delay or impede bringing necessary and desirable power to the utility system. In short, hardship in the sense of this bill has a very broad and liberal connotation.

I want to make it perfectly clear that the principle of no impediment and no delay applicable to the transition to the provisions of this bill applies equally to pending construction permit applications and to pending operating license proceedings. There is need for expediency in both instances.

Sixth. The change in section 10 of the bill introduces greater flexibility in the composition of atomic safety and licensing boards. This flexibility should be utilized in accordance with the Commission's discretion; it is not intended for example, that the Commission's judgment respecting the qualifications of members of a board should be opened to challenge in relation to the nature of the matters that may be considered in the antitrust review. Nor, for example, is it intended that all three members of a board must be present at all times during the conduct of a board's business. Incidentally, Chairman HOLIFIELD and I have been much concerned with the apparent recent trend toward procrastination, and administrative and legal roadblocks, in the overall licensing system. We are worried about the apparently deteriorating licensing situation, and have recently written a letter to Dr. Seaborg which I would like to have inserted in the RECORD at this point.

Before leaving this feature, I, too, want to join Chairman HOLIFIELD in emphasizing the fact that this whole antitrust review in the Commission's licensing procedure in no way extends, impairs, amends, or affects any of the antitrust laws or prevents their application. This major point is underwritten by subsection 105(a) of the Atomic Energy Act, which remains unchanged. By like token, this bill in no way enlarges the substance of the antitrust review in any respect over the provisions of the existing law for commercial licenses. What we are trying to do is clear away precedural uncertainties in the manner in which both the Justice Department and the AEC are to proceed.

The second feature of the bill—the statutory basis for the Commission's charges for uranium enriching services—is not really directed at the recently announced increase in price from $26 to $28.70 per separative unit. The price increase may represent an appropriate price adjustment in the light of the criteria for pricing that the Commission has consistently used since subsection 161(v) became law in 1964.

The bill merely changes several words in subsection 161(v) to reaffirm with greater clarity the underlying intention, as evidenced by the legislative history and as correctly discerned by the Comptroller General in his recent report, that AEC's charges are to be based on the recovery of Government costs averaged over a period of years. AEC's new criteria not only conflicted with the congressionally intended application of subsection 161(v), but they are unnecessarily vague and essentially meaningless. They really do not serve any useful purpose and they provide the appearance of potential for maladministration or mischief.

The third feature of the bill—to utilize on a continuing and comprehensive basis the unique talents of the National Council on Radiation Protection and Measurements and the National Academy of Sciences—I view as even more uniformly acceptable and less controversial these days than motherhood. The Federal Radiation Council, which we recognize statutorily in subsection 274(h) of the Atomic Energy Act has not really done its job as effectively as was originally contemplated by the committee and the Congress. The abolition of the Council, as a result of section 11 of the bill which emphasizes the need to enlist our most preeminent scientists in the determination of appropriate basic radiation protection standards, coincides with the President's intention to abolish the Council under the Reorganization Plan No. 3 on which the House took some favorable action earlier this week.

Mr. Chairman, in summary, the legislation before us will do three things.

First, it will eliminate, as Members have heard, the practical value requirement found in the Atomic Energy Act of 1954. Sixteen years ago, when we passed this act, the state of the technology as to generating nuclear power was rather new, and every license that has been issued for a nuclear power reactor in this country has been issued as a research and development or experimental reactor license.

The act provided that when nuclear power achieved practical value and practical value was found to exist—not by the Congress but by the AEC—then new plants were to be licensed under commercial procedures, and when that occurred, as a prelicensing requirement, there was to be an antitrust investigation by the Justice Department to make certain that in this large new technology everyone had an opportunity to enjoy some of the benefits, principally because the Government had put so much money into it.

Technology has proceeded, and now it is quite obvious that nuclear power has commercial value, and this seems to have overtaken the present law, and we propose to take this anachronism out of the law. As we do so, that brings in this feature about prelicensing investigation from an antitrust standpoint. We are not trying to take it out. What we are trying to do is to specify the procedures which will be employed for the first time, both by the Justice Department and by the AEC, so that the licensing of this great source of power will not be impeded, and power can go on the line and be available to our people.

In short, we are trying to take a step forward here to avoid blackouts and brownouts so far as nuclear power is concerned. I believe we have done it in a careful way.

I wish to congratulate the chairman of the Joint Committee on Atomic Energy for being able to negotiate this through the shoals of what might otherwise have been a private power versus public power fight, on account of the various interests involved. He skillfully avoided that.

Congratulations can also be accepted by the other members of the committee for negotiating this in such a way that the legislation could be brought to the floor without disagreement among the Republicans or the Democrats, the Senate Members or the House Members, so far as this legislation is concerned.

The second thing that the bill does is simply to say that since Uncle Sam is the only source of enriched uranium for the fuel for the Nation's power reactors and, in fact, the world's power reactors, this enriched uranium from the AEC's great gaseous diffusion plants will be made available on the usual basis. When Uncle Sam performs a service he is supposed to be paid for it, in an amount equivalent to the cost of doing business, and no more than that. That is quite a sensible way to operate. There apparently was some lack of clarity with respect to this requirement that the bill here seeks to dispel and make clear.

The third thing, as has been pointed out, is that this bill simply says whoever in the U.S. Government—it is about to be this new Environmental Protection Agency—whoever it is—that establishes the basic standards for radiation protection of the general public relative to nuclear activities shall do so not on any arbitrary basis. It will not just be left up to some bureaucrat who is a good paper shuffler but really does not know much about radiation considerations. Whoever it is who has responsibility to set Federal standards, is required by this Congress at least to go to two places for advice—the two places with the most qualified experts in the world for proper advice on this very important subject. One is the National Academy of Sciences and the other the National Council on Radiation Protection and Measurements.

This is an excellent piece of legislation, in my opinion, and I trust that we will have the support of the House when the time comes for a vote.

(Mr. McCULLOCH, at the request of Mr. HOSMER, was given permission to extend his remarks at this point in the RECORD.)

Mr. McCULLOCH. Mr. Chairman, I rise to associate myself with the views so clearly articulated by Mr. HOSMER.

As a member of the joint committtee, I know first-hand of the need for H.R. 18679 and of the careful work of our committee in arriving at the legislative proposal now before us.

I particularly want to underscore Mr. HOSMER's remarks about the fair and reasonable compromise that revised subsection 105(c) represents. This was a most difficult item for the committee to chart precisely. Potential issues in the sensitive, public-private power area seemed to be lurking behind each seeming suitable alternative. But the committee persevered, and ultimately unanimously arrived at a reasonable, workable compromise procedure which, I think, all fair-minded persons and groups should consider fair, nondiscriminatory, and appropriate.

I fully support H.R. 18679.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield

Mr. HOSMER. I am glad to yield to the gentleman from Illinois, a member of the committee.

Mr. ANDERSON of Illinois. When this matter was presented to the Committee on Rules yesterday, in a prepared statement that was delivered at that time to our committee by the distingiushed chairman of the Joint Committee on Atomic Energy (Mr. HOLIFIELD) he said:

> The ranking minority member of the Joint Committee on Atomic Energy is invariably the essence of sagacity, perspicacity, wit, aplomb, and brevity.

He has earned that accolade, which was given him on that occasion, by his performance in the well of the House this afternoon.

I should like, as a member of the Joint Committee, to join him in support of this legislation.

Mr. HOSMER. Let me say I think the gentleman was wise to get unanimous consent to revise and extend his remarks, because he went pretty far out on a limb with respect to the gentleman in the well.

Mr. KYL. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I am glad to yield to the gentleman.

Mr. KYL. I thank the gentleman for yielding.

I would like to take advantage of this occasion and take advantage of the sagacity and perspicacity and the erudition of the gentleman in the well to get an answer to a couple of questions.

Permit me to premise it in this fashion. We now have in the space of about 25 miles on one of our Great Lakes one atomic energy power generation plant about ready to go into operation and another under construction. The people there or some of the people there are considerably worried that the warm water generated by these plants will keep the ice shelf from freezing along the shore and therefore the beaches and dunes and properties might be destroyed by winter storms. They also worry about the atmospheric questions, and so on.

My question is specifically this: Are we actually progressing in the method of obtaining efficiency from the heat generation in these plants so that in fact the volume of hot water is being significantly reduced?

Mr. HOSMER. Let me answer the gentleman in this way: Any time you produce electric power you are converting one form of energy into another form of energy. The process is not 100-percent efficient. Today in the plants they are fired by coal and oil the efficiency is about 40 percent. That means that 60 percent of the B.t.u.'s out of the fuel that is burned goes into the environment.

And, generally, they either go up a stack or they will go into some condenser cooling water. In the case of a conventionally-fired plant they go both ways. In the case of nuclear plants, we have a new technology whereby we are able to get about 35 percent efficiency which means a few more B.t.u.'s dispersed into the environment. Since you do not discharge heat through a stack in a nuclear plant essentially all of the waste heat goes into the condenser cooling water. So, you are putting more of the heat into these areas by a nuclear plant than by a conventional plant. But as efficiency improves, of course, it will equalize. Moreover, this heated water is dispersed as a result of the cold water going into these areas and the overall ambient temperature will be about the same.

The three plants which the gentleman from Iowa mentioned in the area of Lake Michigan together undoubtedly put into Lake Michigan a minuscule quantity of heat compared to that which the sun daily puts into Lake Michigan just by shining on it. But instead of putting it all over the lake they put it in at these three relatively restricted locations, and in that immediate location there is some heating of the water over the normal temperature of the lake. However, as it spreads out, it equalizes the ambient temperature.

Unfortunately, the Federal Government has informally proposed a standard that the ambient temperature can only be exceeded by 1 degree in discharging water at any particular point. That, of course, is virtually impossible.

When it rains, the city of Chicago could not discharge into Lake Michigan the water from its storm drains under that regulation, because that storm water is at least 3 or 4 degrees above the ambient temperature of the lake. So, you would always have to pay some price to get rid of the storm water in the city of Chicago, and you have to pay some price by way of some potential changes in natural conditions in order to have power. However, net value should always be considered in regard to the price.

Mr. WOLFF. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from New York.

Mr. WOLFF. On that same question there appears an article in the New York Times that states as follows:

> The National Environmental Policy Act, signed last year with great fanfare, will be of very little use unless President Nixon tells his subordinates that it means exactly what it says. The Atomic Energy Commission, for one, has a notion that in licensing nuclear plants it has no authority even to consider a threat of thermal pollution, though the Act clearly enjoins all Government agencies to weight environmental factors in their decisions.

Are the factors of thermal pollution considered by the Atomic Energy Commission in the licensing of a plant?

Mr. HOSMER. Let me say to the gentleman that the New York Times in this case, as often in other cases, in search of some desirable objective, leaves a lot to be desired in the way it approaches these matters.

In the licensing procedure that has been established under the law and the procedure that has been followed up until the passage of the National Environmental Policy Act, the AEC was directed, authorized and had the power in its licensing proceedings to consider only matters having to do with radiation. But let me say that with the passage of this Environmental Policy Act, all governmental agencies, including the AEC, are required to take into consideration all environmental matters in connection with the major actions which they might take. The AEC interpreted the licensing of a nuclear powerplant as a major action and, therefore, it does, under this law, refer the papers and the situation to the Environmental Quality Council, the Department of the Interior, and all other interested Federal agencies.

Mr. HOLIFIELD. And to the States involved.

Mr. HOSMER. It is referred not only to these Federal agencies but to essentially any agency that has any relevant expertise at all for its recommendation with respect to the particular licensing procedure.

So, I say that the New York Times is substantially in error. It is way off course in this summary.

Mr. WOLFF. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I will yield further to the gentleman in just one moment, but first I want to yield to the gentleman from California.

Mr. HOLIFIELD. Mr. Chairman, I thank the gentleman for yielding, and I want to supplement what the gentleman says, because Congress passed the Water Quality Improvement Act of 1970 which continues the States' authority to control the water quality, and that includes whether it is too hot or too cold, as well as too dirty. The AEC must, as the gentleman says, take into consideration the Water Quality Improvement Act as well as the National Environmental Policy Act, which this Congress has passed.

Mr. HOSMER. The gentleman is entirely correct.

Mr. WOLFF. If the gentleman will yield, on that basis there seems to be somewhat of a conflict between the two gentlemen.

Mr. HOSMER. There is no conflict

whatsoever with respect to the advice of one of the Government agencies. The AEC follows those procedures with respect to the Water Quality Improvement Act, and it is met by the certification by the States of reasonable assurance that water quality standards will not be violated as is spelled out under that act.

Mr. WOLFF. If the gentleman will yield further, in the hearings that have been conducted at Shoreham, the hearing board referred over to the State the question of thermal pollution. Now, by referring it over to the State, am I to infer from that that this releases the Atomic Energy Commission from further consideration?

Mr. HOSMER. Of course not. The matter was referred to the State, insofar as the procedures were applicable, and its advice and certification are required under the Water Quality Improvement Act. The AEC on this same question also referred it over to the Interior Department and to other agencies and departments of the U.S. Government for such relevant advice on this same point that they were qualified to give in connection with this licensing procedure.

Mr. WOLFF. The hearing board will take into consideration, then, the advice of a State in making the final determination, or take into consideration the thermal pollution involved?

Mr. HOSMER. I think there should be a taking into consideration of environmental matters involved vis-a-vis the purpose and the need for a particular plant to produce electricity to meet the requirements of the community. In other words, there should be a balancing job in which nobody presumably will be allowed to get away with anything more than is reasonable in relation to the modus vivendi that has to be established in a high-energy society between the production of that energy and the environmental elements that are involved.

Mr. HOLIFIELD. If the gentleman will yield further, the AEC as a condition of granting a license requires that the applicant provide certification from the State in which the facility is located that it has met the water quality standards, and that came from the Committee on Public Works headed by the gentleman from California (Mr. JOHNSON).

Mr. HOSMER. I thank the gentleman for verifying exactly where the procedure is undergone.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I thank the gentleman from California for yielding.

I was going to merely amplify the point that I think has already now been made by the chairman of the committee, that in the actual writing of the construction permit the Atomic Energy Commission actually does write into each construction permit that is issued, each permit and operating license for a nuclear plant, an expressed condition that within 3 years of the date of this Water Quality Improvement Act that the licensee must submit to the AEC certification from the State involved that the discharges from the plant are or are planned to be within the applicable water quality standards, as they are promulgated by the State or other authority. So that is an expressed written condition in the licensing permit granted by the Atomic Energy Commission.

Mr. HUTCHINSON. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman.

Mr. HUTCHINSON. The gentleman referred in his remarks, and the chairman of the committee, to the prelicensing antitrust investigation by the Department of Justice.

My question is: Is this done prior to the construction permit or is it to be done prior to the operation permit?

Mr. HOSMER. The answer to that is in the report and it explains it. In connection with the application for the construction permit, that is the initial action. The antitrust investigation is made in the scope that is provided in the Atomic Energy Act.

Then, if the construction permit is granted and the antitrust procedures have been met, it will take up to 5 or 6 years for the plants to be built. As it nears the end of that construction period, the utility will go in for an operating license.

Now, unless there has been a significant change in the antitrust circumstances, it is not intended that there be a review de novo of the antitrust considerations. Only if there has been a substantial change in this regard, would it be intended that there be another investigation.

As a matter of fact, with respect to the pending applications for construction permits, but where the permit is not yet issued, the Atomic Energy Commission will establish such procedures to assure that this whole business does not have to be de novo, but that the equities on either side can be met without delaying the issuance of the construction permit.

Mr. HUTCHINSON. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I am delighted to yield to the gentleman.

Mr. HUTCHINSON. I certainly thank the gentleman for the clarification.

Perhaps the gentleman now in the well may have surmized that my question was prompted by the experience of two plants in my district in the State of Michigan. To the best of my knowledge, there never was any objection from anybody at the time the construction permit was granted. But now that the utility seeks an operation permit, the question of thermal pollution has completely tied up one of those plants. My concern was that this antitrust investigation would not amount to the same thing so that the utility could be permitted to expend millions of dollars in the construction of the plant.

Mr. HOSMER. The gentleman's concern is certainly well founded. We are trying to accomplish this with respect to this antitrust business.

The objections that have been made in the plants that the gentleman has referred to, have been made on any ground that could possibly be dredged up by people who either are just dead set against any nuclear power or who want to hold those particular plants for ransom for the installation of cooling towers and for the installation of certain very sophisticated type of radiation protection equipment.

Mr. Chairman, I have no further requests for time.

Mr. PRICE of Illinois. Mr. Chairman, concern has been expressed that this legislation would permit the Atomic Energy Commission to exempt a license applicant from the necessity of correcting an antitrust abuse included in a Commission finding where the Commission finds that the need for power in the area or other factors are overriding.

The committee, as stated in the report, expects the Commission normally to take care of both the need for energy as well as to remedy the situation where there has been an affirmative finding under paragraph (5). The report on page 31 in this respect states:

> While the Commission has the flexibility to consider and weigh the various interests and objectives which may be involved, the committee does not expect that an affirmative finding under paragraph (5) would normally need to be overriden by Commission findings and actions under paragraph (6). The Committee believes that, except in an extraordinary situation, Commission-imposed conditions should be able to eliminate the concerns entailed in any affirmative finding under paragraph (5) while, at the same time, accommodating the other public interest concerns found pursuant to paragraph (6). Normally, the committee expects the Commission's actions under paragraphs (5) and (6) will harmonize both antitrust and such other public interest considerations as may be involved.

Considerations involving "the need for power in the affected area" or "other factors" will not permit the Commission to ignore an adverse antitrust finding under paragraph (5) of subsection 105(c).

Paragraph (6) provides that the Commission may issue a license which is so conditioned as to require subsequent corrective action in regard to antitrust problems while allowing the construction or operation of the facilities by the applicant to go forward. Paragraph (6) gives the Commission the opportunity to help cure deficiencies from an antitrust standpoint while enabling timely construction and operation of nuclear power facilities. On the other hand, there may be situations where the Commission might conclude that the public interest would be better served by delaying the issuance of a license until antitrust problems are solved.

The bill provides for the creation of a separate board to hear antitrust issues, and as the report on the bill notes:

> The committee anticipates that all the functions contemplated by these paragraphs would be carried out before the radiological health and safety review and determination process is completed, so that the entire licensing procedure is not further extended in time by reason of the added antitrust review function.

Paragraph (5) does not preclude in any manner the right of the Department of Justice to pursue antitrust suits, civil

or criminal in nature, in the courts, whether or not there are involved parties, facts, or issues that were, or are being, considered by the Commission and nothing in the bill would preclude or limit the intervention or participation of the Department of Justice in proceedings before other regulatory agencies where antitrust issues are involved, and irrespective of whether they involve parties, facts, or issues pertinent to Commission proceeding.

The intent in this regard is made clear in the report on the bill which states:

The bill does not affect in any way the important features contained in the provisions of subsections 105 a. and 105 b. of the 1954 act. These subsections remain separate, distinct and wholly unaffected by the proposed revised subsection 105 c.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That paragraph (4) of subsection 31 a. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"(4) utilization of special nuclear material, atomic energy, and radioactive material and processes entailed in the utilization or production of atomic energy or such material for all other purposes, including industrial or commercial uses, the generation of usable energy, and the demonstration of advances in the commercial or industrial application of atomic energy; and".

SEC. 2. The second sentence of section 56 of the Atomic Energy Act of 1954, as amended, is amended to read as follows: "The Commission shall also establish for such periods of time as it may deem necessary, but not to exceed ten years as to any such period, guaranteed purchase prices for uranium enriched in the isotope 233 produced in a nuclear reactor by a person licensed under section 103 or section 104 and delivered to the Commission within the period of the guarantee."

SEC. 3. Section 102 of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"SEC. 102. UTILIZATION AND PRODUCTION FACILITIES FOR INDUSTRIAL OR COMMERCIAL PURPOSES.—

"a. Except as provided in subsections b. and c., or otherwise specifically authorized by law, any license hereafter issued for a utilization or production facility for industrial or commercial purposes shall be issued pursuant to section 103.

"b. Any license hereafter issued for a utilization or production facility for industrial or commercial purposes, the construction or operation of which was licensed pursuant to subsection 104 b. prior to enactment into law of this subsection, shall be issued under subsection 104 b.

"c. Any license for a utilization or production facility for industrial or commercial products constructed or operated under an arrangement with the Commission entered into under the Cooperative Power Reactor Demonstration Program shall, except as otherwise specifically required by applicable law, be issued under subsection 104 b."

SEC. 4. The first sentence of subsection 103 a. of the Atomic Energy Act of 1954, as amended, is amended to read as follows: "The Commission is authorized to issue licenses to persons applying therefor to transfer or receive in interstate commerce, manufacture, produce, transfer, acquire, possess, use, import, or export under the terms of an agreement for cooperation arranged pursuant to section 123, utilization or production facilities for industrial or commercial purposes",

SEC. 5. Subsection 104 b. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"b. As provided for in subsection 102 b. or 102 c., or where specifically authorized by law, the Commission is authorized to issue licenses under this subsection to persons applying therefor for utilization and production facilities for industrial and commercial purposes. In issuing licenses under this subsection, the Commission shall impose the minimum amount of such regulations and terms of license as will permit the Commission to fulfill its obligations under this Act."

SEC. 6. Subsection 105 c. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"c. (1) The Commission shall promptly transmit to the Attorney General a copy of any license application provided for in paragraph (2) of this subsection, and a copy of any written request provided for in paragraph (3) of this subsection; and the Attorney General shall, within a reasonable time, but in no event to exceed 180 days after receiving a copy of such application or written request, render such advice to the Commission as he determines to be appropriate in regard to the finding to be made by the Commission pursuant to paragraph (5) of this subsection. Such advice shall include an explanatory statement as to the reasons or basis therefor.

"(2) Paragraph (1) of this subsection shall apply to an application for a license to construct or operate a utilization or production facility under section 103: *Provided, however,* That paragraph (1) shall not apply to an application for a license to operate a utilization or production facility for which a construction permit was issued under section 103 unless the Commission determines such review is advisable on the ground that significant changes in the licensee's activities or proposed activities have occurred subsequent to the preview review by the Attorney General and the Commission under this subsection in connection with the construction permit for the facility.

"(3) With respect to any Commission permit for the construction of a utilization or production facility issued pursuant to subsection 104 b. prior to the enactment into law of this subsection, any person who intervened or who sought by timely written notice to the Commission to intervene in the construction permit proceeding for the facility to obtain a determination of antitrust considerations or to advance a jurisdictional basis for such determination shall have the right, upon a written request to the Commission, to obtain an antitrust review under this section of the application for an operating license. Such written request shall be made within 25 days after the date of initial Commission publication in the Federal Register of notice of the filing of an application for an operating license for the facility or the date of enactment into law of this subsection, whichever is later.

"(4) Upon the request of the Attorney General, the Commission shall furnish or cause to be furnished such information as the Attorney General determines to be appropriate for the advice called for in paragraph (1) of this subsection.

"(5) Promptly upon receipt of the Attorney General's advice, the Commission shall publish the advice in the Federal Register. Where the Attorney General advises that there may be adverse antitrust aspects and recommends that there be a hearing, the Attorney General or his designee may participate as a party in the proceedings thereafter held by the Commission on such licensing matter in connection with the subject matter of his advice. The Commission shall give due consideration to the advice received from the Attorney General and to such evidence as may be provided during the proceedings in connection with such subject matter, and shall make a finding as to whether the activities under the license would create or maintain a situation inconsistent with the antitrust laws as specified in subsection 105 a.

"(6) In the event the Commission's finding under paragraph (5) is in the affirmative, the Commission shall also consider, in determining whether the license should be issued or continued, such other factors, including the need for power in the affected area, as the Commission in its judgment deems necessary to protect the public interest. On the basis of its findings, the Commission shall have the authority to issue or continued a license as applied for, to refuse to issue a license, to rescind a license or amend it, and to issue a license with such conditions as it deems appropriate.

"(7) The Commission, with the approval of the Attorney General, may except from any of the requirements of this subsection such classes or types of licenses as the Commission may determine would not significantly affect the applicant's activities under the antitrust laws as specified in subsection 105 a.

"(8) With respect to any application for a construction permit on file at the time of enactment into law of this subsection, which permit would be for issuance under section 103, and with respect to any application for an operating license in connection with which a written request for an antitrust review is made as provided for in paragraph (3), the Commission, after consultation with the Attorney General, may, upon determination that such action is necessary in the public interest to avoid unnecessary delay, establish by rule or order periods for Commission notification and receipt of advice differing from those set forth above and may issue a construction permit or operating license in advance of consideration of and findings with respect to the matters covered in this subsection: *Provided,* That any construction permit or operating license so issued shall contain such conditions as the Commission deems appropriate to assure that any subsequent findings and orders of the Commission with respect to such matters will be given full force and effect."

SEC. 7. Subsection 161 n. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"n. delegate to the General Manager or other officers of the Commission any of those functions assigned to it under this Act except those specified in section 51, 57 b., 61, 108, 123, 145 b. (with respect to the determination of those persons to whom the Commission may reveal Restricted Data in the national interest), 145 f., and 161 a.;"

SEC. 8. The first proviso in subsection 161 v. of the Atomic Energy Act of 1954, as amended, is amended to read as follows: *Provided,* That (i) prices for services under paragraph (A) of this subsection shall be established on a nondiscriminatory basis; (ii) prices for services under paragraph (B) of this subsection shall be no less than prices under paragraph (A) of this subsection; and (iii) any prices established under this subsection shall be on a basis of recovery of the Government's costs over a reasonable period of time:"

SEC. 9. Subsection 182 c. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"c. The Commission shall not issue any license under section 103 for a utilization or production facility for the generation of commercial power until it has given notice in writing to such regulatory agency as may have jurisdiction over the rates and services incident to the proposed activity; until it has published notice of the application in

such trade or news publications as the Commission deems appropriate to give reasonable notice to municipalities, private utilities, public bodies, and cooperatives which might have a potential interest in such utilization or production facility; and until it has published notice of such application once each week for four consecutive weeks in the Federal Register, and until four weeks after the last notice."

SEC. 10. The first sentence of subsection 191 a. of the Atomic Energy Act of 1954, as amended, is amended to read as follows: "Notwithstanding the provisions of 7(a) and 8(a) of the Administrative Procedure Act, the Commission is authorized to establish one or more atomic safety and licensing boards, each comprised of three members, one of whom shall be qualified in the conduct of administrative proceedings and two of whom shall have such technical or other qualifications as the Commission deems appropriate to the issues to be decided, to conduct such hearings as the Commission may direct and make such intermediate or final decisions as the Commission may authorize with respect to the granting, suspending, revoking or amending of any license or authorization under the provisions of this Act, any other provision of law, or any regulation of the Commission issued thereunder."

SEC. 11. Subsection 274 h. of the Atomic Energy Act of 1954, as amended, is amended to read as follows:

"h. Any Government agency designated by the President is hereby authorized and directed to enter into and administer an arrangement with the National Council on Radiation Protection and Measurements for a comprehensive and continuing review of basic radiation protection standards, and the scientific bases therefor, pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use or control of atomic energy, and an arrangement with the National Academy of Sciences for a comprehensive and continuing review of the biological effects of radiation on man and the ecology in order to provide information pertinent to basic radiation protection standards. The respective scopes of the arrangements may, in the discretion of the President or the designated Government agency, also encompass exposure to the effects of radiation from sources other than the development, use or control of atomic energy. The respective arrangements shall require—

"(1) the conduct by the National Council on Radiation Protection and Measurements of a full-scale review of the radiation protection guides presently in effect by virtue of the recommendations of the Federal Radiation Council, and of all available scientific information;

"(2) the conduct by the National Academy of Sciences of a full-scale review of the biological effects of radiation, including all available scientific information;

"(3) consultations between the National Council on Radiation Protection and Measurements and the National Academy of Sciences to assure effective coordination between these bodies to serve the objective of the arrangements;

"(4) consultations by the National Council on Radiation Protection and Measurements and by the National Academy of Sciences, respectively, with scientists outside and within the Government;

"(5) the preparation and submittal by the National Council on Radiation Protection and Measurements to the President, or to the Government agency administering the arrangements, and to the Congress, by December 31, 1970, of its first complete report of its review activities, which shall also set forth its recommendations respecting basic radiation protection standards and the reasons therefor;

"(6) the maintenance by the National Council on Radiation Protection and Measurements of reasonably thorough knowledge of scientific matters pertinent to basic radiation protection standards within the scope of the arrangement, including studies and research previously performed, currently in progress or being planned;

"(7) such recommendations by the National Council on Radiation Protection and Measurements and the National Academy of Sciences respecting the conduct of any studies or research directly or indirectly pertinent to the basic radiation protection standards, or the biological effects of radiation on man and the ecology, under the respective scope of each arrangement, as either body deems advisable from time to time;

"(8) the furnishing of scientific information and advice by the National Council on Radiation Protection and Measurements and by the National Academy of Sciences, within the respective scopes of the arrangements, to the President, Government agencies, the states, and others, at the request of the President or the Government agency administering the arrangements;

"(9) the furnishing of scientific information and advice by the National Council on Radiation Protection and Measurements and by the National Academy of Sciences, within the respective scopes of the arrangements, to the Congress pursuant to the request of any Committee of the Congress;

"(10) the preparation and transmittal to the President or to the Government agency administering the arrangements, and to the Congress, by the National Council on Radiation Protection and Measurements and by the National Academy of Sciences, at the end of each calendar year subsequent to 1970, of a report covering their respective review activities during the year; the report by the National Council on Radiation Protection and Measurements shall also set forth any significant scientific developments relative to basic radiation protection standards, including any recommendations; and the report by the National Academy of Sciences shall set forth any significant scientific developments bearing on the biological effects of radiation on man and the ecology including recommendations;

"(11) the preparation and transmittal to the President, or to the Government agency administering the arrangements, and to the Congress, by the National Council on Radiation Protection and Measurments, of a prompt report of any significant changes which it deems advisable to recommend in regard to its previous recommendations respecting basic radiation protection standards or the scientific bases therefor and not theretofore identified in its reports; and

"(12) the conduct of the activities of the National Council on Radiation Protection and Measurements and of the National Academy of Sciences, under the respective arrangements, in accordance with high substantive and procedural standards of sound scientific investigation and findings.

"Reports received from the National Council on Radiation Protection and Measurements and the National Academy of Sciences under the arrangments shall be promptly published by the Government agency administering the arrangements. All recommendations, in such reports by the National Council on Radiation Protection and Measurements, respecting basic radiation protection standards pertinent to the health and safety aspects of exposure to radioactivity resulting from the development, use or control of atomic energy, shall be carefully considered by any Government agency having authority to establish such standards and, within a reasonable period of time, such Government agency shall submit to the Joint Committee a report setting forth in detail its determinations respecting the recommendations and the measures, revisions, or other actions it proposes to take, adopt, or effect in relation to the recommendations."

Mr. HOLIFIELD (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOLIFIELD. Mr. Chairman, the committee has no amendments to offer and knows of no amendments.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. BURKE of Massachusetts, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 18679) to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes, pursuant to House Resolution 1227, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HOSMER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 346, nays 0, not voting 83, as follows:

[Roll No. 324]

| Long, La. | Pickle | Yates |
| Lowenstein | Pirnie | Zablocki |
| McClory | Powell | |

So the bill was passed.

The Clerk announced the following pairs:

Mr. Thompson of New Jersey with Mr. Taft.
Mr. Hébert with Mr. Gerald R. Ford.
Mr. Hays with Mr. Ayres.
Mr. Brooks with Mr. Cederberg.
Mr. Murphy of New York with Mr. Pirnie.
Mr. Celler with Mr. Fish.
Mr. Zablocki with Mr. Harsha.
Mr. Rostenkowski with Mr. Martin.
Mr. Green of Pennsylvania with Mr. Cramer.
Mr. Fulton of Tennessee with Mr. Brock.
Mr. Edwards of Louisiana with Mr. Burton of Utah.
Mr. Long of Louisiana with Mr. Bray.
Mr. Cabell with Mr. Derwinski.
Mr. Aspinall with Mr. Foreman.
Mr. Hull with Mr. Betts.
Mr. Jones of North Carolina with Mr. Wold.
Mr. Miller of California with Mr. Robison.
Mr. Nedzi with Mr. Weicker.
Mr. Nichols with Mr. Roudebush.
Mr. Olsen with Mr. Lloyd.
Mr. Pickle with Mr. Bush.
Mr. Shipley with Mr. McClory.
Mr. Staggers with Mr. Watson.
Mr. Daddario with Mr. Meskill.
Mr. Colmer with Mr. Reifel.
Mr. Scheuer with Mr. Powell.
Mr. Lowenstein with Mrs. Chisholm.
Mr. Abbitt with Mr. Kleppe.
Mr. Mann with Mr. MacGregor.
Mr. Pepper with Mr. O'Konski.
Mr. Fisher with Mr. de la Garza.
Mr. Flood with Mr. Johnson of Pennsylvania.
Mr. Gilbert with Mr. Conyers.
Mr. Satterfield with Mr. Dowdy.
Mr. Stratton with Mr. Button.
Mr. Fallon with Mr. Beall of Maryland.
Mr. Tunney with Mr. Feighan.
Mr. Yates with Mr. Farbstein.
Mr. Melcher with Mr. Ottinger.

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on H.R. 18679, the bill just passed, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California

There was no objection.

## ANNOUNCEMENT OF PROGRAM

(Mr. MILLS asked and was given permission to address the House for 1 minute.)

Mr. MILLS. Mr. Speaker, I have been asked by the Speaker to advise the membership of the House that immediately upon the conclusion of House consideration of H.R. 19444, there will be considered a conference report on an appropriation bill.

The SPEAKER. By unanimous consent.

Mr. MILLS. By unanimous consent.

## PROVIDING FOR GUARDS TO ACCOMPANY AIRCRAFT OPERATED BY U.S. AIR CARRIERS

Mr. MILLS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 19444), to authorize for a temporary period the expenditure from the airport and airway trust fund of amounts for the training and salary and expenses of guards to accompany aircraft operated by U.S. air carriers, to raise revenue for such purpose, and to amend section 7275 of the Internal Revenue Code of 1954 with respect to airline tickets and advertising.

The SPEAKER. The question is on the motion offered by the gentleman from Arkansas.

The motion was agreed to.

The SPEAKER. The Chair designates as Chairman of the Committee of the Whole the gentleman from Rhode Island, (Mr. ST GERMAIN), and requests that the gentleman from New York (Mr. ROONEY) temporarily assume the chair.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 19444, with Mr. ROONEY of New York (Chairman pro-tempore) in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN pro tempore. Under the rule, the gentleman from Arkansas (Mr. MILLS) will be recognized for 30 minutes, and the gentleman from Wisconsin (Mr. BYRNES) will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Arkansas (Mr. MILLS).

Mr. MILLS. Mr. Chairman, I yield myself 5 minutes.

The CHAIRMAN. The gentleman from Arkansas is recognized.

Mr. MILLS. Mr. Chairman, H.R. 19444 is designed to authorize certain expenditures to be made from the Airport and Airway Trust Fund, and for certain revenues to be provided for that fund to compensate for the additional expenditures from that fund. The bill covers a very important subject matter, and is a matter with which I believe all of the Members of the House will be concerned.

In brief, the bill would authorize for a temporary period, actually a period beginning November 1, 1970, and extending through June 30, 1972, expenditures from the Airport and Airway Trust Fund of amounts required for the training, salaries, and expenses of guards to accompany aircraft operated by U.S. flag air carriers.

In order to finance the payments from the trust fund for this purpose, the bill provides for a temporary increase in the domestic airline ticket tax from 8 to 8.5 percent and a temporary increase in the international travel facilities tax from $3 to $5 per person departing the United States. Both of these increases would be temporary in nature covering only the period beginning November 1, 1970, and ending June 30, 1972.

This bill is in response to the increasing occurrence and the violent nature of aircraft hijacking and the mounting danger therefrom to the lives of airline passengers. In brief, the bill for a temporary period will raise the revenue and authorize expenditures from the Airport and Airway Trust Fund for the training, salaries, and the expenses of these aircraft guards.

Let me emphasize—so there will be no mistake about it—that the bill deals solely with providing revenue for payment of guards out of the trust fund. It does not by any means, nor is it intended to provide a greater authorization for the use of guards than is already provided under existing law. This is clearly set forth in the committee report. The bill deals only with the means of payment of these guards and the raising of revenue for that purpose. These are matters, of course, solely within the jurisdiction of the Committee on Ways and Means.

Mr. Chairman, this bill is a part of a seven-point program outlined by the President on September 11 to deal with the problem of air piracy. Other parts of the program include extension of the use of electronic surveillance equipment, development of other security measures, including new methods for detecting weapons and explosive devices, consultation with other governments concerning a full range of techniques to foil hijackers, promotion of a multilateral convention providing for extradition or punishment of hijackers, and the urging of a meeting of the U.N. Security Council to consider this vexing worldwide problem.

In line with the President's program, the Committee on Ways and Means believes that the Secretary of Transportation and other interested agencies should continue and accelerate their program of research on an emergency basis as to ways of protecting persons and property aboard aircraft, as well as the aircraft themselves. To implement this view, the committee has requested the Secretary of Transportation to conduct such an emergency program of research and to report back to the Congress his findings and recommendations, including ways of financing them, within 1 year of the date of enactment of this bill.

The committee also expects the Department of Transportation to see to it that as rapidly as possible detection equipment is installed and operated at all appropriate places, and that so far as possible this program is designed to meet not only the hijacking problem but other dangers to passengers and property as well. The Secretary of Transportation has indicated that positive action will be taken on these problems.

Mr. Chairman, the urgent need for an answer to the problem of air piracy was highlighted in testimony by the Secretary of Transportation in public hearings held last week in the Committee on Ways and Means. The statistics now show that during the 7 years, 1961 through 1967, there were only seven successful aircraft hijackings and five unsuccessful attempts to hijack U.S. aircraft; during 1968, there were 18 successful hijackings and four unsuccessful attempts; during 1969 there were 33 successful hijackings and seven unsuccessful attempts; and thus far this year there have been 16 successful hijackings and four unsuccessful attempts.

The recent hijackings in the Middle East leave no room in my mind for doubt that the personal safety of the passengers and crews is very much endangered today.

Mr. Chairman, while the longer run measures in the President's program are under consideration and development, this bill provides for temporary affirmative action designed to deter the despicable hijacking of airplanes and the endangering of the lives of innocent passengers. It is temporary in nature and it will provide time for the appropriate agencies to explore whether the payment for guards in this manner represents the best solution to this problem, or whether this program will continue for a longer period of time. The committee is convinced that it is essential that the bill be enacted into law at this time.

Mr. Chairman, the Secretary of Transportation indicated that the administration had submitted to the Senate Appropriations Committee a fiscal year 1971 budget amendment in the amount of $28 million to finance the guard program, with language making the funds available contingent upon the increased revenues provided in this bill. He stated that this amount would cover the costs of the guard program for the remainder of the current fiscal year, and that the $28 million would permit the hiring and training of approximately 2,500 guards—with this number to be reached as soon as possible.

It is estimated that the additional tax collections from the increased ticket taxes will be $29 million in fiscal 1971. I should point out here that the estimated additional collections is approximately the amount requested before the Senate Appropriations Committee by the administration. In fiscal 1972, collections from the increased ticket taxes are estimated to be $57.3 million. This is also near the amount of the projected cost of the guard program for the full fiscal 1972.

The committee believes that it is appropriate that the cost of the Government guards aboard the U.S.-flag air carriers should be paid for by those who use these transportation facilities. As noted in the committee report, this is comparable to situations where guards were used on transportation facilities in the past wherein the guards and the costs of the guards were customarily provided for directly by the carriers. As a result, the committee decided to finance the cost of training, salaries, and other expenses of these guards through the airport and airway trust fund, which in large part is a user-financed fund established by the Airport and Airway Revenue Act of 1970.

Mr. Chairman, the last part of this bill deals with a provision in the Airport and Airway Revenue Act of 1970. This relates to the requirement that the ticket and the advertising of fares show only the total of the basic air fare and the domestic ticket tax, and that the separate statement of the air fare and the tax on the ticket or in the advertising of fares is prohibited. Concern has been expressed that this previous legislation may have the effect of hiding the Federal ticket tax from the purchaser of the ticket.

I might note to my colleagues that the legislation did not prevent the statemen on the ticket or in advertising of fares that the total price included an 8-percent Federal excise tax, nor did the legislation prohibit any airline employee or ticket agent from directly informing the purchaser of a ticket the specific amount of the tax.

Mr. Chairman, the amendment in this bill clears up this misunderstanding; at the same time it maintains the basic intent of the initial legislation to insure a statement of the total cost to the air passenger. To achieve this, the bill continues to require the showing of the total price to be paid—including the tax—both on the ticket and in the advertising of air fares. However, the bill removes the prohibition against a separate statement of the basic fare and the ticket tax. Thus, the airlines and travel agents will be in a position to show on the airline ticket and in the advertising of fares both the amount of the fare excluding tax and the amount of the tax as long as the total of these two amounts to be paid by the purchaser is also shown.

I urge the approval of the bill.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I am glad to yield to the gentleman from Missouri.

Mr. HALL. I appreciate the distinguished gentleman, the chairman of the Committee on Ways and Means, yielding.

Did I correctly understand the gentleman to say that no part of this tax will be hidden from the customer at the airlines?

Mr. MILLS. That is right. Under the provision of existing law they cannot write on the ticket anything except the total amount. We modify that provision, so that the airlines can write on the ticket, the fare plus the tax and come to a total figure.

Mr. HALL. This bill will go even further than making this new add-on tax for the trust fund available to the consumers. It will repeal that change which the other body hung onto the previous bill as a Christmas tree ornament.

Mr. MILLS. The gentleman is correct in stating that the bill removes the prohibition against stating the tax and the fare separately on the ticket and in the advertising.

Mr. HALL. Would there be anything in this bill or authorization that could be interpreted as the law, if it becomes law, as implemented by regulation, as paying the various airlines for the travel space occupied by these guards?

Mr. MILLS. No; but the Secretary of Transportation informed the committee that all of the airlines will provide space on the plane for the guards free of any charge. Of course, in addition they will be provided with their meals while on the planes free of any charge. The Air Transport Association informed the committee that they want these air guards on these planes.

Mr. HALL. I certainly should think it would be to their advantage, rather than to have their planes wantonly blown up in some desert airport.

Mr. MILLS. My friend from Missouri probably knows that the airlines do not like this idea, of course, of this cost of the guards being paid for out of the Airport and Airway Trust Fund through this additional tax. They would prefer, of course, as everybody else prefers, that everything be paid for out of the already heavily encumbered general fund. We are already providing some money available for airports and airway safety from the general fund, in addition to what is collected and deposited into this trust fund. It looks like the claims against the general fund will build up if we are not careful.

Mr. HALL. I will say to the chairman of the committee, as one of the heavy users of airlines, I am willing to pay for this, and I believe they should be.

I hope the Judiciary Committee will back up this protection and that the necessary committees—if, indeed, it is not under this committee—will see to it that there is additional backing with respect to findings and arrests they make, in addition to the protection they provide; and, finally, I hope they will not be prosecuted, as some of our soldiers and marines are being prosecuted when they execute the laws.

Mr. MILLS. I know my friend from Missouri will be interested in the point made by the Department of Transportation, either by the Secretary or by Mr. Shaffer of the FAA, when it was stated that for the average ticket—and this is just the average—the tax would be increased by only 21 cents as a result of this additional one-half of 1 percent tax.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I am glad to yield to my colleague on the committee.

Mr. VANIK. I would appreciate it if our distinguished chairman would tell the Committee about the effect of the increase in the tax to 8½ percent, on the increased fare structure that was recently authorized by the CAB permitting the rounding off of fares.

Mr. MILLS. Yes.

Mr. VANIK. Will this result in an increased fare schedule?

Mr. MILLS. In many instances it will not result in an increase in the total amount paid. Whenever they rounded off to the nearest dollar in the past, they may for example have gained a fare increase of 50 cents. If the new tax results in a 25-cent increase it is my understanding that they will still round to the same next highest dollar under that new scheduling of fares. As a result there would not be any increase in that particular ticket, if the amount of the additional tax were only 25 cents, or even if it were 40 cents.

Mr. VANIK. It would be considered within the original rounding off?

Mr. MILLS. That is my understanding, although, of course, how fares are worked out is a matter for the CAB and not a matter to be dealt with in tax legislation.

The CHAIRMAN. The time of the gentleman from Arkansas has again expired.

Mr. MILLS. Mr. Chairman, I yield myself 2 additional minutes.

Mr. MACDONALD of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Massachusetts.

Mr. MACDONALD of Massachusetts. I want to compliment the gentleman for taking some action in this very dangerous field. I was wondering if the gentleman could explain whether or not the pilots association or the airlines testified on having these guards.

Mr. MILLS. The pilots did not appear before the committee, but the Air Transport Association representative did appear. He was strongly in favor of these air guards. He differed with the recommendation of the Secretary of Transportation in that he wanted the cost of it to be paid out of the general fund of the Treasury and not out of the trust fund. He did not want the ticket tax to be increased to 8½ percent. However, the association was in agreement that this was a wise step to put these guards on these planes.

Mr. MACDONALD of Massachusetts. As the gentleman knows, I am a member of the Committee on Interstate and Foreign Commerce, which has jurisdiction over aeronautics matters. I have received a good deal of mail and I am sure other members of the committee have, also, from pilots and airlines suggesting that this may be an even more dangerous practice than not having guards. They are very troubled about the fact that bullets may be flying around these pressurized aircraft. While, of course, nobody questions the gentleman's authority or the authority of his committee to raise the taxes, my question, sir, is this: Is it necessary to protect the public or, when this scheme or this plan goes into effect, can you assure the committee that this will indeed improve the safety aspects of the traveling public with respect to conditions existing during a hijacking?

Mr. MILLS. My friend from Massachusetts knows that I would always be reluctant to give any assurance that I could not back up myself. The Secretary of Transportation told our committee that the mere fact that it was known publicly that guards would be on planes—whether or not there happened to be a guard on a particular plane was immaterial—it would have a deterrent effect to anyone taking out a pistol and trying to get to the pilot to get him to take him to Cuba or somewhere else. I have been told that if nothing better could be done, this guard then would be expected to disarm this hijacker to keep him from taking the passengers to some other destination. However, I could not give the gentleman that assurance.

Let me also point out on this entire subject matter that whether there will be guards on these planes is a matter in the jurisdiction of the gentleman's committee. The Secretary of Transportation says that in existing law there is authority to use guards. Those guards are presently on these planes. The only question remaining is how shall they be paid. The Committee on Ways and Means felt that they should be paid from the trust fund and that the trust fund should not be depleted by $57 million a year, a full year's cost of operation, in view of the needs that already exist for other aspects of air safety. We should make additional money available to the trust fund, we felt, if the cost of guards was to be paid out of the trust fund. That is why we imposed this tax. The airlines, let me make it clear, wanted it to come out of the general fund, but that would have been a draw of $57 million on the general fund. You and I know that the general fund does not have a surplus to meet this additional expense.

Mr. KAZEN. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Texas.

Mr. KAZEN. Mr. Chairman, how much money is it anticipated that this act will raise?

Mr. MILLS. About $57 million on a full-year basis. Almost the identical amount is the estimate of the cost, for a full year, to train and to pay the salaries and expenses of these guards that they put on the planes. They already have the guards on the planes. They have a request before the Committee on Appropriations of the other body for $28 million to pay for the salaries and expenses of these guards for the remainder of this fiscal year.

Mr. KAZEN. That is for the remainder of this year?

Mr. MILLS. Yes.

Mr. KAZEN. Mr. Chairman, if the gentleman will yield further, this is not in conflict with this tax that you are proposing here?

Mr. MILLS. No; there is no conflict. The Committee on Appropriations must appropriate money for the guards before any amount may be paid out of the trust fund, in addition to the action taken in this bill. The additional one-half of 1 percent provided by this bill merely goes into the trust fund, as does the 8 percent.

Mr. KAZEN. What will keep them from using the other funds?

Mr. MILLS. If necessary, they could use some of the other Airport and Airway Trust Fund moneys, or they can use less than the $57 million of additional revenue developed here. If they do, during this period of time, that excess money from the one-half percent would be used for the purposes of airport construction or airway operation and safety for which we provided funds in the Airport and Airway Revenue Act of 1970.

Mr. KAZEN. Suppose the one-half of 1 percent is not enough?

Mr. MILLS. Then they can use some of the revenues derived from the basic 8 percent or the other taxes going into the fund. They are not by this bill limited to the revenues from the one-half of 1 percent. They do not have to use

this new revenue for this specific purpose. The new revenue goes into the fund, and the Committees on Appropriations have to pass upon how much revenue in the fund will be used to pay the expenses of guards.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Indiana.

Mr. JACOBS. It seems to me that I saw something in the press about the President saying that present military personnel on active duty in Europe might be trained to assume these positions.

Mr. MILLS. Yes; upon release from active duty, I believe is what he said.

Mr. JACOBS. Mr. Chairman, if the gentleman will yield further, the matter that occurs to me is that it seems that between $12 and $14 billion a year is being spent for these security personnel in Europe and yet the first time we really have a specific security problem we have to go out and hire someone else.

Mr. MILLS. There are about 400, if I remember correctly what the Secretary said in his testimony before the committee, about 400 persons already in Government that they are drawing on right now to serve on these planes. They, perhaps, will have to make some reimbursement to the agency that actually employs them. However, I do not know about that. However, they plan to employ some 2,500 people. They will have quite a problem in selecting people with the proper temperament and providing them with the proper training because as I understand it the guarding of human life on these planes is no easy matter.

Mr. JACOBS. Mr. Chairman, if the gentleman will yield further, I think the point is well made by the Chairman. However, the only thing that occurs to me is this: Here we are spending between $70 billion and $90 billion for security in the United States when at the same time a Mig landed down in Florida a year or so ago. It would seem to me that out of the 300,000 military personnel, it is indicated that 2,000 cannot be selected who would have this type of training with which to do this particular job.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Illinois.

Mr. PUCINSKI. In the event we work out some international treaties with reference to the hijacking of these planes and it becomes unnecessary to use these marshals, what will happen to the unused funds?

Mr. MILLS. If that happens prior to the end of June 1972, there is no reason why Congress cannot repeal this new tax. The tax would not go on beyond July 1, 1972, anyway.

Mr. HUTCHINSON. Mr. Chairman, will the gentleman yield?

Mr. MILLS. I yield to the gentleman.

Mr. HUTCHINSON. I am sure that the gentleman is of course aware of the fact that there has been a lot of correspondence coming into the Members' offices relative to the fact that in the present law we did not provide for a separate listing of the tax.

Mr. MILLS. We are doing that in this bill.

Mr. HUTCHINSON. I just wanted to inquire about it.

Mr. MILLS. We are doing that in this bill. We repeal that provision that we enacted earlier.

Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. Moss).

Mr. MOSS. Mr. Chairman, this is a most unusual piece of legislation. It is a precedent-setting one in every respect. It is the first time to my knowledge that this great Nation has decided to tax the users to force them to pay for protection against piracy in international commerce. We are going to do this by levying $155 million of new taxes upon the users.

Mr. MILLS. Mr. Chairman, if the gentleman will yield, it will be $57 million.

Mr. MOSS. I have the figure of $155 million from the counsel of the Commerce Committee, over a 3-year period.

Mr. MILLS. $57 million per year for the first year.

Mr. MOSS. It is $57 million a year?

Mr. MILLS. Yes.

Mr. MOSS. And it is to continue for 2 years?

Mr. MILLS. Twenty months.

Mr. MOSS. The fact is this: That you are going to go from 8 percent a ticket to 8.5 percent, and that is an increase of about 6 or 7 percent immediately following an increase from 5 percent to the 8 percent. And for international passengers we started out with no head tax, and under the Airport and Airway Act we imposed a $3 head tax, and now it is going to be increased to $5, or an increase of 66⅔ percent.

And we are going to increase the number of guards from 20 to somewhere between 2,000 or 2,500, with undefined duties, without any hearing record showing whether or not it is the concensus of the best informed in the industry whether having these armed guards aboard these large planes might not provoke a greater danger to the passengers than it would prevent.

I do not know how well they are going to be trained, but I know that firing a shell into a vital system of these very complex aircraft could bring it to the ground far more rapidly than a hijacker.

I think that my views are concurred in by some pretty good experts. This bill is opposed by the Civil Aeronautics Board; it is opposed by the Air Transport Association, and it is specifically opposed by Pan-Am and TWA, two of the largest international carriers carrying the American flag into world commerce. They are not opposing it because of a conviction it would give greater security, and they are not opposing it because they want in any way to impair the security, they oppose it on two principles. I think the important principle is the one of the precedent of taxing American users to protect them from international piracy.

This Nation has always been able to carry that burden before. If this is a legitimate charge on the airway users trust fund, then why should we not impose a charge on the highway users trust fund and put special guards on trucks, because the hijacking of trucks in this Nation is reaching alarming proportions.

The value of commodities hijacked in commerce in this Nation every day is astronomical, it is running into the hundreds of millions of dollars every year, and are we going to look to this precedent now in the future? We should also look at this Federal bureaucracy and how it has the habit of sustaining itself forever, once given the seed to start.

What are we going to do in 1972 with the 2,000 or 2,500 specially trained guards working for the Federal Aviation Administration and, I assume, having acquired some standing as employees of that agency? What are we going to do with them? Cut them off suddenly on the 30th day of June and send them home? Or are we not going to have some more pressure to continue the tax and to continue the guards, again without one day's hearings as to what we really intend.

The chairman of the Committee on Ways and Means, a very distinguished Member of this House, is technically very correct when he said that the jurisdiction is with the Committee on Interstate and Foreign Commerce and that they have not in the Committee on Ways and Means impinged upon that jurisdiction.

But the fact is that the practical effect of this legislation is to expand the authority under the airport modernization act the purposes for which revenue raised in connection with it can be expended. We never had contemplated for one moment during the hearings on the authorization of that program the possibility of assessing charges for guards on commercial aircraft. To that extent this is an expansion, and a significant expansion. The committee the other day by a unanimous vote, as I recall it, voted to voice its objections to this method of bringing into being an agency or an expansion of an agency.

Mr. MILLS. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I am pleased to yield to the gentleman.

Mr. MILLS. I would call to the gentleman's attention the fact, and I know he knows this, that if you do not want guards on these planes then all in the world you have to do is to report legislation from your committee saying that they cannot be used. You have complete jurisdiction—and if the House goes along with it—that is the end of it.

Mr. MOSS. You can have guards on these planes under the same authority that will exist if you enact this. The only difference will be that you will not be assessing the users and you will be having the Government of the United States assuming its historical role of protecting those in commerce without leveying a charge upon the users.

It in no way impairs the authority of the Government to put guards on board. If they have the authority now, they have it whether or not the bill is passed. The difference is, who pays for it, and what principles do you put into law?

Mr. MILLS. Mr. Chairman, I yield 3 minutes to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I

wish to point out here that the statement of the gentleman from Massachusetts and the gentleman from California illustrates clearly that the question here is a question of substance with respect to airplanes and with respect to the control of them.

The dangers that the gentleman from Massachusetts raised are real dangers. We heard these matters for about a week on this question alone in our committee. At that time there was no recommendation for guards.

Now I recognize that other facts have occurred and I am in no sense condemning the Committee on Ways and Means for doing something as a short-term emergency measure.

But if this is the committee's intent, they need not recommend anything further than the first paragraph of the bill, which would permit the use of the airport and airway trust funds. The fund has just been established. It can be dipped into. It is true, of course, that it has to be fed by the general fund at the present time.

But it would stand behind and insure ultimate repayment of withdrawals from the general fund to meet an immediate emergency. There was no need for the Ways and Means Committee to establish a tax for 20 months at this time.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from California.

Mr. MOSS. Is not there a very important question as to liability? Who is liable in the event of a shooting up between these guards and hijackers?

Mr. ECKHARDT. It is very difficult to answer that question without exploring it in a hearing, but serious problems can be envisioned. Suppose, for instance, the pilot who is like the captain of the ship, tells the stewardess to go back and tell the U.S. marshal to subdue the hijacker. In the firing that ensues a fuel line is pierced which later requires the ship to make a forced landing causing injury to a great number of passengers. If this scenario had occurred in a situation in which all persons involved were employees of the airline, there might be a very real question of whether or not the negligence of the employees of the airline was the cause of ditching and subsequent injury of the passengers. But in this instance, the captain may not have been negligent because he acted reasonably in directing that the hijacker be subdued. It was the method used in subduing him that resulted in crippling the ship. But the marshal may not have been negligent either, because he was not aware that the shooting under the circumstances would cripple the plane. If all persons involved were employees of the airline, the airline might be held to the standard, as the principal, of prudent conduct performed by persons reasonably knowledgeable as to the technicalities and dangers involved in firing the pistol in a way that would not cripple the aircraft.

But you see, this raises the same kind of different questions that the distinguished gentleman from Massachusetts raised: For instance, the question of whether or not the presence of an armed guard increases or decreases risks to the passengers and crew. These are the kinds of questions we considered when we explored this problem of airline hijacking in our committee for about a week. At that time it was thought that a policy of coolness and restraint was the one most likely not to endanger lives; and experience supports this conclusion, because I do not believe any hijacking involving an American carrier has resulted in a single fatality to a passenger or a crewmember to date.

I understand that these questions may need to be reopened in view of the action of the Palestinian guerrillas but there are difficult questions involved that need to be explored.

Now, in the meantime, it would be perfectly proper for the President to do what he feels necessary to protect the public against subversion and violence. But it is urged by the distinguished chairman of the Ways and Means Committee and the distinguished minority member of that committee that the committee has not authorized any activity which the President cannot now do. The Ways and Means Committee may have been justified in going to the extent of simply releasing money from the airport and airway trust fund to get a short-term program started, but it acted wrongly in establishing a tax to be in effect for 20 months which more or less sets the stage for a permanent policy respecting airline safety.

Such policy is within the jurisdiction of the Interstate and Foreign Commerce Committee. If it is established, it is up to Ways and Means to determine whether or not a tax should be enacted. I do not think that these delicate questions should be decided in the atmosphere of panic after a 1-day hearing by the Ways and Means Committee. That committee has not technically invaded the jurisdiction of the Commerce Committee, but it has gone further than it should have gone in creating a sort of fait accompli respecting a wholly administrative policy decision designed to run for a considerable period of time.

Action of this kind by the executive department and by Congress is frequently a knee-jerk response to matters prominently in the news that should not be crystallized in congressional policy without having been more fully examined by the appropriate committee after adequate hearings.

The complaint that I am making at this time is that the Ways and Means Commitee has not done the minimum that needs to be done in the emergency, but has in fact acted in a way so that a decision is made which extensively entrenches on the jurisdiction of the Committee on Interstate and Foreign Commerce.

Mr. MILLS. Mr. Chairman, I yield 2 minutes to the gentleman from Ohio (Mr. VANIK) a member of the committee.

Mr. VANIK. Mr. Chairman, I support the bill. I supported it in the committee.

I want to take this time to call to the attention of the House to a matter that affects this whole subject in a related manner. Under emergency powers in the law, without asking anybody, without any action on the part of this Congress, the Department of Transportation committed the U.S. Government to $3.1 billion of coverage on aircraft involved in intercontinental travel. The liability is not yet complete. It could go as high as $10 billion. This is a contingent liability of the Federal Government which falls upon the shoulders of every taxpayer of this country.

I think we ought to be aware of the ease with which a stroke of the pen in the Department of Transportation or in the administration can commit this country to an insurance program that was never discussed in a committee of the Congress or never discussed in the Congress itself. Something must be done about these emergency powers which are used to put the Federal Government into the insurance business.

In this instance it may be necessary and right, but if the Government is going to be an insurer of last resort, what about the man whose house in the central part of the city is uninsurable?

If we are going to be insurers of last resort, I think we ought to think about someone other than the owners of aircraft, which in considerable part are the bankers of America, who own the mortgages on the aircraft. This aircraft insurance program to a good extent constitutes Government insurance on bank loans.

If we are going into the insurance business, the Congress ought to have a discussion of the question. The committees ought to go into the matter, and I think it is high time that we remove the emergency powers under which the administration insures intercontinental aircraft and under which it attempted to provide almost a billion dollars of coverage on Penn Central bank loans.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VANIK. I yield to the gentleman from Iowa.

Mr. GROSS. Where does the power originate?

Mr. VANIK. In the emergency powers of the President.

Mr. MILLS. Mr. Chairman, I yield 1 minute to the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Chairman, this is an emergency matter. It seems to me the committee has made it clear that it is an emergency matter. I hope the Interstate and Foreign Commerce Committee will bring out a comprehensive bill in the future. I want to congratulate the committee.

Mr. Chairman, I am pleased that the Ways and Means Committee has taken such prompt action in providing ways to fund the costs of having armed guards on commercial aircraft. I support this bill and I sincerely hope that the House Interstate and Foreign Commerce Committee will hold hearings in the near future on additional ways to prevent aircraft hijackings. I support an amendment to the administration proposal which falls under the jurisdiction of the

House Interstate and Foreign Commerce Committee, which would require the Secretary of Transportation to conduct an emergency program of research and development on ways to protect aircraft and persons and property aboard, and shall within 6 months from the enactment of this measure, report to Congress his findings and recommendations. The Secretary of Transportation may, in case of his finding of specific need and emergency, grant to any airline, upon application therefrom, up to 90 percent of the cost of any structural modification of aircraft that may be needed to accomplish the protections herein sought. The thrust of my amendment was endorsed by the Ways and Means Committee in the report on the legislation we are now considering.

I feel strongly that Congress should not only be concerned with what is to be done after an aircraft hijacking takes place, but more importantly, to aid in preventing air piracy from occurring in the first place.

Mr. MILLS. Mr. Chairman, if I have any time remaining, I yield it to the gentleman from California (Mr. VAN DEERLIN).

Mr. VAN DEERLIN. Mr. Chairman, I rise in opposition. This bill, in essence, would require that airline passengers pay a special tax in order to obtain the protection of their Government.

Recent events have dramatically demonstrated the need for armed guards on our commercial airliners. I certainly do not quarrel with the basic wisdom of the plan to hire and train about 2,500 of these guards during the current fiscal year.

But, I can and do take issue with the mechanism proposed by H.R. 19444 for financing this protection: an increase in the domestic air passenger ticket tax from 8 to 8.5 percent, plus $2 boost in the international travel facilities tax.

Enactment of this plan would represent a drastic break in our national tradition of a concerned Government giving—and I emphasize the "giving"—protection to any of our citizens with a legitimate need for it.

One glowing example: For years, the U.S. Coast Guard has diligently protected lives and property at sea—but no one has ever seriously suggested that a beleagued fisherman pulled from the water should pay for this help.

The costs of such assistance has always been assumed to be covered by our regular taxes. Adding a surtax, as H.R. 19444 would do, amounts to double taxation. The costs of the guards should be assessed against general funds, as has always been the case when endangered citizens turn to their Government for protection.

Mr. BYRNES of Wisconsin. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the gentlemen who were questioning this bill raised three points: First, there is the question of whether the Ways and Means Committee is usurping the jurisdiction of some other committee; second, there is a question of who will pay the cost—and somebody has to pay it—of the guards being put on the planes; and third, there is the question whether we are creating a precedent in financing these guards through a user tax.

In commenting on those three questioning, I will not comment on the remarks of the gentleman from Ohio (Mr. VANIK) because the subject he raised has nothing to do with this particular legislation. I think the gentleman made that point clear, but let me emphasize it to avoid confusion, because if we acted in that area, we would certainly be usurping the jurisdiction of the Committee on Banking and Currency, which was responsible for the original act under which the Department of Transportation was authorized to set up an insurance fund of this kind.

First, Mr. Chairman, in the matter of jurisdiction, this bill does not say that there shall be guards on planes or that there shall not be guards on planes. There is nothing in this legislation which affects that issue one way or the other. We are advised that present law authorizes the placing of guards on planes, and in fact, we have guards on some planes today.

If the Committee on Interstate and Foreign Commerce, or any other committee, feels it has jurisdiction in the area and objects to having guards on planes, all it would have to do would be to report in legislation saying so.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I thank the gentleman for yielding. I rise simply to be sure I understand the gentleman's statement that this bill authorizes or legalizes nothing which is not authorized or legalized today, and it does so neither directly nor indirectly. There is, for instance, a list on page 2 of the report, under "Reasons for the Bill," listing a seven-point program to deal with the problem of piracy. Then there is a specific outline of what the President intends to do, which is set forth, and there is reference to a number of specific activities.

Do I understand that if these activities are now legal, this bill only makes money available? If any of these activities or all of them are not legal, this bill does not by implication make them legal. Is that correct?

Mr. BYRNES of Wisconsin. That is my understanding, because all the gentleman need do is take up the bill itself and read what it says:

> Amounts in the Trust Fund shall also be available, as provided by appropriation Acts, to pay those obligations of the United States incurred before July 1, 1972, for the training, salaries, and other expenses of guards having the same powers as United States marshals to accompany aircraft operated by air carriers which are United States citizens.

We do not say that this authorizes the employment of guards. We say if there are to be guards under some other authority, this is the way the guards shall be paid. That is what we have done in this bill.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield further?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield to the chairman of the committee to respond to this question?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Arkansas.

Mr. MILLS. Mr. Chairman, I join myself with the remarks of the gentleman from Wisconsin in responding.

On page 1 of the report, down toward the bottom of the page, before the last full sentence, if the gentleman will look, he will see these words, "and in no way changes the existing authority to provide these guards."

Then, over on page 3 of the report, at the bottom of the page, beginning with the last paragraph, is this language:

> This bill, however, deals only with providing revenue for payment of guards and authorization for such payments out of the Airport and Airway Trust Fund. It does not, and is not intended to, provide a greater authorization for the use of guards than is already provided under existing law. It deals only with the payment of these guards and the raising of revenue.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. BYRNES of Wisconsin. Mr. Chairman, I yield myself 5 additional minutes.

Mr. MILLS. Thus I want to answer the gentleman's question in the affirmative; "Yes."

Mr. ECKHARDT. Mr. Chairman, will the gentlemen yield?

Mr. BYRNES of Wisconsin. I yield further to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman. Therefore, I understand this does not by implication recognize the existence of a pirate.

Mr. BYRNES of Wisconsin. We are not taking any position on that at all, because it is not in our jurisdiction. That is in the jurisdiction of the Committee on Interstate and Foreign Commerce as it relates to airplanes, at least, and probably as to railroads.

Mr. MILLS. Mr. Chairman, will the gentleman yield further?

Mr. BYRNES of Wisconsin. I yield further.

Mr. MILLS. The Secretary of Transportation made it quite clear in our committee that he needed no additional authority to employ guards; that he was already employing guards under existing authority given him by legislation coming from the gentleman's committee.

Mr. BYRNES of Wisconsin. That is the whole underlying presumption of the form of this legislation as it is here before us.

Now we come to the second question, concerning who is going to pay the cost of providing these guards? I believe it is the hope of every member of the Ways and Means Committee, and the hope of every Member of Congress, that a better system, a more certain system, can be developed to provide protection against hijacking and other acts which adversely affect the proper rendering of airline service today. We have specifically asked the Secretary of the Department of Transportation to focus, in a most intensive way, on this problem, with the aim of developing new techniques.

We know, however, that this cannot be accomplished in only a week or two. Spe-

cific action on the problem is required now while our efforts are proceeding in all of these areas. We make it clear in the bill that this provision to pay for the guards is not permanent. It will expire in 20 months. At that time the financing provided in this bill would expire. Concurrent with this expiration we can take a careful look at the situation.

But, who is going to pay the cost of this protection in the meantime? I am reminded of the old stage coach "shotgun rider" in the frontier days. There is no record that Uncle Sam ever paid for that shotgun rider, yet I suppose he had to be there to protect the passengers, the mail, and the freight. However, it was the stage coach company that paid for the protection.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman.

Mr. MOSS. Is there any record that Uncle Sam ever ordered the collection of a special tax to pay for those guards riding on the old stage coach?

Mr. BYRNES of Wisconsin. We did not have to, because it was not a charge against Uncle Sam. The party who had to pay was the one rendering the service. Of course it was passed on to the customer. There is no question about that.

But admittedly, we do not have many precedents to guide us in this area. There are most unusual circumstances we have today. There is no question about that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BYRNES of Wisconsin. Mr. Chairman, I yield myself 5 additional minutes.

Mr. HALEY. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. Surely; I yield to the gentleman.

Mr. HALEY. I would like to tell the gentleman this: We have had these hijackings going on for approximately 3 years now, and I am very happy that some committee of the Congress has come up and tried to do something to stop this terrible situation.

Mr. BYRNES of Wisconsin. I thank the gentleman.

The question now is who pays for this protection. Why should the cost of providing this additional safety not be imposed on the user, just as many other safety measures that we provided for in the Airport and Airway Development Act of 1970. That is all that is suggested here.

While this program is in effect for the next 20 months it would require an increase of one-half of 1 percent in the domestic passenger tax, which now stands at 8 percent, and a $2 increase in the overseas tax, which is now $3.

Should we let the general fund pay for these costs? In the next fiscal year the general fund will already be tapped for nearly $500 million for airway and airport development. Are we going to put another burden on the general fund, when we know it is in no condition to stand the strain?

The general fund really should be relieved of burdens, instead of having new ones added. So, knowing this, we have provided this special tax. It is simply a question of who pays for the protection.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Texas.

Mr. ECKHARDT. I would like to ask a clarifying question.

As I understand it, the captain is in command of the plane as a captain is in command of a ship. If the guard is an employee of the United States but the captain is in direction of the plane and the captain is his principal, if the guard acts negligently, does an action rest against the airline, or is the guard and the airline isolated from recovery because of the sovereignty of the United States?

Mr. BYRNES of Wisconsin. We do not establish any change in liability by this particular bill. We did determine that the captain of the plane will be the one who is in charge of the plane.

Mr. MILLS. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Arkansas.

Mr. MILLS. This guard will have the status of a U.S. marshal. That means he is there for the purpose of maintaining law and order on this aircraft. He is in charge of the maintenance of law and order. In the instance that you talked about, under the provisions of existing law, as I understand the provisions, this person is acting as the agent not of the airlines but as the agent of the Federal Government. Any negligence on his part I would not think would subject the airlines to any prosecution, but the Federal Government might well be prosecuted.

Mr. BYRNES of Wisconsin. I think that was brought out in the hearings.

Mr. MILLS. It was.

Mr. BYRNES of Wisconsin. It is a general recognition of the fact that if the marshal were negligent, the individual would have recourse under the Federal Tort Claims Act against the Federal Government to the same extent as when damages are inflicted through the negligence of other Federal law-enforcement officers.

Now let me call your attention to the fact that we do have situations in this country where people render certain services which they feel calls for special protection. Many hotels, for example, hire house detectives. Many industrial plants feel they need special protection. We do not furnish them with special police protection. They have to hire it themselves, as do stores which have unusual problems with looting.

Generally, in a specific emergency, the local police force moves in to give people the protection they need. But there has never been, as I understand it, any precedent for the Federal Government to be responsible for providing special police protection on a continuing basis against risks that arise in the conduct of a given business. I think we have to bear this in mind with reference to the question of paying for protection against hijacking.

Surely, there is a legitimate question as to what is the best procedure to follow. But the majority of your committee—and in fact, all of the members present when the bill was reported out—believe that this was the appropriate way to do it.

So, we bring this bill to you on that basis. We do not bring it to you, however, with the idea of creating a precedent, about which some Members have expressed concern. On this point, Mr. Chairman, let me refer the Members of the Committee of the Whole House on the State of the Union to our committee report where we try to make this point amply clear by saying:

> Your committee does not believe that it is appropriate to view this temporary provision for charging for protection provided under emergency circumstances as a precedent for extending this to other areas.

Therefore, it is certainly understood by the committee, and I would hope it is understood by the membership of this House, that this is not in any way intended as the establishment of a precedent.

I trust, Mr. Chairman, that this bill will be approved by the House. I think it is a necessary action in a very serious emergency that we face.

Mr. Chairman, I yield back the balance of my time.

Mr. SCHMITZ. Mr. Chairman, while I thoroughly approve of the policy of placing armed guards in passenger airliners, proposed by President Nixon immediately after the recent concerted series of hijackings by Middle East revolutionaries and now embodied in legislation, I do not believe that we should require American passengers on American airlines to pay extra for the basic protection of life and limb which any American Government should provide for them by right. We do not ask the property owner to pay extra for police protection of his particular piece of property, nor do we ask the automobile driver to pay extra for the service of the highway patrol. Neither should we levy a tax on air travelers and an additional charge for their particular protection against violent crime. This cost, like basic law enforcement costs everywhere, should be borne equally by all taxpayers.

In keeping with my commitment to the voters who elected me, that I would never vote for an overall tax increase except in case of a war declared by Congress, I could not vote for this measure. However, I want to reiterate my conviction that armed guards on passenger airliners are urgently needed, to make it very clear to all prospective air hijackers that at long last we are taking firm action to halt their depredations.

Mr. MONAGAN. Mr. Chairman, international air piracy presents an immediate danger to the safety of domestic and international air travelers and I support H.R. 19444 to fund the training of guards to accompany aircraft operated by U.S. air carriers.

Earlier this month the world was shocked by several aircraft hijackings perpetrated by irresponsible and reckless combinations which proceeded to utilize innocent men, women, and children, as

well as the aircraft, as pawns to further their own political ends.

The four recent hijackings dramatically underscore the extreme vulnerability of air traffic to lawless individuals and groups and have created a heightened urgency for protective legislation.

Several months ago in the wake of an armed attack upon a commercial aircraft, I introduced House Congressional Resolution 534, urging the President to determine and undertake appropriate action to stop armed attacks upon aircraft in international air travel, and the Foreign Affairs Committee of which I am a member is presently holding hearings on that bill. That bill by directing the President to seek stronger international agreements governing air piracy, is a good adjunct to the bill we are considering today, and I am hopeful that the House will have an opportunity to act on the measure in this Congress.

The bill we are considering today provides funds for implementing the most urgent parts of the President's September 11 seven point proposal to deal with the problem of air piracy and I am happy to support the President's efforts to provide air travelers with this needed protection.

The bill enacts the administration's recommendation of raising revenues to finance the guard program by temporarily increasing the 8-percent excise tax on domestic air tickets to 8.5 percent and increasing from $3 to $5 the tax on international travel facilities. The question of financing the cost of the protection and detection program arose in hearings now underway in the Foreign Affairs Committee and in the course of the hearings, I pointed out that the costs for this service should be provided by international air travelers and should not come out of the general revenues of the Treasury. The new protections to be provided to international travelers and air carriers are tailored to their specific needs and I am pleased to note that the expenditures authorized by this bill will come out of the airport and airways trust fund as I suggested.

This measure is necessary and urgent, and I urge my colleagues to join me in voting for passage.

Mr. RARICK. Mr. Chairman, I certainly favor every action that can be taken to prevent hijacking of our aircraft and endangering the lives of the passengers. However, this bill, H.R. 19444 does nothing but raise taxes.

It seems to be the pattern of our time—that we allow the criminals to run rampant until the people at home demand action out of utter exasperation and then rather than utilize the existing police facilities, laws, and protection, we in Congress are called upon to solve the problem by raising taxes and adding an additional increment to the ever-increasing Federal police force.

I feel that had stringent measures been immediately applied, we would not now be calling for additional taxes.

We have ample criminal laws presently on the books which would deter kidnapping and hijacking, but we have never sufficiently enforced them but have permitted the offenders to become almost immune to punishment. We now find ourselves in such a position that out of desperation our Government is again asking the people for more money to hire a larger Federal police force.

With the exorbitant taxes my people are already paying and with the number of U.S. marshals and Justice Department employees swarming all over our southern schools to enforce racial balance, certainly those in leadership could find sufficient funds and manpower without penalizing the innocent air travelers' pocketbooks.

Although our southern classrooms quite frequently have guards the President has not suggested that the parents of schoolchildren pay the guards' salaries to protect children from violence.

A question of command is also presented by the placing of Federal guards having the same powers as U.S. marshals on commercial airliners. Who will be in command, the pilot or the U.S. marshal in cases of emergency? What will happen when their commands overlap?

Mr. Chairman, I regret that I must cast my people's vote against H.R. 19444.

Mr. RANDALL. Mr. Chairman, I oppose H.R. 19444, the armed guard tax bill, which provides for the further increase from 8 to 8½ percent in domestic airline ticket tax and the increase in the new international passenger tax from $3 to $5.

It should go without saying I am against hijacking and skyjacking as well as any other form of piracy wherever and whenever it may occur, whether in the air, on the ground, or on the seas. I have a long and consistent record for fighting crime of every kind. It is a matter of pride that I am the author of a discharge petition which some believe has prompted our judiciary committee to mark up and to report out the organized crime bill passed by the other body earlier this year, and which hopefully, will be passed by the House before we adjourn.

To conclude that any Member who opposes a bill that puts a special tax on a selected group to pay taxes for protection which should be given by their Government or by the carrier are therefore somehow in favor of hijacking, is absurd and ridiculous.

Never before in our history has there been a charge against users to provide law enforcement to protect our citizens against acts of international piracy. We have had to fight international piracy since the time of Thomas Jefferson, but there has never before been a request for a special tax to protect American citizens. In the days of President Jefferson the attacks was against our ocean shipping. Today, it is an attack against U.S. aircraft. Because of the current Mideast crisis our airplanes are an easy target. Yet it remains an indisputable fact there is no difference between paying Government personnel who defend attacks against United States flag aircraft and paying members of the FBI or any other U.S. law enforcement agents to protect and then to punish similar offenses against travel by rail, bus or ship.

What we are doing today by this special tax is very much like assessing a separate tax against a community because it happens to be the temporary scene of disorders which requires the National Guard to be called into town to restore order.

Along with everyone else, when the announcement was made, I applauded the placing of guards on U.S. air carriers. But I am against any further increase in taxes, and particularly a tax increase of this size, when the guards should be paid either by the airlines themselves or paid for out of general revenue.

To recapitulate, I am as much against hijacking as anyone in the Congress or any of our people outside of Congress. Yet, the best way to prevent skyjacking is to make a thorough and complete search of every one who gets on a plane. No one is compelled to travel by air. Air travel is not a right but a privilege. If air passengers refuse to submit to a thorough search, they can go by bus or by rail or by ship. Or not go at all. Many of the airlines have established devices that will detect metal objects hidden or concealed on a person. Personal searches are now being made of hand luggage on all flights daily and nightly right here at National Airport. This is all to the good and should be continued.

To oppose H.R. 19444 does not make one in favor of hijacking. It only means we are against a further increase in a new and special tax. Our citizens who travel by air should expect and receive security provided by the airlines. Then upon the carriers ommission or failure to do so, provision of Federal personnel should be paid for out of general revenue.

The CHAIRMAN. Under the rule, the bill is considered as having been read for amendment.

The bill is as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 208(f) (1) of the Airport and Airway Revenue Act of 1970 is amended by adding at the end thereof the following new sentence: "Amounts in the Trust Fund shall also be available, as provided by appropriation Acts, to pay those obligations of the United States incurred before July 1, 1972, for the training, salaries, and other expenses of guards having the same powers as United States marshals to accompany aircraft operated by air carriers which are United States citizens."

SEC. 2. Section 4261 of the Internal Revenue Code of 1954 (imposition of tax on transportation of persons by air) is amended by redesignating subsection (e) as subsection (f) and by inserting after subsection (d) the following new subsection:

"(e) TEMPORARY INCREASE IN RATES.—Effective with respect to transportation which begins after October 31, 1970, and before July 1, 1972—

"(1) in the case of amounts paid after October 31, 1970, and before July 1, 1972, the rate of the taxes imposed by subsections (a) and (b) shall be 8.5 percent in lieu of 8 percent, and

"(2) the rate of the tax imposed by subsection (c) shall be $5 in lieu of $3."

SEC. 3. (a) Section 7275 of the Internal Revenue Code of 1954 (relating to penalty for offenses relating to certain airline tickets and advertising) is amended to read as follows:

"SEC. 7275. PENALTY FOR OFFENSES RELATING TO CERTAIN AIRLINE TICKETS AND ADVERTISING.

"(a) GENERAL RULE.—In the case of transportation by air all of which is taxable transportation (as defined in section 4262) or would be taxable transportation if section 4262 did not include subsection (b) thereof—

"(1) the ticket for such transportation shall show the total of (A) the amount paid for such transportation, and (B) the taxes imposed by sections 4261 (a), (b), and (c), and

"(2) any advertising made by or on behalf of any person furnishing such transportation (or offering to arrange such transportation) which states the cost of such transportation shall state the total of (A) the amount to be paid for such transportation, and (B) the taxes imposed by sections 4261 (a), (b), and (c).

"(b) PENALTY.—Any person who violates any provision of subsection (a) is, for each violation, guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $100."

(b) The amendment made by subsection (a) shall apply to transportation beginning after the date of the enactment of this Act.

The CHAIRMAN. No amendments are in order except amendments offered by direction of the Committee on Ways and Means.

Are there any committee amendments?

Mr. MILLS. Mr. Chairman, there are no committee amendments.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ST GERMAIN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 19444) to authorize for a temporary period the expenditure from the airport and airway trust fund of amounts for the training and salary and expenses of guards to accompany aircraft operated by U.S. air carriers, to raise revenue for such purpose, and to amend section 7275 of the Internal Revenue Code of 1954 with respect to airline tickets and advertising, pursuant to House Resolution 1231, he reported the bill back to the House.

The SPEAKER. Under rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HALL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 323, nays 17, not voting 89, as follows:

[Roll No. 325]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Thompson of New Jersey with Mr. Ayres.

Mr. Hébert with Mr. Gerald R. Ford.

Mr. Hays with Mr. Betts.

Mr. Brooks with Mr. Bush.

Mr. Murphy of New York with Mr. Cederberg.

Mr. Celler with Mr. Fish.

Mr. Zablocki with Mr. Harsha.

Mr. Staggers with Mr. Foreman.

Mr. Green of Pennsylvania with Mr. O'Konski.

Mr. Fulton of Tennessee with Mr. Kleppe.

Mr. Edwards of Louisiana with Mr. Cramer.

Mr. Long of Louisiana with Mr. Pollock.

Mr. Cabell with Mr. Lloyd.

Mr. Aspinall with Mr. Burton of Utah.

Mr. Podell with Mr. Reifel.

Mr. Yates with Mr. Robison.

Mr. Miller of California with Mr. McClure.

Mr. Nedzi with Mr. Clancy.

Mr. Olsen with Mr. Pirnie.

Mr. Pickle with Mr. Derwinski.

Mr. Shipley with Mr. Martin.

Mr. McMillan with Mr. MacGregor.

Mr. Daddario with Mr. Meskill.

Mr. Colmer with Mr. Roudebush.

Mr. Scheuer with Mrs. Chisholm.

Mr. Lowenstein with Mr. Conyers.

Mr. Friedel with Mr. Brock.

Mr. Mollohan with Mr. Snyder.

Mr. Fisher with Mr. Taft.

Mr. Flood with Mr. Weicker.

Mr. Stratton with Mr. Button.

Mr. Fallon with Mr. Watson.

Mr. Tunney with Mr. Powell.

Mr. Landrum with Mr. Wold.

Mr. Melcher with Mr. Beale of Maryland.

Mr. Pepper with Mr. Bray.

Mr. Symington with Mr. Abbitt.

Mr. Dent with Mr. Rostenkowski.

Mr. Teague of Texas with Mr. Feighan.

Mr. de la Garza with Mr. Ottinger.

Mr. Satterfield with Mr. Smith of Iowa.

Mrs. Hansen of Washington with Mr. Farbstein.

Mr. Hull with Mr. Jones of North Carolina.

Mr. Mann with Mr. Dowdy.

Mr. REES changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

## GENERAL LEAVE TO EXTEND

Mr. MILLS. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may have 5 legislative days within which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

## PERMISSION FOR COMMITTEE ON EDUCATION AND LABOR TO SIT DURING THE REMAINDER OF THE DAY

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that the Committee on Education and Labor may be permitted to sit during the remainder of the evening, after 4 o'clock p.m., today.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

## CONFERENCE REPORT ON H.R. 17575, DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY, AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. ROONEY of New York submitted the following conference report and statement on the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 91-1548)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17575) "making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 5, 13, 14, 15, 32, and 33.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 4, 6, 7, 9, 12, 21, 22, 24, 25, 26, 27, 31, and 34 and agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$22,150,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$20,795,000"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$39,000,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,750,000"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amendment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$140,713,000"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$4,365,000"; and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$42,050,000"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment, as follows: In lieu of the sum named by said amendment insert "$9.00"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,050,000"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$15,485,000"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$4,033,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 2, 3, 17, 23, and 35.

STATEMENT

The managers on the part of the House at a conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments; namely:

TITLE I—DEPARTMENT OF STATE

*Administration of foreign affairs*

Salaries and Expenses

Amendment No. 1: Appropriates $221,850,000 as proposed by the Senate instead of $220,100,000 as proposed by the House.

Amendment No. 2: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the language of the Senate regarding the purchase of passenger motor vehicles.

Acquisition, Operation, and Maintenance of Buildings Abroad (Special Foreign Currency Program)

Amendment No. 3: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the language of the Senate regarding payments in Ceylonese rupees.

*International Organizations and Conferences*

Contributions to International Organizations

Amendment No. 4: Appropriates $140,911,000 as proposed by the Senate instead of $144,611,000 as proposed by the House.

*International Commissions*

International Fisheries Commissions

Amendment No. 5: Appropriates $2,505,800 as proposed by the House instead of $2,605,800 as proposed by the Senate.

*Educational Exchange*

Mutual Educational and Cultural Exchange Activities

Amendment No. 6: Provides that not less than $5,800,000 shall be used for payments in foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States, as proposed by the Senate instead of $6,000,000 as proposed by the House.

TITLE II—DEPARTMENT OF JUSTICE

*Federal Bureau of Investigation*

Salaries and Expenses

Amendment No. 7: Appropriates $260,235,000 as proposed by the Senate instead of $257,485,000 as proposed by the House.

*Federal Prison System*

Buildings and Facilities

Amendment No. 8: Appropriates $22,150,000 instead of $21,800,000 as proposed by the House and $22,350,000 as proposed by the Senate.

TITLE III—DEPARTMENT OF COMMERCE

*Bureau of the Census*

Nineteenth Decennial Census

Amendment No. 9: Appropriates $39,279,000 as proposed by the Senate instead of $45,000,000 as proposed by the House.

*Economic Development Administration*

Planning, Technical Assistance, and Research

Amendment No. 10: Appropriates $20,795,000 instead of $20,200,000 as proposed by the House and $21,390,000 as proposed by the Senate.

*Regional Action Planning Commissions*

Regional Development Programs

Amendment No. 11: Appropriates $39,000,000 instead of $29,000,000 as proposed by the House and $45,000,000 as proposed by the Senate.

*Business and Defense Services Administration*

Salaries and Expenses

Amendment No. 12: Appropriates $7,235,000 as proposed by the Senate instead of $7,035,000 as proposed by the House.

*International activities*

Salaries and Expenses

Amendment No. 13: Appropriates $21,500,000 as proposed by the House instead of $22,000,000 as proposed by the Senate.

*Office of Field Services*

Salaries and Expenses

Amendments Nos. 14 and 15: Appropriate $5,851,000 as proposed by the House instead of $5,951,000 as proposed by the Senate and delete language proposed by the Senate.

*Foreign direct investment regulation*

Salaries and Expenses

Amendment No. 16: Appropriates $2,750,000 instead of $2,500,000 as proposed by the House and $3,000,000 as proposed by the Senate.

*National Industrial Pollution Control Council*

Salaries and Expenses

Amendment No. 17: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate to appropriate $300,000.

*Environmental Science Services Administration*

Salaries and Expenses

Amendment No. 18: Appropriates $140,713,000 instead of $140,000,000 as proposed by the House and $141,426,000 as proposed by the Senate.

Facilities, Equipment, and Construction

Amendment No. 19: Appropriates $4,365,000 instead of $4,250,000 as proposed by the House and $4,565,000 as proposed by the Senate.

*National Bureau of Standards*

Research and Technical Services

Amendment No. 20: Appropriates $42,050,000 instead of $41,750,000 as proposed by the House and $42,350,000 as proposed by the Senate.

Amendment No. 21: Provides that not to exceed $800,000 shall be available for transfer to the "Working capital fund" as proposed by the Senate instead of $500,000 as proposed by the House.

*Maritime Administration*

Ship Construction

Amendment No. 22: Appropriates $187,500,000 as proposed by the Senate instead of $199,500,000 as proposed by the House.

Research and Development

Amendment No. 23: Reported in technical disagreement. The managers on the part of the House will offer a motion to delete the language of both the House and the Senate regarding the N. S. Savannah.

TITLE IV—THE JUDICIARY

*Courts of appeals, district courts, and other judicial services*

Salaries of Supporting Personnel

Amendment No. 24: Appropriates $53,862,000 as proposed by the Senate instead of $54,078,000 as proposed by the House.

Fees of Jurors

Amendment No. 25: Appropriates $14,930,000 as proposed by the Senate instead of $15,800,000 as proposed by the House.

Salaries and Expenses of United States Magistrates

Amendment No. 26: Appropriates $4,560,000 as proposed by the Senate instead of $560,000 as proposed by the House.

Amendment No. 27: Inserts language regarding United States Commissioners as proposed by the Senate.

General Provisions—The Judiciary

Amendment No. 28: Provides that reports of the United States Court of Appeals for the District of Columbia shall not be sold for more than $9.00 per volume instead of $6.50 as proposed by the House and $12.00 as proposed by the Senate.

TITLE V—RELATED AGENCIES

*Equal Employment Opportunity Commission*

Salaries and Expenses

Amendment No. 29: Provides not to exceed $1,050,000 for payments to State and local agencies instead of $900,000 as proposed by the House and $1,200,000 as proposed by the Senate.

Amendment No. 30: Appropriates $15,485,000 instead of $14,313,000 as proposed by the House and $19,000,000 as proposed by the Senate.

*Federal Maritime Commission*

Salaries and Expenses

Amendment No. 31: Appropriates $4,479,000 as proposed by the Senate instead of $3,929,000 as proposed by the House.

*Small Business Administration*

Salaries and Expenses

Amendment No. 32: Provides not to exceed $5,000,000 for expenses necessary to carry out the provisions of section 406 of the Economic Opportunity Act of 1964, as amended, as proposed by the House instead of $6,000,000 as proposed by the Senate.

Amendment No. 33: Appropriates $18,950,000 as proposed by the House instead of $19,950,000 as proposed by the Senate.

*Special representative for trade negotiations*

Salaries and Expenses

Amendment No. 34: Appropriates $597,000 as proposed by the Senate instead of $550,000 as proposed by the House.

*U.S. Information Agency*

Salaries and Expenses (Special Foreign Currency Program)

Amendment No. 35: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the language of the Senate regarding payments in Ceylonese rupees.

Special International Exhibitions

Amendment No. 36: Appropriates $4,033,000 instead of $3,500,000 as proposed by the House and $4,566,000 as proposed by the Senate.

CONFERENCE TOTAL—WITH COMPARISONS

The total new budget (obligational) authority for the fiscal year 1971 recommended by the Committee of Conference, with comparisons to the fiscal year 1970 total, the 1971 budget estimate total, and the House and Senate bills follows:

| | *Amounts* |
|---|---|
| New budget (obligational) authority, fiscal year 1970 | $2,653,376,900 |
| Budget estimates of new (obligational) authority, fiscal year 1971 (including $7,295,000 not considered by House) | 3,251,200,000 |
| House bill, fiscal year 1971 | 3,106,956,500 |
| Senate bill, fiscal year 1971 | 3,122,080,500 |
| Conference agreement [1] | 3,108,074,500 |
| Conference agreement compared with: | |
| New budget (obligational) authority, fiscal year 1970 | +454,697,600 |
| Budget estimates of new (obligational) authority, (as amended), fiscal year 1971 | −143,125,500 |
| House bill, fiscal year 1971 | +1,118,000 |
| Senate bill, fiscal year 1971 | −14,006,000 |

[1] Includes $300,000 in amendment No. 17 reported in technical disagreement.

JOHN J. ROONEY
(except as to amendments Nos. 29 and 30),
ROBERT L. F. SIKES,
JOHN M. SLACK,
NEAL SMITH
(except as to amendments Nos. 29 and 30),
JOHN J. FLYNT, JR.,
GEORGE MAHON,
FRANK T. BOW,
ELFORD CEDERBERG,
MARK ANDREWS,
*Managers on the Part of the House.*

Mr. ROONEY of New York. Mr. Speaker, I ask unanimous consent for the immediate consideration of the conference report on the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the Judiciary, and related agencies for the fiscal year ending June 30, 1971, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from New York?

Mr. BINGHAM. Mr. Speaker, reserving the right to object, might I inquire of the distinguished gentleman from New York what the reason is for having this conference report considered before the printed report is available to the membership?

As I understand, there is a matter of considerable controversy, at least, to me, that is included in the conference report, and I for one would like to have an opportunity to study the report and to communicate with other Members about it.

I wonder what the reason for this unanimous-consent request is?

Mr. ROONEY of New York. Mr. Speaker, if the gentleman will yield, there is only one reason, and that is to expedite the business of the House. This bill passed this House on last May 14, and we were unable to get together with the other body, to have the bill perfected, and sit down as conferees until yesterday, and we thought it would be well to get this business behind us.

Mr. BINGHAM. Mr. Speaker, under the circumstances I must regretfully object.

The SPEAKER. Objection is heard.

## A CLEAN ENVIRONMENT IS EVERYBODY'S BUSINESS

(Mr. SPRINGER asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SPRINGER. Mr. Speaker, everyone is interested in a clean environment. We all hope for clear air, clean water, and beautiful green lands.

Today, committees are being formed all over the country to make a better environment for our future. The Federal Government and States are passing laws trying to bring this about. Some of these are restricting obvious sources of pollution to the air, the water, and the land.

There is, possibly, one questionable observation. Many people want other people's rights and freedoms restricted but few restraints on themselves.

On last Sunday, I walked through the Smithsonian Institution's National Zoological Park here in Washington. For those who have never visited this zoo, it has a wonderful setting above Rock Creek Park. Thousands of Washingtonians and vistors from all over the country go there each year. When I visited the park late in the day, there was almost a carpet of candy and ice cream wrappers, water cups, newspapers, and other forms of pollution throughout the park. All of this in spite of the fact that waste containers had been placed almost everywhere.

Some 2 months ago, I visited one of the beautiful parks in my own State. The Sangamon River flows peacefully through it. This is the same Sangamon River upon which Abraham Lincoln built his first raft and floated down to New Orleans. I was simply amazed at the number of soft drink containers and beer and Coke cans lying besides many of the beautiful trails through the park. On that day, hundreds were enjoying the park, but there was a strange indifference to the pollution all about.

Last September, I visited one of the picturesque redwood parks of California. I could hardly believe the human made pollution existing among these beautiful sequoias which reached up 200 feet to the sky.

We can by law reach the great polluters of the air, the water, and the land. Much of this law is going on the books every day either here in the Congress or in State legislatures. Many of us are concerned as to whether or not in the homes and the hearts of people generally there is a desire to do their part in helping to keep a livable environment. Much of this can only be done by teaching in the home and in the schools. In short, a clean environment is everybody's business.

Looking back upon the first 70 years of the 20th century, some historians may call this the dawn of the nuclear age. Others may make our visit to the moon and to the stars the great historical event of our time. There are those with respected opinions, including many of the Subcommittee on Health and Welfare of which I am a member, that the great medical discoveries of this time in history will perhaps be the landmark of our day.

These are all tremendous breakthroughs in the history of science. Certainly, few events could be more important to the future of mankind.

I happen to believe that a fourth—and one which equals these three—is that this generation may be remembered as the one which was wise enough to leave the earth, its waters, and its atmosphere in a better condition than we found it. All of us have regarded the natural environment as a great bank upon which we could draw for our physical needs all the way from food to the great refinements of housing, transportation, and well-being. There were some of us in the Congress as long as 15 years ago who were documenting the diverse catastrophies which have since occurred in our environment. Those were bleak days when we were talking to empty Chambers—there was no audience listening. There was really no interest compounded into energy to get things done. Only recently has there truly awakened an interest in creating a livable environment.

In an attack on a problem as serious as cleaning up our environment, I am talking not in terms of a few years or even a decade of environmental therapy. It may well take much beyond that time in research and applied science to restore clean air with a proper balance of carbon dioxide and oxygen. Or to rescue bodies of water such as Lake Erie, San Francisco Bay, and the Potomac River from their current status as open sewers. Or to learn how to dispose of our solid wastes and our chemical and radiological poisons without having them turn up to bedevil our children and grandchildren like biblical plagues. Or to learn how to control insect and plant pests without killing our wildlife and upsetting our ecological balances.

Today, I am introducing a resolution which would establish a Standing Committee on the Environment.

Initially, I would recommend that the Committee on the Environment be vested with such areas of concern as water quality, air quality, weather modification, waste disposal of all kinds, and acoustic problems.

I do not want to take away from any Member of this body or to minimize the excellent work which has been done by a number of our present committees in these areas. The real difficulty is that some of these problems are under the scrutiny, irregularly, of two, three, and even four different committees. A situation which is neither efficient nor conducive to the coordinated leadership which we so much need for the environment quality effort that will have to be made in these next few years. It is my belief that a standing committee of the House matched, I would hope, by an equivalent standing committee in the other body of the Congress, is needed to forge some of the landmark legislation which will have to be enacted in the next few years.

I would envision that this committee would enable Members to apply themselves squarely and only to environmental problems with the assistance of a professional staff which could include ecologists, physiologists, biologists, agronomists, meteorologists, and other environmental specialists. This committee would command the respect and the prestige which is so necessary to accomplish anything under the kind of parliamentary system which we have in this Congress. By the enactment of this legislation, we could achieve a high quality of life not only just for those of us now living on this earth but also for the generations yet to come.

Mr. BROTZMAN. Mr. Speaker, will the gentleman yield?

Mr. SPRINGER. I yield to the gentleman from Colorado.

(Mr. SAYLOR (at the request of Mr. BROTZMAN) was granted permission to extend his remarks at this point in the RECORD.)

Mr. SAYLOR. Mr. Speaker, the gentleman from Illinois (Mr. SPRINGER), has been one of those who has blazed trails in this Congress for a better environment. His authorship of the Clean Air Act of 1967 and its renewal again this year and his sponsorship of the Solid Waste Disposal Act of 1970 are evidences of his dedication and interest. He is the ranking minority member of the committee handling this legislation. He has spoken forcefully on the floor of the House in behalf of that legislation. He has influenced the course of history in this country for a better and cleaner environment for today and for our children who will follow.

Mr. SPRINGER. Mr. Speaker, I thank the distinguished gentleman from Pennsylvania (Mr. SAYLOR), for his kind words.

Only a few weeks ago he was awarded the Izaak Walton League of America Founder's Award. If there is a single leader in the U.S. House of Representatives in the whole field of environment, it is the gentleman from Pennsylvania and I am happy to pay him this tribute.

Mr. Speaker, I yield now to the gentleman from Colorado (Mr. BROTZMAN).

Mr. BROTZMAN. Mr. Speaker, I am familiar with the work which has been done by the gentleman from Illinois (Mr. SPRINGER), on air quality. He has also supported such important legislation as the Point Reyes National Seashore Act, the Scenic Rivers Act, and the defeat of the timber management bill.

All of these are matters of concern if we are to have the kind of environment we visualize we will hand on to those who will follow.

I congratulate him on the introduction of his resolution. It is truly landmark legislation in the field of environment. Such a committee as he has suggested could accomplish more than anything we presently have in the Congress.

---

## ABATEMENT ATROPHY AT NAPCA

(Mr. RYAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RYAN. Mr. Speaker, at a time when public awareness and concern about the environment makes it possible for administrators and legislative bodies to take bold and effective action to combat the menace of air pollution, it is ironic that the Federal Government is not using the full extent of its powers. The National Air Pollution Control Administration has permitted the interstate air pollution abatement conference procedure to atrophy—a fact confirmed by an article in the Washington Daily News of September 16.

Interstate pollution abatement conferences have proven to be very effective weapons in the fight against air pollution. In the New York metropolitan region the Federal abatement procedure has been quite effective.

During the Thanksgiving Day inversion of 1966 in New York City, I called upon the Secretary of Health, Education, and Welfare to use the procedure. He immediately called an air pollution abate-

ment conference which convened on January 3, 1967. The first session of the conference in January 1967, considered sulphur dioxide pollution. The second session in January and February of 1968 considered particulates and carbon monoxide. The recommendations for abatement which resulted from these sessions were salutory and resulted in a significant reduction of pollutants.

Following the 1967 conference New Jersey made a very strong effort and developed an air pollution control program which has produced major improvements.

In New York City Consolidated Edison took the conference recommendations quite seriously and moved rapidly to modify some of its installations and start setting up a supply of low sulfur fuels. This new fuel was actually being used before the deadline of the recommendations.

New York State air pollution codes were broadened in accordance with recommendations of the conference.

In fact, the heads of air pollution control administrations from New York, New Jersey, and Missouri agreed at the annual meeting of the APCA in June 1970 that the interstate abatement procedure had been the most significant factor in advancing control in their areas.

Unfortunately, this effective abatement program began to slow down in 1968 and apparently died a slow unheralded death during 1969. Where conferences had been held, such as the second phase of the New York-New Jersey Air Pollution Abatement Conference, recommendations were slow to come back through channels. Finally, it seemed that the program was being abandoned—despite public reassurances to the contrary.

Now an article in the Washington Daily News of September 16 headed "Aide Hits Clean Air Chief," has revealed that Assistant Commissioner William H. Megonnell wrote an internal departmental memorandum indicating that Commissioner John T. Middleton had "engaged in a 'deliberate, long-range, carefully calculated plan to eliminate any effort' " to implement an effective air pollution abatement program.

As a result of the memorandum, a panel was set up within the Department of Health, Education, and Welfare to look into the matter. The panel found that the abatement procedure had been "overdeemphasized" and recommended a management reorganization of the National Air Pollution Control Administration.

During the past 2 years there has been a shockingly high turnover in personnel which suggests two problems to me: First, that no agency can operate effectively if it is constantly losing personnel, and, second, that morale must be very low.

It is urgent that Secretary of Health, Education, and Welfare Richardson implement the recommendations of the panel for a management review and reorganization of NAPCA. He should determine how much previous experience in air pollution control the principal administrators have had, why morale is low and personnel turnover high, and why the abatement program has been deemphasized—to say nothing of "overdeemphasis." These steps should not be delayed pending the creation of the new Environmental Protection Agency outlined in the President's Reorganization Plan No. 3 of 1970.

I have called upon the Secretary of Health, Education, and Welfare to reemphasize the abatement conference procedure in the New York-New Jersey metropolitan region by convening as soon as possible the third session of the New York-New Jersey Air Pollution Abatement Congress which had been promised to consider, and make recommendations, concerning oxidants and hydrocarbons. Automobile pollution is growing ever more serious in New York City and very little is being done to abate or control it. The abatement conference procedure is the most effective means available to do so.

---

## TEACHER LIST BID DROPPED

(Mr. BROWN of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWN of Ohio. Mr. Speaker, I am extremely disturbed at a situation which has developed in the education system in the District of Columbia which has a bearing on the congressional district which I represent.

It seems that some of my colleagues who serve on the House District Committee had requested the Board of Education of the District of Columbia to make available to them the names of teachers in the public school system of the District of Columbia who have been graduated from or have attended Antioch College in my congressional district. Disclosure of the names has been blocked by a 10-day restraining order issued by Judge Oliver Gasch as a result of a suit by the Washington Teachers Union. The members of the select subcommittee of the House District Committee have since withdrawn their request of the school board, presumably because they have obtained the information in other ways.

But I am sorry, Mr. Speaker, this matter was not adjudicated. I should be shocked if any court would make a decision to the effect that the qualification and training of a teacher in any public school system is not the public's business. Since the U.S. Congress puts up a good deal of the American taxpayer's money to finance the operation of the District of Columbia and its school system, it would seem to me perfectly clear that the Congress has the right to be informed about the training, qualification, and performance of the teachers in that system.

Antioch College was at one time one of the great liberal educational institutions in the United States. I am sure those who operate it today, those who have been educated there in the past and those who send their children there today or who finance the institution's operations could have no serious objection to an assessment of the impact on the public schools of the District of Columbia—or any other community or institution—of those who have been trained at Antioch. Why, then, should the Washington Teachers Union be concerned?

Is there not a right of the public to know what is involved in this issue?

While I am unfamiliar with the objectives of the study by the House District Committee, it occurs to me that this effort to deny information to the Congress bears some attention from my colleagues. To that end I insert, following my remarks, the story of the matter from this morning's Washington Post:

TEACHER LIST BID DROPPED—HILL WILL NOT ASK DISCLOSURE OF ANTIOCH NAMES

(By David R. Boldt and Peter Osnos)

The House District Select Subcommittee is withdrawing a request that the D.C. school board give it the names of Antioch College graduates teaching here.

Sources said yesterday that a letter from House District Committee Chairman John L. McMillan (D-S.C.) withdrawing the request will be formally disclosed in U.S. District Court today.

It is understood that the letter will say the Subcommittee no longer needs a list from the school board, possibly because it has gained the information it wanted elsewhere.

The court hearing is on a suit brought by the Washington Teachers Union, which calls the request "as close to a witch hunt as the D.C. schools could possibly have had."

The disclosure of the names had been blocked by a 10-day restraining order issued by Judge Oliver Gasch at the union's request.

The subcommittee staff and its acting chairman, Rep. Don Fuqua (D-Fla.), have declined to say why they are interested in the names of the alumni of the Yellow Springs, Ohio, school, which is widely known for the liberal bent of its faculty and 2,000-member coed student body.

The attitude of the Committee had been that the "witch hunt" charge was an overreaction to what was just one of many requests the Subcommittee had made concerning school personnel.

The Subcommittee, which was led by Rep. John Dowdy (D-Tex.) until Dowdy was recently hospitalized with a back ailment, has been looking into the D.C. schools since last spring. Often, its questioning has turned on whether witnesses felt teachers were being permitted to teach radicalism and Marxism in the schools.

Antioch has been associated with several controversies in D.C. schools. It was, for instance, initially involved in the direction of the Morgan Community School, an experimental project in increased community participation in schools. That involvement ended more than a year ago, partly as a result of friction between the Antioch personnel and local administrators.

Antioch students, alternating semesters of study with semesters of work experience, have been intern teachers in the D.C. schools. Many alumni of Antioch have taught, or still teach here.

In addition, there is an Antioch-Putney graduate program for teachers, under which about 45 teachers work in the D.C. schools. Antioch College is a partner in that venture, which also has centers elsewhere.

A spokesman at the college said the name Antioch "has become a shorthand way of referring to student radicals in general."

It was also learned that a teacher at one local high school had made a specific complaint to a congressman on the District Committee about the activities of two Antioch-related teachers at his school. Both teachers reportedly have left the school system.

Complaints about the two teachers included what was described as "ultraliberal" philosophy, conducting the class without

using a textbook, being unable to maintain order and being insubordinate to school officials.

One of the two teachers, reached by phone in Colorado, said he had troubles with both administrators and students, many of whom he said were unresponsive, even hostile, to the kind of teaching he was attempting. He said he was finally relieved of his teaching post.

## CRACKING DOWN ON POLLUTERS

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. VAN DEERLIN) is recognized for 10 minutes.

Mr. VAN DEERLIN. Mr. Speaker, Congress has finally come to a crossroads in the war on pollution. Either we mean what we say, or we do not. The course we take in shaping the final version of H.R. 17255, the Clean Air Act of 1970, will set the tone of this effort for years to come.

In a real sense, the problem has been simplified for us because we have such a clear choice. The Senate bill is strong and the House bill is weak. The Senate bill would get at the root of the air pollution problem, by requiring auto manufacturers to produce virtually pollution-free engines by the beginning of 1975. Our House bill, on the other hand, was pretty much business as usual. There were some improvements in existing programs, of course, but nothing was done that would really inconvenience the major polluters.

One source of frustration for those who would like cleaner air has been the failure of many automobile emission control devices to function properly. Up to now, the Federal Government has been authorized only to test prototypes of these systems furnished by the manufacturers. As approved by the House, H.R. 17255 does provide for the inspection of vehicles as they come off the assembly line, a distinct improvement but still not enough. The Senate measure would make the manufacturers fully accountable for their product by insisting that they guarantee the performance of pollution-control systems for up to 50,000 miles of actual operation, as called for by regulations already in the books.

Back on June 10, when the House bill was debated and approved, strengthening amendments were summarily rejected. One such amendment contemplated the gradual phasing out of the inherently "dirty" internal combustion engine, beginning with 1975-model cars. Another would have provided for the voluntary inspection of antipollution devices after 4,000 miles, with corrective action by the industry required only if these inspections uncovered a "pattern" of defects.

These amendments were actually mild in comparison with what the other body has voted unanimously to do. Although the Senate bill does not specifically direct the phasing out of the internal combustion engine, it does require that by 1975 the industry produce, for all cars, a virtually smogless engine. Most authorities seem to agree that this laudable goal cannot be accomplished with the traditional internal combustion system. Thus in effect, the Senate has ordered the auto industry to accomplish by 1975 what the rejected House amendment would have given the industry until 1978 to do: Fit every new vehicle with a viable clean, and new, propulsion system. Predictably, the big auto manufacturers are maintaining they would be unduly burdened by this requirement. But the facts are that this great industry has consistently demonstrated it possesses the know-how and versatility to accomplish the "impossible," and that such alternative propulsion systems as steam and gas turbine are cleaner, by far, than the internal combustion engine.

And the Senate would make the manufacturers responsible for the performance of every emission control device, regardless of whether a pattern of defects existed.

Conferees have been appointed, and will begin meeting shortly to attempt to reconcile the clashing philosophies embodied in the two bills.

While normally I am inclined to support the House version in conflicts of this sort, the stakes are so high in this case that I am imploring my colleagues who will represent the House at the conference to accept the Senate legislation.

For if the final conference bill approximates the weaker House legislation, Congress will have clearly signaled that it would rather talk about the environmental crisis than take necessarily decisive action. The California Senate, recognizing that the automobile accounts for at least two-thirds of all pollutants in the air, demonstrated its concern last year, by voting to ban the internal combustion engine from California, starting with 1975-model cars. That move failed by a single committee vote on the assembly side.

Congress now has the opportunity to assume leadership by enacting a bill that will put some punch in the national effort to overcome smog.

At this point, I include an article from the September 23 Washington Post describing the Senate version of the Clean Air Act:

TOUGH AIR POLLUTION BILL PASSED BY SENATE, 73 TO 0

(By Spencer Rich)

The Senate yesterday passed the toughest air pollution cleanup bill ever to reach the floor, with a requirement that the auto industry begin installing a nearly pollution-free engine in all new cars within five years. The vote was 73 to 0.

The bill, which must go to conference with a less-stringent House-passed measure also includes wide-ranging general provisions to set national air quality standards, force new factories and mills to build in antipollution devices, prohibit altogether the emission of any substances extremely dangerous to health, greatly speed up implementation and enforcement of clean-air requirements all over the country, and provide $1.2 billion over three years for research, implementation and enforcement.

Thomas C. Mann, president of the Automobile Manufacturers Association, said the legislative deadline is unacceptable even though the Senate Public Works Committee included a partial escape hatch giving the Secretary of Health, Education, and Welfare power to suspend the deadline for one year only—to Jan. 1, 1976—if the industry demonstrates it cannot meet the initial date after a good-faith effort.

But Sen. Edmund S. Muskie (D-Maine), chairman of the Air and Water Pollution subcommittee and chief sponsor of the bill, said Congress' first duty was to set objectives for protecting the public health from the menace of auto pollution.

The auto deadline requires the new cars produced after Jan. 1, 1975, emit 90 per cent fewer pollutants than permitted for 1970 models.

The 1970 levels already represent substantial reductions in some pollutants as compared with earlier uncontrolled vehicles.

The 1975 requirements would push hydrocarbons down to 1½ per cent of the amount of emissions from uncontrolled vehicles, carbon monoxide to about 3 per cent, and nitrogen oxides to about 11 per cent or lower. The Nixon administration had proposed reaching these goals by 1980—five years later.

Republican co-sponsors of the bill, like J. Caleb Boggs (Del.) said many of the other provisions coincide with Nixon administration requests.

Nearly all the floor amendments and debate on the bill involved the auto engine deadline.

The Public Works Committee had provided for federal court review of any decision by the Secretary on whether to allow the one-year suspension of the 1975 deadline.

Sen. Bob Dole (R-Kan.), with Muskie's support, offered a floor amendment wiping out the court review and permitting the one-year suspension to go into effect automatically unless disapproved within 60 days by either chamber of Congress. Dole said since Congress was setting the deadline, Congress should also control the suspension, but John Sherman Cooper (R-Ky.) said judicial review, with adversary proceedings, would afford the industry more of its right to due process.

The Dole amendment was rejected, 43 to 31. Also rejected, 57 to 22, was an amendment by Edward J. Gurney (R-Fla.) allowing the auto industry to make its application for the one-year suspension at any time, without having to wait until the start of 1973 to file the application. Sponsors of the bill said this would allow the industry to seek immediate remission and weaken its efforts to meet the five-year deadline.

Adopted by voice vote, with Muskie's assent, was an amendment by Howard Baker (R-Tenn.), a strong supporter of the bill and a member of the Air and Water Pollution subcommittee, requiring auto manufacturers, rather than dealers, to bear the costs of mandatory 50,000-mile performance warranties on auto pollution-control systems.

Mann and other auto industry spokesmen said that the performance warranty was too comprehensive—that the industry would be willing to guarantee pollution systems against defects, but not against general bad performance.

The auto provisions also authorize the government to make new antipollution devices developed by one manufacturer available to others in order to meet pollution standards. Without this provision, the auto industry might be barred from sharing devices because of a consent decree it signed after the government accused it of conspiring to delay use of pollution devices on cars.

Also in the bill are provisions to bar use of fuels harmful to health or damaging to pollution control devices.

Although the 1975 deadline for auto engines is the most controversial and widely publicized provision of the bill, it is only one cog in a mechanism designed to bring most major air pollution problems under a substantial degree of control in five years.

Other key provisions of the bill:

Require the Secretary to designate air quality control regions all over the country within 90 days.

Authorize national air quality standards and goals to be set, stringent enough to "insure protection of the health of persons," and give the states up to three years after that to submit and implement plans to meet the

standards. Such plans could include bans on downtown traffic to reduce concentration of auto pollutants. The whole scheme—from the setting of national standards on—is designed to require the plans to be working in the states within approximately four to five and a half years from enactment of the bill.

Require all major new stationary sources of pollution—iron and steel plants, mills, oil refineries, electric power plants, municipal incinerators and the like—to install the best pollution control equipment available. Plants not certified as meeting standards could not operate.

Permit the Secretary to set national emission limitations for selected pollutants—such as arsenic, copper, chlorine gas—not covered by other provisions but affecting health and welfare, and require him to prohibit emissions of pollutants considered extremely hazardous to health, such as asbestos, cadmium, mercury and beryllium.

Permit citizen suits to enforce compliance with standards.

Provide $465 million for research and $25 million for enforcement and implementation over the next three years.

Mr. REES. Mr. Speaker, will the gentleman yield?

Mr. VAN DEERLIN. I yield to my colleague from California.

Mr. REES. I would like to congratulate my colleague, who is a member of the Commerce Committee, and who has been doing a great deal of work in this field. I am one of those who believe that we have to have tough new pollution standards right now, because I think if we continue to live in these areas of concentrated pollution, the health of the American people is going to be seriously jeopardized. We found this out in Los Angeles, where my own district is. The incidence of emphysema, which is a lung disease, has gone up dramatically since we have been having more and more pollutants spewed out into the atmosphere.

We in Los Angeles are so familiar with this problem because of the unique inversion layer we have in our atmospheric conditions. We are trying to tell those on the national level, "If you do not want Los Angeles smog throughout the country, we must act now." I think it is terribly important that the House of Representatives support the Senate version, and that is almost a complete elimination of pollutants from automobiles by 1975.

Detroit states that they do not have the technology. But do you know something? I have read three or four reports of groups outside of Detroit that do have the technology. We found in Los Angeles, when we set up the Motor Vehicle Pollution Control Board, that the devices which were first developed and approved by the Board were developed by outside industries, outside technology. But Detroit did not want to admit that someone else knew more about this problem, and therefore they have been dragging their feet. They have been dragging their feet from the very beginning.

Ten years ago they claimed that no pollution came from the automobile.

Another item in the Senate bill that I think is terribly important——

Mr. VAN DEERLIN. If the gentleman will permit me to interrupt, the best evidence now is that in urban areas about two-thirds of our pollution comes from auto emissions. Is that not correct?

Mr. REES. I would say that is essentially true in an area such as Los Angeles, where we have very strong laws and ordinances dealing with stationary polluting sources, such as industrial furnaces and the backyard incinerator. We have not had outside backyard incinerating in California for about 15 years. And really about the only—well, the only uncontrolled source remaining is the automobile.

Another thing that is terribly important with this bill is that it talks about regional air pollution districts. It talks about regional areas. I think this is awfully important because air pollution just flows, and unless you develop a practical region to surround the air pollution area, you are not going to be able to deal with the problem.

For example, the Los Angeles Basin includes six different counties. We have stringent controls in Los Angeles County, but the air pollutants still flow back and forth across county lines and city lines. So we have to take this on a "basin" concept because this is where the pollutants are, in a basin.

I think if we do not start doing something about this, we will find that many of the indexes that we use in the field of public health are going to reveal more and more increases of lung cancer, emphysema, and cardiac arrest diseases. They are going to occur. I congratulate the gentleman for taking this special order on the House floor. I hope all Members of the House will try to impress upon our own conferees in the conference committee the importance of adopting these major Senate provisions.

Mr. VAN DEERLIN. The gentleman himself, in his earlier years of public life, built quite a record in Sacramento on this issue. I wonder if he would comment on the action of the California Senate, the upper body in the State legislature, last year in having passed a bill very similar to the current U.S. Senate version, the deadline for the auto industry?

Mr. REES. Well, the California Senate did approve legislation which would, for all practical purposes, outlaw the internal combustion engine by 1975, and it was not something that was just put in for the benefit of the press. It was put in with a great deal of thought and a great deal of conferring with industrialists who were dealing in other sources.

Mr. VAN DEERLIN. Would the gentleman brand the California Senate a radical body?

Mr. REES. No, I certainly would not. It is a very conservative, but a very concerned body.

Mr. VAN DEERLIN. I thank the gentleman for his contribution.

Mr. CORMAN. Mr. Speaker, will the gentleman yield?

Mr. VAN DEERLIN. I yield to the gentleman from California.

Mr. CORMAN. I thank my colleague for yielding. I am pleased to join in his remarks. It is critical that the conferees adopt the Senate version of this bill.

I did want to comment on an ancillary problem, and that is the fuel that is going to go into the new automobile. The Ways and Means Committee has before it a proposal by the administration to put a special tax on lead additives. I anticipate I will probably support it, because there is substantial evidence that lead in gasoline, although it makes gasoline cheaper to produce with higher octane, also adds a very poisonous substance to the pollutant.

The administration witnesses said they would like to accomplish by exercise of the police power the removal of high octane heavily leaded gasoline, but they did not know whether they could do that or not, so they were going to try to encourage the petroleum industry to alter its methods of refining gasoline by this tax disincentive. I cannot pass up supporting that tax disincentive, but I think it is clear that unless the Federal Government exercises very vigorous police powers in this entire area, we just will not be able to solve the problem.

There is no question in my mind but that the automobile industry and the petroleum industry together can build and fuel an automobile that does not pollute the air. But the evidence is clear that there is no incentive for them to do it, they are not going to do it unless they are required to do it by exercise of the Federal police power. I think we have to look at both those industries.

If anyone thinks the solution is going to flow from the conscience of the automobile makers, I would remind them what it took to get seat belts in cars after we had overwhelming evidence that seat belts saved lives. The belts were not put in until the Federal Government required them.

Mr. Speaker, I commend my colleague, the gentleman from California, for his supporting a really tough clean air bill.

Mr. VAN DEERLIN. Mr. Speaker, I thank the gentleman.

While I normally stick with the House version of controversial legislation, I would like to impress upon our clean air conferees the urgency of giving fullest consideration to the tough, meaningful Senate bill. An ever-greater part of this Nation is afflicted with unclean air—and, through the haze, will be watching what we do.

---

## H.R. 19518, TO EXPAND THE WILD AND SCENIC RIVERS ACT OF 1968

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 10 minutes.

Mr. HOSMER. Mr. Speaker, today I am introducing H.R. 19518 to amend the Wild and Scenic Rivers Act of 1968 by adding six rivers in California as potential components of the system.

As one of the original House sponsors of the 1968 act, I believe we have an excellent opportunity to expand on that historic legislation. The act was passed to protect natural, free-flowing, and unpolluted rivers from further encroachment by man or machine.

The original act designated six rivers in the United States as "instant" components of the wild and scenic rivers sys-

tem. These were the Clearwater in Idaho, Rio Grande in New Mexico, Rogue in Oregon, St. Croix in Minnesota and Wisconsin, Salmon in Idaho, and the Wolf River in Wisconsin.

In addition, Congress listed 27 other rivers which it felt should be studied for possible inclusion in the system at a later date. This designation as a potential component affords these other rivers substantially the same protection as those immediately included in the act.

Today, H.R. 19518 proposes the addition of rivers number 28 through 33 to that list. They are:

28. The Kern River from its source to Kernville at Lake Isabella.
29. The Klamath River from Iron Gate Dam to the mouth.
30. The Russian River from Ukiah to the mouth.
31. The Sacramento River from the source to Shasta Lake and from Keswick Reservoir to Sacramento.
32. The Smith River, including the entire main stem, the North Fork as far as Diamond Creek, the Middle Fork to Griffen Creek, and the entire South Fork.
33. The Tuolomne River from Hetch-Hetchy Dam to the New Don Pedro Reservoir.

When Congress passed the 1968 act, it wisely included a section specifically providing for the future consideration of beneficial public projects in the wild and scenic river areas, provided that the proposed projects were not inimical to the main purposes of the act.

Section 7(a) of the bill reads, in part:

Nothing * * * shall preclude licensing of, or assistance to, developments below or above a wild, scenic or recreational river area * * * which will not invade the area or unreasonably diminish the scenic, recreational and fish and wildlife values present in the area * * *.

Section 2 of the bill I am introducing today provides that studies of the six named rivers also consider their potential as water supply sources for the proposed California Undersea Aqueduct.

One of the most attractive features of the California Undersea Aqueduct proposal is that it would permit the simultaneous achievement of two high-priority needs of California. First, it would enable us to divert water from the mouth of a river to the water-short areas of the State, including areas in northern and central California as well as the southern parts of the State. And, second, since the project would utilize the fresh water only as it wastes into the sea, it would not require blocking of these beautiful rivers.

My bill would permit construction of those limited, onshore facilities which would be necessary to properly operate such an aqueduct.

I have long sought a realistic balance between meeting the needs of California's people for fresh water supplies, and preserving some of the exciting, natural rivers in our State. I believe we must meet both of these needs, and only by relying on our most creative minds and undertaking the most thoughtful analysis of development and preservation of our resources can California remain the State that has excited the imagination of more people than any other area in the country.

## THE NATIONAL GUARD AND CIVIL DISORDERS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 15 minutes.

Mr. FINDLEY. Mr. Speaker, the report of the President's Commission on Campus Unrest deserves a better fate than the report of the 1968 National Advisory Commission on Civil Disorders. Many of the recommendations made 2 years ago are now repeated. If we ignore them again, 2 years hence, we may have another national tragedy, another commission to investigate it, another report to consider, and another opportunity for action—or inaction.

Inaction is what occurred after the Commission report in 1968. President Johnson virtually ignored it. Instead of sorting out for action its many worthy recommendations, proposing changes in administrative procedures and laws where needed, the Johnson administration simply put the report on the shelf to gather dust. Our Nation can ill afford to be plagued again with inaction.

President Nixon has promised better treatment for the report he ordered. He personally received it amidst much publicity and ordered it sent to all department and agency heads who might benefit from its findings. In addition, he has promised to review it himself as soon as he returns from his European trip.

Hopefully, President Nixon will act substantially on many of the recommendations ignored in 1968. For example, the 1968 report recommended "increased riot control training" for the National Guard. The result: An absurd pittance, 8 hours of initial training were added, with 16 hours of "refresher training" each year.

Is this enough in 1970? The President's Commission on Campus Unrest thinks not. It states:

Guardsmen must receive far more adequate and extensive disorder control training, in recognition of the fact that the National Guard today has a second mission which it performs far more often than wartime duty.

The 1968 report found:

Experiences of this last summer (1967) reveal that much of (the Guard's) equipment is inappropriate for dealing with civil disorders in American cities. The Guard and other military units lack an adequate "middle ground" between a display of force and the use of lethal or indiscriminate force. The Commission has recommended federally sponsored and financed research for developing nonlethal weapons.

What progress has been made in the last 2 years? According to the President's Commission on Campus Unrest:

Nothing much has come of this research. The need for something more is greater than ever before. We recommend that the federal government actively continue its research to develop nonlethal control devices for use in civil and campus disorders.

The fact is that the National Guard, trained and equipped primarily for military combat, rarely goes to war. Instead it is used mostly for quelling civil disorder, a complex military problem for which it has little specialized training and equipment.

Potentially a priceless backup reserve for local police, it now functions at only a fraction of this potential. This is because most of the $1.2 billion taxpayers invest in the Guard each year goes for equipment and training for military combat, items and skills that are unlikely ever to be used, rather than for civil disorder control.

In this era when local police need large-scale professional support often and on short notice, the Congress should reorder the responsibility, training, and equipment of the Guard to fill this need.

To continue the present anachronistic arrangement makes about as much sense as sending firemen to put out a blazing fire with buckets of gasoline.

It is unfair to the Guardsmen who frequently expose themselves to mob danger. It is also unfair to the general public, whose vital needs are inadequately served and whose tax investment is substantially wasted.

Decades of experience would be some guide as to what the major mission of the National Guard will be in the coming years.

Last spring, during the crises on our Nation's campuses which followed the entry of U.S. troops into Cambodia, a crisis which saw four students killed at Kent State University, 35,000 Army and Air National Guardsmen were called to active duty in 20 States to help contain and control the violent disorders which rocked many colleges and universities.

During the riots of 1968 which followed the assassination of Dr. Martin Luther King, over 50,000 National Guardsmen were ordered to the streets to help restore order to our Nation's cities.

The long, hot, riot-torn summer of 1967 brought similar broad use of the National Guard to help deal with those Americans who had gone berserk and yielded to mob passions.

By contrast, of 3,038 Army National Guard units in the entire Nation, only 34—about 1 percent—were called to active duty as a result of the Tet offensives in Vietnam.

If our experience over the past quarter century is any guide, the primary purpose and use of the National Guard will continue to be for the control of civil disturbances and for the maintenance of law and order at home. Even with the advent of a national emergency, the National Guard is unlikely to see as much duty on foreign soil as it will on America's tree-shaded campuses and asphalt-paved streets. Only in the most extreme circumstances would a Governor permit this vital backup to leave his State unprotected from mobs of citizens who might resort to violence to show their disagreement with national policy.

Nor is Secretary of Defense Laird's directive of August 21 likely to change the outlook. In his memorandum, Secretary Laird stated that he is "concerned with the readiness of Guard and Reserve units to respond to contingency requirements, and with the lack of resources that have been made available to Guard and Reserve commanders to improve Guard and Reserve readiness."

All of us can share the Secretary's concern. While it has rendered great service under very trying circumstances, the National Guard is not presently combat ready. It is neither trained adequately nor equipped adequately to face an enemy on the battlefield of war. Nor is it trained and equipped adequately to control an unruly mob in our Nation's cities.

In fact, what is seldom recognized is that these are two very different tasks requiring different equipment, training, and weapons.

The combat rifle, so effective in warfare, has proven largely ineffective as an instrument for crowd control. Nor is it suitable for self-protection by Guardsmen. Tanks and jet fighter planes have no place at all in a civil disturbance.

Charged with the most difficult task, that of controlling a rioting mob of their fellow citizens, National Guardsmen have found themselves against impossible odds.

With Guardsmen inadequately trained and equipped to do the job they were given, it was inevitable that some citizens, including Guardsmen, would be needlessly injured and some innocent bystanders killed. Never in its 334-year history has the National Guard been so widely criticized. A militia which was created primarily to protect and maintain order within each State, the National Guard has never been given the tools to fulfill its fundamental task.

Although Guardsmen are seldom called up for civil duty and sent into action until violence is imminent or already has broken out, and although the Guard is almost certain periodically to be confronted with an irrational and angered mob of local citizens, each new enlisted Guardsman receives, as stated before only 8 hours of specialized training in how to deal with civil disorders—the only military situation he is likely to encounter while a member of the Guard. Refresher training totaling 16 hours is given annually to all Guardsmen, but since requirements state that it must be given during the months of January through May, the Guard's traditional 2-week summer encampment training period includes no civil disturbance work. Instead, that period focuses exclusively on regular combat training, driving tanks, flying jet fighters, and firing lethal weapons unsuitable for civil disorder control.

The cost of the tools available to a Guardsman in his efforts to quell a civil disturbance—the tanks, machineguns, jet fighters, combat rifles, and 16 hours of "refresher training"—is substantial. Last year the budget for the Army and Air National Guard exceeded $1.2 billion. That amount of money, invested wisely in equipment and training for controlling crowds and quelling civil disturbances within the United States, would yield an efficient police backup reserve work.

The primary responsibility for inadequacies in the National Guard must be assumed by Congress. Congress has mandated that "the discipline, including training, of the Army National Guard shall conform to that of the Army" and has ordered that "the same types of uniforms, arms, and equipment as are issued to the Army shall be issued to the Army National Guard." Similar restrictions have been laid down for the Air National Guard.

In addition, this stepchild of the regular Army has received hand-me-down equipment, one fact which caused the Secretary of Defense to voice his "concern" over the "readiness of the Guard—to respond to contingency requirements." The weapons carried by the Ohio Guard at Kent State were M–1 and M–14 rifles, similar to those used during World War II. Whatever their effectiveness as combat weapons, they were entirely inappropriate for maintaining order on the university campus.

Protective equipment worn by the Guard is also inadequate. Designed for combat action overseas, it is largely ineffective against bricks, bottles, and rocks thrown by demonstrators. Face masks and protective chest gear provide greater safety to local law enforcement officers than gear now worn by the Guard.

As a result, the Guardsmen are put in a difficult position when provoked by a crowd of rioting local citizens. Their primary training has been in the use of deadly force at the end of a combat rifle—their only hand firearms—yet, most Guardsmen agree that bullets from a combat rifle are totally inappropriate as a response to rock throwing. Each Guardsman is required to pledge:

> I will not load or fire my weapon except when authorized by an officer in person, when authorized in advance by an officer under certain specific conditions, or when required to save my life.

The Army Field Manual goes on to state:

> The use of deadly force (i.e. live ammunition or any other type of physical force likely to cause death or serious bodily harm) in effect invokes the power of summary execution and can therefore be justified only by extreme necessity. Accordingly, its use is not authorized for the purpose of preventing activities which do not pose a significant risk of death or serious bodily harm.

Rocks and bottles are not officially regarded as presenting that kind of risk to justify deadly force. The individual Guardsman who has lost teeth or an eye as the result of such missiles is entitled to ask why he is not provided with the protective equipment he needs which will also make it less likely that he will feel compelled to fire his weapon into a crowd.

Even sniper fire during a riot presents a situation totally different from that experienced during military combat. As the field manual says:

> The normal reflex action of the well-trained combat soldier to sniper fire is to respond with overwhelming mass of firepower. In a civil disturbance situation this tactic endangers innocent people more than snipers.

The manual provides as an alternative that—

> Fire by selected marksmen may be necessary under certain situations. Marksmen should be preselected and designated in each squad.

It is no wonder that Secretary Laird has expressed his concern over the readiness of the Guard for military combat. It is time that every American express his concern over the readiness of the Guard for civil duty here at home.

What must be concluded from these facts is that the requirements for fighting a war are quite different from quelling a civil disturbance or a riot. The purpose of the National Guard when used to control disorders is to contain and control rioters, not to kill them. Automatic combat rifles which fire 850 deadly rounds per minute are about as inappropriate on a college campus or in the streets of American cities as tactical nuclear weapons. They offer little protection to the beleaguered Guardsman because most rioters rightly assume such weapons will not be used.

When nervous Guardsmen do resort to gunfire, as at Kent State, the tragedy which follows is incalculable. Lives are lost and ruined, and a nation is torn apart by bitterness which erupts into more violence.

When I first made public my suggestion to Secretary Laird, a young National Guardsman from Houston, Tex., wrote me the following:

> I wholeheartedly agree with your proposal to have trained countersniper teams and to equip Guardsmen with nonlethal weapons. I also believe we should have less jungle training and more riot training (I have seen none yet.) I don't believe anyone wants to see another Kent State incident. One would think that there would have been some changes in National Guard policy after that episode. Instead the changes seem to be moving in the opposite direction.

Congress should provide the Guard with the training and equipment required for riot duty.

The Defense Department should undertake a continuing program to develop weapons specifically designed for bringing riots under control. As the commanding general of the California National Guard recently told a House subcommittee:

> We need some kind of a low velocity weapon, such as a shotgun or low velocity ammunition for our rifles. I hate to see a man shooting a sniper upon the roof with the knowledge that the bullet may land three blocks away and injure or kill some innocent person.

Some of these things can be accomplished by directive of the Secretary of Defense. Others, for example, the basic policy to be pursued, require changes in existing laws. It will be necessary to reallocate funds.

Today, I am introducing two amendments to title 32 of the United States Code to make clear the priority need to train and equip the National Guard to deal effectively with civil disturbances. The first amendment requires that in addition to standard combat training each National Guard recruit presently receives "equal emphasis shall be given to training—for the control of civil disturbances within the United States."

The second amendment orders the Secretary of Defense to "equip units of the Army National Guard and the Air

National Guard as required with specialized equipment and weapons suitable for us to control civil disturbances within the United States."

After the Kent State killings, President Nixon was shown pictures of the four young people who then lay lifeless. He said:

I vowed then that we were going to find methods that would be more effective to deal with these problems of violence, methods that would deal with those who use force and violence and endanger others, but at the same time, would not take the lives of innocent people.

This bill implements one of the most vital recommendations of the 1968 Report of the National Advisory Commission on Civil Disorders and the just released Report of the President's Commission on Campus Unrest. Both urged that the National Guard be provided with the capability to cope with civil disorders.

Recent history suggests that in the coming years the National Guard will be used increasingly for civil disturbance work. If Congress and the executive branch of Government work together properly to equip and train the Guard to deal with riots and crowd control, Guardsmen will be able to serve as a vital backup reserve, standing shoulder to shoulder with the men of the regular police force when they are needed. If we fail in this task, the tragedies of last spring and the deaths which rocked the conscience of the Nation inevitably will be repeated. Text of the bill follows:

H.R. ——

A bill to require that the training of the National Guard for civil disorders be emphasized equally with that for combat warfare, and to require that the National Guard be provided with specialized weapons and protective equipment suitable for use to control civil disorders

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 501(a) of title 32 of the United States Code (relating to the training of the National Guard) is amended to read as follows:

"SEC. 501. TRAINING GENERALLY

"(a) The discipline, including training of the Army National Guard, shall conform to that of the Army providing that equal emphasis shall be given to training under this chapter for the control of civil disturbances within the United States. The discipline, including training of the Air National Guard, shall conform to that of the Air Force, provided that equal emphasis shall be given to training under this chapter for the control of civil disturbances within the United States."

SEC. 2. Section 701 of title 32 of the United States Code (relating to the uniforms, arms and equipment of the National Guard) is amended to read as follows:

"SEC. 701. UNIFORMS, ARMS, AND EQUIPMENT TO BE SAME AS ARMY OR AIR FORCE

"So far as practicable, the same types of uniforms, arms, and equipment as are issued to the Army shall be issued to the Army National Guard, and the same types of uniforms, arms, and equipment as are issued to the Air Force shall be issued to the Air National Guard: provided that the Secretary of Defense shall equip such units of the Army National Guard and the Air National Guard as required with specialized equipment and weapons suitable for use to control civil disturbances within the United States as specified in chapter 5."

## JOB MART—A SUCCESS THAT IS JUST BEGINNING

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Massachusetts (Mrs. HECKLER) is recognized for 5 minutes.

Mrs. HECKLER of Massachusetts. Mr. Speaker, it is clear that an important factor in reducing the rate of unemployment is providing a means to match job seekers with job openings. In many cases jobs are available but potential, qualified applicants are unaware of the opening.

The Veterans' Administration and the Boston Globe recently undertook to match jobs with applicants. The result was the highly successful New England Vietnam Veterans Job Mart which was recently held in the Paddock Club of the Suffolk Downs Race Track in East Boston.

I was delighted to have the opportunity to visit the Job Mart and I was greatly impressed with the high quality of the veterans and nonveterans who attended to learn of job opportunities.

Each of the applicants had the opportunity to meet with representatives of any of the more than 200 business firms that came to the Job Mart with jobs to fill. Approximately 7,000 veterans and nonveterans now have jobs or followup opportunities for jobs. In addition, many others have an improved understanding of employment requirements and opportunities.

There are four gentlemen whom I would especially like to single out for their obvious concern for our veterans and their families and for the need to continue our efforts toward economic growth. They are John I. Taylor, president of the Boston Globe Newspaper Publishing Co., who approved his newspaper's full support for the joint effort with the Veterans' Administration.

In addition, the Job Mart could not have achieved the tremendous success it did without the efforts of three very capable Globe staffers—Nat Kline, Frank Mahoney, and Lawrence Healy who worked long hours to insure that the Job Mart provided the outstanding service it did.

In addition, Francis A. Hunt, the Veterans' Administration's Information Service Representative for New England, served as project director of the Job Mart and can claim credit for a great deal of its success.

The Honorable Donald E. Johnson, Administrator of Veterans' Affairs, also attended the Job Mart and expressed to me his immense satisfaction and enthusiasm for the Job Mart concept. The Boston Job Mart will be a model for the VA to follow throughout the Nation.

The welfare of our returning veterans is a concern for all Americans. To translate this concern into action is the job of the Veterans' Administration and interested citizens such as the staff of the Boston Globe. It is with great pleasure that I call to the attention of the House the fine success of the Job Mart and the outstanding efforts of those associated with it.

Mr. Speaker, I am including at this point in the RECORD three articles from the Boston Globe describing the Job Mart:

JOB MART—A SUCCESS THAT'S JUST BEGINNING

(By Frank Mahoney and Nat Kline)

The big two-day Vietnam Veterans Job Mart sponsored by the Veterans Administration and Boston Globe is over, but the real effect is just beginning.

Major employers of all types, ranging from large industrial firms to government or municipal agencies, have scheduled follow-up interviews for alert young men—and those a bit older—found to be excellent prospects for long careers with them.

The general opinion of those who manned booths all or part of the 11-plus hours each day at Suffolk Downs, from before 9 in the morning until past 8 at night, was that Job Mart accomplished at least five important things:

1. In a two-day period, utilizing four acres of space as a common meeting ground, well over 200 employers' representatives with firm job offers were able to meet young men who had the talent or skill they needed—men who wanted to work. Many personnel men said they accomplished more in two days at Job Mart than in months.

2. Returning young servicemen, needing to understand this civilian world, found people, important people, were actually interested in their welfare, interested in putting them to work so they could make a sound contribution and gain a foothold on a secure future.

3. Businessmen, talking to the many Veterans Administration, Massachusetts Division of Employment Security, US Civil Service Commission and US Department of Labor representatives at the Mart, found that the government did more than collect their taxes, and that government men were keenly aware of the employment picture.

4. New devices were introduced to speed-up the "two-way street" of matching applicant and position: Fourteen electronic job bank viewers in one building were used for the first time, so that all jobs being offered throughout the time period were on view at all times and the applicant could watch and pick the company to which he felt most suited. New-type IBM copiers went into service so that duplicates of applicant's preregistration forms, listing his qualifications, could be reproduced at unbelievable speed.

5. The "meeting of the minds" on the whole area job picture, from Federal official to businessman to the young fellow off the street, regardless of his status, color, or creed. All parties interviewed stressed the fairness of the operation and the friendliness of those trying to extend or receive job help. This might well be the most important factor of all.

Nearly 11,000 people passed through the entrance of the Suffolk Downs Clubhouse in those 22 hours of Job Mart. More than 7000 either have a job, a promise of one or word that they are to return to take physical tests, aptitude exams or a follow-up interview.

President Nixon sent a telegram expressing appreciation of the Globe's part in Job Mart. Sen. Kennedy's and nearly all other Bay State congressmen made specific favorable comments in writing on the project.

Donald Johnson, Veterans Administrator, extended his scheduled 8-hour observation study and critique of Job Mart to the full 22 hours and two days of its running.

He was glad he stayed, and called it "the greatest of its kind in the nation."

Congresswoman Margaret Heckler of the House Veterans' Affairs Committee, on hand for the opening ceremony, felt "this is a wonderful aid to the men who have served their country."

EMPLOYERS DELIGHTED AT RESULTS

To really understand how participants on both sides of the employer-employee exchange felt about Job Mart, definite com-

ment was solicited. Here's how some of the employers' representatives felt:

"When people climbed up the stairs to our third floor booth we knew they really wanted to talk to us," said John T. Charron, district manager of Metropolitan Life Insurance Co.'s ordinary sales office.

"We had eight men to a shift, 16 a day, manning our booth. We listed 70 further interviews up to 2 o'clock on opening day.

"I selected two young men who I know are hard-to-find people with real drive. I don't know where I could possibly have met them if it were not for a project like Job Mart.

"I certainly hope this is done again."

Deputy Superintendent Jeremiah Sullivan, Boston Police Department Community Relations Bureau: "We were delighted to participate. A total of 450 veterans were interviewed at our booth. Entrance requirements were explained and Civil Service rules pointed out. Quite a few men went right over to the Civil Service booth, made out their forms on the spot, then came back to us."

"Frankly, we looked at this with a jaundiced eye at first," said Derek Hepworth, agency secretary for John Hancock Life Insurance Co., "but we went in because it was good public relations.

"We have been delighted and amazed at the outcome.

"In the past, our personnel people frequently spent more than an hour with one man and then found the company and he weren't mutually suited. Here we've sent 30 men to see independent agency representatives the first day, and they are excellent prospects."

On opening day alone, George Spector, regional supervisor for northern New England for John Hancock, sent 50 persons to districts in areas ranging from Concord, N.H., to Providence, R.I.

A prime illustration of the Job Mart's worth to an employer was cited by Albert Barber, director of employment for L. C. Balfour of Attleboro, manufacturing jewelers.

"We had been looking for a good traveling illustrator for more than a year, a young fellow who could communicate with students and young executive types. We couldn't seem to find him.

"At Job Mart this young man who had been driving a taxi 11 hours a day stopped to talk to me.

"I found he was a graduate of the Massachusetts College of Art, had real personality, liked to talk to people. After I told him we sold the Boston Bruins their Stanley Cup championship rings and his job would have glamour, not become humdrum, he was genuinely interested. I'll be seeing him again tomorrow."

Robert Gatti of Westinghouse's Sturtevant Division, industrial relations assistant, said his firm was "very happy with Job Mart.

"We were looking for welders, erectors, machinists—particularly for people who could read blueprints. I found 30 in a little over a day. More than 10 will be hired. Most of the people who came to our booth were 20–28 years old. There were not only veterans, but quite a few non-veterans. We did not discriminate."

Bob Greene, Sears, Roebuck personnel manager at its Burlington Mall store, was one of that firm's representatives at their booth in Job Mart.

"Married men with low-paying jobs, like one part-time machinist I talked to, were shown how they could do much better with the possibility of a lifetime, rewarding career," he stressed.

Gifford W. Colburn, director of the personnel division of the Post Office's regional office here, said "William Bolger, our regional director, found Job Mart most worthwhile," and went on to say 728 contacts were made, 621 veterans issued applications, and 329 filled them out before they left.

Praise came from Internal Revenue Service Center, Andover, Personnel Chief William F. Borbour, who gave a point about being patient with a process that isn't completed overnight. He said, "We are now processing scores of applications from Job Mart in our drive to recruit employees."

United Parcel Service representatives Chuck Cahoon, Frank Cullen and Joe Ferro, said everyone from those with master's degrees to grammer school diplomas were heard, military experience such as supervising an Army motor pool or driving big military trucks was taken into consideration, and mechanics, and other skilled people sent to the proper offices of this big outfit, which covers 39 out of 50 states.

Hertz Rent-A-Car Personnel Manager H. B. Mikonis voiced similar sentiments.

---

VETERANS HAPPY AT RECEPTION

Every veteran who took part in the Job Mart thought the whole concept was "great"—even those who did not find a job.

It had its drawbacks for many and they gave their honest opinions as to what they thought was wrong. Both the VA and Globe sought out these people because constructive criticism can make for better future job marts.

For the thousands who went away with a job or a prospect of one, it was one of their finest days since they separated from Uncle Sam.

As for others, here's what some of the men had to say as they left Suffolk Downs Thursday night:

Dennis Richard, 22, of Lynn, a Marine Corps vet, said, "I thought the whole thing was pretty good. I want to be a civil engineer but I need further training. I found that out here. The VA counselors were more help than anything to me."

Dennis was not the only one who had high praise for the counseling service. Many veterans were unaware that such a service was available.

Hundreds of others, who had no idea of what kind of a job they wanted or what they were suited for, had their first experience with the totally revamped vocational counseling service of the Massachusetts Division of Employment Security. Counseling director Thomas Conway said, "Our job was to show these kids they were, in most cases, setting their sights too low when it came to their potential."

Charles Corricelli, 25, of Everett, an Air Force veteran, commented, "I thought it was great. Personally it has not been so good for me, but I talked to a lot of guys who made out fine. It should run for a week—it's too much for one or two days. I want to be a computer-programmer, but I've had too much previous training for most of the companies here. They want to train their own people.

"But I've got three or four interviews lined up for next week and that's more than I had when I came here."

Many employers said, after the first day, they had no idea that the average Vietnam veteran would have the training and qualifications they had. "Many of these kids are almost over-educated," one experienced personnel manager commented.

Another said, "Every fourth kid had a college degree. It amazed me. But we were looking for men who could work with both their heads and their hands—we don't have any openings for history majors, right now."

John O'Donnell, 26, of Norwood, an Army vet, said, "This was an excellent idea. Really tremendous. I talked to a number of companies and I've got a lot of leads and some interview appointments. I wanted a training position in government. I came here both days, but you really need more time than that to get to see all the companies you wanted."

Melvin Diggs, 25, of Roxbury, another ex-soldier, wanted a training job. "This was a good thing. There's a lot of opportunities here and I got some leads on jobs. I sure found out that it's difficult to get a job today without a good technical education."

The question of a technical education versus a liberal arts education came up constantly during Job Mart.

There is no question that employers are seeking young men with a good, advanced, technical education such as schools like Wentworth Technical Institute offer.

But that's today. A Federal official pointed out that by 1972, in just the Veterans Administration itself, more than three-fourths of the top management men will be retiring, having reached age 55 with 25 years on the job. Then the demand will switch back to the liberal arts—business—professional degree man.

George Howe, 26, of Waltham, another Army man, has been setting aside one day a week for job hunting. "This was very impressive. In one day I covered more companies that I could in six weeks. At Job Mart I went only a few steps to get from one company to another and I was able to talk face to face with the guy that could hire me. I have two or three things fairly definite and a dozen hopefuls. I came both days and even then I didn't get to see everyone I wanted. Two days is really not enough time."

Robert Morrissette, 23, is an Air Force veteran who is continuing his schooling at Bridgewater State Teachers College. "I wanted a part-time job. At first I was pretty depressed, then I hit the oil company booths and now I have a choice of jobs starting at $2.75 an hour. Now, instead of no job, I've got to decide which ones I want. This was a good thing for you guys to do."

Bruce Haglquist, 22, of Charlestown, an Army veteran, thought the whole thing could have been better. "It's too big for itself. I didn't make out at all. It was not diverse enough in what it had to offer. The idea was great.

Mike Arsenault, 22, of Chelsea, an ex-Marine and his pal, Charles Zerola, 21, also of Chelsea, an Army man, both thought Job Mart did not offer anything for a young veteran who only had a high school education—but both were delighted with Job Mart and hoped another one would be held.

Charlie left saying he thought he would take up his dad's offer to tend bar in his cafe.

Mike said, "They set their qualifications too high for me. They want degrees. I went into the service out of high school and now I think I'm too old to go after a degree.

"The idea was great. It was good to find out that someone big is trying to help guys when they come back. People forget, I guess, that after a while in Vietnam you come back with your mind a blank. You don't know what you want to do. I talked to lots of guys here and a lot of them made out just great—but not me. I don't know what I want to do.

Mike was a lucky one because at that point Tom Conway from MDES happened to walk up and hear him. He quickly squired Mike over to a beautiful young lady who holds a master's degree in vocation. He now is going to undergo extensive vocational therapy and he doesn't know it yet, but Job Mart will pay off for him, too.

Throughout the whole thing, and as tired as both the veterans and the employers and the sponsors got, a sense of humor prevailed.

One wiry little guy spent some time talking with the FBI recruiters. Finally, he was told he was too short and underweight to be an agent.

He quipped "I'll buy elevator shoes—no one but my mother will ever know."

"You're still underweight," said the agent with a grin.

"I wish to heck you were sitting on my draft board when they called me up," the little guy said, "I could have used a friend like you then."

Needless to say that broke up the usually taciturn FBI men.

## DEFENSE AND THE ECONOMY

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, one of the most realistic appraisals of defense spending in recent months is contained in an address by the Honorable G. Warren Nutter, Assistant Secretary of Defense for International Security Affairs. It is entitled "Defense and the Economy" and it spells out the true measure of cuts in defense spending, and it contrasts our own defense status with that of Communist forces in a most effective way.

The address follows:

DEFENSE AND THE ECONOMY

(By Hon. G. Warren Nutter)

I have been asked to speak on defense and the economy. I welcome the opportunity to do so before this audience of fellow economists.

Naturally, I speak in my capacity as an official of the Defense Department, but that is not all bad. I recall a former colleague of mine at the University of Virginia, a historian, who used to say that we have plenty of unbiased histories of the Civil War. What we lack, he would add, is an unbiased history written from the Southern point of view.

I am pleased to give an unbiased account of defense and the economy as seen from the Defense point of view.

Let us first take a look at trends in public spending as projected from fiscal 1964, the last year before the military buildup in Southeast Asia, through fiscal 1971. In current prices, spending by government at all levels—federal, state and local—is expected to increase over this period by $143 billion, or by 82 percent. Spending by the Department of Defense, on the other hand, is expected according to the present budget to increase by only $21 billion, or by 41 percent, while non-defense spending increases by the remaining $122 billion, or by 98 percent.

The contrasting trends are even more striking when measured in constant dollars. In prices of fiscal 1971, spending will have risen by $88 billion for government as a whole, comprising $82 billion for nondefense programs and less than $6 billion for defense. The corresponding percentage increases in real spending are 38.5 percent for government as a whole, 50 percent for nondefense purposes and only 9 percent for defense.

As a consequence of these trends, nondefense spending will show a rise from 20 percent of GNP to some 24 percent, while defense spending shows a decline from 8.3 percent to 7.0 percent, the lowest percentage since 1951. Similarly, in fiscal 1971 defense will account for less than 35 percent of federal spending, the lowest fraction since 1950. In fiscal 1964, it accounted for 41.8 percent.

The civilian and military manpower employed by the Department of Defense and defense contractors amounted to about 5.8 million persons at mid-1964. The figure will be higher by less than 700 thousand, or 11 percent, at mid-1971. Over the same period, the labor force will rise by some 14 percent.

Of course, this relative shift in resources away from defense to other uses has not taken place steadily since fiscal 1964. Quite the contrary. Through fiscal 1968, the relative shift was in the other direction. At the peak of the buildup in Southeast Asia, just before the present Administration came into office, defense spending had risen to 9.5 percent of GNP and 42.5 percent of total federal spending. The trend has been reversed by the sharp military cuts of the last year and a half.

At first sight, these cuts may not appear to be as large as they have been. In fiscal 1968, defense spending was $78.0 billion. The present budget calls for $71.8 billion in fiscal 1971, a decline by $6.2 billion or 8 percent. But prices and wages paid by the Defense Department have risen by some 15 percent and have therefore eaten up a far larger sum. In fiscal 1971 prices, it would have cost $89.4 billion to finance the defense program actually undertaken in fiscal 1968, or $11.4 billion more than the cost in then current prices. That is to say, real defense spending measured in fiscal 1971 prices has been cut by $17.6 billion over this period. This is the figure to focus on: a reduction by one-fifth in real defense outlays accomplished so far under the Nixon Administration. This is the magnitude of the shift in resources that is taking place.

Despite this hefty cut in defense spending, there are some who say that we have not cut enough, that the "peace dividend" runs many billions of dollars more than the cuts already made. These claims are wrong for two basic reasons.

First, what we can save by withdrawing troops from Vietnam is considerably less than the full cost of the war. Measured in fiscal 1971 prices, the full cost of our forces came to $30 billion in fiscal 1968. Of that amount, however, some $7 billion represented the cost that would have been incurred for baseline forces if they had been engaged in peacetime activities elsewhere. Hence the incremental cost attributable to Vietnam was $23 billion.

Second, we have since reduced defense spending in the same real terms by almost $18 billion, leaving only $5 billion to $6 billion of the so-called "peace dividend" still to be realized. This sum is only about half of the incremental cost of the Vietnam war that will still face us in May 1971, after the withdrawals of 265,500 troops announced so far have been accomplished. That is to say, we will actually have overdrawn the "peace dividend" by some $5 billion before the end of fiscal 1971, but we can do so only by deferring or reducing other essential programs.

The cutbacks may stand out more sharply when put in terms of people and things. Our military forces numbered 3.5 million in mid-1968 and will number 2.9 million in mid-1971, a decline of 639 thousand. Those nineteen through twenty-two years old, or about half the total, accounted for 24.7 percent of their age group in 1968 as compared with only 14.5 percent in 1971.

Civilian employment will show a drop of 142 thousand in the case of the Defense Department and 1.4 million in the case of defense contractors. Total direct employment in defense activities, civilian and military, will therefore decline by some 2.1 million between midyears of 1968 and 1971, creating a substantial problem of transitional unemployment.

Real purchases of goods and services will fall by 30 percent. Our active fleet will be reduced by more than 200 ships. The average age of ships in the active fleet is now more than 16 years. About half of our Air Force planes are over nine years old. Yet the Air Force has scheduled purchase of only 390 aircraft in fiscal 1971, the smallest number since 1935.

The problem facing our nation today is to meet a mounting external threat while reducing the resources devoted to defense and expanding those devoted to internal programs. Whatever we do, we must not commit the fatal error of closing our eyes to the threat shown by actions as well as words.

The gravity of strategic nuclear developments in both Communist China and the Soviet Union is revealed by a few salient facts and figures:

Our estimate of the monster Soviet SS–9 Intercontinental Ballistic Missiles deployed or under construction has increased from 230 a year ago to over 300 today.

The number of SS–11 ICBM's has also increased substantially.

The Soviets continue testing SS–9 multiple re-entry vehicles and an improved SS–11 missile.

The Soviets now have some 50 ballistic-missile submarines, including 25 that are nuclear powered. At present construction rates, the Soviet fleet of Y-Class submarines could numerically match or exceed our fleet of Polaris and Poseidon submarines by 1974 or 1975.

Communist China has continued to test nuclear weapons in the megaton range and is expected to test its first ICBM within the next year. An operational capability may be achieved by the mid-1970's, and a force of 10 to 25 ICBM's might be operational two or three years later. The launching of a satellite this spring reinforces these judgments.

In light of these developments, it is important to remember that we have not increased our force level of strategic offensive missile launchers as established around 1965. We have actually decreased the megatonnage in our total strategic offensive force by more than 40 percent since then. In the same period, the Soviet Union has quintupled its number of strategic offensive missile launchers, increasing them from 300 to 1,500, and quadrupled the megatonnage of its strategic offensive force.

We are confronted with a strong conventional threat as well. The most critical theater is that facing the NATO Central Region, where the Warsaw Pact could, in a relatively short time, assemble a force of about 1.3 million men and associated combat equipment. In Asia, we are all well aware, Communist China and North Korea maintain armed forces that represent a very real threat to neighbors who are among our staunchest allies.

Our defense planning and budgeting must also give serious consideration to submarines in the Soviet general purpose forces. The Soviets have about 300 attack and cruise-missile submarines, including about 55 with nuclear power, that could endanger both our own naval forces and the merchant shipping essential to support our European and Asian allies.

The Soviets are rapidly building up other elements of their naval fleet and expanding its presence throughout the seas of the world. The number of steaming days for Soviet naval units in the Mediterranean has risen from some 750 in 1963 to around 16,000 last year. A recent worldwide naval exercise involved about 200 ships whose operations were closely coordinated. Soviet naval units have cruised in the Caribbean each of the last two years. This year, three ships and a nuclear-powered submarine armed with cruise missiles visted a Cuban port.

In brief, the Soviet Union is embarked on an ambitious program to achieve a global naval capability.

We estimate that Soviet expenditures on research and development for military and related purposes have been increasing at an annual rate of about 12 to 13 percent during the last few years, while our effort has actually declined when inflation is taken into account. Our greater past expenditures have given us a technological lead over the Soviet Union, but recent trends threaten to destroy that lead. Accordingly, the only course we can prudently follow is to advance our own knowledge at a reasonable pace in every area we consider important to our future military strength.

To ensure our future safety and to avoid the risk of serious technological surprise, we must invest each year a reasonable volume of resources for improving and expanding our technological base. While we cut back on force levels and procurement of weapons in response to budgetary restrictions, we must

protect against future threats to national security that would result from inadequate support of basic research efforts.

Put more broadly, increases in some defense programs are the best way to cut defense spending as a whole. Military assistance and sales are a case in point. These twin instruments assume new importance as we implement the Nixon Doctrine. They are the means for transferring to allied and friendly nations the military equipment and training they need to provide for their own and the common defense. In some areas where American forces are now stationed, we can increasingly realize substantial savings by exchanging military assistance for manpower. In others, we can help allies and friends achieve a self-reliance that will make use of American manpower unnecessary in future crises.

The great danger is that we may be tempted to cut the defense program recklessly simply because it is more easily controlled, year by year, than the rest of the budget. About half of federal spending, or roughly $100 billion in fiscal 1971, is subject to annual control through the appropriation process. Sixty-five percent of the annual controllable sum rests within the defense budget.

Uncontrollable spending is determined by basic legislation not subject to annual review. In many areas, payments depend on some formula set by law, and funds are automatically disbursed unless Congress revises the basic legislation.

When spending must be cut quickly, controllable items bear the brunt. Defense therefore becomes a prime target, whether or not reductions make sense as far as national security is concerned. The moral would seem to be that more of the federal budget needs to be brought under annual control so that aggregate spending can be reduced in an orderly fashion when the economic situation calls for such an aggregate reduction.

Peace is the prime objective of this Administration. President Nixon has demonstrated his full commitment to that objective through Vietnamization, negotiation, and realignment of national priorities.

But peace and security require strength. By the end of this fiscal year, the defense effort will have been cut by 20 percent and manpower by 25 percent. We can reduce our defense community only so far without jeopardizing the nation's safety. Secretary Laird has made this clear in saying:

"My great concern at the present time is the maintenance of the nation's military strength at the level required in today's world. The pressures for deeper immediate cuts are strong. Convinced that deeper cuts would expose the American people to risks which I cannot in conscience recommend that they assume, I shall do my best to persuade the Congress and the people to reject them."

In brief, we have cut defense enough for the present. It is time to look elsewhere for relief from the heavy burden of taxes and for resources better employed in meeting pressing domestic needs. Those whom you have entrusted with responsibility for the nation's security speak with one voice in sending this message to you.

---

## FEDERAL PROGRAM ON ALCOHOL USE URGED

(Mr. BROWN of California asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. BROWN of California. Mr. Speaker, a few days ago Mr. William N. Plymat, Iowa insurance executive, appeared before the House Committee on Interstate and Foreign Commerce to testify on behalf of the proposed Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970.

Mr. Plymat's testimony was extremely enlightening, and being familiar with his knowledge and sincerity in this regard I feel compelled to bring his statement to the attention of my colleagues.

The testimony follows:

STATEMENT OF WILLIAM N. PLYMAT, CHAIRMAN OF THE BOARD OF DIRECTORS OF THE PREFERRED RISK MUTUAL INSURANCE CO., WEST DES MOINES, IOWA

Mr. Chairman and Members of the Committee: My name is William N. Plymat. I was a founder of and now am Chairman of the Board of Directors of the Preferred Risk Mutual Insurance Company of West Des Moines, Iowa. I served for 11 years as President of this automobile insurance company, which insures only non-users of alcohol. I am an attorney and am General Counsel of the American Council on Alcohol Problems of Washington, D.C. This organization represents statewide organizations in a large majority of the states concerned about alcoholism and all alcohol problems. These organizations and the American Council on Alcohol Problems represent the concerns of multitudes of church groups across the country. I am also President of the Iowa Council on Alcohol Problems, which carries on an extensive alcohol educational program in the schools of the State of Iowa, and this organization is a state affiliate of the American Council on Alcohol Problems.

In appearing here I wish not only to urge the passage of this Bill but to urge you to give consideration to some things that bear on the whole alcohol problem which I fear may be overlooked. And the suggestions which I make may point up a need for several amendments to the Bill to insure that the noble purpose of the Bill may be achieved.

It is rightly said that alcoholism is a *progressive* disease. There are still many things that are not known about it. There is a difficulty even in defining it. There is a minority that feel that it is essentially a *physiological* disease—some in this minority claim it is due to the hormone situation that exists in some individuals. They claim that there are few baldheaded alcoholics—that most alcoholics have heavy heads of hair. You can check this by going to an Alcoholics Anonymous meeting and looking around—but I will say that there are baldheaded alcoholics. There are some in this minority who claim that it is due to a liver deficiency in some individuals who thereby become addicted. There is at least one expert who claims it is due to a damage to a section of the brain—the hypothalamus, which controls the autonomic nervous system of the body, and that the damage by alcohol to this section of the brain causes the compusive addiction to alcohol.

But I am sure that *the majority* properly view alcoholism as essentially a *psychological* problem. I think it is fair to say that the most successful therapy in America has been that of Alcoholics Anonymous. Their record of effecting recovery is outstanding. It is noteworthy that their therapy is based upon the willingness of the individual to become completely honest with regard to the affliction, his or her actions in seeking recovery, and a total response to all the problems and challenges of life. I know of no successfully recovered alcoholic who is not an honest person. It is also clear that spiritual change is involved in recovery. This sometimes bothers some who are resistent to entertaining the notion that their lives could be improved and that religious and spiritual principles have meaning and value and should be responded to.

Undoubtedly much research needs yet to be done on alcoholism which this Bill will provide for. But much more action than research is needed. This Bill can lead to recoveries from alcoholism for hundreds of thousands at a minimum who will otherwise die. The need is urgent and getting more urgent with every passing day. So the Bill must pass.

### REHABILITATION AND WARNINGS ARE NOT ENOUGH

But more is needed than just a massive program of rehabilitation and a warning of individuals about the dangers of abusive use of alcohol and alcoholism. We need to consider the matter of social and legal controls. We need research in many areas far afield from the problem of "alcohol abuse"—in the form of intoxication and alcoholism.

We need to study "alcohol use" as well as "alcohol abuse." It is my firm conviction that if we mount all the rehabilitation efforts that can be achieved as a result of this Bill, if passed, and all the prevention warnings that can be mounted on "alcohol abuse" we will still be falling behind in coping with this problem. Sooner or later we must face up to the hard truth—and that is that if we are going to make real progress in the whole area of alcohol problems, alcohol abuse, and alcoholism, we must take actions that will reduce the consumption of alcoholic beverages in this country instead of standing by and watching per capita consumption continue to mount and the widespread use of alcohol continue to expand. I am not only willing but eager to have competent research done to verify hypotheses which many sincere citizens, including myself, have arrived at after our own research. Our research leaves much to be desired, but as private citizens we do not have the staff or funds to do better.

### THE STORY OF A STATE

Let me cite you the example of my own state. Until July of 1963 Iowa sold liquor legally only by the bottle. We had a somewhat unknown amount of "illegal liquor by the drink" in so-called key clubs mostly in our metropolitan areas. This situation was distressing to many citizens and legislators and so we legalized liquor by the drink and immediately faced the dilemma of deciding whether it was to be "limited" as to number of licenses or "unlimited." If the number were limited, there would be the great danger of graft and corruption in the scramble for the valuable licenses. And so we abandoned any limit. We wound up in 1964 with one license for every 1,219 people in Iowa. By 1969 there was one license for every 917 people. We were told that liquor by the drink would promote moderation and that if a man could get a drink or two in a bar he would be satisfied and would drink less than if he bought a whole bottle. But it did not turn out that way. In the first year of liquor by the drink, Iowans bought $37,182,672.67 in liquor by the drink including the 10% tax. The next year it was $43,767,911.01. The next year it was $51,120,718.77. In 1967 it was up to $56,581,227.45. Then we lost our hard figures for the retail tax was taken off, but reasonable estimates indicate continued increase.

In the six years after liquor by the drink, the per capita consumption of liquor in Iowa rose over 32% against the average of the four years before. At the same time, our mileage death rate according to National Safety Council figures rose 33.6% from a rate of 4.73 per 100,000,000 miles traveled for the years of 1960 to 1962 inclusive to 6.32 for the years 1963 to 1968 inclusive. Drunk and drinking driving fatal traffic accidents increased markedly. Over the country "run off the road" fatal accidents involve drinking to the tune of around 75%. Iowa's toll in this category increased markedly. Midnight to 4 a.m. fatal accidents involve much drinking, and this category increased greatly. When our death rates rose, we added 100 men

to our Highway Patrol at a cost of around $1,000,000 annually, but that did not result in a decrease. Alcohol abuse and alcoholism are highly related to poverty problems, and these problems have risen dramatically.

IOWA'S OUTSTANDING REHABILITATION EFFORT

We wisely mounted a great campaign to attack alcoholism in Iowa under the able leadership of our then Governor Harold E. Hughes. And now Des Moines has a detoxification hospital that costs taxpayers $450,000 a year. This hospital, the Harrison Treatment and Rehabilitation Center, was named for our now famous Municipal Judge Ray Harrison, who has been a great leader in rehabilitation work for more than 30 years. It is doing a great job, and many alcoholics have found sobriety there. In addition, we have 16 information centers over the state, ten halfway houses, and a 50-bed hospital at the University of Iowa. Our state Alcoholism Commission is doing effective educational and other work. I think in proportion to its population and wealth Iowa is doing as much if not more than any state in the Union. With a population of 2,789,893, Iowa is now spending annually around $2,500,000.

There have been great increases in the number of alcoholic patients in our four state mental health institutes. There is no positive evidence that the liberalization of our liquor laws caused this increase, but the moderation we were promised by liberalization surely did not appear; and if alcoholism is a *progressive disease,* as it is, it may well be that the greater accessibility of liquor through around 3,000 new bars in our state sped many a man and woman down the road to alcoholism. And much loss in life and personal injury and loss of income and family injury can be avoided the sooner an alcoholic can be arrested on his or her way down to the dreadful "bottom." We come then to the question whether all this wonderful work is really "solving" or substantially meeting our problem of alcohol abuse and alcoholism. And my conviction is that it is not.

REHABILITATION ALONE DOES NOT SOLVE THE PROBLEM

I know of one recovered alcoholic who was reported to have been arrested over 300 times for intoxication before he found sobriety. This is to say that when an alcoholic finds sobriety the drunk arrests in his city over a period of time often are lessened by from one to a hundred or more. Arrests for drunkenness often do not tell the true story because arrests sometimes are more an indication of enforcement diligence, which varies from time to time, than actual conditions. Yet I know of no intensified effort in Des Moines to arrest more for intoxification in the last few years than before. I anticipated that when we mounted this vast rehabilitation effort in Iowa there would be a reduction in arrests for drunkenness in Des Moines and this would indicate we were making real progress in the total problem. But this has not occurred. I wish to provide a tabulation of this record at this point.

ARRESTS FOR DRUNKENNESS IN DES MOINES, IOWA

| Year | Total | Under age 21 | 21 and over |
|---|---|---|---|
| 1959 | 3,657 | | |
| 1960 | 4,035 | | |
| 1961 | 4,024 | | |
| 1962 | 3,801 | 80 | 3,721 |
| 1963 | 4,454 | 98 | 4,356 |
| 1964 | 4,400 | 296 | 4,104 |
| 1965 | 4,311 | 198 | 4,113 |
| 1966 | 4,612 | 264 | 4,348 |
| 1967 | 4,696 | 336 | 4,360 |
| 1968 | 4,944 | 367 | 4,577 |
| 1969 | 5,257 | 401 | 4,856 |

I should like to add that when Judge Harrison established in Des Moines a special court class for those arrested for drunkenness some years before liquor by the drink, drunk arrests dropped markedly. Yet after liquor by the drink, the trend was reversed. These facts convince me that although we are doing an outstanding and commendable job and it should be continued, expanded and intensified, we will never really make gains until we do something more. I will call your attention also to the trend of arrests of those under 21 years of age. Millions of youth are probably starting down the road to alcohol abuse and alcoholism.

SOME GENERAL RECOMMENDATIONS

If we are to completely respond to the challenge of our problem, we should do research of many kinds. One researcher, Dr. Melvin H. Knisely, the subject of an article in the *Reader's Digest* in June, 1970, contends that even moderate use of alcohol may result in brain and heart damage. This contention deserves extensive research. It has been assumed until recently that only heavy drinking over a long period of time results in brain damage. If there is brain damage with moderate social drinking, this needs to be brought home to all our citizens for alcohol abuse and alcoholism may result from conduct that today is considered socially acceptable and non-injurious.

It is my belief that no physical or mental test can be given to a youth that can foretell if he or she will become an alcoholic if he starts the use of alcohol and that on the average one out of 15 who begin use will sooner or later wind up as an alcoholic. Research should be undertaken to determine if this belief is correct. If it is, the nature of our preventive education may need to include strong efforts to suggest to our youth that total non-use of alcoholic beverages is the only sure way to avoid the disease of alcoholism. And recognizing that alcoholism is a fatal disease unless arrested, the danger of it, although being only one in 15, is so great as to warrant strong efforts to avoid it.

Research needs to be done to determine the degree of successful recovery that can be obtained through a massive total effort at rehabilitation. If, for example, the chance of recovery is only 50%, as may be the case, this needs to be brought home to all of our citizens.

We need to determine whether legal restrictions are helpful in reducing the problem of alcohol abuse. I am of the conviction that the line should be held against the Sunday sale of liquor in all the places where under state and local law such is now prohibited. Drinking is largely related to leisure-time activities. The liquor industry pushes hard for Sunday sales because it means great increases in sales. One of its industry officials reported that in New York, where Sunday sales are allowed, approximately 60% of the sales of the week are done on Sunday. A few years ago I compared the records of fatal traffic accidents in Washington and Iowa which had no Sunday sale of liquor with California and Oregon that did and found a marked difference. My home state of Iowa has no legal sale of either beer or hard liquor on Sunday, and although traffic flows are known to be about the same for both Saturday and Sunday, our fatal traffic toll is much less on Sundays.

We need to know whether under a liberalized system of widespread liquor by the drink there develops more alcoholism than under more restricted conditions. We need to know whether increased per capita consumption of liquor under liquor by the drink results in great increases of what may be called "alcohol abuse."

We need to carefully research the effects of advertising of alcoholic beverages especially on radio and television. It seems fundamental that advertising increases use and consumption, and it is to be recognized that the advertising of alcoholic beverages on radio and TV appeals to teenage youth to buy a product that for them most places is illegal.

We need an intensive investigation of the drinking driving problem. Right now it is being claimed that most of the blame for the problem of drinking driving fatal and injury accidents belongs to alcoholics. I am of the conviction that those who think that see only the top of the "iceberg." Admittedly there are many alcoholics and so-called "alcohol abusers" in this category, but there are tremendous numbers of alcohol-caused accidents involving drivers under 25 years of age and most of these are not alcoholics or problem drinkers . . . nor so-called "alcohol abusers." They are young people who do not regularly get drunk but who on one occasion got too much alcohol for safe driving.

According to Raymond K. Berg, chief judge of the Chicago traffic court, a recent study there showed that only 20 percent of those convicted of drunken driving were alcoholics. The rest, according to him, were just ordinary social drinkers most of whom did not believe they were impaired drivers until a blood sample or a breath-tester showed otherwise.

In my opinion, it is most unfortunate that the National Safety Council leaders have been persuaded that they should abandon their historic pleas to motorists to avoid *all* drinking and driving. Their action, which was prompted by evident theories of one or more psychologists, was designed to get after the drunk driver, but its result will be, I fear, to increase drinking and driving by many who will be led to believe they can safely drink and drive if they will hold their drinks to some reasonable number.

Do we need to study the wisdom of returning to strong encouragement of total non-use of alcohol? I believe so. A person who never drinks never becomes an alcoholic. We recognize that alcoholism requires not only use of alcohol but also some as yet greatly unknown "X" factor that combines with alcohol to create alcoholism. So long as we do not know what the "X" factor is, are we not wisest to mount a campaign to discourage drinking in our society . . . and to encourage non-use?

I cannot help at this point but point out our marked difference in our approach to alcohol and tobacco these days. Most people claim that unless one smokes heavily for a long time he does not get lung cancer nor emphysema nor severe heart damage. This is the common, largely unchallenged, belief. Yet today we are engaged in a massive campaign trying to persuade everyone to quit smoking. Yet alcohol is a much more powerful drug causing many severe social, economic, and physical problems. No man smokes a cigarette and goes home and beats up his wife—but drinkers do. At worst smoking injures only the smoker, but drinking can injure multitudes of others.

Yet we seem to view alcohol in a much more tolerant way. We seem to be saying that unless one gets drunk and then injures someone or becomes an alcoholic, all is well. We fail to recognize all the damages that occur to individuals and society from alcohol use that falls short of this. We are told that around 75% of those in our penitentiaries got there through crimes committed under the influence of alcohol. We should recognize that a small amount of alcohol can destroy an inhibition that holds back one who has a desire to commit a serious crime. We seem content to wait until one's use of alcohol reaches a stage of severe addiction before we think we should take any steps to discourage its use.

I am convinced that as a society we must soon reach a sort of new social maturity in which we try to discourage the institution of the "cocktail party," avoid putting alcohol to the fore in social relationships, be willing to give some of our "liberty" in avoiding drinking driving, and try by personal example and influence to discourage the use of this highly dangerous drug and especially on the part of our youth.

THE FEARS OF CONCERNED CITIZENS ABOUT THIS BILL

Many dedicated citizens who are concerned not only about alcohol abuse and alcoholism but all alcohol problems and the dangers to our youth from alcohol use are expressing a concern about what will happen when this bill is passed. They fear that all the funds will go into a program of rehabilitation of alcoholics and coping with only the severe alcohol users and that the focus of efforts will be in the direction of research just on the end results of severe alcohol use. They fear that the leadership that will come into power to operate the entire program under the law will rule out every inquiry that does not relate itself just to alcoholic rehabilitation and intoxication as being irrelevant and not proper for investigation and study under the law.

If we are to really cope successfully in the long run with this problem, we must have a *wide-open focus* on not only alcoholism and "alcohol abuse" but alcohol use and all the things that may lead to all alcohol problems and which usually wind up producing alcoholism.

I have not had a chance to discuss the points I have raised here with the sponsors of this Bill. Yet I know of their sincere desires to attack the problem in every effective way. I feel sure they are willing that no stone be left unturned in a total response to all alcohol problems and that in the pursuit of this mission there be thorough investigation and research in all areas that may relate to this massive problem. I feel sure that they want participation from persons of many varying backgrounds. I am sure they see the wisdom of participation not only by those who have been primarily, if not solely, concerned about alcoholic rehabilitation but those who feel that legal controls should be considered and studied and that prevention encompass not only warnings against alcoholism and intoxication but that the full story of the dangers of alcohol be brought home to our citizens and especially our youth and that a total citizen response be generated even to the point of urging avoidance of all drinking and driving and the wisdom of non-use of alcohol.

DOES THE BILL NEED AMENDMENT?

If there be agreement to what I have said here, then does the Bill need amendment? It may be that the sponsors of this Bill may contend that in its present form the Bill contemplates all that I have recommended and that we may be assured that comprehensive work of the nature I have outlined will be done and that persons of all points of view will be involved in activities so that the fears of many may be unwarranted and concern unjustified. If this is true, I believe it needs to be made clear in some positive way. One way may be by amendments. I regret I have not had time to study this Bill in both its original and amended form to the extent and in the detail I should wish and to investigate the reasons for many of the changes that were made, but I can suggest some changes that might be made which might meet the fears of multitudes of concerned laymen and clergy and insure that a total response be made to the challenges of this mammoth problem with participation of persons with widely diverse backgrounds.

SUGGESTED AMENDMENTS—A CHANGE IN DEFINITION OF "ALCOHOL ABUSE"

I believe Section 201(a) should be amended to read:

"(a) 'Alcohol Abuse' means any use of alcoholic beverages that results in damage to persons, property or society."

As it stands now, the definition limits this to such use as results in "intoxication" and this term is one lacking in precise definition. Dictionary definitions usually seem to equate "intoxication" with being "drunk." Evidently the injury that may be considered under this Bill is only that which flows out of actual intoxication or drunkenness, and much injury can result from use that falls short of such an amount. To insure that a comprehensive inquiry shall not be ruled out, the definition of "alcohol abuse" should be broadened.

AN ADDITION TO "FINDINGS AND DECLARATION OF PURPOSES"

I believe that Title I—Findings and Declaration of Purposes should be amended in Section 101 by adding thereto the following:

"(h) There has been inadequate research and investigation of many factors that may increase alcohol abuse and alcoholism and methods of prevention. Every method of prevention should be explored in detail including the possible efficacy of retaining and creating new legal restrictions on the sale of alcohol, legal drinking age levels, limitations on advertising and promotion of sale and consumption of alcohol, and the possible value of wide publicity of effects of moderate use of alcohol if research establishes physical damage, and the possible value of educational activities that discourage the use of alcohol and encourage non-use."

MEMBERSHIP OF THE NATIONAL ADVISORY COUNCIL

Section 701 of the original Bill as printed in the *Congressional Record* on May 14, 1970 reads as follows:

Sec. 701. (a) The Secretary shall appoint an Advisory Committee on Alcohol Abuse and Alcoholism to consist of *eighteen* qualified persons, including (1) leaders from the general public representing such areas as *business and industry, professional and public training and education, medical and paramedical training, law, religion, State and local government, public health, labor, urban affairs;* and (2) representative leaders from those with major concern for alcohol abuse and alcoholism, *including voluntary associations, governmental groups, and the universities.* Some members of the Advisory Committee must be recovered alcoholics. The Advisory Committee shall advise and consult with the Secretary and the Institute and assist them in carrying out the provisions of this Act." (Italic is the author's)

In the Amendment of August 3, 1970 this section was omitted and instead Title VI provided for "The National Advisory Council Alcohol Abuse and Alcoholism." This section purports to amend "Section 217" of the Public Health Service Act. There is evidently an editorial error here. The Section intended to be amended appears to be Section 218. This section in effect places the proposed Council among other councils which are related to "health," "cancer," "mental health," "heart" and "dental" problems. This Council would have only *twelve* members rather than the *eighteen* specified by the original Bill. In addition, it appears to me that the scope of persons eligible for appointment is greatly, and I believe unfortunately, narrowed. This Section as proposed to be amended would read in part as follows:

"The twelve appointed members of each such council shall be leaders in the fields of fundamental sciences, medical sciences, or public affairs, and six of such twelve shall be selected from among leading medical or scientific authorities who . . . are outstanding in the study, diagnosis, or treatment of . . . alcohol abuse and alcoholism. . . ."

I believe there should be some amendment of this Section to broaden the membership of the Council so that it be clear that the classes of persons listed in the original Bill be members of such Council. While it may be reasonable in the case of the other diseases listed in this Section to be limited greatly to medical and scientific experts, in the case of alcoholism the classes of persons should be as wide at least as provided in the original Bill, and I believe much wider. The disease of alcoholism is peculiarly different from the other diseases and deserves attention of a wider group of concerned and qualified persons. My own belief is that it is important that such a Council have members whose background and experience is outside the groups whose primary, if not sole, interest is in the field of alcoholic rehabilitation and that ministers, educators and others who have devoted themselves to youth education and who have stressed the values of non-use of alcohol should be included, as well as those who may be knowledgeable in the field of law and legal and social controls.

POSSIBLE NEED FOR AMENDMENT ON PART C—PROJECT GRANTS

Part C. Sec. 520, 521, 522 and 523 relate to wide range of "project grants." Section 521 (a) (2) for example provides grants for conduct of "research" and ". . . more effective methods of prevention. . . ." Section 521 has certain limitations on these grants. Then Section 522 seems to make necessary approval or evaluation by a state agency before the grants may be made to any group located within a state. I would assume such state agencies would be those related primarily, if not exclusively, to rehabilitation work. The question I raise is whether if some organization seeks grants for educational and research work which is outside the normal field of rehabilitation, it should be required that such a proposed project be approved or evaluated by an agency that has no substantial interest in such research or educational efforts. An example of this could be the Iowa Council on Alcohol Problems or any of nearly forty such similar groups in the several states.

There also seems to be a question of what approval or evaluation may be required, if any, in the case of a national organization that wishes to undertake some research and educational work on a national scale. I would assume that such requests would not require any special evaluation or approval of any agency in a state before its consideration by the National Advisory Council. An example of this might be the American Council on Alcohol Problems and The American Business Men's Research Foundation of Elmhurst, Illinois.

Those who are far more familiar with the intentions of the sponsors than I should determine the need and propriety of any special consideration of this matter and possible amendment to clarify the situation if it is needed.

WISDOM OF DELAY IN A SECRETARY'S REPORT

Section 309 which relates to the Reporting Functions of the Secretary contain the following:

"(b) submit to Congress on or before June 30, 1971, a report (1) containing current information on *the health consequences of using alcohol,* and (2) containing such recommendations for legislation and administrative action as he may deem appropriate;" (Italic by this author)

I am naturally very pleased to see that this report requires consideration of "the health consequences of *using* alcohol" which makes it clear that the consideration is not specifically of "alcohol abuse" and "alcoholism" but rather to the general *use* of alcohol.

But it seems to me that the time for this report is too soon to enable an adequate study and research to be made by the Secretary and evaluation of the research and information available from many groups of concerned citizens. I believe such a report should be delayed at least a year and perhaps more if necessary in the opinion of the Secretary.

In conclusion I should like to emphasize that I have a deep concern about the problem of alcohol abuse and alcoholism and that I recognize it to be among the major problems of our society and that the problem is becoming more severe with each pass-

ing year. It is noteworthy that the consumption of alcohol is rising in this country and that the industries that produce alcoholic beverages do everythnig in their power to increase sales and consumption. I believe there is justification for the general belief that as consumption increases so do the multitude of all alcohol problems. The danger of drugs to our youth is receiving special attention these days, and most adults are deeply concerned about this damage to our society and to the future of our country.

I have noted with great interest the statement of Senator Harold E. Hughes on August 10 when this Bill was before the Senate. He said:

"In the hearings of our Subcommittee on Alcoholism and Narcotics, held in such cities as Los Angeles, New York, Denver, and Des Moines, we heard the testimony of many former narcotic addicts. I was struck with the fact that in most instances, the addicts, many of them young people, had begun their careers of drug abuse with alcohol. This seems to be the starter drug of the drug cycle, if such can be named."

It seems likely that these drug addicts were not addicts, yet alcohol was involved in their problems. It is for this reason and the others that I feel that as we dedicate ourselves to the problem of alcohol abuse and alcoholism we must relate to all the alcohol problems and to a consideration of all alcohol use if we are to make real progress toward lessening the damage to our country from all these problems. Thus I commend the sponsors of the Bill and strongly urge its passage, and at the same time urge that it be made as comprehensive as possible so that there will be a total attack on the problems and we make real progress.

## TAX DEDUCTIONS FOR BLOOD DONATIONS

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, I am introducing legislation that would help meet today's chronic shortage of transfusable blood and at the same time improve the quality of blood in our hospital blood banks. My bill would give a tax incentive to a person to give blood by allowing them a $25 tax deduction for each pint of blood donated to a nonprofit organization. A maximum of $125 would be placed on the amount each taxpayer could deduct in a year since health requirements limit a person to giving one pint of blood once every 8 weeks and 5 times a year.

The need for blood is increasing at a rate of 14 percent a year. The problem is that the number of donors are not increasing in a rate equal to the demand. The population is growing and more and more uses of blood are being found through medical research. In addition to the transfusion of whole blood, a single pint of blood, through blood fractionation, can be broken down so as to provide red cells for anemia or post surgery, white cells for leukemia victims, platelats for purpora suffers, factor VII for hemophiliacs and plasma for burns and accident victims.

Unfortunately, the shortage of donated blood has resulted in a proliferation of commercial blood banks. The commercial blood banks are less stringent in the health standards they require, and consequently they attract persons with poor medical histories for whom the on-the-spot cash offered is attractive, such as derelicts and drug addicts. Statistics show that the dangers of contracting hepatitis from a transfusion of commercial blood is 10 times that of donated blood.

Mr. Speaker, 65 percent of the nonprofit blood is donated by middle-income individuals: persons who earn between $5,000 and $13,000 annually. Furthermore, only 3 percent of the population now donates blood—and if we could raise this percentage by only one point to 4 percent, the blood shortage problem could be solved, and the demand for commercial blood would be greatly reduced if not totally eliminated.

I believe that the bill I am introducing would provide the necessary incentive to increase the number of donors—and do so at relatively little cost to the Treasury. The American Red Cross has opposed this proposal to date because they are concerned that citizens would be tempted to lie about their medical histories in order to obtain this tax deduction. And yet, the American Red Cross does accept blood donated by prisoners in New Hampshire, South Carolina, and Mississippi where inmates are given a 5-day discount from their sentences for each pint of blood they donate.

I would point out that those who are most dangerous to blood banks—namely, derelicts and drug addicts—would not be attracted by this program because it would not offer them an on-the-spot cash payment. The incentive is for the blue- and white-collar men and women who can look forward to a small, but helpful, tax break at the end of the year. The provisions of the bill are such that all taxpayers would receive the deduction, including those who use the standard deduction.

Mr. Speaker, the blood shortage bears a particular hardship for those who have rare blood types. Blood is a form of medicine, and as incredible as it may seem, persons do die today because of a simple want of a blood transfusion. Last year, I had a call from a mother of a young rabbinical student who was dying of a rare disease. His case was further complicated because of his rare blood type, and his critically needed operation was being postponed because compatible blood could not be found. Fortunately, my office was able to secure the blood needed and the young man's operation was a success—but not all of these cases have such a good ending.

Mr. Speaker, I commend this legislation to my colleagues, and I hope the Department of Health, Education, and Welfare and Treasury will give this favorable consideration. The incentive in this bill is clearly directed to the healthy middle-income blood donor—and thereby will do much to eliminate the "skid row" blood from our blood banks.

H.R. ——

A bill to amend the Internal Revenue Code of 1954 to provide that blood donations shall be considered as charitable contributions deductible from gross income

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 170 of the Internal Revenue Code of 1954 (relating to deduction for charitable, etc., contributions and gifts) is amended by redesignating subsections (i) and (j) as subsections (j) and (k), respectively, and by inserting after subsection (h) the following new subsection:

"(i) BLOOD DONATIONS.—

"(1) IN GENERAL.—For purposes of this section, a donation by an individual of his own blood to an organization described in subsection (c) shall be considered to be a 'charitable contribution' of such individual in an amount equal to $25 for each pint donated.

"(2) LIMITATION.—The aggregate amount of individual's charitable contributions described in paragraph (1) which may be taken into account in determining the deduction allowed a taxpayer under this section for any taxable year shall not exceed $125."

SEC. 2. Section 62 of the Internal Revenue Code of 1954 (relating to the definition of adjusted gross income in the case of an individual) is amended by adding after paragraph (9) the following new paragraph:

"(10) the deduction allowed by section 170, to the extent attributable to charitable contributions of the type described in subsection (i) thereof."

SEC. 3. The amendments made by this Act shall apply only with respect to blood donated on or after the date of the enactment of this Act.

## U.S. ARMS SHIPMENTS TO GREEK JUNTA ARE WRONG

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. KOCH. Mr. Speaker, the administration has announced that it intends to resume full-scale arms shipments to Greece. I strongly urge that this course of action be reconsidered. With this decision, the United States is once again lining up with a totalitarian regime for illusory reasons for military expediency. The unfortunate result is to reinforce a dictatorial government whose practices of torture and repression are repugnant to everything the Western democracies stand for.

Since the Greek colonels seized power in 1967 the government has detained thousands of political prisoners, many of whom remain in jail. The regime permits no elections. It has suppressed political parties. It has restricted and harassed the local press and, most distressing of all, it has unmercifully tortured those conceived to be its enemies. These charges are not the figment of hostile imaginations. The European Commission on Human Rights has formally reported the use of torture, and Greece has been forced out of the Council of Europe for these and other repressive practices. Against this background, the U.S. policy of resuming arms shipments represents a shabby surrender to the status quo. It is a blow to the efforts of our European allies whose policies have been geared to cause a liberalization in Greece. It also removes another lever which we could have used to serve the same cause.

The military justification for the change in our policy is weak indeed. It is said that these arms are important to the strength of NATO. I do not accept this argument because I believe that, even if NATO should be strengthened in this area, there are alternative ways to do it. It is also said that we must insure our ability to use airfields in Greece in

the event of an emergency in the Middle East. The Greek position on this point is not clear, but it would seem incredible that Greece would be able to deny our use of those fields if we felt that the Middle East situation was so desperate as to necessitate actual use of our planes or troops. However, the Nixon administration, which prides itself on being a tough bargainer with other nations, does not seem to be so exacting in this case. The inescapable conclusion is that the administration has succumbed to arguments which, in light of the present status of NATO and a political situation in Western and Southeastern Europe, should have been resisted.

It is my view that the United States should formulate its military aid policy toward Greece with clear and publicly stated objectives. First, we should be entitled to use Greek support facilities in the event of a major crisis in the Middle East and surely Greece would consent to that by treaty since it is in their interest to do so. Second, there should be substantial liberalization of the Greek regime's domestic policies leading clearly to a restoration of parliamentary democracy. These are not unreasonable requirements for the benefits, in addition to our NATO commitment, which Greece will derive from major assistance to its defense.

It is time for a reassessment of the U.S. policies of underwriting totalitarian regimes such as Greece, Spain, and Portugal. We should consider very carefully the price we pay in terms of our diplomatic and political objectives when we follow the course of least resistance and send more arms. Our position in the Mediterranean is of the highest importance, but there are alternative means to maintain that position. It is not necessary at this time to please the Greek colonels to secure our interests.

## ON RETIREMENT LEGISLATION

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, on February 26, 1969, I introduced 8 bills which constitute a legislative program for our retired Federal employees. These bills call for an increase in the annuities of Retired Federal Employees, and the elimination of a number of inequities in the Civil Service Retirement Law. Through the years some inequities have arisen, mostly because the amendments to the retirement law did not apply to those Federal employees already on the retirement laws when the amendments became effective.

There must be some measure of correlation between the benefits awarded prospectively during the past 15 years and the benefits now paid to those who retired prior to the effective dates of such prospective legislation. Otherwise, how can present Federal employees have any assurance that they too, will not be forgotten as soon as they leave the active working force. How long can the morale of the present active working force be sustained under such conditions? How much longer are we going to require these long-time retirees to wait so they can receive the same benefits?

While there has been an increase in the standard of living and a rise in the general economy during the past few years, the standard of living for retired employees has stood almost still, and in many cases it has been lowered due to the tremendous effect the inflationary trend has had.

Liberalization of the Railroad Retirement Act was necessary and liberalization of the Social Security System must be forthcoming, but let us not forget the retired Federal employee.

According to the report of the U.S. Civil Service Commission, Bureau of Retirement and Insurance of an approximate 997,000 retired Federal employees and survivors, some 276,000 receive a monthly annuity of less than $100, and over 515,000 receive less than $200.

My bill, H.R. 7770, would give an increase to all Federal retirees and survivors, with the largest increase going to those presently receiving the smallest annuities. These increases would be on the following schedule. $26 per month if now less than $200 per month; 13 percent if now at least $200 but less than $300 per month; 9 percent if now at least $300 but less than $400 per month; 7 percent if now at least $400 but less than $500 per month; or 5 percent if now at least $500 per month. I am urging the Chairman of the Post Office and Civil Service Committee, Honorable THADDEUS J. DULSKI, to hold hearings in the immediate future on this Federal retiree increase legislation so as to correct this injustice by granting these Civil Service annuitants and survivors an overall annuity increase.

One of my other bills, H.R. 7772, would correct a very glaring inequity in the Civil Service Retirement Law, which is presenting a special hardship for quite a large number of Federal retirees. The present retirement law provides that a retiree at the time of retirement may elect to take a reduced annuity to provide a survivor annuity for his spouse. Some annuitants who retired many years ago were forced, under law, to take as much as a 25-percent reduction in their annuities to provide for a survivor's annuity, because when the law was liberalized reducing the cost of providing a survivor annuity, the amendments reducing the cost applied only to those employees retiring after the effective date of the liberalized amendment as the amendments were not retroactive. Employees retiring today take a reduction of 2½ percent on the first $3,600 of annuity and 10 percent on the remainder. If my bill, H.R. 7772 is approved, the cost for providing a survivor annuity will be the same for all retirees, past, present and future, thus eliminating this glaring inequity.

I was very pleased when hearings were held on August 4, 1970, in the House on bills that would permit a retiree to name a new spouse, and restore the full annuity to the retiree when the named spouse predeceases the retiree. One of my bills, H.R. 7773, provides for the naming of a new spouse, and restoring the full annuity to the retiree when the named spouse predeceases the retiree, and I want to commend Chairman DOMINICK V. DANIELS, of the Subcommittee on Retirement, Insurance, and Health Benefits, for holding these hearings. I was also pleased to note that several of the recommendations for amendments made by President Thomas G. Walters of the National Association of Retired Civil employees were concurred in by the Civil Service Commission. This legislation is being reported out by the committee, and when it comes up for consideration on the floor, I urge my colleagues to support its enactment. Incidentally, I was greatly encouraged by the favorable action recently taken by the Senate on similar legislation. The Senate version of this bill, S. 437, was passed on a voice vote.

One of my bills which has special significance to our retired Federal employees is H.R. 7775. This bill provides an exemption from Federal income tax for the first $5,000 of civil service retirement annuity. This legislation would give a big boost to the already strained budgets of our retired Federal employees.

Other bills which I have introduced will eliminate other inequities in the Civil Service Retirement Law and aid Federal retirees and survivors.

I am quite sure that a goodly number of my colleagues are not fully aware of these inequities in the law, and I urge you to give serious consideration to legislation increasing the annuities of our Federal retirees, and eliminating these and other inequities in the Civil Service Retirement Law.

## NATIONAL AIR QUALITY STANDARDS ACT OF 1970

(Mr. ROTH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROTH. Mr. Speaker, the national effort to clean our polluted air is an enormous, complicated, and costly task. The peril of air pollution is becoming more menacing every day, yet we are barely beginning to realize how costly it is to us in terms of health, material losses, and inconvenience, not to speak of higher taxes, higher prices, and sacrifices in comfort and well-being that face us as we try to control and abate it.

Last week, the Senate took a decisive step forward in the national fight against air pollution. It passed the National Air Quality Standards Act of 1970, a comprehensive measure which pinpoints the hitherto ineffective areas of air pollution control and attempts to rectify their shortcomings in the light of new evidence of rapidly increasing health hazards, and damage to property, crops, and livestock.

I applaud the stand taken by the Senate that a massive, stepped-up attack on air pollution must be authorized. I am particularly gratified to note that the key provision of the bill calls for greatly accelerated automotive pollution control efforts. The report accompanying the bill states:

If the Nation is to continue to depend on individual use of motor vehicles, such vehicles must meet high standards. The bill recognizes that a generation—or ten years' pro-

duction—of motor vehicles will be required to meet the proposed standards. During that time, as much as seventy-five percent of the traffic may have to be restricted in certain large metropolitan areas if health standards are to be achieved within the time required by this bill.

Accordingly, the bill calls for the automobile industry to telescope its automobile pollution control effort to achieve 1980 clean car targets by 1975. This would mean a 90-percent reduction in pollutants from the 1970 models, the goals for 1980 set by the Department of Health, Education, and Welfare being: 0.3 grams hydrocarbons per mils, 4.7 carbon monoxide, 0.4 nitrogen oxide, and 0.03 particulates.

These provisions could mean pollution controls for used cars, also, since States are given the power to control pollution from all sources that do not meet proposed new Federal standards.

I am aware that the automobile manufacturers have emphatically insisted that it is impossible to meet this advanced deadline because of a lack of satisfactory technology to control the pollutants involved. I am also aware that the House version of the amendments to the Clean Air Act does not contain any legislative deadlines for tighter controls of automobile emissions, and that several amendments that would have provided more stringent control were defeated. But I am convinced that drastic steps are necessary to eliminate the No. 1 polluter—the automobile—before it causes truly irreparable damage to our urban areas and before we reach the stage where public health in our cities is so threatened that automobile traffic would have to be eliminated entirely. In the absence of adequate mass transportation systems in most metropolitan areas, the results of such a step could be catastrophic.

To provide some leeway in the implementation of the new emission controls, the auto industry is provided a modification that would allow a delay in making the 90-percent reduction of up to 1 year if the industry could persuade HEW that the 1975 deadline could not be met as specified.

I also endorse other provisions of the bill such as those dealing with stationary source pollution problems. The bill authorizes regulations requiring that new major industrial plants such as steel mills, powerplants, and others achieve a degree of emission control that takes advantage of the latest available technology, processes, and operating methods. Federal authorities would be empowered to ban all industrial emissions especially hazardous to health, such as asbestos, beryllium, cadmium, and mercury.

As the Senate report states, the Committee of Public Works determined that, first, the health of the people is more important than the question of whether the early achievement of ambient air quality standards protective of health is technically feasible; and second, the growth of pollution load in many areas, even with application of available technology, would still be deleterious to public health.

Accordingly, the bill proposes the establishment of national air quality standards for pollutants on which criteria are available within 30 days after enactment of the law. Ninety days would be permitted for comments, another 90 days for review. States would be required to hold public hearings and be allowed 9 months to develop implementation plans. After Federal approval, States would then be allowed 3 years to attain national standards.

This is an accelerated procedure which is very welcome. We have found in the past that without statutory deadlines very little is accomplished. Equally welcome is the emphasis on States responsibility to implement Federal standards by formulating such action in ways best suited to their particular circumstances. State implementation plans must spell out detailed steps to be taken which would include the whole spectrum of air pollution control: traffic control, emission controls, mass transit plans, land use plans, monitoring and enforcement procedures, and other actions necessary to meet the required deadlines.

I hope that my colleagues will carefully examine these and other provisions in the Senate bill and consider them favorably. In fact, I hope the House conferees will withdraw the House version, and accept the Senate bill as it now stands.

I trust that we can enact a law which will establish that the air is a public resource, and that those who would use that resource must protect it from abuse, to assure the protection of the health of every American.

## TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. Personal savings in the United States has increased from $3.8 billion in 1940 to over $40 billion in 1969.

## ENVIRONMENTAL PROBLEMS

(Mr. ANDERSON of Illinois asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ANDERSON of Illinois. Mr. Speaker, last week the radical-liberal members of Democratic Policy Council's committee on the Human Environment staged a day-long session for public consumption and held the Nixon administration—which has been in office less than 2 years—accountable for every possible problem with our environment.

The way the radical-liberals tell it, President Nixon is creating power shortages, polluting the air and water, and, for good measure, somehow causing a degradation in the quality of goods and services which American industry provides to consumers.

There are very few people who are going to be fooled by this nonsense. But there are quite a few people who will remember the lack of action during the years when so many of the environmental problems we now face were created and cultivated.

In case my colleagues have forgotten, I will remind them that Democrats have controlled the Congress for 36 of the last 40 years; and have occupied the White House for 28 of the last 38 years.

Mr. Speaker, I cannot help wondering if we would be facing an environmental crisis today if the party which now claims to be so terribly concerned about fighting pollution, had been as concerned during the years between 1932 and 1969.

## INCREASE IN OIL IMPORT QUOTA ANNOUNCED

(Mr. VANIK asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. VANIK Mr. Speaker, in order to meet a potential shortage of fuel supplies this winter, the administration announced an expansion of up to an additional 80,000 barrels a day in the east coast heating oil import quota for the first quarter of 1971. This action comes in response to critical shortages which are developing throughout America, most particularly in the northeastern sector. The shortages are accompanied by excessive price increases in both oil and coal which affect every consumer in the United States.

The cruel fact is that the oil-quota system which limits the entry of foreign oil into the United States constitutes the principal maker of both high prices and shortage.

Furthermore, every extra barrel coming into the United States under the quota system constitutes a handy gift to the recipient of the quota of a bonanza of between $1 and $1.50 per barrel between the import price and the domestic price.

The oil-quota system is an instrument of price and privilege which should be stricken from American law.

## LIFE ON SYRACUSE'S TIPPERARY HILL

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, much of the strength and flexibility of American society is drawn from the sense of identity and community fostered by neighborhoods that developed in our cities in the latter part of the 19th century. Some that come to mind are Beacon Hill in Boston, Grant Avenue in San Francisco, and New York's Mulberry Street. Formed mainly for ethnic reasons, there was a richness and culture in these neighborhoods which deeply influenced the cities around them.

Such a neighborhood was Tipperary Hill in Syracuse, settled largely by Irish immigrants associated with the Erie Canal and salt industry nearby. Its spiritual focal point was St. Patrick's, the parish church founded in 1870. It is to honor the 100th anniversary of St. Patrick's of Syracuse's Tipperary Hill that I call your attention today.

Until mid-1870 the Catholics of Tip-

perary Hill, in order to attend Sunday Mass, had to journey practically across the city of Syracuse to St. John the Evangelist on North State Street.

On July 31, 1870 the first mass of St. Patrick's parish was said in Cool's Hall at 101 Hamilton Street "on the banks of the Erie Canal."

When St. Patrick's parish was founded, this part of the world, specifically southwest of the "Big West Bend" of the canal, was known as Tipperary Hill, but it was not a part of Syracuse nor of the Diocese of Syracuse. Geddes, with its 1,000 residents, of whom 400 were Catholic, did not become a part of the city of Syracuse until 1887, 17 years after the parish was founded.

The first pastor of St. Patrick's, Geddes, was Rev. Hugh Shields of the Albany Diocese. The Syracuse Diocese was not formed until November 20, 1886, by which time St. Patrick's had had its fourth pastor, Msgr. James P. Magee; the second pastor having been Father James Lynch; the third, Father Patrick Smith.

The 70 in attendance at that first mass in Cool's Hall included these men and their families: John Cody, Bernard Sisson, Patrick Parkinson, William Hogan, Jeremiah Dwyer, James Keeler, Malachy Gooley, James M. Farrell, Cornelius Enright, Richard Tobin, Timothy Enright, Philip McGraw, John Holihan, John English, James Lanigan, Patrick Hannon, John Murray, Timothy Sheehan, John Barager, Michael O'Brien, Thomas Meagher, John Fitzpatrick, John Brown, Patrick Fogarty, Joseph Donegan, Michael Brown, John Moriarity, John Matthews, and Mr. O'Connell.

The first baptism at St. Patrick's was that of James Lawrence, infant son of Mr. and Mrs. James White, on Sunday, August 7, 1870; the sponsors being John Cummings and Ellen Collins.

The first marriage was solemnized on Wednesday, November 2, 1870, when Brigid Murphy married Thomas Savage. The witnesses were Catherine Murphy and John Lacey.

All Sunday and weekday masses were held in a temporary chapel in Porter School until St. Patrick's was dedicated by Rt. Rev. Francis McNeirney, D.D., Bishop of Albany, on Sunday, September 15, 1872, on the same day on which he confirmed a class of about 300.

Father Patrick Smith was the pastor of the new edifice. Until this time the pastors had lived at St. John Evangelist's Rectory or in a rented room. Matthew Ryan, who had built a new home on the corner of Ulster Street and Milton Avenue, gave Father Smith the use of his home until a rectory was built on Schuyler Street, next to the church. Matthew Ryan, a foreman in the rolling mill, lived in a cabin attached to the back of his new house.

His mother, Esther Ryan, "Aunt Heddy," made all the candles for the church altar. Matt's brother, Michael built the communion rail, confessionals, and church doors. Michael was helped by Malachy Dwyer, who lived to be 105 and was buried on St. Patrick's Day. This Ryan family was called the Ryan-Aysthers—Esther's.

The fourth pastor, Rt. Rev. James P. Magee, lived in the Schuyler Street rectory for 54 years, from October 7, 1875 to February 4, 1929. He was a Canadian who was ordained at the Seminary in Troy, which later became the Provincial House for the Sisters of St. Joseph where many of the girls of St. Patrick spent their noviatiate.

Monsignor Magee died at the age of 87 on February 4, 1929.

Father Henry Curtin came as fifth pastor to St. Patrick's in June 1929. In this time of depression, he was so extremely charitable that at the time of his death of a heart attack his savings account had shrunk from $4,200 to slightly more than $1. During his pastorate the construction of the high school was begun.

Father Daniel Hennessey succeeded Father Curtin in January 1932. On June 22, 1935, the first high school class was graduated. Father Hennessey died of cancer in February 1938.

Since the 1920's St. Patrick's has contributed more than its share to the political leadership of Syracuse. Today three Justices, a U.S. Congressman and the recently retired Mayor of Syracuse are St. Patrick's parishioners.

The Rt. Rev. Monsignor Thomas J. Driscoll, pastor of St. Patrick's from 1938 to 1968 was proud to recall that nearly 30 priests have come from his parish.

Now, 100 years after the first mass, this vibrant, intensely engaging center of Catholic life on Tipperary Hill is headed by Father Frank L. Sammons. No better choice could have been made to carry the fine tradition of St. Patrick's into its second 100 years.

---

## UNSOLICITED CREDIT CARDS—ARTICLE BY CONGRESSMAN WILLIAM D. FORD

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, the Georgetown Law Weekly, published by the Georgetown University Law Center, has printed an excellent article by my good friend and colleague, Congressman WILLIAM D. FORD of Michigan, on the recently approved bill to curb the mailing of unsolicited credit cards.

Congressman FORD outlines the need for such legislation and explains how the legislation will help to accomplish this need.

I would like to commend Congressman FORD for a fine article, and include it in the RECORD at this point:

### UNSOLICITED CREDIT CARDS

(NOTE.—The following article was written specifically for the Georgetown Law Weekly by Michigan Democratic Congressman William D. Ford. As a lawyer, Mr. Ford points out several legal problems in the new world of "plastic credit."

(Congressman William D. Ford was born in 1927 in Detroit. He earned a Bachelor's Degree in 1949 and a Law Degree in 1951. He then began the practice of law in Detroit and in 1955, was elected a Township Justice of the Peace on the Democratic ticket.

(He was elected as a Democratic Delegate to the Michigan Constitutional Convention in 1961 and was elected on the Democratic ticket to the Michigan State Senate in 1963. In 1964, he became a Representative to Congress and was re-elected in 1966 and 1968.

(In Washington, Mr. Ford is a Member of the Education and Labor Committee, and of the General Subcommittee on Education, Select Subcommittee on Labor, and Special Subcommittee on Labor. He also serves on the Post Office and Civil Service Committee.)

I was pleased this week when the House of Representatives unanimously approved a bill, which I had co-sponsored, to curb the credit cards.

Many of us, including some companies which make extensive use of credit cards, have been aware for some time of the potential danger in this blanket mailing of unordered credit cards.

This method of extending credit puts the intended recipient of an unsolicited credit card in a precarious legal position if the card is stolen or otherwise finds its way into the hands of the wrong person.

The person whoes name is on the card may well find himself billed for merchandise and services which he has never ordered or authorized. He is subject to considerable inconvenience and possible embarrassment and harassment. He also faces the very real possibility of having his credit rating jeopardized through no fault of his own. Millions of Americans can testify as to the virtual impossibility of arguing with a computerized billing system.

The extent of the problem is seen in the fact that some 200,000 credit cards are stolen and millions are lost in the United States each year, and more than $2,000,000 is stolen through credit card fraud. Recent years have seen the creation of a new insurance phenomenon—policies to protect credit card holders from loss through theft or loss of their cards. This insurance is based, however, on the action of the card holder in notifying the insurer of the loss or theft.

In the case of an unordered card, however, this is obviously not possible. The person whose name is on the card does not even know it exists, let alone that it has been lost or stolen. His first indication comes when he receives bills for goods he never ordered.

#### ILLEGALITY OF ACT

There is good legal ground for contending that sending an unordered credit card to an individual constitutes an invasion of privacy by thrusting upon him an unwanted semi-contractual responsibility.

Credit cards most certainly have their place in today's fast-moving economy, when so many transactions are made without an actual cash transfer. No one would suggest that any effort be made to curtail the use of credit cards by those who wish to use them.

In 1958, the nation had 91,669 bankruptcy cases, of which 87.6 percent were non-business. By 1968, the national figure had grown to 197,811, of which 91.6 percent were non-business. We can only conjecture the role of credit cards, solicited or otherwise, in this dramatic increase, but I am sure it is substantial.

For sheer human tragedy, it would be hard to equal a story which was related before our Postal Operations Subcommittee by Mr. Paul Rand Dixon, Chairman of the Federal Trade Commission. He told of a letter received from a woman in California:

"The writer informs that her father had been sent an unsolicited credit card by one of the bank credit card programs. The father, a man in his seventies, has been a known alcoholic for thirty years, and has had a sub-zero credit rating which even the most casual credit check would have uncovered. The alcoholic father, upon receipt of the credit card promptly took it to the local liquor store where it was kept in the cash register for him. He ran up in a short pe-

riod of time a five-hundred dollar liquor bill, and in the short period of time has drunk himself into insanity. "The first indication of the tragedy came to light when the old man's son, of the same name, but different part of the country, received a phone call from the credit card establishment implying that he must have had some good parties—witness the $500 liquor bill. The author of the letter states that the son is still receiving billing letters which, among other things, ask 'Do you want your credit rating ruined?' "

I think the House of Representatives has taken a big step toward eliminating one of the conditions which made such a tragedy possible. Further study and possibly additional legislation may be necessary to make certain that the credit card remains an asset, rather than becoming a liability, to our nation's economy.

LEGISLATIVE SOLUTION

The legislation which I co-sponsored, and which the House has now adopted, simply puts the burden on the sender to make certain that an unordered credit card reaches the hands of the intended recipient. The bill requires that unsolicited credit cards be sent by registered mail, restricted delivery and with a return receipt.

The recipient then has the option of accepting the card, and signing a receipt to prove his acceptance, or of sending it back to the mailer.

Unsolicited credit cards sent in violation of the bill would make the mailer liable for criminal penalties including up to a $1,000 fine.

I think this bill would not only serve as a protection for the consumer, but it will also help curb a nation-wide problem in credit card fraud.

Credit card mail thefts have risen 700 percent in the past four years, and one big factor has been the criminals' knowledge that many of the intended recipients do not know that a card has been issued in their names.

One group of card thieves in New York City recenty ran up bills totaling $175,000 with 20 credit cards stolen from within the Postal Service. There is a credit card "black market" operating throughout the country, with a going price of $100 per card.

Testimony before the House Postal Operations Subcommittee, on which I serve, has revealed isolated cases of merchants cooperating with card thieves to provide merchandise and services until the card appears on the "hot card list" and then turning in the card and splitting the reward with the improper holder.

NO COVERAGE IN UNIFORM COMMERCIAL CODE

This growing criminal activity is abetted, in effect, by the lack of uniform commercial code for credit card tranactions, since there is no established body of contractual law covering the phenomena of "plastic credit."

Very few states have enacted legislation to protect the consumer from unauthorized use of credit cards.

Complicating the entire issue is a growing amount of evidence that many persons who declare personal bankruptcy each year use credit cards to charge substantial bills which they are unable to pay.

Senator William Proxmire's Subcommittee on Financial Institutions held hearings last year which established a direct correlation between personal bankruptcies and unsolicited credit cards. Bankruptcy referees testified from personal experience on the frequent incidence of the use of unsolicited credit cards.

## THE COAL-BLACK SHAME OF THE UMW

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, the current—October—issue of Reader's Digest includes an excellent article by Trevor Armbrister on the United Mine Workers of America. This is the best summary I have read of the present leadership of this union which in many respects has failed to represent the true interests of the rank-and-file coal miners. I commend this article to the attention of my colleagues:

THE COAL-BLACK SHAME OF THE UMW

(By Trevor Armbrister)

Shortly after 1 a.m. last December 31, three men approached a solid fieldstone house in the coal-mining hamlet of Clarksville, Pa. Working quietly and confidently—they had already cased the residence for days—they cut the telephone lines and entered through a side door. They took off their shoes and crept upstairs to the second floor.

Asleep in the master bedroom lay Joseph A. "Jock" Yablonski, a 59-year-old union official, and his wife, Margaret. In an adjacent bedroom slept their daughter Charlotte. One man aimed a .38 caliber revolver at Charlotte's head and fired twice. Margaret Yablonski screamed. Her husband groped for the box of shotgun shells he kept under the bed. A second gunman cut them down in a hail of bullets.

Throughout his unsuccessful campaign for president of the United Mine Workers of America, the short, raspy-voiced Yablonski had charged UMW leaders with employing terror tactics, called them corrupt and begged the Labor and Justice departments to investigate. Few listened. And then it was too late.

The grisly murders shocked the nation. Attorney General John Mitchell ordered the FBI into the case, and on January 21 authorities in Cleveland arrested three suspects. A Federal grand jury indicated them, one of their wives and a local union official on charges of interfering with the rights of a union member, obstruction of justice and conspiracy to kill Yablonski. (No evidence has appeared to link UMW leaders to the crime.) The Labor Department filed suit to invalidate the election results. The Justice Department and the Internal Revenue Service examined the union's books for "possible criminal prosecution."

Yablonski's supporters found irony in all this. "Alive, Jock couldn't convince anyone to act," one of them said bitterly. "But his ghost has got everyone hopping."

Cruel Parody. The UMW embraces 193,000 active and retired miners in some 1300 locals spread across 27 states and four Canadian provinces. For more than 40 years, under John L. Lewis, it was the pride of American labor. The charismatic, shaggy-browed Lewis won high wages for his men, pioneered in establishing the UMW's Welfare and Retirement Fund which was among the first to give workers pensions and free medical care. Later, he encouraged mechanization of the mines, to revive an industry threatened by atomic energy and cheaper oil fuels. Then, in 1960, Lewis appointed as his vice president (and eventual successor) a short, baldish ex-coal miner from Montana named W. A. "Tony" Boyle. It was, he told intimates before his death last year, "the worst mistake I ever made."

An arrogant, hot-tempered man who once threatened to shove a bologna down a Congressman's throat, the 65-year-old Boyle insists he has followed in Lewis's footsteps. Hardly. He lacks his predecessor's vision and links to the rank and file. Since he took office, the union has deteriorated into a cruel parody of its former self. Interviews with UMW spokesmen, miners and government officials and careful scrutiny of union documents sworn affidavits and Congressional testimony show how its leaders have flouted both Congress and its own constitution:

*They have spurned democratic procedures.* "This union is a private government—like the Mafia," says Washington attorney Joseph L. Rauh, Jr., who served as Yablonski's campaign adviser. "It operates above the law." The Landrum-Griffin Act of 1959 stipulates that rank-and-file union members must have the right to choose their own representative. But the UMW has simply winked at this law. Today, in 20 of the UMW's 25 districts, Boyle appoints the officers. The 50,000-plus miners of West Virginia, for instance (who account for nearly one third of the UMW's total dues income), have no voice in the election of their district officials.

The UMW's own constitution says that union locals must consist of "ten or more workers working in or around coal mines." But many locals—estimates range as high as 600—are composed entirely of pensioners in areas where the mines have been abandoned. Legally, these "bogus" locals should be disbanded, their members transferred to nearby active locals. But "because we haven't got the heart to revoke their charters," UMW leaders keep them on the rolls. Their rationale is less charitable than it sounds. These bogus locals can always be counted upon to supply large blocs of pro-Boyle votes.

*They have squandered millions from their own treasury.* Boyle has vast sums of money at his disposal. The union itself has assets of $88 million. It owns 75 percent of the stock of the National Bank of Washington (Boyle has earned more than $30,000 in bank director's fees since 1964), and exerts strong influence over the $179 million Welfare and Retirement Fund (Boyle is a trustee of the Fund and its chief executive officer).

In 1969, the union disbursed more than $1 million to its officers and employees for "expenses" without requiring adequate documentation, a violation of the Landrum-Griffin Act. One official was paid for "mileage and expenses" while he lay in a hospital bed. "Some officials have claimed expenses for hotel and travel for practically every day of the year," a Labor Department report noted. Boyle's daughter Antoinette, a union attorney in Billings, Mont., received $43,809 in salary and expenses for duties that remain unclear (she declines to comment on them).

In 1960 the union's top officers quietly transferred $850,000 from the treasury into a special "agency fund" (with current assets of $1,500,000) to finance their retirement at full salary. The average miner, however—if he is lucky—retires on an annual pension of $1800. Any welfare and retirement fund with assets as large as the UMW's should make a sizable profit on its investments. This hasn't been the case, primarily because of the Fund's links with the union-owned National Bank of Washington. Until recently the Fund kept $67 million in a *checking* account at the bank. The money earned no interest for the miners. The bank, however, benefited enormously from its "free" use of the resource and poured fat dividends (since 1964 nearly $8 million) into the union's coffers.

In theory, the Fund is independent of the UMW. In practice, miners apply for their pensions through their local unions and, in order to receive them, must pay monthly dues of $1.25 (25 cents of which goes to the locals and $1 to UMW headquarters). As a result, the UMW gleans an annual extra million dollars. "This is extortion, pure and simple," says Mike Trbovich, chairman of a reform group called Miners for Democracy.

*They have fostered cozy ties with the employers.* "This union is in bed with the coal operators," says Lou Antal, a stocky district chairman of Miners for Democracy. "It's been going on for years." Despite union denials, "sweetheart contracts" do exist which per-

mit some companies to pay workers less than union scale. Boyle has not won conspicuous concessions for his men at the bargaining table, either. Not until 1968, for example, did the rank and file win Christmas as a paid holiday. The present contract contains no provision for "sick pay," standard in most union contracts—and this in an industry which ranks as the nation's most hazardous. To finance the Welfare and Retirement Fund, coal companies pay a royalty of 40 cents per ton—a figure which hasn't changed since 1952.

*They have lagged behind in the push for coal-mine health and safety legislation.* Since the early 1930s, 1,500,000 men have been injured in the nation's mines. In 1969 alone, 203 men died in mine accidents. Another 10,000 were seriously injured, and thousands of others impaired, by pneumoconiosis, the dreaded "black lung" disease. Arnold Miller, a local union official from Ohley, W. Va., says, "If we promoted safety, really pushed it, we could cut that death rate in half."

During the winter of 1968–1969, three West Virginia doctors—Isadore Buff, Hawey Wells and Donald Rasmussen—appealed to the UMW for help in pushing health and safety legislation through the state legislature. UMW officials spurned their plea. (Boyle explained later in a speech, "We're not going to destroy the coal industry to satisfy the frantic ranting of self-appointed and ill-informed saviors of coal miners.") That January the doctors joined with a group of dissident miners to form the Black Lung Association. UMW officials warned the miners to disassociate themselves from it or face possible expulsion from the union. Infuriated by their threat, nearly all of West Virginia's 42,000 active miners staged a wildcat strike. Boyle ordered them back to work. The miners defied him. Finally the legislature passed a bill to compensate victims of black lung. Whereupon the UMW *journal* ran an article crediting passage of the new law to Boyle's leadership.

The Challenge. By spring 1969, the union's long decline and undemocratic procedures had attracted the attention of powerful critics. Rep. Ken Hechler of West Virginia and Ralph Nader spoke out against Boyle. So did Jock Yablonski.

For nearly 36 years, Yablonski had served the UMW—first as a local union president in Pennsylvania, finally as acting director of the UMW's lobbying arm. No one had been a more effective public defender of the leadership. Privately, however, Yablonski chafed under Boyle's regime. On May 29, 1969, he announced his candidacy for the union's top job.

"I participated in and tolerated the deteriorating performance of this leadership," he said, "but with increasingly troubled conscience. I will no longer be beholden to the past." He posed the first real threat to UMW officials since 1926 and, at that first press conference, he said he might be killed as a result. His supporters thought he was being "melodramatic."

To gain a place on the ballot, Yablonski had to win the nominations of at least 50 locals. Boyle seemed determined to stop him. He increased his loans to UMW districts; his supporters offered miners cash to block Yablonski's nomination. Despite a warning from the Fund's comptroller that a pension hike would jeopardize the Fund's solvency, he rammed through a 33-percent increase in the monthly payments.

On July 18, attorney Rauh wrote the then Labor Secretary George P. Shultz requesting an investigation. He charged that UMW officials, in massive violation of federal law, were trying to revoke the charters of pro-Yablonski locals or, failing in that, to merge them into pro-Boyle units. Locals which had already nominated Yablonski were told that a recount showed they had really favored Boyle. Local union presidents in Illinois were, Rauh alleged, "offered $150 to $200 each to coerce their locals into nominating Boyle."

Although the Landrum-Griffin Act clearly states that the Secretary of Labor had the right to investigate, Shultz decided that the Department "should not investigate and publicize the activities of one faction in an election in order to assist the campaign of the other." He would observe "long-standing policy" and wait until the balloting was over.

Despite the obstacles in his path, Yablonski won the nominations of 96 locals—nearly twice as many as he needed. His campaign zeal surprised even his own supporters. ("A lot of us were pretty skeptical at first," miner Harry Patrick remembers. "He'd been part and parcel of that gang since the year 1.") As Yablonski hammered away at Boyle and the UMW leadership, violence grew apace. On June 28, after he spoke at a meeting in Springfield, Ill., he was knocked unconscious. Hawey Wells discovered leaves and pine cones in the gas tank of the plane he used to fly to Yablonski rallies. In Moundsville, W. Va., five men attacked Tom Pysell, a vocal Yablonski backer, and left him with three broken ribs.

Cry Foul! On December 1, eight days before the election, Rauh made one last plea for government intervention. "The failure of the Department of Labor to take strong measures to insure a fair election," he wrote, "may well bring in its train ugly violence." Shultz repeated his stand. There would be no investigation "at this time." In the December 9 election, Boyle won by 35,000 votes. He had succeeded in his strategy of wooing the 70,000 bituminous-mining pensioners—by suggesting that a Yablonski victory might rob them of their benefits and implying that it would be "healthy" for them to back the incumbents. Boyle received 93 percent of their ballots. Yablonski did well among the working miners. Where he had stationed observers (his supporters had been forced to pose as newsmen just to find out the location of many polling places), he usually won or broke even. In districts where he didn't, Boyle's ratio soared as high as 88 to 1.

Yablonski cried "foul" and refused to concede. He asked the Labor Department to impound the ballots. Yablonski's son Chip submitted an affidavit alleging nearly 100 election-law violations. One local official was seen casting ballots for 30 men. Another local received only 95 ballots. Yet Boyle won by 145 to 5.

The Labor Department refused Yablonski's request. He didn't give up. "We're gonna fight this thing all the way," he rasped. On December 18 he wrote to union headquarters: "Tellers, stand up before it's too late. I too once submitted to the discipline of Tony Boyle. But I shall die an honest man because I finally rejected that discipline." Two weeks later he *was* dead.

A Stilled Voice Speaks. On January 8, Labor Secretary Shultz finally called for "a full-scale investigation." Early in March the Department filed suit to overturn the election results. Meanwhile, the union is under fire on other fronts. The Labor Department has filed suit to compel it to keep adequate financial records. The Justice Department is preparing suit to insist that the union allow members to elect their own district officers. The Senate Labor Subcommittee is probing into the election and the relationship between the union, the Welfare and Retirement Fund and the bank. Hundreds of miners have filed a suit alleging that Boyle, his vice president and secretary-treasurer have misappropriated $18 million from the union's treasury.

Dismissing such challenges as "politically motivated," union officials seem intent on business as usual. Not long ago, miners in western Pennsylvania walked off their jobs to protest the government's failure to enforce new health and safety legislation. UMW leaders told them to go back to work and, when they refused, joined forces with coal companies in an effort to compel them to return.

The shots fired in Clarksville last December 31 have stilled a voice but not a movement. Threats and bribes no longer smother dissent. "I can look my children in the eye," says West Virginia miner Tom Pysell, whose outspokenness led to a beating last fall. "That means more to me than money."

Throughout the coal fields today, from the slag heaps of Pennsylvania to the hollows of Kentucky, other miners are echoing Pysell's sentiments. One afternoon last February, hundreds of them converged upon Washington to picket the Justice Department. It was the sort of protest that would have been unthinkable in John L. Lewis's time and, as if in realization of this, some of the men had tears in their eyes. "The UMW is a shame," they shouted. The buttons on their heavy jackets were more explicit: "Stop murder," they said.

## RAVENSWOOD NEWS—ACHIEVEMENT IN EXCELLENCE

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, I would like to salute the Ravenswood, W. Va., News and its staff, including Phil Fourney, editor-publisher, and Joseph W. Short, former editor-publisher and now News photographer, for their achievements.

The News was honored by the West Virginia Press Association for excellence and Joe Short was honored by being inducted into the association's 50-Year Club. I would like to insert into the RECORD the following articles from the September 24 Ravenswood News on the awards and on Joe Short's honor, as well as an editorial on the weekly newspaper's determination not to sit on its laurels.

### NEWS TAKES TOP HONORS AT STATE PRESS CONVENTION

The Ravenswood News captured six awards—two of them first place—at the West Virginia Press Association Convention held last weekend at Pipestem Resort in Summers County.

The two first place citations were presented for special achievements in the categories of General Excellence and Excellence in Makeup and Typography.

In addition to the two first place awards the NEWS won second place for best editorial page, second place for best local display advertisement, second place in photography, and third place for its classified page.

Leading the winning newspaper group in total awards were the Terra Alta, Preston County News, which scored in eight of the 12 categories, together with the Ravenswood NEWS with its six awards, and the Berkeley Springs, Morgan Messenger with a total of five awards.

The excellence in photgraphy award received by this newspaper was based on a picture of the dynamiting of Lock 22. The facilities, south of here, were destroyed after the Ohio River pool stage was raised when the Racine Dam was in use.

The contest judges had this to say about the photograph:

"Well-timed action shot which tells the story as no word-account could. Good reproduction in the newspaper, despite the fact that the photo was taken in the rain."

Entries in the contest were judged by

professional journalists and journalism educators from 12 major University Journalism Schools across the country.

The winners in the annual Better Newspaper Contest were presented the awards Friday at the Awards Luncheon of the WVPA Convention.

Dr. Daniel B. Taylor, State Superintendent of Schools in West Virginia, was the guest speaker at the luncheon, and the award presentations were made by George A. Smith Jr., president-elect of the West Virginia Press Association, and publisher of the Terra Alta Preston County News.

Attending the convention from the NEWS was Phil Fourney, editor-publisher of the paper and Mrs. Fourney, and Joseph Short, NEWS photographer, and Mrs. Short.

---

STATE PRESS GROUP HONORS 50-YEAR MEN

Four West Virginia newspaper men, including a Ravenswood man, were inducted into the Fifty-Year Club of the State Press Association Saturday night following a convention banquet at Pipestem Resort.

The local man was Joseph W. Short, now semi-retired and working as a photographer for The Ravenswood NEWS. Others who received certificates were Joseph Buckner of Clarksburg, Allen Byrne of Phillippi, and C. Donee Cook of Richwood. The Fifty-Year Club was established in 1937.

Short did his first newspaper work in 1919 as printers devil on The Morgantown Post. While attending West Virginia University, where he majored in journalism and was managing editor of The Athenaeum, University publication, he worked evenings on The Morgantown New Dominion and in 1924 accepted a full-time position on The Fairmont West Virginian, a daily newspaper. He served on weeklies in Pt. Pleasant, Keyser, Morgantown and Martinsburg, and was managing editor of the morning Morgantown daily for six years.

He and his wife, Lucille, came to Ravenswood in 1941 and purchased The Ravenswood NEWS, which they sold in 1955. After working in public relations with the West Virginia Motor Truck Association and editing that organization's monthly magazine, The Transporter, for six years, Short returned here as news editor for the NEWS.

The Fifty-Year Club certificate states that the recipient has devoted more than 50 years to the newspaper profession, "and in recognition of his services to his community and state and contributions made to the material, moral and spiritual development of our people, is awarded this certificate of membership in the Fifty-Year Club of the West Virginia Press Association."

OUR AIM IS TO TRY HARDER

Although we've become accustomed to winning awards in the West Virginia competition, we are singularly proud of one citation we received last week at the press association's annual meeting.

The NEWS—among other citations—was given the first place award for general excellence, in competition with all weekly newspapers in the state. Like the Blue Ribbon newspaper designation about which we wrote several weeks ago, the general excellence prize goes to that newspaper which does everything better than other newspapers in the state.

To win the plaudit is a compliment to our total staff. It means the judges felt we covered news events better than other papers and that our stories about the news were well written. It means the number and quality of our photographs are superior. The advertising content of the paper is well presented. Those who produce the paper—the typesetters, makeup personnel, camera, platemaking and pressroom crews—do a superlative job.

In other words, in giving the general excellence award the judges feel we have done a better all-round job with our newspaper than any others. It means our team has performed better than the teams who work for the other weekly newspapers in the state.

We're very proud to have earned this distinction once again, and remain proud of the staff which writes and produces The NEWS.

At the same time, we realize we're not yet doing the job which the most important judges (our readers) feel needs be done. Last Sunday, for example, a reader wanted us to take a picture of an event—but our personnel were spread so thin that we couldn't honor the request. We know that particular reader doesn't place us at the top of the list this week. Other readers—as do we—feel our representatives should attend more meetings and give more personal reports. Or they feel the actions in circuit court should be given more personal attention and thorough reporting.

We know we must continue to improve our coverage of our community and county, and to relate more state happenings to a local level. We aren't satisfied. We pledge to continue working to make the state's best weekly newspaper even better.

---

## RALPH NADER: HIS TRIBE INCREASES

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, the American consumer and the average guy who gets pushed around by insensitive and irresponsible institutions is much better off today because of Ralph Nader. Working within the system, Mr. Nader and his associates have effectively enabled voiceless people to be heard, and have pushed and prodded large corporations to become more aware of their civic responsibilities. They have done this both within the framework of the law, and by the use of the law for the protection of those hitherto unprotected.

In a recent article in the Los Angeles Times dated September 24, 1970, Rudy Abramson has written about some of the activities of Ralph Nader on behalf of the public interest. Some people and some institutions bristle when Mr. Nader sticks a pin into them, but his facts are accurate, his sense of timing is superb, his instinct for the jugular is uncanny, and he inspires confidence by the rising string of accomplishments to his credit. I commend the following articles in the September 24, 1970, Los Angeles Times to my colleagues:

NADER'S RAIDERS A BIGGER TEAM, MORE TARGETS

(By Rudy Abramson)

WASHINGTON.—This summer more than 4,000 students, including a third of the student body at Harvard law school, and, for the first time, substantial numbers from the Deep South, volunteered to work for a pittance under consumer man Ralph Nader.

His Center for the Study of Responsive Law, the home base for Nader's Raiders, could take only about 200 of them.

Nevertheless, this year's youth crusade on behalf of the consuming public has been the most fervent since the first time volunteers joined up in June, 1968.

Raider platoons have roamed far from their earlier haunts in the federal bureaucracy to probe land use in California, the pulp industry of Maine, pollution of the Savannah River in Georgia and the travail of textile towns in North Carolina.

Back in Washington, others returned to old targets like the Food and Drug Administration and the Department of Agriculture, and opened new investigations of the antitrust division of the Justice Department and the quality of care in nursing homes.

GAINING IN INFLUENCE

Nadar at 36, has become, in four years, a national institution. He has brought about a near-revoluton in U.S. law schools, and his influence is still skyrocketing.

New public interest groups are sprouting like daisies across the country—a few of them loosely connected with Nadar, some of them inspired by him, and others copies.

Boosted by a $425,000 out-of-court settlement of an invasion-of-privacy suit against General Motors last month, Nader has been able to start a public interest law firm in Washington. As one of its first major projects, it is zeroing in on the Civil Service System, doing a technical analysis of what is required to make Civil Service employes more accountable to the public.

He has also launched another new group called Professionals for Auto Safety, which he hopes will develop into a nationwide body of lawyers, engineers, physicians and other professionals who will give their time to lobby for auto safety needs.

It is now leaving the starting gate in pursuit of the tinted windshield, a luxury item from Detroit which its leaders consider a dangerous limitation on visibility, particularly among elderly drivers, and during twilight hours.

This fall, Nader, who started it all with a 1966 book entitled "Unsafe at Any Speed," and two of his associates will bring out another car book—a manual for "lemon" owners.

DECLINE PREDICTED

Despite new backbone in the consumer movement and the spread of the religion called Naderism, some critics still forecast the decline they have predicted from the time Nader burst into prominence.

Nader has spread himself too thin, the argument goes. He is eroding his influence by speaking out too often on too many subjects, always with a predictable level of outrage. One great mistake by one of his Raiders will destroy his credibility, they say.

But allies in the consumer movement marvel that Nader becomes more and more influential despite four years in the spotlight. His capacity for work is as limitless as ever.

Nader has become one of the more powerful people in a city that iodolizes power. Bureaucrats he has taken under fire tend to think portrayals of Nader as a David against Goliath had the characters reversed.

HOUSEHOLD WORD

While the Nader institution is taking root across the country, the man is about the same invisible, mildly eccentric character he was before he became a household word. Apparently, this is of both choice and necessity.

He carefully guards the address of his $80-a-month room, does not own an automobile, frequently changes the telephone number where he can be reached, and operates from a secret private office.

He is mysterious about his movements around town. The only way to find him is to leave word around with his associates at the Center for the Study of Responsive Law or with congressional aides he frequently sees. A favorite meeting place is the lobby of the Dupont Plaza Hotel. Usually late, Nader seems to materialize from nowhere, often with an armful of books and papers.

His workday is said to run as long as 20 hours. Not infrequently, he is on the phone in the middle of the night, rousting less-driven allies out of bed to talk business.

In preparation for appearances before con-

gressional committees, he has been known to work through the night, then roll his prepared testimony out of the typewriter just in time to deliver it at the committee session.

A story is told that Nader had similar habits as a Princeton undergraduate majoring in Oriental studies.

A night watchman is said to have repeatedly found him sleeping in the library after it was closed. The student explained he had so much work to do that he found it necessary to nap with his head on a library table.

The explanation got Nader entrusted with a personal key to the library, but it made him no friends when he refused fellow students who wanted to borrow the key to take girl friends to the library after hours.

Nader left Princeton a Phi Beta Kappa, though someone had seen fit to put him in a remedial English class as a freshman.

DISILLUSION GROWS

His deep disillusionment with the workings of the system set in at Harvard Law, an institution he found too much a trade school. His grades were not outstanding, and, in retrospect, it seems Harvard never really challenged him.

People who have known Nader since his first days in Washington see little change in him.

"He's more sophisticated now," said a Senate staff member who works with him. "It used to be just the good guys and the bad guys, as far as he was concerned, with no in-between. Now he understands that Sen. Philip Hart (D-Mich.) can go just so far on auto safety, and Sen. Fred Harris (D-Okla.) can go just so far on pipeline safety."

When he sees the pulbic interest at stake, though, Nader isn't hesitant to harpoon the good guys, too.

Last May, one of his task forces hit Sen. Edmund S. Muskie (D-Me.), the Senate's leading force against air pollution, with a bare-knuckled broadside.

"The man who has received the greatest political mileage from his identification with the air pollution issue, Sen. Edmund S. Muskie of Maine, does not deserve the credit he has been given," the report said. "He and Sen. Jennings Randolph of coal-rich West Virginia worked hand-in-hand in 1967 to create the labyrinthine Air Quality Act, which has so far been a business-as-usual license to polluters."

MUSKIE ANGERED

Muskie was furious, and many leaders of the consumer movement were aghast.

Here, some friends said, was that first big mistake. Nader associate John Esposito wrote the report but Nader stood behind it.

"I looked at that report and said, 'Oh, God, he's made his first mistake,' " said one of Nader's lawyer friends. "Maybe Muskie should have done more; but he's done more than anybody else, and he's not somebody to dump on."

The episode has now blown over. Muskie and Nader have communicated several times since the incident. Nader and his team are convinced personally that stinging the senator had something to do with the toughest piece of air pollution legislation in history, which Muskie's subcommittee wrote recently.

If that's true, it is real evidence of Nader's clout, for Muskie is a man with Senate prestige and serious aspirations to be President.

In contrast to his investigative reports and public pronouncements on consumer issues, Nader works through other avenues open to no one else. He helps write some legislation before it ever emerges to public view.

ANNOYED BY CHANGE

A Senate legislative aide with Nader on a bill once changed an adjective to an adverb for grammatical reasons. Nader wasn't told of the change, and when he saw it, the staff member said, "He went up the wall. He thought somebody had gotten to the staff."

As that indicates, Nader is a man with a conspiratorial nature.

"But," said one of his close friends, "it's hard to tell when he is being for real and when he is just posturing."

Others think this element of his personality is a real problem for him, that he spends a great deal of time worrying about things that never happen.

Some of his friends thought he was daft in 1966 when he became convinced he was being followed. As it turned out, he was being shadowed by a private detective retained by General Motors.

GM admitted it, and its president apologized publicly. Nader sued, and out of that grew the $425,000 settlement.

Whatever the motivation for Nader's reclusive life style, the fact he is disinterested in creature comforts or accumulation of personal wealth has added greatly to his credibility. The other reason for his credibility is that he is careful with his facts.

HOLDS TRUMP CARD

One of Nader's favorite techniques is to make an expose without revealing his crucial evidence. After his target issues a denial, Nader then likes to produce his trump card—as he did once with a printout from Ford Motor Co.'s own computers.

The printout came to Nader from a graduate student who had worked at Ford and who had taken the discarded information home with him to use in preparation of his thesis.

Not surprisingly, Nader does not talk about his intelligence network. It is a source of some pride to him that no one has ever been fired for helping him. And there hasn't been a lawsuit against him and his Raiders for their investigations.

Many who have worked with Nader and watched him are convinced that descriptions of him as a one-man CIA are overdone.

Jerome N. Sonosky, a Washington lawyer who was a Senate staff member during the 1966 auto safety hearings, said of Nader, "He uses good lawyer techniques, good reporter techniques. A lot of the stuff he gets is right under our noses. I'm not saying that to minimize what he's doing. That's his genius; he came here and learned the system, and he found that government agencies put out an unbelievable amount of data that people pay no attention to."

At one point in his automobile safety crusade, for example, Nader went to the U.S. Patent Office, got the names of people who had patented safety devices and wrote to each of them.

Nader has been on the scene long enough now that he has developed personal constituencies throughout government agencies as well as in Congress.

He frequently feeds information to members of Congress involved with consumer matters, and, by the same token, goes to them on occasions for help in breaking information loose.

The center operates in a disheveled old townhouse just off Washington's Dupont Circle. The interior looks more like the command post for a weekend demonstration than a permanent institution. The door is always locked.

Outside his personal orbit, Naderism has become more apparent than ever in recent months.

In Cleveland, a group has been established to monitor auto manufacturers and keep an eye on the sales, servicing and advertising practices of area dealers. It will serve as an organization to collect citizens' complaints about their cars, and will produce a rating of auto dealers for potential buyers.

At the University of Texas law school, nine students, who spent most of the summer in Washington investigating the Atomic Energy Commission, are writing a 350-page report for the Texas Law Review. The Review raised $10,000 for the study.

Robert Fellmeth, a Harvard graduate whose California land use study is the biggest project ever undertaken by Nader's Raiders, said he and several others will first spend a year raising money to establish a firm with offices in California, Washington and New York.

They expect to conduct investigations, write reports and use summer student volunteers like the Center for the Study of Responsive Law. A separate branch of the same organization would practice more conventional case law.

LAWSUITS POSSIBLE

During the summer study now being put into book form, seven Raider teams combed California records and interviewed officials on land planning and use.

"We see the possibility for literally hundreds of suits," Fellmeth said, "including multimillion-dollar actions against some large corporations."

Nader seems to consider his prime mission one of developing leadership for the new consumer advocacy by providing opportunities for young professionals to expose institutional wrongs.

"The name of the game is numbers," he said. "We have to have large numbers all over the country. The function of leadership is to develop leadership. It's a question of whether you want the movement to provide career roles, or if you just want to write a few books and testify a little."

For all the success of his movement so far, Nader's outrage is unabated.

"Everybody agrees society is going downhill," he said in an interview, then started reeling off why—an obsolete Congress, prematurely aged labor unions, people and institutions who endorse principles, then make a mockery of them.

"I talk with people with $200 and $300 million fortunes who won't support 10 law students," he said. "That's the Roman decline right there."

"The country has produced absolutely ingenious ways to siphon public resources into the private sector, when it should be working the other way, and corporations are crying socialism all the way to the bank."

Nader's young allies at work in the field often get lectured by their elders that they're following a radical who is trying to destroy the free enterprise system.

"The corporations are the radicals," Nader replies. "They're the ones acting outside the ideals, the norms of society. They can do almost anything they want so long as it is through inaction—like releasing cars that pour out poisonous gases affecting all Americans."

Besides the major projects already mentioned, the staff at Nader's center and the Raiders have been investigating supermarkets, the Federal Water Quality Administration, the National Air Pollution Control Administration, the Bureau of Reclamation, the Forest Service, the National Institute of Mental Health, land taxation, black cooperatives, hospital accreditation, the Connecticut Insurance and Consumer Department, and law firms.

Nader says he will never run out of subjects.

Despite all of the things he sees, he is not a total pessimist.

"The country knows the disasters we are headed for, and that's a plus," he said. "We also have the resources to deal with these things."

"The question is whether we can band these into a will, a commitment, an ethic where everybody in his job is his own person, whether he's working on an assembly line or in a government agency."

---

WINS AND LOSSES ON NADER'S SCOREBOARD

WASHINGTON.—Ralph Nader's targets range from General Motors, his well-known favorite, to excessively fatty hot dogs and the red

dye in maraschino cherries. His calls for reform have covered such a wide range of subjects that many have come to nothing.

Some examples of his wins and losses:

His book "Unsafe at Any Speed" focused on Chevrolet's popular Corvair. Although courts have held the car is not inherently unsafe, sales plunged 93% in the years after the book, and Corvair was taken out of production after 1969 models.

A scathing report on the Federal Trade Commission started a reorganization of the agency. A study by the American Bar Assn. backed up many of the FTC criticisms by Nader's raiders.

His reports on dental X-rays raised public concern over the possibility of miscarriages and birth deformities. The American Dental Assn. told members they should stop making X-rays a standard part of dental examination of pregnant women.

RADIATION EMITTED

After Nader reports that some color television sets emit excessive radiation, the FTC issued warning to consumers to sit a least 6 feet from the screen.

Three baby food manufacturers stopped using the taste-enhancer monosodium glutamate after Nader called attention to harmful effects to animals produced by large amounts in laboratory studies.

Nader's forces recently won a major victory when the U.S. District Court in Baltimore ordered the Agriculture Department to release certain records to its meat inspection division. The case is being appealed by the government.

Recently, Nader tried to get a ban against smoking on airliners, contending it is a safety hazard as well as a nuisance to nonsmokers. He was turned down by the Federal Aviation Administration, went to court, and lost again.

A report by Nader's Raiders recommended that the Interstate Commerce Commission be abolished. There is no indication that it is in the works, but a congressional study is being made.

A project called "Campaign GM," backed by Nader, lost a bid last spring to get three public representatives appointed to the GM board of directors but succeeded in spotlighting the issue of corporations and public responsibility.

W. A. (Tony) Boyle won reelection as president of the United Mine Workers despite Nader charges of corruption and nepotism in the union.

A report by Nader's Raiders on the Food and Drug Administration called for complete food labeling and charged the FDA with repeated favors to special interests. Major recommendations have not been followed.

In some areas of the federal establishment, the Raiders are finding improved access to information. But some agencies—the Department of Housing and Urban Development and the Food and Drug Administration—have started charging them for researching files and for providing large numbers of copies.

Nader's exposures and work with consumer-oriented members of Congress played a major role in the auto safety bill of 1966, the Wholesome Meat Act of 1967 and the Coal Mine Health and Safety Act this year.

Associates believe Raider criticism of Sen. Edmund S. Muskie (D-Me.) prodded him to engineer a tougher air pollution bill this year.

Nader's charges that fishing vessels are not inspected for sanitation brought a White House meeting on the subject, but not a public reaction such as the one that pushed the Wholesome Meat Act through Congress.

---

## AN ACCURATE CENSUS: THE TALE OF ONE CITY

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, recently I called attention to the efforts to obtain an accurate census count in my hometown of Huntington, W. Va. I believe we have succeeded, and the Bureau of the Census deserves high praise for its efforts. As a matter of fact, the Director of the Census, Dr. George H. Brown, has accepted an invitation to address over 100 census enumerators who will be my guests at a steak dinner to be held at the Hotel Frederick, Huntington, October 10. Under unanimous consent, there follows the text of my testimony on this subject before the House Subcommittee on Census and Statistics, September 29, 1970.

STATEMENT OF REPRESENTATIVE KEN HECHLER

I come to praise the Census, not to bury it.

I have invited over 100 census enumerators in my home town of Huntington, West Virginia, to be my guests at a steak dinner on the evening of October 10, to honor them for their dedicated and conscientious work in taking the 1970 census, despite the fact that their results revealed a drop of over 10,000 in Huntington's population since 1960. The Director of the Census, Dr. George H. Brown, has accepted an invitation to speak at the dinner.

It is very natural for anguished outcries to fill the air whenever the census, a measure of progress, shows a decline in population instead.

The 1960 census pegged Huntington's population at 83,627. When the news broke early in June that Huntington's preliminary 1970 count was only 72,970, a 7 column headline splashed across our local newspaper: "City Census Figure Faces Challenge." My telephone started ringing incessantly with protests.

Local officials insisted that with over 28,000 households billed for city garbage collection, at a rate of three persons per household there surely must be at least 84,000 people instead of 72,970 in Huntington. Other indices such as increases in water meters, auto registration, and certified work force were used to refute the claims of the Census Bureau.

The Huntington Herald-Dispatch categorically stated in the opening sentences of a critical June 6, 1970 editorial: "Maybe West Virginia census enumerators just can't count. Or perhaps Mountaineers were more indignant than most Americans about answering some of the questions on the census forms and decided to be 'out' when the enumerator came around." In its concluding blast at the inaccuracy of the census, the Herald Dispatch stated: "But to concede—in the face of indices all pointing in the opposite direction—that Huntington has lost 10,657 residents since 1960, is just plain ridiculous."

When these protests rolled in, I was determined to get the facts and instead of arguing with the critics of the census I was equally determined that they be accorded a free, full and fair opportunity to present their evidence and have it weighed carefully. First, I talked at length with Census officials at central headquarters to insist that a massive volunteer recount effort in Huntington should receive the official blessing of the Bureau of the Census. Second, I quizzed Joseph Norwood, Regional Director of the Census Bureau in Charlotte, N.C., on the best procedure for such a volunteer recount, as well as the steps which had been attempted in Huntington to re-check the preliminary figures. Mrs. Anna Maxine Booth, district manager for eleven West Virginia counties including the city of Huntington, had carried out additional checks for census coverage under the direction of the Regional Office, prior to announcing the preliminary total. These checks included: comparing each enumerator's district with the city master map to see that all of the City was properly included; checking the address register of all households for full coverage of addresses; a re-check of areas showing below average number of persons per housing unit or above average of vacancies; and a re-check of areas where there had been some demolitions to insure that the structures were either vacant or demolished. At the same time, "Were You Counted?" advertisements were run in the newspapers and over radio and television in a concerted effort to discover those people who had been overlooked.

Despite these careful checks which had been made, I encouraged both the city officials and the Bureau of the Census to give support to a volunteer block count in order to get the facts, and there was enthusiastic agreement all around that this task should get underway immediately.

On June 4, 1970—two days after the preliminary census figures were revealed—I issued a public statement which was carried in all the news media. Noting that "I am sure that Mrs. Maxine Booth, manager of the Huntington Census Bureau office, has done an excellent job with her enumerators," I added: "All of us are concerned that the count be complete and accurate . . . The Census Bureau will assist any citizen campaign effort to encourage those who feel they were not counted to report information to the regional director."

We arranged a special air shipment to Huntington of several thousand "Were You Counted?" forms, and the City of Huntington duplicated additional forms. A 3-column front page article on Sunday June 7, 1970 helped kick off the effort, along with the lead editorial in the Sunday June 7 Huntington Herald-Advertiser entitled "Operation Blockcount is a Crusade For Truth." A double-column bold type box in the center of the editorial stated: "Notice to Volunteers. If you wish to join in 'Operation Blockcount,' to insure that the City of Huntington receives full credit for its entire population, call City Hall. The number is 529–7164. Ask for the Central Clearing Office. . . . Let's make this campaign a crusade!"

The Census Bureau allowed 11 days for the "Operation Blockcount." Thirty volunteers showed up the first day, and immediately went to work. The blockcounters were authorized to pick up census forms not previously collected by enumerators, and were also authorized to record basic information on those people who felt they had not been counted. The Huntington Junior Chamber of Commerce participated in and backed the volunteer effort, as did other civic organizations.

Massive radio, telephone and newspaper support backed up the campaign, which I encouraged at every opportunity with television and radio spots and news announcements. During the first week of the Blockcount it was reported that 250 persons had volunteered to assist, with an estimated 50 percent of the city's residential areas assigned. Totals recording the additional people counted were published frequently by the newspapers.

At all levels, the Census Bureau was most cooperative, and midway in the Blockcount an eleven-day extension in the deadline was granted up to June 30. Not all of the City of Huntington was covered in Operation Blockcount. Yet few civic projects received such strong support from the news media, city officials and civic organizations, and the Bureau of the Census did everything possible to make Operation Blockcount a success.

By the time 20 percent of the city had been checked, it was estimated that 1,000 names had been added, leading to the projection by local authorities that Huntington's final count would add about 5,000 people. However, by the end of the period, forms for 1,328 persons, representing 568

households, had been turned in to the Charlotte Regional Office. To these 568 households were added 164 more forms that were sent either to the Huntington census office after it officially closed early in June, or to the Jeffersonville, Indiana, or central office of the Bureau of the Census.

Now started the refining process of thoroughly checking the 732 additional households. By comparing these 732 forms with data already recorded, it was discovered that all but 71 households (representing 183 persons) were either outside the City of Huntington or duplicated households and individuals already counted.

When Regional Director Norwood relayed this information to me, I suggested that he ought to take these 183 additional people and field check his results in Huntington to find out why they were not counted in the original census. A survey statistician from the Regional Census Office went to Huntington and he personally checked out each of the 71 households and 183 people, and discovered that 4 addresses were non-existent, 3 were in the county and outside the Huntington city limits, 2 had the wrong name entered, and 8 were households which had moved into Huntington since April 1 and knew they had been counted elsewhere.

So this boiled down to 30 households and 90 people, and I again went back to Mr. Norwood and asked him: just why weren't these 90 counted? It was discovered that they were living in the rear or over commercial buildings, or were transient or floater population that simply had not been caught in the census net. Nevertheless, 90 additional people—which constitutes a shade over one-tenth of one percent increase beyond the preliminary census estimate—is sufficient cause for a celebration and a steak dinner for the enumerators who did such an accurate job.

After all the build-up and the criticism of the enumerators, the Huntington morning newspaper blacked out any mention of the results of the final census check. The afternoon newspaper, the Huntington Advertiser, carried a little one column story on September 10, 1970.

Aside from this Tale of One City, I would like to make two small suggestions for the committee's consideration in making recommendations for the next census. West Virginia has the highest percentage of its population serving in the armed forces, and I believe the lowest number of personnel in proportion to population serving as recruiters or other military personnel within the borders of the state. I know that since 1790, military personnel has been allocated under the census to the state where the military happens to be serving. I can see no logic in counting a man who is sent against his will to Fort Jackson, S.C., in South Carolina's population, when he pays his taxes, votes, owns property and expects to return to West Virginia when he gets out of the military service. The same thing goes for college students, who are now counted in the state where they happen to be attending college. That is simply illogical, and should be changed in both instances so they will be accurately added to the population of the state which is their true state of residence.

Finally, in the light of the great mobility of our populations, I support a census taken every five years.

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. LOWENSTEIN (at the request of Mr. WOLFF), for today, on account of religious observance.

Mr. DOWDY (at the request of Mr. BOGGS) for an indefinite period, on account of illness.

Mr. SCHEUER (at the request of Mr. BINGHAM), on account of illness.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. VAN DEERLIN, for 10 minutes, today.

Mr. GONZALEZ, for Thursday, October 1, 1970, for 30 minutes.

Mr. RARICK (at the request of Mr. GONZALEZ), for 15 minutes, today, and to revise and extend his remarks, and include extraneous matter.

(The following Members (at the request of Mr. MCCLOSKEY) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. HALL, for 60 minutes, on October 7.

Mr. HOSMER, for 10 minutes, today.

Mr. FINDLEY, for 15 minutes, today.

Mrs. HECKLER of Massachusetts, for 5 minutes, today.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. GRAY in two instances and to include extraneous matter.

Mr. HOLIFIELD to include extraneous matter in his remarks on H.R. 18679.

Mr. PRICE of Illinois (at the request of Mr. HOLIFIELD), to extend his remarks in the RECORD on the bill H.R. 18679.

Mr. BYRNES of Wisconsin to revise and extend remarks made on the hijack bill, H.R. 19444.

(The following Members (at the request of Mr. MCCLOSKEY) and to include extraneous material:)

Mr. ZWACH.
Mr. CHAMBERLAIN.
Mr. ROBISON in two instances.
Mr. LUJAN.
Mr. KING.
Mr. WYMAN in two instances.
Mr. HOGAN.
Mr. MCDONALD of Michigan.
Mr. RHODES.
Mr. BEALL of Maryland.
Mr. ADAIR.
Mr. HOSMER in two instances.
Mr. SKUBITZ.
Mr. FINDLEY.
Mrs. HECKLER of Massachusetts.
Mr. FREY.
Mr. COUGHLIN.
Mr. WYLIE.
Mr. SCHWENGEL.
Mr. SCHMITZ.
Mr. WEICKER.
Mr. GROVER.
Mr. HALL.
Mr. GERALD R. FORD.
Mr. SCHADEBERG in two instances.
Mr. WATSON.
Mr. SCOTT.
Mr. MESKILL.

(The following Members (at the request of Mr. GONZALEZ) and to include extraneous matter:)

Mr. MAHON in two instances.
Mr. CELLER.
Mr. PEPPER in two instances.
Mr. KASTENMEIER.
Mr. MCCARTHY in three instances.
Mr. RODINO.
Mr. GARMATZ.
Mr. MCMILLAN in two instances.
Mr. KLUCZYNSKI in two instances.
Mr. ANNUNZIO in three instances.
Mr. RARICK in two instances.
Mr. DENT in three instances.
Mr. MINISH in two instances.
Mr. PUCINSKI in six instances.
Mr. PICKLE in four instances.
Mr. NIX.
Mr. BLATNIK.
Mr. STEPHENS in two instances.
Mr. ROSTENKOWSKI.
Mr. NICHOLS.
Mr. EDWARDS of California.
Mr. BRASCO in three instances.
Mr. BENNETT in two instances.
Mr. EILBERG.
Mr. TIERNAN.

## SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3558. An act to amend the Communications Act of 1934 to provide continued nnancing for the Corporation for Public Broadcasting.

## ADJOURNMENT

Mr. GONZALEZ. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 5 minutes p.m.), the House adjourned until tomorrow, Thursday, October 1, 1970, at 12 o'clock noon.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 2175. A bill to amend title 18 of the United States Code to authorize the Attorney General to admit to residential community treatment centers persons who are placed on probation, released on parole, or mandatorily released (Rept. No. 91–1520, pt. II)). Referred to the Committee of the Whole House on the State of the Union.

Mr. FLOWERS: Committee on the Judiciary. H.R. 14684. A bill for the relief of the State of Hawaii (Rept. No. 91–1542). Referred to the Committee of the Whole House on the State of the Union.

Mr. CELLER: Committee on the Judiciary. H.R. 17901. A bill to improve judicial machinery by providing for the appointment of a circuit executive for each judicial circuit; with amendments (Rept. No. 91–1543). Referred to the Committee of the Whole House on the State of the Union.

Mr. EDMONDSON: Committee on Interior and Insular Affairs. S. 368. An act to authorize the Secretary of the Interior to make disposition of geothermal steam and associated geothermal resources, and for other purposes; with amendments (Rept. No. 91–1544). Referred to the Committee of the Whole House on the State of the Union.

Mr. DONOHUE: Committee on the Judiciary. S. 902. An act to amend section 1162 of title 18, United States Code, relating to State jurisdiction over offenses committed by or against Indians in the Indian country (Rept. No. 91–1545). Referred to the Com-

mittee of the Whole House on the State of the Union.

Mr. KASTENMEIER: Committee on the Judiciary. S. 1461. An act to amend section 3006A of title 18, United States Code, relating to representation of defendants who are financially unable to obtain an adequate defense in criminal cases in the courts of the United States; with amendments (Rept. No. 91–1546). Referred to the Committee of the Whole House on the State of the Union.

Mr. ZABLOCKI: Committee on Foreign Affairs. House Joint Resolution 1355. Joint resolution concerning the war powers of the Congress and the President (Rept. No. 91–1547). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROONEY of New York: Committee of conference. Conference report on H.R. 17575 (Rept. No. 91–1548). Ordered to be printed.

Mr. ROGERS of Colorado: Committee on the Judiciary. S. 30. An act relating to the control of organized crime in the United States; with an amendment (Rept. No. 91–1549). Referred to the Committee of the Whole House on the State of the Union.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MANN: Committee on the Judiciary. H.R. 4463. A bill for the relief of Francis X. Tuson. (Rept. No. 91–1541). Referred to the Committee of the Whole House.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CLANCY:

H.R. 19517. A bill to restore balance in the Federal form of Government in the United States; to provide both the encouragement and resources for State and local government officials to exercise leadership in solving their own problems; to achieve a better allocation of total public resources; and to provide for the sharing with State and local governments of a portion of the tax revenue received by the United States; to the Committee on Ways and Means.

By Mr. HOSMER:

H.R. 19518. A bill to amend the National Wild and Scenic Rivers Act of 1968 (Public Law 90–542) to include certain rivers located within the State of California as potential components of the National Wild and Scenic Rivers System, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. O'HARA (for himself, Mr. STEIGER of Wisconsin, Mr. DANIELS of New Jersey, Mr. QUIE, Mr. PERKINS, Mr. AYRES, Mr. DENT, Mr. BELL of California, Mr. PUCINSKI, Mr. REID of New York, Mr. CAREY, Mr. ERLENBORN, Mr. HAWKINS, Mr. DELLENBACK, Mr. SCHEUER, Mr. ESCH, Mr. BURTON of California, Mr. HANSEN of Idaho, and Mr. GAYDOS):

H.R. 19519. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any person to qualify for employment consistent with his highest potential and capability and for other purposes; to the Committee on Education and Labor.

By Mr. BROOMFIELD:

H.R. 19520. A bill to promote public health and welfare by expanding, improving, and better coordinating the family planning services and population research activities of the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 19521. A bill to prohibit assaults on State law enforcement officers, firemen, and judicial officers; to the Committee on the Judiciary.

By Mr. EDMONDSON (for himself, Mr. BELCHER, Mr. CAMP, Mr. JARMAN, and Mr. STEED):

H.R. 19522. A bill for the relief of the owners of interests in the minerals and mineral rights in certain land located in Caddo County, Okla.; to the Committee on the Judiciary.

By Mr. FINDLEY:

H.R. 19523. A bill to require that the training of the National Guard for civil disorders be emphasized equally with that for combat warfare, and to require that the National Guard be provided with specialized weapons and protective equipment suitable for use to control civil disorders; to the Committee on Armed Services.

By Mr. KOCH:

H.R. 19524. A bill to amend the Internal Revenue Code of 1954 to provide that blood donations shall be considered as charitable contributions deductible from gross income; to the Committee on Ways and Means.

By Mr. McCARTHY:

H.R. 19525. A bill to amend the Water Resources Planning Act (79 Stat. 244) to include provision for a national land use policy by broadening the authority of the Water Resources Council and river basin commissions and by providing financial assistance for statewide land use planning; to the Committee on Interior and Insular Affairs.

By Mr. MILLS:

H.R. 19526. A bill to eliminate the duty on natural rubber containing fillers, extenders, pigments, or rubber-processing chemicals; to the Committee on Ways and Means.

By Mr. MURPHY of New York:

H.R. 19527. A bill to prohibit assaults on State law enforcement officers, firemen, and judicial officers; to the Committee on the Judiciary.

By Mr. PIKE (for himself, Mr. GUBSER, Mr. RIVERS, Mr. ARENDS, Mr. LEGGETT, Mr. STAFFORD, Mr. HICKS, Mr. FOREMAN, Mr. WHITE, Mr. WHITEHURST, Mr. BRINKLEY, Mr. DANIEL of Virginia, and Mr. BEALL of Maryland):

H.R. 19528. A bill to amend chapter 73 of title 10, United States Code, to establish a survivor benefit plan; to the Committee on Armed Services.

By Mr. ROBISON:

H.R. 19529. A bill to amend the Truth in Lending Act to eliminate the inclusion of agricultural credit; to the Committee on Banking and Currency.

By Mr. ST GERMAIN:

H.R. 19530. A bill to amend section 344(a)(1) of the Immigration and Nationality Act to prohibit the charging of fees with respect to certain individuals in naturalization proceedings; to the Committee on the Judiciary.

By Mr. SHRIVER:

H.R. 19531. A bill to allow the Comptroller General of the United States to settle and pay certain claims arising out of the crash of a U.S. aircraft at Wichita, Kans., on January 16, 1965; to the Committee on the Judiciary.

By Mr. SYMINGTON:

H.R. 19532. A bill to amend the Public Health Service Act to encourage physicians, dentists, optometrists, and other medical personnel to practice in areas where shortages of such personnel exist, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 19533. A bill to amend the Internal Revenue Code of 1954 to provide relief to certain individuals 65 years of age and over who own or rent their homes, through a system of income tax credits and refunds; to the Committee on Ways and Means.

By Mr. WATSON:

H.R. 19534. A bill to amend title II of the Social Security Act to increase from $1,680 to $3,000 the amount of outside earnings permitted each year without any deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. WEICKER (for himself, Mr. ANDERSON of California, Mr. ANDERSON of Illinois, Mr. BARING, Mr. BUCHANAN, Mr. BUTTON, Mr. BYRNE of Pennsylvania, Mr. CARTER, Mr. CLEVELAND, Mr. COUGHLIN, Mr. DULSKI, Mr. EDWARDS of California, Mr. FLOOD, Mr. FOLEY, Mr. FRELINGHUYSEN, Mr. FREY, Mr. FULTON of Pennsylvania, Mr. GIAIMO, Mr. GUBSER, Mr. HALPERN, Mr. HASTING, Mrs. HECKLER of Massachusetts, Mr. HICKS, Mr. HORTON, and Mr. HOSMER):

H.R. 19535. A bill to require the Secretary of Transportation to prescribe regulations governing the humane treatment of animals transported in air commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. WEICKER (for himself, Mr. JARMAN, Mr. JOHNSON of California, Mr. KASTENMEIER, Mr. KUYKENDALL, Mr. KYROS, Mr. MATHIAS, Mr. McCULLOCH, Mr. McKNEALLY, Mr. MESKILL, Mr. MINISH, Mrs. MINK, Mr. MOORHEAD, Mr. MORSE, Mr. MOSS, Mr. MURPHY of New York, Mr. OTTINGER, Mr. PETTIS, Mr. PIRNIE, Mr. RIVERS, Mr. RODINO, Mr. ROE, Mr. RYAN, Mr. SCHWENGEL, and Mr. TALCOTT):

H.R. 19536. A bill to require the Secretary of Transportation to prescribe regulations governing the humane treatment of animals transported in air commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. WEICKER (for himself, Mr. TUNNEY, Mr. WHITEHURST, and Mr. YATRON):

H.R. 19537. A bill to require the Secretary of Transportation to prescribe regulations governing the humane treatment of animals transported in air commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. WOLD:

H.R. 19538. A bill to designate the Stratified Primitive Area as a part of the Washakie Wilderness, heretofore known as the South Absaroka Wilderness, Shoshone National Forest, in the State of Wyoming, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. DON H. CLAUSEN:

H.R. 19539. A bill to authorize the Secretary of Agriculture to cooperate with the States and subdivisions thereof in the enforcement of State and local laws, rules, and regulations within the national forest system; to the Committee on Agriculture.

By Mr. SCHMITZ:

H. Con. Res. 760. Concurrent resolution expressing the sense of the Congress with respect to sanctions against Rhodesia; to the Committee on Foreign Affairs.

By Mr. WHALLEY:

H. Con. Res. 761. Concurrent resolution urging the President to determine and undertake appropriate actions with respect to stopping armed attacks on aircraft and passengers engaged in international travel; to the Committee on Foreign Affairs.

By Mr. MURPHY of New York (for himself and Mr. FRIEDEL):

H. Res. 1232. Resolution calling for a national commitment to cure and control cancer within this decade; to the Committee on Interstate and Foreign Commerce.

By Mr. SPRINGER:

H. Res. 1233. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on the Environment; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. HALPERN introduced a bill (H.R. 19550) for the relief of Tito P. Romero, which was referred to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

607. By the SPEAKER: Petition of Mrs. Fidelia Poblete Macapaz, Makati, Rizal, Philippines, relative to redress of grievances; to the Committee on Foreign Affairs.

608. Also, petition of CUNA International, Inc., Madison, Wis., relative to consumers affairs; to the Committee on Government Operations.

# SENATE—*Wednesday, September 30, 1970*

The Senate met at 10 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, by whose providence we have been brought to this new day, we give Thee hearty thanks for the good land Thou hast given us. Forgive our transgressions; cleanse us from things that defile our national life, and grant that this people, which Thou hast abundantly blessed, may keep Thy commandments, walk in Thy ways, and trust in Thy grace.

Be gracious to our times, that by Thy bounty both national quietness and pure religion may be duly maintained. Keep the Members of this body steadfast and true and may Thy peace abide in their hearts.

*Let the beauty of the Lord our God be upon us, and establish Thou the work of our hands upon us; yea, the work of our hands, establish Thou it.*

Through Jesus Christ our Lord. Amen.

## DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., September 30, 1970.*

*To the Senate:*

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
*President pro tempore.*

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

## THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, September 29, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent—and I believe this has been cleared—that the Committee on Finance, the Committee on Commerce, the Subcommittee on Education of the Committee on Labor and Public Welfare be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

## DEPARTMENT OF LABOR

The assistant legislative clerk read the nomination of Malcolm R. Lovell, Jr., of Michigan, to be an Assistant Secretary of Labor.

Mr. COTTON. Mr. President, I will not inconvenience or delay the Senate by asking for a rollcall vote on the confirmation of this nomination.

I merely state for the RECORD that if we had a rollcall vote, I would be compelled to vote against confirmation.

The ACTING PRESIDENT pro tempore. The question is, will the Senate advise and consent to the nomination of Malcolm R. Lovell, Jr., of Michigan, to be an Assistant Secretary of Labor?

The nomination was confirmed.

## DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

The assistant legislative clerk read the nomination of Wilmot R. Hastings, of

Massachusetts, to be General Counsel of the Department of Health, Education, and Welfare.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

## ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business with a time limitation of 3 minutes therein.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Is there morning business to be transacted at this time?

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## PERSONAL STATEMENT ON REASONS FOR VOTING FOR CLOTURE MOTION ON YESTERDAY

Mr. BYRD of West Virginia. Mr. President, I voted for cloture yesterday for three reasons:

First. A constitutional amendment was involved. The protection of a minority viewpoint is, therefore, adequately assured by the Constitution, which requires, for adoption, a two-thirds vote of both Houses and ratification by three-fourths of the States. This is quite different from invoking cloture on a bill, the passage of which would require only a majority of both Houses of the Congress.

Second. The matter on which the cloture motion was intended to apply was a matter to which I was not opposed. As a member of the Judiciary Subcommittee on Constitutional Amendments, I had voted to report the resolution providing for election of the President by direct popular vote, having supported in preference thereto the proportional system and the district system, both of which were rejected.

Third. Considerable time for debate had elapsed, with one cloture motion already having been attempted.

## COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORT OF CLAIMS SETTLED BY GENERAL SERVICES ADMINISTRATION UNDER MILITARY PERSONNEL AND CIVILIAN EMPLOYEES' CLAIMS ACT OF 1964

A letter from the Administrator, General Services Administration, transmitting, pursuant to law, a report on claims settled by that Administration under the Military Personnel and Civilian Employees' Claims Act of 1964 for the fiscal year ended June 30, 1970 (with an accompanying report); to the Committee on the Judiciary.

REPORT ON HEALTH CONSEQUENCES RELATING TO USE OF MARIHUANA

A letter from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a preliminary report concerning current information on the health consequences of using marihuana (with an accompanying report); to the Committee on Labor and Public Welfare.

REPORT OF OPERATIONS BY FEDERAL DEPARTMENTS AND ESTABLISHMENTS IN CONNECTION WITH BONDING OF OFFICERS AND EMPLOYEES

A letter from the Secretary of the Treasury, transmitting, pursuant to law, a report of operations by Federal departments and establishments in connection with the bonding of officers and employees, for the fiscal year ended June 30, 1970 (with an accompaning report); to the Committee on Post Office and Civil Service.

REPORT OF THE CANADA-U.S. INTERPARLIAMENTARY GROUP

A letter from the chairman of the Senate delegation, Canada-U.S. Interparliamentary Group, transmitting, pursuant to law, a report of the group on the 13th meeting, March 10–15, 1970 (with an accompanying report); to the Committee on Foreign Relations.

## PETITION

A petition was laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ALLEN):

A resolution adopted by the City Council of Gardena, Calif., relating to more direct funding of city programs; to the Committee on the Judiciary.

## ENROLLED BILL SIGNED

The ACTING PRESIDENT pro tempore (Mr. ALLEN) announced that on today, September 30, 1970, he signed the enrolled bill (H.R. 14373) to authorize the Secretary of the Navy to convey to the city of Portsmouth, State of Virginia, certain lands situated within the Crawford urban renewal project (Va–53) in the city of Portsmouth, in exchange for certain lands situated within the proposed southside neighborhood development project, which had previously been signed by the Speaker of the House of Representatives.

## S. 4418—ORIGINAL BILL REPORTED TO AUTHORIZE APPROPRIATIONS FOR CONSTRUCTION OF CERTAIN HIGHWAYS—FIXING A TIME FOR COMMITTEE ON PUBLIC WORKS TO FILE A REPORT (S. REPT. NO. 91–1254)

Mr. RANDOLPH. Mr. President, I report a clean bill from the Committee on Public Works, authorizing appropriations for the fiscal years 1972 and 1973 for the construction of certain highways and for other purposes.

I ask unanimous consent that the bill in its entirety be printed in the RECORD. I also ask unanimous consent that the committee have until midnight, Wednesday, September 30, 1970, to file an accompanying report, together with individual views.

The PRESIDING OFFICER (Mr. COOK). Without objection, it is so ordered.

The text of the bill is as follows:

S. 4418

A bill to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SHORT TITLE

SECTION 1. SHORT TITLE.—This Act may be cited as the "Federal-Aid Highway Act of 1970".

REVISIONS OF AUTHORIZATION OF APPROPRIATIONS FOR INTERSTATE SYSTEM

SEC. 2. Subsection (b) of section 108 of the Federal-Aid Highway Act of 1956, as amended, is amended by striking "$2,225,000,000 for the fiscal year ending June 30, 1974," and the last sentence thereof and inserting "$4,000,000,000 for the fiscal year ending June 30, 1974, the additional sum of $4,000,000,000 for the fiscal year ending June 30, 1975, and the additional sum of $4,000,000,000 for the fiscal year ending June 30, 1976."

AUTHORIZATION OF USE OF COST ESTIMATE FOR APPORTIONMENT OF INTERSTATE FUNDS

SEC. 3. (a) The Secretary of Transportation is authorized to make the apportionment for the fiscal years ending June 30, 1972, 1973, and 1974, of the sums authorized to be appropriated for such years for expenditures on the National System of Interstate and Defense Highways, using the apportionment factors contained in table 5 of House Document Numbered 91–317, Ninety-first Congress, as revised pursuant to subsection (b) of this section.

(b) The Secretary is authorized and directed to develop apportionment factors for a revised table 5, House Document 91–317, which shall reflect the capability of the States to obligate funds apportioned for the Interstate System for the fiscal years ending June 30, 1972, 1973, and 1974.

EXTENSION OF TIME FOR COMPLETION OF SYSTEM

SEC. 4. (a) The second paragraph of section 101(b) of title 23, United States Code, is amended by striking out "eighteen years" and inserting in lieu thereof "twenty years" and by striking out "June 30, 1974", and inserting in lieu thereof "June 30, 1976".

(b) The introductory phrase and the second and third sentence of section 104(b)(5) of title 23; United States Code, are amended by striking "1974" where it ap-

pears and inserting in lieu thereof "1976", and such section 104(b)(5) is further amended my striking the two sentences preceding the last sentence and inserting in lieu thereof the following: "The Secretary shall make a revised estimate of the cost of completing the then designated Interstate System after taking into account all previous apportionments made under this section, in the same manner as stated above, and transmit the same to the Senate and the House of Representatives within ten days subsequent to April 10, 1970. Upon the approval by the Congress, the Secretary shall use the Federal share of such approved estimate in making apportionments for the fiscal years ending June 30, 1972, June 30, 1973, and June 30, 1974. The Secretary shall make a revised estimate of the cost of completing the then designated Interstate System, after taking into account all previous apportionments made under this section, in the same manner as stated above, and transmit the same to the Senate and the House of Representatives within ten days subsequent to January 2, 1973. Upon approval of such estimate by the Congress by concurrent resolution, the Secretary shall use such approved estimate in making apportionments for the fiscal years ending June 30, 1975, and June 30, 1976."

MINIMUM ONE-HALF PERCENT APPORTIONMENT FACTOR FOR INTERSTATE SYSTEM

SEC. 5. (a) Paragraph (5) of subsection (b) of section 104 of title 23, United States Code, is amended by adding at the end thereof the following new sentence: "No State shall receive less than one-half of 1 per centum of the total apportionment for each year under this paragraph."

(b) By February 1, 1972, the Secretary shall report to Congress on his recommendations for the apportionment of funds and matching requirements for work on Federal-aid highways in States which have completed, or are nearing completion of construction on Interstate System mileage located in their State, and for all States after completion of the Interstate System.

AUTHORIZATIONS

SEC. 6. For the purpose of carrying out the provisions of title 23, United States Code, the following sums are hereby authorized to be appropriated:

(1) For the Federal-aid primary system and the Federal-aid secondary system and for their extension within urban areas of less than fifty thousand population, out of the Highway Trust Fund, $1,050,000,000, for the fiscal year ending June 30, 1972, and $1,050,000,000, for the fiscal year ending June 30, 1973. The sums authorized in this paragraph for each fiscal year shall be available for expenditure as follows:

(A) 55 per centum for projects on the Federal-aid primary highway system;

(B) 35 per centum for projects on the Federal-aid secondary highway system; and

(C) 10 per centum for projects on extensions of the Federal-aid primary and Federal-aid secondary highway systems in urban areas of less than fifty thousand population, and to carry out the purposes of section 135.

(2) For the Federal-aid Urban System, out of the Highway Trust Fund, $375,000,000 for the fiscal year ending June 30, 1972, and $450,000,000 for the fiscal year ending June 30, 1973.

(3) For forest highways, out of the Highway Trust Fund, $33,000,000 for the fiscal year ending June 30, 1972, and $33,000,000 for the fiscal year ending June 30, 1973.

(4) For public lands highways, out of the Highway Trust Fund, $16,000,000 for the fiscal year ending June 30, 1972, and $16,000,000 for the fiscal year ending June 30, 1973.

(5) For forest development roads and trails, $170,000,000 for the fiscal year ending June 30, 1972, and $170,000,000 for the fiscal year ending June 30, 1973.

(6) For public lands development roads and trails, $8,000,000 for the fiscal year ending June 30, 1972, and $10,000,000 for the fiscal year ending June 30, 1973.

(7) For park roads and trails, $30,000,000 for the fiscal year ending June 30, 1973.

(8) For parkways, $20,000,000 for the fiscal year ending June 30, 1972, and $20,000,000 for the fiscal year ending June 30, 1973.

(9) For Indian reservation roads and bridges, $30,000,000 for the fiscal year ending June 30, 1973.

(10) For carrying out section 402 of title 23, United States Code (relating to highway safety programs), out of the Highway Trust Fund, $75,000,000 for the fiscal year ending June 30, 1972 and $100,000,000 for fiscal year ending June 30, 1973.

(11) For carrying out section 403 of title 23, United State Code (relating to highway safety research and development), out of the Highway Trust Fund, $70,000,000 for the fiscal year ending June 30, 1972, and $115,000,000 for the fiscal year ending June 30, 1973, such sums to remain available for expenditure for two years after the close of the fiscal year for which such sums are appropriated.

(12) For carrying out section 131 of title 23, United States Code (relating to control of outdoor advertising), out of the Highway Trust Fund, $27,000,000 for the fiscal year ending June 30, 1971, $20,500,000 for the fiscal year ending June 30, 1972, and $50,000,000 for the fiscal year ending June 30, 1973.

(13) For carrying out section 136 of title 23, United States Code (relating to control of junkyards), out of the Highway Trust Fund, $3,000,000 for the fiscal year ending June 30, 1971, $3,000,000 for the fiscal year ending June 30, 1972, and $5,000,000 for the fiscal year ending June 30, 1973.

(14) For carrying out section 319(b) of title 23, United States Code (relating to landscaping and scenic enhancement), out of the Highway Trust Fund, $1,500,000 for fiscal year ending June 30, 1972, and $10,000,000 for fiscal year ending June 30, 1973.

(15) For necessary administrative expenses in carrying out section 131, section 136, and section 319(b) of title 23, United States Code, out of the Highway Trust Fund, $1,500,000 for the fiscal year ending June 30, 1971, $1,500,000 for the fiscal year ending June 30, 1972, and $3,000,000 for the fiscal year ending June 30, 1973.

(16) Paragraph (10) of section 5 of the Federal-Aid Highway Act of 1968 (relating to authorizations for carrying out section 402 of title 23, United States Code) is hereby repealed.

FEDERAL AID URBAN SYSTEM

SEC. 7. (a) Subsection (a) of section 101 of title 23, United States Code, is amended as follows:

(1) After the definition of the term "Federal-aid secondary system", add the following new paragraph:

"The term 'Federal-aid urban system' means the Federal-aid highway system described in subsection (d) of section 103 of this title."

(2) The definition of the term "Interstate System" is amended to read as follows:

"The term 'Interstate System' means the National System of Interstate and Defense Highways described in subsection (e) of section 103 of this title."

(b)(1) Subsections (d) and (e) of section 103 of title 23, United States Code, are redesignated as subsections (e) and (f), respectively, including all references thereto, and section 103 is further amended by adding immediately after subsection (c) the following subsection (d):

"(d) The Federal-aid urban system shall be established in each urban area of fifty thousand population or more. In making selections for this urban system, those highways which best serve the goals and objectives of the community as determined by the responsible public officials of such urban area based upon the planning process required pursuant to the provisions of section 134 of this title and which are designed to reduce traffic congestion and to facilitate the flow of traffic in the urban area shall be included. Routes on the Federal-aid urban system shall be selected by the responsible public officials in cooperation with and subject to the approval of the State and by the Secretary as provided in subsection (f) of this section. The urban system shall also include urban extensions of the primary and secondary systems in urban areas of fifty thousand population or more which extensions shall remain under the control of the State subject to the provisions of section 134 of this title. The provisions of chapters 1, 3, and 5 of this title that are applicable to Federal-aid primary highways shall apply to the Federal-aid urban system except as determined by the Secretary to be inconsistent with this subsection."

(2) Relettered subsection (f) of section 103 of title 23, United States Code, is amended by inserting after "the Federal-aid secondary system," the following: "the Federal-aid urban system."

(3) Subsection (a) of section 103 of title 23, United States Code, is amended to read as follows:

"(a) For the purposes of this title, the four Federal-aid systems, the primary system, the urban system, the secondary system, and the Interstate System, are established and continued pursuant to the provisions of this section."

(4) Subsection (b) of section 103 of title 23, United States Code, is amended by striking the period at the end of the next to last sentence and inserting in lieu thereof a comma and the following: "but not including any roads on the Federal-aid urban system."

(5) Subsection (c) of section 103 of title 23, United States Code, is amended by inserting after "the Federal-aid primary system" a comma and the following: "the Federal-aid urban system,".

(c)(1) Subsection (b)(3) of section 104 of title 23, United States Code, is amended to read as follows:

"(b)(3) For extension of the Federal-aid primary and Federal-aid secondary systems within urban areas of less than fifty thousand population:

"In the ratio which the population in municipalities and other urban areas of five thousand or more but less than fifty thousand in each State bears to the total population in municipalities and other urban areas of five thousand or more but less than fifty thousand in all the States as shown by the latest available Federal census."

(2) Subsection (b) of section 104 of title 23, United States Code is amended by adding at the end thereof the following new paragraph

"(6) For the Federal-aid urban system:

"In the ratio which the population in municipalities and other urban areas of fifty thousand or more in each State bears to the total population in municipalities and other urban areas of fifty thousand or more in all States as shown by the latest available census."

(3) Section 104 of title 23, United States Code is amended by adding at the end thereof the following:

"(f) Any funds which are apportioned under paragraph (6) of subsection (b) of this section for the Federal-aid urban system to a State may be used in whole or in part for the construction of highways for facilities to directly facilitate and control traffic flow as provided for in section 135

and for the implementation of section 137 of this title."

(d) Subsections (d) and (e) of section 105 of title 23, United States Code, are redesignated (e) and (f), respectively, including all references thereto, and section 105 is further amended by adding immediately after subsection (c) a new subsection (d):

"(d) In approving programs for projects on the Federal-aid urban system, the Secretary shall require that such projects be selected by the responsible public officials of such urban area in cooperation with the State."

(e) Subsection (b) of section 106 of title 23, United States Code, is amended to read as follows:

"(b) In addition to the approval required under subsection (a) of this section, proposed specifications for projects for construction on (1) the Federal-aid secondary system, except in States where all public roads and highways are under the control and supervision of the State highway department, and (2) the Federal-aid urban system, shall be determined by the appropriate responsible public officials in cooperation with and approved by the State."

(f) Subsection (a) of section 120 of title 23, United States Code, is amended by striking out "and the Federal-aid secondary system" and inserting in lieu thereof a comma and the following: "the Federal-aid secondary system, and the Federal-aid urban system."

(g) The first sentence of subsection (a) of section 123 of title 23, United States Code, is amended to read as follows:

"When a State shall pay for the cost of relocation of utility facilities necessitated by the construction of a project on the Federal-aid primary, urban or secondary systems, or on the Interstate System, Federal funds may be used to reimburse the State for such cost in the same proportion as Federal funds are expended on the project."

ELIMINATION OF SEGMENTS OF INTERSTATE SYSTEM NOT TO BE CONSTRUCTED

SEC. 8. Section 103 of title 23, United States Code, as amended by section 7 of this Act is further amended by adding at the end thereof the following new subsection:

"(g) The Secretary shall remove from designation as a part of the Interstate System for the purpose of apportionment of funds pursuant to section 104(b)(5) of this title and the Federal share payable pursuant to section 120(c) of this title, any segment of such system for which a State has not established by ten days subsequent to January 2, 1973, a schedule for the expenditure of funds for completion of construction of such segment within the period of availability of funds authorized to be appropriated for completion of the Interstate System, and with respect to which the State has not provided the Secretary with assurances satisfactory to him that such schedule will be met, and for which a State has not submitted plans, specifications, and estimates for his approval by July 1, 1975. Such segment shall remain as part of the Interstate System but such designation shall create no Federal financial responsibility except that Federal-aid highway funds otherwise available to the State may be used to construct such segments as part of the Interstate System. The provisions of subsection (e) (2) of this section shall not apply with respect to any segment of the Interstate System eliminated pursuant to this subsection."

ECONOMIC, SOCIAL, ENVIRONMENTAL AND OTHER IMPACT

SEC. 9. (a) Subsection (a) of section 101 of title 23, United States Code, is amended by—

(1) Adding the following after the period at the end of the definition of the term "construction": "It further includes the cost of adjustments needed to reduce adverse economic, social, environmental and other impacts caused by a project, as required by section 109(h) of this title, and includes, among other things, equal employment opportunity training and skill improvement programs authorized by section 140 of this title, and the cost of the acquisition of replacement housing sites and of the acquisition, rehabilitation, relocation, and construction of replacement housing pursuant to section 142 of this title. Such costs shall also include exclusive or preferential bus lanes, highway traffic control devices, bus passenger loading areas and facilities, including shelters, bus terminals, bus storage, and parking areas and facilities."

(2) Striking the period at the end of the first sentence in the definition of the term "highway" and inserting in lieu thereof a comma and the following: "and for purposes of relocation assistance pursuant to chapter 5 of this title, also includes any area which has suffered direct economic, environmental, social or other injury as the result of its location adjoining or near a highway project."

(b) Section 109(g) of title 23, United States Code, is amended to read as follows:

"(g) The Secretary shall not approve plans and specifications for proposed projects on any Federal-aid system unless such plans and specifications are accompanied by a plan for minimizing possible soil erosion both during and after the construction of the project. Such plan shall be tailored to the individual needs of the project and be in accordance with guidelines for soil erosion control issued by the Secretary."

(c) Such section 109 is further amended by adding the following new subsections:

"(h) As soon as possible but not later than July 1, 1972, the Secretary, after consultation with appropriate Federal officials, shall issue guidelines for avoiding, minimizing or overcoming possible adverse economic, social, environmental and other impacts relating to any proposed projects on any Federal-aid system. Not later than two years after the publication of such guidelines, the Secretary shall not approve any plans and specifications for any such proposed project unless such plans and specifications are accompanied by a comprehensive analysis identifying the associated economic, social, environmental, and other adverse impacts of such proposed project and the plans and specifications include adequate measures for avoiding, minimizing or otherwise overcoming such adverse impacts in compliance with such guidelines. The impact problems to be accounted for should include but not be limited to the following:

"(1) air, noise, and water pollution;

"(2) destruction or disruption of manmade and natural resources, aesthetic values, community cohesion, and the availability of public facilities and services;

"(3) adverse employment effects, and tax and property value losses;

"(4) injurious displacement of people, businesses, and farms; and

"(5) disruption of desirable community and regional growth.

"(i) The Secretary, after consultation with appropriate Federal, State, and local officials, shall develop and promulgate noise level standards compatible with different land uses and after July 1, 1972, shall not approve plans and specifications for any proposed project on any Federal-aid system for which location approval has not yet been secured unless he determines that such plans and specifications include adequate measures to implement the appropriate noise level standards.

"(j) The Secretary, after consultation with the Secretary of Health, Education, and Welfare, shall develop and promulgate guidelines to assure that highways constructed pursuant to this title are consistent with any approved plan for the implementation of any ambient air quality standard for any air quality control region designated pursuant to the Clean Air Act, as amended."

(d) Subsection (b) of section 307 of title 23, United States Code, is amended by adding the following sentence: "The highway research program herein authorized shall also include studies to identify and measure, quantitatively and qualitatively, those factors which relate to economic, social, environmental, and other impacts of highway projects."

HIGHWAY PROJECT PRIORITIES

SEC. 10. Section 105 of title 23, United States Code, is amended by adding at the end thereof the following new subsections:

"(g) In approving programs for projects on the Federal-aid systems, the Secretary shall give priority to projects which will provide adequate direct and convenient public access to passenger or cargo terminal buildings at public airports and seaports.

"(h) In approving programs for projects on the Federal-aid secondary system, the Secretary shall give priority to projects which will encourage the location of business and industry in rural communities, facilitate the mobility of labor in sparsely populated areas, and provide rural citizens with improved highways to such public and private services as health care, recreation, employment, education, and cultural activities, or otherwise encourage the social and economic development of rural communities."

COST REDUCTION

SEC. 11. Section 106 of title 23, United States Code, is amended by adding at the end thereof the following new subsection:

"(d) In such cases as the Secretary determines advisable, plans, specifications, and estimates for proposed projects on any Federal-aid system shall be accompanied by a value engineering or other cost reduction analysis."

PUBLIC HEARING

SEC. 12. Section 128 of title 23, United States Code, is amended to read as follows:

"§ 128. Public hearings

"(a) Prior to the submission of any plans required under section 134 of this title or plans for any highway project to be constructed under the provisions of this title, the Governor or other duly constituted State authority shall certify to the Secretary that public hearings have been held by a duly authorized State or local official or that the people of the area or community involved have been afforded an opportunity to be heard and that opportunity has been afforded during such hearing for the presentation of testimony and other evidence on the economic and social effects of such a plan, highway location or design, its impact on the environment and, to the extent applicable, its consistency with goals and objectives set forth in the urban transportation plan for the area as required by section 134 of this title. Such certification of the economic, social, environmental, and other effects of the plan or highway location or design and various alternatives which were raised during the hearing or which were otherwise considered.

"(b) When hearings have been held under subsection (a), the Governor or other duly constituted State authority shall submit a copy of such hearings to the Secretary together with the certification and report."

EMERGENCY RELIEF

SEC. 13. (a) The first sentence of subsection (a) of section 125 of title 23, United States Code, is amended to read as follows: "An emergency fund is authorized for expenditure by the Secretary, subject to the provisions of this section and section 120 of this title, for (1) the repair or reconstruction of highways, roads, and trails which we shall find have suffered serious damage as the result of (A) natural disaster over a wide

area such as by floods, hurricanes, tidal waves, earthquakes, severe storms, or landslides, or (B) catastrophic failures from any cause, in any part of the United States, and (2) the repair or reconstruction of bridges which have been permanently closed to all vehicular traffic by the State after December 31, 1967, and prior to the enactment of this Act, because of imminent danger of collapse due to structural deficiencies or physical deterioration."

(b) Section 120(f) of title 23, United States Code, as amended, is amended by adding before the last sentence thereof the following new sentence: "As used in this section and section 143 of this title, 'a comparable facility' shall mean a facility which meets the current geometric and construction standards required for the types and volume of traffic which such facility will carry over its design life."

FEDERAL PARTICIPATION IN THE IMPROVEMENT OF TOLL ROADS

SEC. 14. Section 129 of title 23, United States Code, is amended by adding a new subsection (e) and redesignating (e) as subsection (f):

"(e) Notwithstanding the provisions of subsection (b) of this section, the Secretary may permit Federal participation in the reconstruction and improvement of any toll road which is a designated part of the Interstate System as he may find necessary to bring such toll road to standards for the Interstate System in order to provide for the safe use of such highways as part of the Interstate System and to facilitate the tolls therefrom. Federal participation in such reconstruction and improvement shall be on the same basis and in the same manner as in the construction of free Interstate System highways under this chapter. No Federal participation shall be permitted pursuant to this subsection except on toll roads which were designated as a part of the Interstate System on or before June 30, 1968: *Provided*, That the State and toll road authority involved shall agree that no additional indebtedness to be liquidated by the collection of tolls shall be incurred after the date of the agreement permitting such Federal participation and that the toll road shall become a free road when such indebtedness is liquidated."

MARINE HIGHWAY FACILITIES

SEC. 15. (a) Subsection (f) of section 129 of title 23, United States Code, is amended to read as follows:

"(f) Notwithstanding the provisions of section 301 of this title, the Secretary may permit Federal participation under this title in the construction of marine highway facilities, whether toll or free, the route of which has been approved under section 103 (b) or (c) of this title as a part of one of the Federal-aid systems and has not been designated as a route on the Interstate System. Such facilities may be either publicly or privately owned and operated, but the operating authority and the amount of fares charged for passage shall be under the control of a State agency or official, and all revenues derived from publicly owned or operated facilities shall be applied to payment of the cost of construction or acquisition thereof, including debt service, and to actual and necessary costs of operation, maintenance, repair, and replacement. For the purpose of this section 'construction of marine highway facilities' includes the construction or reconstruction of ferries or other necessary vessels and docking facilities and approaches thereto."

(b) The heading of such section 129 is amended by striking out "Ferries" and inserting in lieu thereof "Marine Highway Facilities".

(c) The table of contents of chapter 1 of title 23, United States Code is amended by striking out "ferries" in the matter relating to section 129 and inserting in lieu thereof "marine highway facilities".

CONTROL OF OUTDOOR ADVERTISING

SEC. 16. (a) Section 131(b) of title 23, United States Code, is amended to read as follows:

"(b) On or after January 1, 1971, or after the expiration of the next regular session of a State legislature, whichever is the later, Federal-aid highway funds apportioned to any State which the Secretary determines has not made provision for effective control of the erection and maintenance along the Interstate System and the primary system of outdoor advertising signs, displays, and devices which are visible from the main traveled way of the system and not otherwise permitted pursuant to subsection (d) of this section, shall be reduced for the first year of noncompliance by amounts equal to 5 per centum of the amounts which would otherwise be apportioned to such State under section 104 of this title, with the reduction of an additional 1 per centum for each succeeding year of noncompliance but not in excess of a total of 10 per centum until such time as such State shall provide for such effective control. Any amount which is withheld from apportionment to any State hereunder shall be reapportioned to the other States. Whenever a State has made adequate provision for effective control as required by this section but is unable to carry out such provision because of a declaration by a court of competent jurisdiction or a ruling of the attorney general of such State, then the Secretary may suspend the application of this subsection to such State until sixty days after the adjournment of the next session of the State legislature having authority to consider such declaration or ruling. Should a constitutional amendment be required, the application of this subsection shall be suspended until the Secretary, taking into consideration the constitutional processes of the State involved, determines that the State has had a reasonable opportunity to make adequate provision for effective control in accordance with this section."

(b) Section 131(c) of title 23, United States Code, is amended to read as follows:

"(c) Effective control means that after January 1, 1971, or after the expiration of the next regular session of a State legislature, whichever is the later, such signs, displays, and devices shall, pursuant to this section, be limited to (1) directional and official signs and notices, which signs and notices shall include, but not be limited to, information in the specific interest of the traveling public, signs, and notices pertaining to natural wonders, scenic and historical attractions, which are required or permitted by law, which shall conform to national standards hereby authorized to be promulgated by the Secretary hereunder, which standards shall contain provisions concerning the lighting, size, number, and spacing of signs, and such other requirements as may be appropriate to implement this section, (2) signs, displays, and devices advertising the sale or lease of property upon which they are located, and (3) signs, displays, and devices advertising activities conducted on the property on which they are located."

(c) Section 131(d) of title 23, United States Code, is amended to read as follows:

"(d) In order to promote the reasonable, orderly and effective display of outdoor advertising while remaining consistent with the purposes of this section, signs, displays, and devices whose size, lighting and spacing, consistent with customary use is to be determined by agreement between the several States and the Secretary, may be erected and maintained within areas adjacent to the Interstate and primary systems which are zoned industrial or commercial under authority of State law, or in unzoned commercial or industrial areas may be determined by agreement between the several States and the Secretary. The States shall have full authority under their own zoning laws to zone areas for commercial or industrial purposes, and the actions of the States in this regard will be accepted for the purposes of this Act. Whenever a bona fide State, county, or local zoning authority has made a determination of customary use, such determination will be accepted in lieu of controls by agreement in the zoned commercial and industrial areas within the geographical jurisdiction of such authority. Nothing in this subsection shall apply to signs, displays, and devices referred to in clauses (2) and (3) of subsection (c) of this section."

(d) Section 131(e) of title 23, United States Code, is amended to read as follows:

"(e) Any sign, display, or device to which subsection (g) of this section is applicable shall be required to be removed on a scheduled basis as the Federal share of just compensation becomes available for this purpose. The schedule shall be determined by agreement between the Secretary and the State. Unless the Federal share of just compensation is not available, no schedule shall extend beyond the end of the fifth year after such signs, displays, and devices have become nonconforming under State law. Any other sign, display, or device lawfully erected which does not conform to this section shall not be required to be removed until the end of the fifth year after it becomes nonconforming."

(e) Section 131(g) of title 23, United States Code, is amended to read as follows:

"(g) Just compensation shall be paid upon the removal of the following outdoor advertising signs, displays, and devices—

"(1) those lawfully in existence on October 22, 1965,

"(2) those lawfully on any highway made a part of the Interstate or primary system on or after October 22, 1965, and before January 1, 1968, or the effective date of a State law enacted to comply with this section, whichever is the later,

"(3) those lawfully erected on or after January 1, 1968, or the effective date of a State law enacted to comply with this section, whichever is the later, and

"(4) those lawfully in existence beyond six hundred sixty feet of the nearest edge of the right-of-way and visible from the main traveled way of the Interstate System and the primary system on the effective date of a State law enacted to control such signs, displays, and devices.

The Federal share of such compensation shall be 75 per centum. Such compensation shall be paid for the following:

"(A) the taking from the owner of such sign, display, or device of all right, title, leasehold, and interest in such sign, display, or device; and

"(B) the taking from the owner of the real property on which the sign, display, or device is located, of the right to erect and maintain such signs, displays, and devices thereon."

(f) Section 131 of title 23, United States Code, is amended by adding thereto:

"(o) The Secretary is authorized to enter into agreements with one or more States for the purposes of carrying out demonstration projects to determine the best means of accomplishing the purpose of this section. Preference shall be given to any State or States which have undertaken agreements with the Secretary and private individuals or business concerns to carry out the provisions of this section. Any such agreement shall provide for the payment of the Federal share, prescribed in subsection (g), of the cost of the program, and shall be in accordance with the other provisions of this section to the extent applicable for the purpose of this subsection. Not to exceed $15,000,000 of the funds authorized to be appropriated for each of the fiscal years ending June 30, 1971, and June

30, 1972, for carrying out this section shall be available to carry out this subsection."

CONTROL OF JUNKYARDS

SEC. 17. (a) Section 136(b) of title 23, United States Code, is amended to read as follows:

"(b) On or after January 1, 1971, or after the expiration of the next regular session of a State legislature, whichever is the later, Federal-aid highway funds apportioned to any State which the Secretary determines has not made provision for effective control of the establishment and maintenance along the Interstate System and the primary system of outdoor junkyards, which are visible from the main traveled way of the system, shall be reduced for the first year of noncompliance by amounts equal to 5 per centum of the amounts which would otherwise be apportioned to such State under section 104 of this title, with the reduction of an additional 1 per centum for each succeeding year of noncompliance, but not in excess of a total of 10 per centum, until such time as such State shall provide for such effective control. Any amount which is withheld from apportionment to any State hereunder shall be reapportioned to the other States. Whenever he determines it to be in the public interest, the Secretary may suspend, for such periods as he deems necessary, the application of this subsection to a State."

(b) Section 136(c) of title 23, United States Code, is amended to read as follows:

"(c) Effective control means that by January 1, 1971, or after the expiration of the next regular session of a State legislature, whichever is the later, such junkyards shall be screened by natural object, plantings, fences, or other appropriate means so as not to be visible from the main traveled way of the system, or shall be removed from sight. Junkyards which are lawfully in existance and which the State finds suitable for screening shall be screened within five years, after January 1, 1971, or the effective date of a State law enacted to comply with this section, whichever is the later."

(c) Section 136(g) of title 23, United States Code, is amended to read as follows:

"(g) Notwithstanding any provision of this section, junkyards, auto graveyards, and scrap metal processing facilities may be operated within areas adjacent to the Interstate System and the primary system which are zoned industrial under authority of State law, or which are not zoned under authority of State law, but are used for industrial activities, as determined by the several States subject to approval by the Secretary."

(d) Section 136(h) of title 23, United States Code, is amended to read as follows:

"(h) Any junkyard to which subsection (j) of this section is applicable shall be required to be removed on a scheduled basis as the Federal share of just compensation becomes available for this purpose. The schedule shall be determined by agreement between the Secretary and the State. Unless the Federal share of just compensation is not available, no schedule shall extend beyond the end of the fifth year after such junkyards have become nonconforming under State law. Any other junkyard lawfully established which does not conform to this section shall not be required to be removed until the end of the fifth year after it becomes nonconforming."

(e) Section 136(i) of title 23, United States Code, is amended to read as follows:

"(i) The Federal share of the State's costs for landscaping, screening, relocation, removal, or disposal under this section shall be 75 per centum."

(f) Section 136(j) of title 23, United States Code, is amended to read as follows:

"(j) Just compensation shall be paid the owner for the relocation, removal, or disposal of the following junkyards—

"(1) those lawfully in existence on October 22, 1965,

"(2) those lawfully along any highway made a part of the Interstate or primary system on or after October 22, 1965 and before January 1, 1968, or the effective date of a State law enacted to comply with this section, whichever is the later,

"(3) those lawfully established on or after January 1, 1968, or the effective date of a State law enacted to comply with this section, whichever is the later, and

"(4) those lawfully in existence beyond one thousand feet of the nearest edge of the right-of-way and visible from the main traveled way of the Interstate System and the primary system on the effective date of a State law enacted to control such junkyards.

The Federal share of such compensation shall be 75 per centum."

LANDSCAPING AND SCENIC ENHANCEMENT

SEC. 18. Section 319(b) of title 23, United States Code, is amended to read as follows:

"(b) An amount equivalent to 3 per centum of the funds apportioned to a State for Federal-aid highways for any fiscal year shall be allocated to that State out of funds appropriated under authority of this subsection, which shall be used for landscape and roadside development within the highway right-of-way and for acquisition of interests in and improvement of strips of land necessary for the restoration, preservation, and enhancement of scenic beauty adjacent to such highways, including acquisition and development of publicly owned and controlled rest and recreation areas and sanitary and other facilities, including information center buildings, within or adjacent to the highway right-of-way reasonably necessary to accommodate the traveling public, without being matched by the State. The Secretary may authorize exceptions from this requirement, upon application of a State and upon a showing that such amount is in excess of the needs of the State for these purposes. The provisions of chapter 1 of this title relating to the obligation, period of availability, and expenditure of Federal-aid primary highway funds shall apply to the funds authorized to be appropriated to carry out this subsection after June 30, 1967."

STUDY OF ON-PREMISE SIGNS

SEC. 19. The Secretary is hereby authorized and directed to conduct a comprehensive study of on-premise signs which advertise the sale or lease of, or activities being conducted upon, the real property where the signs are located, in order to evaluate such signs in relation to section 131 of title 23, United States Code. The Secretary shall submit a report of such study, together with recommendations, to the Congress not later than January 1972.

URBAN TRANSPORTATION PLANNING

SEC. 20. Section 134 of title 23, United States Code is amended by adding at the end thereof the following:

"No highway project may be constructed in any urban area of fifty thousand population or more unless the responsible public officials of such urban area in which the project is located have been consulted and their views considered with respect to the corridor, the location and the design of the project."

URBAN AREA TRAFFIC OPERATIONS IMPROVEMENT PROGRAMS

SEC. 21. Subsection (b) of section 135 of title 23, United States Code, is amended to read as follows:

"(b) The Secretary may approve under this section any project on an extension of the Federal-aid primary or secondary system in urban areas for improvements which directly facilitate and control traffic flow, such as grade separation of intersections, widening of lanes, channelization of traffic, traffic control systems, and loading and unloading ramps, if such project is based on a continuing comprehensive transportation planning process carried on in accordance with section 134 of this title."

FRINGE AND CORRIDOR PARKING FACILITIES

SEC. 22. (a) Section 137 of title 23, United States Code, is amended to read as follows:

"§ 137. Fringe and corridor parking facilities

"(a) The Secretary may approve as a project on any Federal-aid urban system the acquisition of land adjacent to the right-of-way outside a central business district, as defined by the Secretary, and the construction of publicly owned parking facilities thereon or within such right-of-way, including the use of the air space above and below the established grade line of the highway pavement, to serve an urban area of fifty thousand population or more. Such parking facility shall be located and designed in conjunction with existing or planned public transportation facilities. In the event fees are charged for the use of any such facility, the rate thereof shall not be in excess of that required for maintenance and operation (including compensation to any person for operating such facility).

"(b) The Secretary shall not approve any project under this section until—

"(1) he has determined that the State, or the political subdivision thereof, where such project is to be located, or any agency or instrumentality of such State or political subdivision, has the authority and capability of constructing, maintaining, and operating the facilty;

"(2) he has entered into an agreement governing the financing, maintenance, and operation of the parking facility with such State, political subdivision, agency, or instrumentality, including necessary requirements to insure that adequate public transportation services will be available to persons using such facilities; and

"(3) he has approved design standards for constructing such facility developed in cooperation with the State highway department.

"(c) The term 'parking facilities' for purposes of this section shall include access roads, buildings, structures, equipment, improvements, and interests in lands.

"(d) Nothing in this section, or in any rule or regulation issued under this section or in any agreement required by this section, shall prohibit (1) any State, political subdivision, or agency or instrumentality thereof, from contracting with any person to operate any parking facility constructed under this section, or (2) any such person from so operating such facility.

"(e) The Secretary shall not approve any project under this section unless he determines that it is based on a continuing comprehensive transportation planning process carried on in accordance with section 134 of this title."

(b) The analysis of chapter 1 of such title is amended by striking out the matter relating to section 137 and inserting in lieu thereof the following:

"137. Fringe and corridor parking facilities."

(c) Section 11 of the Federal-Aid Highway Act of 1968 is hereby repealed.

STUDY OF RELATIONSHIP OF HIGHWAY CONSTRUCTION TO PUBLIC TRANSPORTATION SERVICES

SEC. 23. The Secretary is authorized and directed to undertake an analysis and study of the relationship of highway construction and funding to public transportation services using highways and to report to the Congress recommendations, if any, no later than February 1, 1972.

ADDITIONS TO INTERSTATE SYSTEM

SEC. 24. The existing language of section 139 of title 23, United States Code, shall be

designated as subsection (a) and a new subsection (b) added as follows:

"(b) Whenever the Secretary determines that a highway on the Federal-aid primary system would be a logical addition or connection to the Interstate System and would qualify for designation as a route on that system in the same manner as set forth in paragraph 1 of subsection (d) of section 103 of this title, he may upon the affirmative recommendation of the State or States involved designate such highway as part of the Interstate System. Such designation shall be made only upon the written agreement of the State or States involved that such highway will be constructed to meet all the standards of a highway on the Interstate System within twelve years of the date of the agreement between the Secretary and the State or States involved. The mileage of any highway designated as part of the Interstate System under this subsection shall not be charged against the limitations established by the first sentence of section 103(d) of this title. The designation of a highway as part of the Interstate System under this subsection shall create no Federal financial responsibility with respect to such highway except that Federal-aid highway funds otherwise available to the State or States involved for the construction of Federal-aid primary system highways may be used for the reconstruction of a highway designated as a route on the Interstate System under this subsection. In the event that the State or States involved have not substantially completed the construction of any highway designated under this subsection within the time provided for in the agreement between the Secretary and State or States involved, the Secretary shall remove the designation of such highway as a part of the Interstate System. Removal of such designation as result of failure to comply with the agreement provided for in this subsection shall in no way prohibit the Secretary from designating such route as part of the Interstate System pursuant to subsection (a) of this section or under any other provision of law providing for addition to the Interstate System."

EQUAL EMPLOYMENT OPPORTUNITY

SEC. 25. Section 140 of title 23, United States Code, is amended by designating the existing language as subsection (a) and adding the following subsection:

"(b) The Secretary, acting through the Secretary of Labor, and in cooperation with any other department or agency of the Government, State agency, authority, association, institution, corporation (profit or nonprofit), or any other organization or person, is authorized to develop, conduct, and administer highway construction-related training and skill improvement programs. Whenever an apportionment is made under subsections 104 (b)(1), (b)(2), (b)(3), (b)(5), and (b)(6) of this title of the sums authorized to be appropriated for expenditure upon the Federal-aid primary and secondary systems, and their extensions within urban areas, the Interstate System, and the Federal-aid urban system the Secretary shall deduct such sums as he may deem necessary for administering the provisions of this subsection to be financed from the appropriation for the Federal-aid systems. Such sums so deducted shall remain available until expended. The provisions of section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not be applicable to contracts and agreements made under the authority herein granted to the Secretary."

ADDITIONAL AUTHORIZATIONS IN CHAPTER 1

SEC. 26. (a) Chapter 1 of title 23, United States Code is amended by inserting at the end thereof the following new sections:

"§ 142. Construction of replacement housing

"(a) The Secretary may approve as a part of the cost of construction of any project under any Federal-aid program which he administers the cost of (1) constructing new housing, (2) acquiring existing housing, (3) rehabilitating existing housing, and (4) relocating existing housing, as replacement housing for individuals and families whenever he determines that a proposed project on any Federal-aid system cannot proceed to actual construction because replacement housing as certified by the Secretary of Housing and Urban Development is not available and cannot otherwise be made available as required by law. For the purposes of this subsection the term 'housing' includes all appurtenances thereto.

"(b) In carrying out the provisions of this section the Secretary shall consult with the Secretary of Housing and Urban Development. Whenever practicable, the services of State or local governmental housing agencies shall be utilized in carrying out this section.

"§ 143. Special bridge replacement program

"(a) Congress hereby finds and declares it to be in the vital interest of the Nation that a special bridge replacement program be established to enable the several States to replace bridges over major rivers or other topographical barriers when the States and the Secretary find that there is a significant importance of a bridge facility to serve the needs of the people of communities located along such river or topographical barrier and there is significant danger that the bridge may collapse.

"(b) The Secretary in consultation with the States shall (1) inventory all bridges located on any of the Federal-aid systems over navigable waters and other topographical barriers of the United States; (2) classify them according to their serviceability and safety; and (3) based on that classification, assign each a priority for replacement.

"(c) Whenever any State or States make application to the Secretary for assistance in replacing a bridge which the priority system, established under subsection (b) of this section shows to be unsafe and inadequate to serve the people of the communities involved and the traffic which it carries, the Secretary may approve Federal participation in the reconstruction of a comparable facility. In approving projects under this section, the Secretary shall give consideration to those projects which will remove from service bridges which are most in danger of failure and give consideration to the economy of the area involved. Approval of projects and allocation of funds under this section shall be without regard to allocation or apportionment formulas otherwise established under this title.

"(d) The Federal share payable on account of any bridge replacement under this section shall not exceed 75 per centum of the cost thereof.

"(e) For the purpose of carrying out the provisions of this section, there are hereby authorized to be appropriated out of the Highway Trust Fund, $150,000,000 for the fiscal year ending June 30, 1971; $150,000,000 for the fiscal year ending June 30, 1972; and $150,000,000 for the fiscal year ending June 30, 1973, to be available until expanded. Such funds shall be available for obligation at the beginning of the fiscal year for which authorized.

"(f) The Secretary shall report annually on projects approved under this section with any recommendations he may have for further improvement in the special bridge replacement program authorized in accordance with this section."

(b) The analysis of chapter 1 of title 23, United States Code, is amended by adding at the end thereof the following:

"Sec. 142. Construction of replacement housing.

"Sec. 143. Special bridge replacement program.

HIGHWAY SAFETY

SEC. 27. Subsection (c) of section 402 of title 23, United States Code, is amended by striking out beginning in the second sentence thereof "as Congress, by law enacted hereafter," and all that follows down through and including the period at the end of the third sentence thereof and inserting in lieu thereof the following: "75 per centum in the ratio which the population of each State bears to the total population of all the States, as shown by the latest available Federal census, and 25 per centum in the ratio which the public road mileage in each State bears to the total public road mileage in all States. For the purpose of this subsection, a 'public road' means any road under the jurisdiction of, and maintained by, a public authority and open to public travel. The annual apportionment to each State shall not be less than one-third of 1 per centum of the total apportionment."

TERRITORIAL HIGHWAY PROGRAM

SEC. 28. (a) Chapter 2 of title 23, United States Code, is amended by adding at the end thereof the following new section:

"§ 215. Territorial highway program

"(a) Recognizing the mutual benefits that will accrue to the Virgin Islands, Guam, and American Samoa, and to the United States from the improvement of highways in such territories of the United States, the Secretary is authorized to assist each such territorial government in a program for the construction and improvement of a system of arterial highways, and necessary interisland connectors designated by the Governor of such territory and approved by the Secretary. Federal financial assistance shall be granted under this subsection to such territories upon the basis of a Federal contribution of 70 per centum of the cost of any project.

"(b) In order to establish a long-range highway development program, the Secretary is authorized to provide technical assistance for the establishment of an appropriate agency to administer on a continuing basis highway planning, design, construction and maintenance operations, the development of a system of arterial and collector highways, including necessary interisland connectors, and the establishment of advance acquisition of right-of-way and relocation assistance programs.

"(c) No part of the appropriations authorized under this section shall be available for obligation or expenditure with respect to any territory until the Governor enters into an agreement with the Secretary providing that the government of such territory (1) will design and construct a system of arterial and collector highways, including necessary interisland connectors, built in accordance with standards approved by the Secretary; (2) will not impose any toll, or permit any such toll to be charged, for use by vehicles or persons of any portion of the facilities constructed or operated under the provisions of this section; (3) will provide for the maintenance of such facilities in a condition to adequately serve the needs of present and future traffic; (4) will implement standards for traffic operations and uniform traffic control devices which are approved by the Secretary.

"(D)(1) Three per centum of the sums authorized to be appropriated for each fiscal year for carrying out subsection (a) of this section shall be available for expenditure only for engineering and economic surveys and investigations, for the planning of future highway programs and the financing thereof, for studies of the economy, safety, and convenience of highway usage and the desirable regulation and equitable taxation thereof, and for research and development, necessary

in connection with the planning, design, and maintenance of the highway system, and the regulation and taxation of their use.

(2) In addition to the percentage provided in paragraph (1) of this subsection, not to exceed 2 per centum of sums authorized to be appropriated for each fiscal year for carrying out subsection (a) of this section may be expended upon request of the Governor and with the approval of the Secretary for the purposes enumerated in paragraph (1) of this subsection.

"(e) None of the funds authorized to be appropriated for carrying out this section shall be obligated or expended for maintenance of the highway system.

"(f) The provisions of chapters 1 and 5 of this title that are applicable to Federal-aid primary highway funds, other than provisions relating to the apportionment formula and provisions limiting the expenditure of such funds to the Federal-aid systems, shall apply to the funds authorized to be appropriated to carry out this section, except as determined by the Secretary to be inconsistent with this section."

(b) The analysis of chapter 2 of title 23, United States Code, is amended by adding at the end thereof the following:

"215. Territories highway development program."

(c) There are hereby authorized to be appropriated out of the Highway Trust Fund for carrying out subsection (a) of section 215 of title 23, United States Code, not to exceed $2,000,000 for each of the territories listed in such section for the fiscal year ending June 30, 1971, and for each of the two succeeding fiscal years.

(d) Sums authorized to be appropriated for the fiscal year ending June 30, 1971, shall be available for obligation immediately upon enactment of this section in the same manner and to the same extent as if such sums were apportioned under chapter 1 of title 23, United States Code. Sums authorized to be appropriated for the fiscal year ending June 30, 1972, and the fiscal year ending June 30, 1973, shall be available for obligation at the beginning of the fiscal year for which authorized in the same manner and to the same extent as if such sums were apportioned under chapter 1 of title 23, United States Code.

DARIEN GAP HIGHWAY

SEC. 29. (a) Chapter 2 of title 23, United States Code, is amended by adding at the end thereof the following additional section:

"§ 216. Darien Gap Highway

"(a) The United States shall cooperate with the Government of the Republic of Panama and with the Government of Colombia in the construction of approximately two hundred and fifty miles of highway in such countries in the location known as the Darien Gap to connect the Inter-American Highway authorized by section 212 of this title with the Pan American Highway System of South America. Such highway shall be known as the Darien Gap Highway. Funds authorized by this section shall be obligated and expended subject to the same terms, conditions, and requirements with respect to the Darien Gap Highway as are funds authorized for the Inter-American Highway by subsection (a) of section 212 of this title.

"(b) The construction authorized by this section shall be under the administration of the Secretary, who shall consult with the appropriate officials of the Department of State with respect to matters involving the foreign relations of this Government, and such negotiations with the Governments of the Republic of Panama and Colombia as may be required to carry out the purposes of this section shall be conducted through, or authorized by, the Department of State.

"(c) The provisions of this section shall not create nor authorize the creation of any obligations on the part of the Government of the United States with respect to any expenditures for highway survey or construction heretofore or hereafter undertaken in Panama or Colombia, other than the expenditures authorized by the provisions of this section.

"(d) Appropriations made pursuant to any authorization for the Darien Gap Highway shall be available for expenditure by the Secretary for necessary administrative and engineering expenses in connection with the Darien Gap Highway program.

"(e) For the purposes of this section the term 'construction' does not include any costs of rights-of-way, relocation assistance, or the elimination of hazards of railway grade crossings."

(b) The analysis of chapter 2 of title 23, United States Code, is hereby amended by adding at the end thereof the following:

"216. Darien Gap Highway.".

(c) There is hereby authorized to be appropriated not to exceed $100,000,000, to remain available until expended, to enable the Secretary of Transportation to carry out section 216 of title 23, United States Code.

INTEREST PAYMENTS FOR REPLACEMENT HOUSING

SEC. 30. Section 506 of title 23, United States Code is amended by redesignating subsection (b) as subsection (c) and inserting a new subsection (b) as follows:

"(b) In addition to the amounts otherwise authorized by this title, the State agency shall make an interest payment to compensate such owner for any increased rate of interest which such owner is required to pay for financing such replacement dwelling.

"This interest payment shall be computed and allowed only if there was an existing mortgage against the dwelling transferred to the State and such mortgage was a valid lien on said premises for at least one year prior to the institution of negotiations for the acquisition of such property, and if the mortgage for the replacement dwelling bears a higher rate of interest than the interest rate on the mortgage of the transferred dwelling; but, in no event shall such interest on the replacement dwelling be greater than the maximum interest allowable under State law.

"The value of the interest payment shall be the difference in the interest rate existing on the balance of any mortgage on a transferred dwelling and the interest rate on the mortgage of the replacement dwelling for the remainder of the term of any such mortgage on such transferred dwelling reduced to discounted present value.

"The discount rate as above provided shall be the maximum rate of interest permitted to be paid on savings deposits by any savings bank within the State pursuant to the rules and regulations of the Federal Deposit Insurance Corporation."

EFFECTIVE DATE OF CHAPTER 5

SEC. 31. Section 37 of the Federal-Aid Highway Act of 1968 (82 Stat. 836), is amended to read as follows:

"(a) Except as otherwise provided in subsection (b) of this section, this Act and the amendments made by this Act shall take effect on the date of its enactment, except that until July 1, 1970, sections 502, 505, 506, 507, and 508 of title 23, United States Code, as added by this Act, shall be applicable to a State only to the extent that such State is able under its laws to comply with such sections. Except as otherwise provided in subsection (b) of this section, after July 1, 1970, such sections shall be completely applicable to all States. Section 133 of title 23, United States Code, shall not apply to any State if sections 502, 505, 506, 507, and 508 of title 23, United States Code, are applicable in that State, and effective July 1, 1970, such section 133 is repealed, except as otherwise provided in subsection (b) of this section.

"(b) In the case of any State (1) which is required to amend its constitution to comply with sections 502, 505, 506, 507, and 508 of title 23, United States Code, and (2) which cannot submit the required constitutional amendment for ratification prior to July 1, 1970, the date of July 1, 1970, contained in subsection (a) of this section shall be extended to January 1, 1971."

ALASKA HIGHWAY

SEC. 32. (a) The President, acting through the Secretaries of State and Transportation, is authorized to undertake negotiations with the Government of Canada for the purpose of entering into a suitable agreement authorizing paving and reconstructing the Alaska Highway from Dawson Creek, Canada (including a connecting highway to Haines, Alaska), to the Alaska border, including, but not limited to, necessary highway realinement.

(b) The President is requested to report to Congress not later than one year after the date of enactment of this section the results of his negotiations under this section.

ALASKAN ASSISTANCE

SEC. 33. (a) Subsection (b) of section 7 of the Federal Aid Highway Act of 1966 is amended to read as follows:

"(b) There is hereby authorized to be appropriated for construction and maintenance of highways of the State of Alaska, out of the Highway Trust Fund and in addition to funds otherwise made available to the State of Alaska under title 23, United States Code, $20,000,000 for each of the fiscal years ending June 30, 1972, and June 30, 1973."

(b) Any right-of-way for roads, roadways, highways, tramways, trails, bridges, and appurtenant structures reserved by section 321(d) of title 48, United States Code (61 Stat. 418, 1947), not utilized by the United States or by the State or territory of Alaska prior to the date of enactment hereof, shall be and hereby is vacated and relinquished by the United States to the end and intent that such reservation shall merge with the fee and be forever extinguished.

DISTRICT OF COLUMBIA

SEC. 34. Subsections (a), (b), and (c) of section 23 of the Federal-Aid Highway Act of 1968 are hereby repealed.

## BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. CURTIS (for himself and Mr. HRUSKA):

S. 4414. A bill to amend the Internal Revenue Code of 1954 to make it clear that independent truck dealers and distributors who install equipment or make minor alterations on tax-paid truck bodies and chassis are not to be subject to excise tax as manufacturers on account thereof; to the Committee on Finance.

By Mr. COTTON:

S. 4415. A bill for the relief of Niki Vomvolaki; to the Committee on the Judiciary.

By Mr. MOSS:

S. 4416. A bill for the relief of Miss Maike Hannemann; to the Committee on the Judiciary.

By Mr. FONG:

S. 4417. A bill for the relief of Chang Shee Pang (Chang Chung Kyau); to the Committee on the Judiciary.

By Mr. RANDOLPH:

S. 4418. A bill to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; placed on the calendar.

(The remarks of Mr. RANDOLPH when he reported the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. FANNIN:

S. 4419. A bill to provide for medical and hospital care through a system of voluntary health insurance, to establish a national program for protection against catastrophic illness, to provide for peer review of health services provided under Federal programs, and for other purposes; to the Committee on Finance.

(The remarks of Mr. FANNIN when he introduced the bill appear later in the RECORD under the appropriate heading.)

## ADDITIONAL COSPONSORS OF BILLS

S. 1466

Mr. HANSEN. Mr. President, on March 11, 1969, I introduced a bill to designate the Stratified Primitive Area as a part of the Washakie Wilderness, heretofore known as the South Absaroka Wilderness in the Shoshone National Forest in Wyoming.

I ask unanimous consent that, at the next printing, my colleague, the senior Senator from Wyoming (Mr. MCGEE) be added as a cosponsor.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

S. 2453

At the request of the Senator from New Jersey (Mr. WILLIAMS), the Senator from Washington (Mr. MAGNUSON) was added as a cosponsor of S. 2453, the Equal Employment Opportunities Enforcement Act.

## ENROLLED BILL AND JOINT RESOLUTIONS PRESENTED

The Secretary of the Senate reported that on today, September 30, 1970, he presented to the President of the United States the following enrolled bill and joint resolutions:

S. 3558. An act to amend the Communications Act of 1934 to provide continued financing for the Corporation for Public Broadcasting;

S. 3637. An act to revise the provisions of the Communications Act of 1934 which relate to political broadcasting;

S.J. Res. 218. Joint resolution providing for the designation of a "Day of Bread" and "Harvest Festival Week"; and

S.J. Res. 228. Joint resolution to authorize the President to designate the period beginning October 5, 1970, and ending October 9, 1970, as "National PTA Week."

## INCREASED RESEARCH INTO DRUG ABUSE AND DRUG DEPENDENCE—AMENDMENTS

AMENDMENTS NOS. 979 THROUGH 981

Mr. ERVIN submitted three amendments, intended to be proposed by him, to the bill (H.R. 18583) to amend the Public Health Service Act and other laws to provide increased research into, and prevention of, drug abuse and drug dependence; to provide for treatment and rehabilitation of drug abusers and drug dependent persons; and to strengthen existing law enforcement authority in the field of drug abuse, which were ordered to lie on the table and to be printed.

## OMNIBUS CRIME CONTROL AND SAFE STREETS ACT AMENDMENTS OF 1970—AMENDMENTS

AMENDMENTS NOS. 982 AND 983

Mr. CRANSTON submitted two amendments, intended to be proposed by him, to the bill (H.R. 17825) to amend the Omnibus Crime Control and Safe Streets Act of 1968, and for other purposes, which were ordered to lie on the table and to be printed.

## EQUAL EMPLOYMENT OPPORTUNITIES ENFORCEMENT ACT—AMENDMENTS

AMENDMENTS NOS. 984 THROUGH 1000

Mr. ERVIN submitted 17 amendments, intended to be proposed by him, to the bill (S. 2453) to further promote equal employment opportunities for American workers, which were ordered to lie on the table and to be printed.

## NOTICE OF HEARING ON CERTAIN NOMINATIONS

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, October 7, 1970, at 10:30 a.m., in room 2228, New Senate Office Building, on the following nominations:

Robert H. McWilliams, Jr., of Colorado, to be U.S. circuit judge for the 10th circuit, vice Jean S. Breitenstein, retired.

Edward R. Becker, of Pennsylvania, to be U.S. district judge, eastern district of Pennsylvania, a new position created under Public Law 91–272, approved June 2, 1970.

J. William Ditter, Jr., of Pennsylvania, to be U.S. district judge, eastern district of Pennsylvania, a new position created by Public Law 91–272, approved June 2, 1970.

Daniel H. Huyett III, of Pennsylvania, to be U.S. district judge, eastern district of Pennsylvania, a new position created under Public Law 91–272, approved June 2, 1970.

William W. Knox, of Pennsylvania, to be U.S. district judge, western district of Pennsylvania, a new position created by Public Law 91–272, approved June 2, 1970.

L. Clure Morton, of Tennessee, to be U.S. district judge, middle district of Tennessee, vice William E. Miller, elevated.

Malcolm Muir, of Pennsylvania, to be U.S. district judge, middle district of Pennsylvania, a new position created by Public Law 91–272, approved June 2, 1970.

Sam C. Pointer, Jr., of Alabama, to be U.S. district judge, northern district of Alabama, a new position created under Public Law 91–272, approved June 2, 1970.

Walter K. Stapleton, of Delaware, to be U.S. district judge, district of Delaware, vice Edwin D. Steel, Jr., retired.

Donald W. Van Artsdalen, of Pennsylvania, to be U.S. district judge, eastern district of Pennsylvania, a new position created under Public Law 91–272, approved June 2, 1970.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Nebraska (Mr. HRUSKA), and myself as chairman.

## NOTICE OF HEARING ON DRUG ABUSE

Mr. EAGLETON. Mr. President, on behalf of the chairman (Mr. TYDINGS), I ask unanimous consent that this hearing notice be printed in the RECORD.

There being no objection, the notice was ordered to be printed in the RECORD, as follows:

Notice of hearing on drug abuse in the Washington Metropolitan Area.

Mr. TYDINGS. Mr. President, as Chairman of the Senate Committee on the District of Columbia, I wish to give notice that a hearing on Drug Abuse in the Washington Metropolitan Area will be held on Friday, October 2, 1970. The hearing will begin at 10:00 a.m. in Room 6226 of the New Senate Office Building.

Individuals and representatives of organizations who wish to testify at the hearing should notify Mr. Al From at 225–4161, prior to 5 P.M. October 1, 1970.

Written statements, in lieu of personal appearance, are welcomed and may be submitted to the Staff Director, Room 6218, New Senate Office Building, Washington, D.C. 20510, for inclusion in the hearing record.

## ADDITIONAL STATEMENTS OF SENATORS

### LEGITIMATE DISSENT AND ACTS OF VIOLENCE

Mr. MCCLELLAN. Mr. President, on September 13, 1970, the Akron, Ohio, Beacon Journal published an editorial entitled "A Call to Reason—America in Peril." The editorial draws the line of demarcation between proper and legitimate dissent and acts of violence and protest by revolutionaries and professional anarchists. It reminds us of and emphasizes the gathering storms of social unrest and of increased crime, corruption, and subversion that present a growing menace which threatens the security of our traditional institutions and the survival of our system of government.

I commend the reading of this strong and timely editorial to Members of Congress and to all other Americans. It is a potent reminder that we must strengthen and reenforce our efforts to repel the deliberate internal assaults that are being made on our free society and on the basic principles of liberty, equality, and justice under rule of law, upon which our Nation was founded.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CALL FOR REASON—AMERICA IN PERIL

What has happened to America?

Why, in our madness, do we turn to riots and destruction, to contempt for revered institutions which made the American dream possible, to nostrums instead of cures for our economic ills, to sleazy, cheap political

devices rather than exercising at least a modicum of statesmanship?

Are we indeed a part of the world revolution which seeks only to destroy while parading under the banners of democracy, Marxist style?

Why are Americans, who enjoy greater freedoms under our Constitution than are permitted anywhere else in the world, berating "the system" which makes these precious liberties possible?

How long must we permit a small band of revolutionaries to disrupt our colleges and universities, to bomb government research centers, kill innocent people and ruin the careers of devoted scientists?

What kind of a country do we live in where the flouting of law has become a national pastime, where a law officer automatically becomes a "pig," an object of derision and attack by an untutored, undisciplined and unprincipled rabble?

Where indeed, are our leaders, the parents of our youth, the educators and the great body of law abiding, responsible citizens?

Are the leaders too politically oriented, too concerned with their personal ambitions to stand up and be counted?

Have the educators become so supine, so dependent upon government grants or so cowardly that they stand meekly by while their institutions of learning are defiled and brought to heel by roving bands of professional anarchists?

Must we yield to the sophistry that the right of dissent—as stated so forthrightly in Article I of the Bill of Rights—can be taken as license by those willful violators of the law who cannot distinguish between dissent and disobedience?

Ironically, the destroyers who abuse our Constitutional liberties would find themselves prisoners of the Marxist police state of the authoritarian world to which they give such frenetic devotion.

The greatest of all government documents—the United States Constitution—provides ample safeguards against tyranny and injustice.

Yet the Center for the Study of Democratic Institutions has drafted a new constitution for the United States that would concentrate all authority in the national government, strengthen the Presidency, weaken the national judiciary and create new branches of government to oversee planning, elections and economic regulations.

Dr. Rexford G. Tugwell, 79-year-old former member of Franklin D. Roosevelt's "brain trust" and author of the document, observes that cherished traditions and institutions which no longer serve the needs of modern society must be pulled down as "impediments to progress."

Along with the Black Panthers, who have also put together a new constitution, Dr. Tugwell typifies the fuzzy and radical left who would tear apart our system of government while offering the absolute authority of statism in its place.

These are the true revolutionaries—along with socialists in the teaching profession—who are more to be feared than college youth expressing their frustrations on the campus.

Yes, our young people are being taught that there is something inherently evil about the capitalistic system, that its rewards for the industrious and thrifty segments of our society are unfair, that a "people's capitalism" would somehow solve all of our problems.

Why is it, Americans, that we of the world's most affluent society now wish to embrace the fatuous economic doctrines which have failed so miserably wherever they have been tried?

Are we like the lemmings who migrate at intervals to their own destruction?

Where were our statesmen when Congress fueled the fires of inflation by passing a "tax reform measure" which insured a huge deficit?

Can you tell us, please, why such responsible Negro leaders as Whitney Young and Roy Wilkins constantly criticize the total community for the excesses of young blacks while making no substantial contribution of their own in the direction of restraint?

Does it bug you that elementary school teachers once dedicated to character building are now setting a sorry example for our youth with their union-directed strikes on the eve of a new school year?

Or that labor's power monopoly is able to cripple the economy by making a farce of collective bargaining?

Can these distortions of an orderly society be attributed solely to the war in Indochina? Or is the current unrest symptomatic of a world society in revolution?

Whatever the cause, this is a time for the rededication of all Americans to the proposition, as stated in the preamble of the Constitution, that this nation was conceived to "form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

These were the wise and profound thoughts of our Founding Fathers.

That we have strayed so far from the paths of righteousness is a serious indictment of the weaknesses of man who in the almost 200 years of our Republic now finds himself for the first time seemingly incapable of constructive self-government.

For our enemies within would destroy the Union, make a mockery of justice, insure domestic anarchy, gut the national defense, disregard the general welfare and repress the blessings of liberty.

This is what is happening to America, known in happier days as the land of the free and the home of the brave.

JOHN S. KNIGHT.

## NATIONAL NEWSPAPER WEEK

Mr. SYMINGTON. Mr. President, "A newspaper," wrote the official Licenser of the Press in the London of 1680, "makes the multitude too familiar with the actions and councils of their superiors and gives them not only an itch but a kind of—right and license to be meddling with the government." The case for freedom of the press has never been better stated. There is a sense in which all our hard-won liberties are related to and dependent upon freedom of speech and freedom of the press, the vehicle of free expression.

In celebrating National Newspaper Week, we are also remembering the chief function of the American newspaper—the dissemination of information and opinion to all the people in a manner free of governmental restraint or control. The history of our free press is intimately bound up with the long, often bitter struggle for freedom of speech.

Two hundred years ago, during the fierce controversies which led directly to our revolution, Alexander McDougall, patriot and leader of the Sons of Liberty, was arrested by the Colonial authorities for having issued a broadside, attacking the highly unpopular law requiring the quartering of British troops in American homes. Street fighting flared in the so-called battle of Golden Hill. Eventually, McDougall was tried, convicted and imprisoned for contempt. The arrest of Alexander McDougall, his refusal to post bond and his steadfast plea of not guilty, served to dramatize the growing conflict over free speech as against governmental coercion. It is a timely reminder today of the dangers inherent in every arbitrary limitation upon the inalienable right of free expression.

The Hartford Courant, America's oldest newspaper in continuous publication was first published in 1764—just over two centuries ago. In 1775 there were only 37 newspapers in all the 13 colonies: All were weeklies, except the Pennsylvania Evening Post which later became the first American daily.

In the State of Missouri as in the Nation at large, we are blessed with a strong, healthy press, vigorously outspoken on the issues of the day and faithful to our common commitment to freedom.

Missourians can be especially proud of our news media, for the history of American journalism has deep roots in our State.

Missouri has 285 weekly and 53 daily papers, plus four metropolitan dailies and 15 Sunday papers.

Each county in Missouri has at least one newspaper. Most have more than one; and in every county and city, our newspapers provide invaluable services while at the same time they champion the best interests of their readers.

Most Missouri papers are members of the Missouri Press Association, which will celebrate its 104th birthday at an annual convention in St. Louis this fall. The association is providing outstanding leadership in our State by stimulating better journalism along with freedom of the press.

Missouri is a major national center for news wire service. Both the Associated Press and United Press International have outstanding staffs and news facilities in our State.

The University of Missouri's world famous school of journalism, not only the first but the largest school of its kind, is recognized by many as the best. It has produced many of America's leading newspapermen and broadcasters.

In addition, this school of journalism is making a significant contribution through its unique Freedom of Information Center.

We are fortunate to have so many fine communications resources, and can be proud that each Missouri paper, station, and trained journalist, by helping each of us to be well informed, plays a vital role in our democratic system.

In 1808, Missouri's first newspaper, Missouri Gazette, was published by Joseph Charless. While Charless had only 174 original subscribers in those pioneer days, Missouri newspapers today have a combined circulation of 3,577,370.

Journalism in Missouri has had many great leaders, Joseph Pulitzer the founder of the St. Louis Post-Dispatch, and William Rockhill Nelson the founder of the Kansas City Star, to name but two. In dozens of counties, weekly and daily editors have played outstanding roles in the development of their areas and in the preservation of the great traditions of journalism.

Today there is hardly a city or town in America which does not have at least

one newspaper; our major urban centers usually have several. Newspapers have become a vital factor in American life, both public and private.

As chairman of the Subcommittee on U.S. Security Agreements and Commitments Abroad, I am working to eliminate unnecessary Government secrecy, and I can report that the working press has been of tremendous assistance in bringing to public attention the extent of today's secrecy problems. Without the news media, our task would have been virtually impossible.

As a citizen, as a former newspaperman, and as a U.S. Senator, I count it a privilege to salute the newspapers of Missouri and the Nation during this anniversary week and to commend their dedication to those fundamental guarantees of our historic rights: freedom of speech, and freedom of the press—rights as inseparable today as in the past, rights which offer us the best hope for the future of America.

## THE NATION'S ECONOMY

Mr. BYRD of West Virginia. Mr. President, I believe that the Government's anti-inflation policies have accomplished their purpose. The cost-of-living increase last month was only two-tenths of 1 percent—the smallest increase in nearly 2 years. This is welcome news to the wage earner and to the housewife who must buy food for the family. Now it is time to reduce interest rates and ease restrictive monetary policies that are retarding economic growth. It is time to stimulate home building, plant expansion, business recovery, and full employment. These are steps which must be taken to solve our country's pressing economic problems.

## WOLD PROPOSES GENERATING POWER BY HARNESSING VOLCANIC STEAM

Mr. GRIFFIN. Mr. President, a distinguished colleague in the other body, Representative JOHN WOLD, of Wyoming, wrote an excellent article recently for the North American Newspaper Alliance in which he conveyed his deep concern for the manner in which we will generate electrical power in a nation rapidly approaching a dangerous shortage of energy.

Mr. WOLD's article appeared in many newspapers, including the Detroit News of Sunday, September 13.

Mr. WOLD, the only geologist serving in Congress, describes the enormous force of such geological phenomena as Old Faithful geyser in Yellowstone National Park. The geysers and the geothermal system of which they are a part are completely clean, Mr. WOLD noted; and "what is more important, the same geological forces which produce—them—may one day serve as one of America's major sources of power."

As NANA wrote in a preface to Mr. WOLD's article, the Congressman has made the energy shortage one of his primary concerns. Mr. WOLD's deep interest is both national and related to his State's development. Mr. WOLD notes in his article that the State and region could be the center of a vast system of clean power facilities harnessing the natural energy of the earth's stored heat.

Mr. WOLD, an ardent conservationist, sees great hope in the fact that geothermal power production is "extraordinarily desirable in this rightly environment-conscious day and age—there is no chance of water, air, or soil pollution."

Mr. President, I ask unanimous consent that Representative JOHN WOLD'S article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR UNTAPPED RESERVES—ENDING THE ENERGY CRISIS

(By Representative JOHN S. WOLD)

WASHINGTON.—Wild beautiful landscapes splashed with brilliant color . . . swirling, boiling natural springs . . . volcanoes of thickly bubbling mud . . . and more soaring, shimmering giant geysers than in all the rest of the world put together . . . bring some 3 million tourists to Wyoming's Yellowstone National Park each year.

The giant geysers are probably Yellowstone's "start." Thoroughly satisfied with the impressive size and beauty of these famous natural attractions, few of their millions of admirers realize (or care) why these beautiful geysers exist. They are the above-ground evidence of the incredible energy that still lies untapped beneath the earth's surface.

What is more important, the same geological forces which produce Yellowstone's Old Faithful may one day serve as one of America's major source of power.

No eventuality could be more welcome. The drive to find new national power source is becoming daily more acute. Truly suitable sources become harder and harder to find as America becomes more and more committed to producing that power without destroying the beauty of our national heritage.

That's what makes tapping underground energy the answer to a conservationist's prayer. It involves no defacement of existing national parklands and preserves. We already know of many isolated areas like the wilderness of Idaho where these long-buried reserves are equally available—and there are undoubtedly many more as yet undiscovered.

Twenty years of exploring natural power sources have convinced me that one of the best—perhaps the best—solution to our potential power shortage lies in what we geologists call "geothermals"—hot pockets of underground rock lying relatively close to the earth's surface, but almost always hidden. Where geothermals combine with lake and river water seeping down through subterranean channels, they produce the spectacular hot springs and geysers which indicate their presence—like Old Faithful, that Wyoming celebrity.

I am not alone in my estimate of the geothermals' importance; an exhaustive study of the feasibility of tapping this power and of imitating the process artificially is currently being conducted jointly by the United States Atomic Energy Commission (AEC) and the American Oil Shale Company (Battelle Northwest Laboratories).

Technically, the concept under study involves using an underground nuclear explosion to create a rock- or rubble-filled chimney in a geothermal area where natural subsurface water is not found. Optimum result is a cylinder or chimney about 300 to 400 feet in diameter.

Preliminary estimates indicate that such a chimney in rock of 600 degrees Centigrade at a depth of 7,000 to 8,000 feet below the earth's surface would produce enough energy to fuel a 200-megawatt electric generating plant for approximately 18 months—and one megawatt is equal to 1 million watts!

The method employed would be to pump water to the bottom of the shaft or chimney, where it would be heated and converted to steam. Pressurized, it would rise to the surface with tremendous force, thereby generating the enormous amounts of electricity indicated.

Such Chimneys have already been successfully employed in the Atomic Energy Commission's Plowshare gas stimulation projects "Gasbuggy" and "Rulison," and in over 250 underground explosions at the AEC's Nevada test site.

Actually, we would be far from the first people to enjoy some of the benefits of natural thermal power. Research tells us that, for thousands of years, Italians and Icelanders have been drawing heat from volcanoes to warm their homes. Even more to the point, New Zealand already has a "thermal power" plant in operation, producing around 400 megawatts of electricity annually.

Think what this new power supply will mean in the preservation of other natural resources now being threatened because they, too, are possible sources of the power that American people so desperately need. Newly available geothermal energy would allow Americans to leave our mountain streams undammed, our virgin stands of timber undefiled.

Equally important, geothermal power production is extraordinarily desirable in this rightly environment-conscious day and age. This is clean power—power produced in a closed, uncontaminated and uncontaminating system. The balance between man and nature (The "ecosystem") remains healthfully undisturbed; there is no chance of water, air or soil pollution.

And finally, geothermal power is relatively inexpensive: we are only harnessing forces that Nature is already providing free of charge. Of course, there will be costs—for construction, and processing, machinery, and so on—but the money and the methods are well within our grasp. When men are walking on a moon 238,855 miles away, surely they can sink a shaft into the earth a few thousand feet or so.

Make no mistake—we must develop a coherent, unified and sensible national energy policy. We must put an end to America's spendthrift dissipation of natural resources we cannot replace. Geothermal power is one answer to this enormously pressing problem, I believe—and we have found it in time.

Let us hope so from the very bottom of our hearts. For, unless we can find power generation systems that meet our staggering requirements without degrading our environment, we are facing destruction every bit as final as a nuclear bomb—merely a trifle slower and quieter.

## THE VICE PRESIDENT AND THE FOUR STUDENTS

Mr. KENNEDY. Mr. President, the New York Times on September 26 published a column by Anthony Lewis, in the form of a letter to the Vice President relevant to the latter's appearance with four students on the David Frost program the prior evening.

Mr. Lewis examines the substance of the students questions and the lack of substance in the nonresponses offered by the Vice President. Senators will be interested, if they have not already examined the article. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEAR MR. VICE PRESIDENT

(By Anthony Lewis)

DEAR MR. VICE PRESIDENT: Congratulations on your coolness and quick articulation under fire from the four student critics on the David Frost show. I watched you tape the program, and I was impressed.

You kept bringing the discussion back to the subject likely to arouse the television viewers' emotions: student violence. Most effective, judging by the reaction of the studio audience, was your comment that violence "has existed in this country because of the disgusting and permissive attitude of the people in command of the college campuses."

As a political sally, that was great stuff. American parents love hearing that someone else—a band of conspiratorial teachers—is responsible for the rebellion of their children. But there is always the danger that a politician may begin to believe what he says. In this case, I think it would be unfortunate if you did.

The real reasons for the restlessness of the young in America are not obscure.

They are brought up on the creed of possession, sold hard by the advertising message that goods are happiness. But they soon find that possessions do not assure human satisfaction.

They know beauty; they have read about it. But they likely live in an esthetically arid suburb, and all around them they see the most beautiful of countries wantonly destroyed for reasons of private greed.

Their nation is the richest in history, but they see that it allows its poor to go hungry and its cities to decay, that its tax system encourages life on expense amounts and favors personal consumption over urgent social needs.

They see that the United States cannot bring itself to do as well as relatively impoverished Britain in providing a decent system of medical care; they need about large numbers of American doctors, the most prosperous anywhere, fiddling their tax returns.

They hear much about law and order, but they know that corruption is widespread among American politicians and law enforcement officers.

They are told that violence is evil, but they know that guns can be bought and sold in the United States as in no other civilized land. And they observe the President of the United States photographed happily with union leaders—some with criminal records—whose members have just made news by beating up young people opposed to the Vietnam war.

They have dinned into them from childhood the appeal of sensuality, assured that this cigarette or that car or deodorant will bring them sexual success. They see on every hand evidence of their elders' exploitation and commercialization of sex. Yet their own possibly naive efforts to express sexual feelings in an open, easy way are met by moralizing outcry and repression.

Those among them who have tried marijuana are lectured, on inadequate facts, about the potential danger; some are sent to jail. But they see billions spent, legally, to promote the use of the proven narcotic killers, alcohol and tobacco.

They are told by their political leaders that the Vietnam war was necessary to save the South Vietnamese from Communist savagery. But however real that threat was in 1954 or 1964, they know that even Lyndon Johnson or Dean Rusk would not have considered the price of American intervention—the price in dead Vietnamese, a ravaged culture, a polarized America—worth paying if it had been known in advance. And still we profess the same objectives.

It is the values of American life, sir, and the hypocrisy, that make the young so uneasy. What intelligent parent, including you, has not found his child troubled by those values, and challenging them? Violence is wrong. But if there is violence, it is hardly to be laid to college faculties.

"You're not listening," you were told on the Frost show by Eva Jefferson, that appealing Negro girl from Northwestern.

"You're not listening," you were told on the prospective mass television audience, not to her and the other students in the studio. And of course in political terms you were so right. In the short run, even the medium run, you are likely to profit by tuning out Eva Jefferson and those like her.

But one need have no purple glasses to recognize that many American college students these days have an extraordinarily clear and loving perception of this country. To ignore them, to jeer at them, may be profitable for you today. But it will be misery for America unless someone in power starts listening soon.

## THREAT TO PRESS FREEDOM IN CHILE

Mr. TALMADGE. Mr. President, I invite the attention of Senators to an editorial published recently in the Washington Post regarding some of the consequences of the Chilean elections. It is entitled "Threat to Press Freedom in Chile" and cites a warning issued by the Inter-American Press Association concerning the strangulation of the free press in that Latin American country.

On October 24, the Chilean Congress will choose a new President as a result of the recent election in which none of the three candidates received an absolute majority. Dr. Salvador Allende, an avowed Marxist, while receiving the largest number of votes, was able to attract only 36 percent of the ballots cast. This means that he received support from only slightly more than one out of every three Chileans who went to the polls. Nevertheless, if elected by the Chilean Congress, he would become the first elected Marxist president in the Western Hemisphere.

Dr. Allende, with strong support by the established Communist Party in Chile, has made it perfectly clear that, in typical Marxist fashion, he will not tolerate dissent and thus has threatened to take over the powerful Mercurio newspaper chain which stanchly fought his election. The Chileans have been justly proud of their democratic form of government and its strong adherence to constitutional law. A free press is one of the strongest guarantees for the maintenance of truly democratic institutions. It is a shame to see the proud past of Chile threatened. All nations of the hemisphere should take seriously the warning of the Inter-American Press Association and support its fight for a free press in Chile.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Sept. 22, 1970]

THREAT TO PRESS FREEDOM IN CHILE

The Inter-American Press Association has issued a most urgent and alarming warning about the threatened strangulation of the press in Chile. Earlier this month Salvador Allende, a Marixist supported by the Communist Party, won a plurality in the popular balloting for president, and since then, according to the IAPA, "Communist and Marxist forces and their allies" have attacked the country's independent media, causing the resignation or dismissal of journalists opposed to them and otherwise using union pressure and intimidation to bring the media under their control. El Mercurio, Chile's leading newspaper and one that has stoutly opposed Mr. Allende, has come under particularly heavy pressure. Its owner, Augusta Edwards, has refused to give in.

Mr. Allende's distaste for the influential Edwards newspaper chain and his stated intent to "liberate" the Chilean media from their "Commercial character," are all too well known. But implementation of such a policy is utterly incompatible with the preservation of the democratic system that, until now, has been Chile's pride. Mr. Allende received only 37 per cent of the popular vote and he needs the support of other parties in the runoff election in Congress on Oct. 24. The Christian Democrats, as a condition of their support, have demanded that he pledge to keep the democratic system intact. It is essential that Mr. Allende make such a pledge and even more essential that he move immediately to honor it by throwing his weight against those of his followers who, in his name, are threatening to turn Chile 1970 into Czechoslovakia 1948.

## THOMAS D. MORRIS JOINS GENERAL ACCOUNTING OFFICE

Mr. PROXMIRE. Mr. President, over the past decade and a half, one of the most hard-working and dedicated public servants has been Thomas D. Morris. He is especially known for his work at the Department of Defense, where he served as Assistant Secretary of Defense for Installations and Logistics and, later, as Assistant Secretary of Defense for Manpower.

Numerous innovations and efficiencies followed from Thomas D. Morris' stewardship, especially the establishment of the Defense Supply Agency when knocking heads together was absolutely vital in substituting a single agency for a proliferation of individual service supply agencies which duplicated one another.

He was also responsible for the prompt and vigorous action which the Defense Department, in the 1960's, took on General Accounting Office criticism and reports; for the vastly improved procedures and large savings in the disposal of excess and surplus property; and for the reduction of "gold plating" in the procurement of defense items.

Everyone I know gives the highest marks to Thomas D. Morris for his work at the Pentagon in the area of supply and logistics. He filled one of the toughest jobs in the Government.

Now he joins the General Accounting Office as a Special Assistant to the Comptroller General. He is doing this in a period when the work of the GAO in the area of defense efficiency has taken on a new importance and a new meaning. The contributions to our national defense, the security of the country, and to the economic well-being of all Americans can be greatly enhanced by the actions of a vigorous congressional watchdog agency.

For my own part, I am delighted that the legislative branch of the Government now has the services of Tom Morris. He is to be congratulated for choosing this avenue of service, and Comptroller General Elmer B. Staats should

be praised for having the foresight and initiative to bring Tom Morris back to Government service. Only the country can benefit.

I ask unanimous consent that a release from the General Accounting Office announcing Tom Morris' appointment be printed at this point in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

THOMAS D. MORRIS JOINS GENERAL ACCOUNTING OFFICE

Elmer B. Staats, Comptroller General of the United States, announced today the appointment of Mr. Thomas D. Morris as a Special Assistant to the Comptroller General, effective October 5, 1970.

Mr. Morris joins the General Accounting Office after extensive experience in Government and private industry in the management field. His governmental experience has been primarily in the Tennessee Valley Authority, the Bureau of the Budget, and the Department of Defense. During World War II, he served in the Navy from 1942 to 1945 as a member of the Navy Management Engineering Staff.

Following World War II, Mr. Morris joined the consulting firm of Cresap, McCormick and Paget as a partner and participated in studies by both Hoover Commissions. He also conducted management surveys for a number of Federal agencies and for private industry.

In 1956–57, he served in the Office of the Secretary of Defense in several capacities, including the position of Deputy Assistant Secretary for Supply and Logistics and as an Assistant to Deputy Secretary of Defense Reuben Robertson.

In 1958–59, Mr. Morris was director of management planning and assistant to the President of the Champion Paper and Fibre Company, following which he was appointed as Assistant Director for Management and Organization in the Bureau of the Budget. Beginning in 1961, Mr. Morris served for more than five years as Assistant Secretary of Defense for Installations and Logistics and, later, for more than two years as Assistant Secretary of Defense for Manpower. He is currently serving as Corporate Vice President of Dart Industries, located in Los Angeles.

In announcing the appointment, the Comptroller General expressed his pleasure in having an individual with Mr. Morris' extensive background in the management field available to assist in directing the increasing number of studies being made by the General Accounting Office having Government-wide significance.

Mr. and Mrs. Morris have two children: a son David, and a daughter Martha. They reside at 5223 Duvall Drive, Washington, D.C.

## NATIONAL FARM-CITY WEEK

Mr. DOLE. Mr. President, Congress and the Nation are aware new farm legislation is pending in the Joint Conference Committee before final approval and passage.

Much has been said about limitation of Government payments to farmers the past year, but not enough has been told about the farmer's real contribution to the well-being of this Nation.

The October issue of Farm Journal magazine contains an editorial which tells this story very well. The editorial relates to the coming celebration of Farm-City Week in November and enumerates many ways the city population benefits from farm efforts as well as some of the problems the farmers face. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ELEVEN REASONS WHY YOU ARE NO. 1

Coming soon is National Farm-City Week, Nov. 20–26. The purpose of this week is to give farmers and city folks a chance to tell each other about their own business.

We think that you have a solid story to tell. Here are eleven positive points that you can make with trumpet and fanfare:

1. *Food is better than ever.* The quality is better; the selection is broader; and the safety is unmatched. Farmers are producing higher grades of food than ever before; the food leaves the farm in the best condition ever; and food processing methods maintain quality better.

2. *Food has more built-in services than ever.* Thanks to prepared mixes, new food combinations, and easy-to-prepare food innovations, housewives spend less time preparing food, get more uniform quality with less waste.

3. *Food prices have gone up less than other costs of living.* Between 1950 and 1969, food prices (home and eating out) increased 46%—while other living costs climbed 55%. What a surprise that is to a lot of people! One reason for the surprise: the monthly cost-of-living report out of the Department Labor usually highlights food costs. The news media play this up. Whenever a TV station does a program on the cost of living, where do they go? Down to the food store to interview shoppers.

4. *Food prices have increased less than wages.* Wages in manufacturing industries have climbed 122% since 1950—from $1.44 per hour to $3.19 last year—2½ times as much as the cost of food. A recent Gallup poll in New Jersey found that nearly nine out of ten city folks believe that food prices have gone up faster than wages.

5. *We spend less of our income for food than ever before.* We are now spending 14¢ per dollar of national personal income (before taxs) for food—11¢ for food eaten at home and 3¢ for food eaten "out." This is the lowest in history—and beats any other country.

6. *Food prices are the most reasonable of all the "essentials."* Let's say that rents, health care and taxes are "essentials." Rents have risen 50% and health care costs have soared 136% since 1950. And taxes, whew! Federal, state and local governments collected $71 billion in 1950—and a whopping $319 billion last year: 4½ times more!

7. *Nowhere is food as reasonable as in the United States.* In 1967 (most recent figures), we spent 19% of our private expenditures (after taxes and savings) for food. In the United Kingdom, it was 25%; in France, 29%; in West Germany, 33%; and in Russia, 55%.

8. Farmers' "take" has increased much less than in other parts of the food business. Since 1950, the prices that farmers get for food commodities have gone up only 17%—yet the prices farmers pay for everything climbed 46%. During the same time, food marketing costs—from farm to consumer—went up 51% to handle the same "market basket" of food. While we spend 14¢ per dollar of personal income for food, only 4.3¢ of this goes to the farmer.

9. Farmers are doing more than any other economic group to combat inflation. We get inflation and higher prices when money or wages increase faster than the output of goods. Farmers' output per man-hour is increasing three times faster than in non-farm industries. Output per man-hour in non-farm industries climbed 60% since 1950—but farmers' output per man-hour jumped 182%!

10. Our amazing farm productivity is a chief reason for our national affluence. The fact that we can spend 86¢ out of each dollar of personal income for things other than food allows us to support a wide range of consumer goods and services. We can pour money into education, the arts, household appliances, automobiles, sports, housing, highways, airplanes, electric power, hospitals,, etc. Only 5% of our population now live on farms—leaving 95% to produce other goods and services. One farm worker feeds 45 people.

In India where they have only 40¢ left per dollar after buying food, the economy can't get off its back. Russia has a third of her work force tied up producing food—she can marshal resources to go to the moon, but it's a disappointing trip to the Russian food store.

11. Farmers are industry's best customer, using each year ⅓ as much steel as the automobile industry; enough rubber to put tires on 85% of the new cars; and more petroleum than any other industry. Farming employs more people than any other industry and is the biggest customer for the products of the nation's workers. In 1970, farmers' production expenditures will reach $40 billion—with another $32 billion of family spending.

You have an impressive story to tell—and you can use Farm-City Week to be aggressive about telling it.

## STATEMENT IN SUPPORT OF THE JELLYFISH CONTROL ACT

Mr. BOGGS. Mr. President, the Senate will soon take up for consideration H.R. 12943, a bill to extend the Jellyfish Control Act of 1966 for another 3 years. I wish to state my strong support for this bill and to urge its passage by the Senate.

In these days when we are paying special attention to the problems of environmental quality, it is important to recognize that jellyfish, like polluted water, threaten to destroy some of our finest beaches for the pleasure of bathers and some of our coastal waters for the use of fishermen.

The jellyfish problem touches many of us directly or indirectly. Most of us who have ever been to our Nation's beaches have experienced at one time or another the annoyance of jellyfish in the water and even the physical pain of their sting. By spoiling the pleasure of swimming and other water activities, jellyfish constitute a dangerous nuisance.

In my State of Delaware we have many beautiful beaches, but even they occasionally have been bothered by jellyfish. I am anxious that this blight be removed.

But jellyfish also pose a difficult and costly problem for commercial and fishing interests. On the Chesapeake Bay, for instance, jellyfish clog pump intakes and tangle the nets and lines of fishing boats.

There is no easy solution to the problems created by jellyfish. But until research into their life stages, growth, and reproduction was begun under the Jellyfish Control Act of 1966, relatively little was known of these creatures.

In the past 3 years some extremely important work has been done in this field. Maryland and Virginia have gathered valuable information on the life history, distribution, and seasonal occurrence of jellyfish in the Chesapeake Bay. Maryland has tested the tolerance of jellyfish to certain chemical control agents and is moving toward the development of an antitoxin to treat jellyfish

stings. Maryland is also experimenting with physical barriers that would restrict jellyfish from certain shoreline areas. Similar studies of local conditions are underway in Mississippi, Florida, Puerto Rico, Connecticut, and New York.

Much significant research has already been done, but the aim of this act—jellyfish control or elimination—will take many more years of study and experimentation. I believe it is crucial that we show our support for this valuable work by extending the authorizations for jellyfish control for an additional 3 years.

## TAX RELIEF FOR SMALL BUSINESS

Mr. MOSS. Mr. President, it is my pleasure to join with the chairman and many other members of the Select Committee on Small Business in sponsoring the small business tax reform and relief bill of 1970.

This measure was recently introduced by the Senator from Nevada (Mr. BIBLE), climaxing a 3-year study by the Small Business Committee. The proposals thus draw upon a wide variety of sources including testimony by the most senior Treasury officials during the committee's 1967 hearings, the report of an advisory committee of businessmen submitted to the select committee in December of 1968, and the advice and recommendations of more than 2 dozen trade associations, tax, accounting, and small business organizations across the country.

As a former member of the Small Business Committee, I have a certain amount of pride in the bill. In the course of many hearings and other committee work, I learned firsthand of the problems of 5½ million American small businessmen who are trying to make a living in the face of the complex and burdensome effects of Federal, State, and local taxation as well as rising costs, high interest rates, and labor difficulties.

### UTAH A SMALL BUSINESS STATE

My own State of Utah is predominantly one of small firms. Of the 18,093 business establishments statewide, the average employment is 12½ workers per firm—excluding agriculture, railroads, and nonprofit organizations. The overwhelming number of these, 17,825 or 98.5 percent have less than 100 employees. Only 32 companies have more than 500 employees.

Small firms are the least able to hire high-priced accountants and tax specialists, so the weight of all taxes and paperwork is disproportionately against them.

Because of this, I have felt for a long time that we needed an overhaul of the entire tax system from the small businessman's point of view. However, to begin this process in the right way takes a good deal of expertise. I noted that the Deputy Assistant Secretary of the Treasury for Tax Policy remarked before a session of the Federal Bar Association on September 18 that Senator BIBLE's tax bill is "a magnificent vehicle" for such a comprehensive review.

I wish to add my commendation to the Small Business Committee and its chairman, Senator BIBLE, for the dedication and effort which it took to formulate S. 4039.

In putting forward this bill, we are inviting the comment and criticism of private professional organizations, including the leading groups in Utah, so that the suggestions of all those interested can be included in an improved version of the bill to be resubmitted in the 92d Congress.

I plan to support strongly what I hope will be the forward progress of this legislation so that we may arrive at meaningful tax reform and relief for the small business community in Utah and throughout the Nation.

## PRISONERS MAKE HEADLINES

Mr. GRIFFIN. Mr. President, an item appeared in today's newspapers which all Americans have been hoping for. The last hijack victims have been released by the Palestinian guerrillas.

This is welcome news not only to the hostages' families and friends, but for all those concerned with the illegal detention of innocent victims.

But there is another headline all of us are waiting for: the release announcement of another group of prisoners—the Americans still held by the North Vietnamese.

Some of those men have been captives over 5 years. Their families miss them no less than those of the hijack victims. The American Government is no less concerned for our men in North Vietnam than it has been over those in Jordan.

There is little we can say to the wives and children of the prisoners. Be patient? They have been patient for half a decade. Protest? To whom should they petition? North Vietnam has been insensitive to the most reasonable requests.

Still, we must not abandon our efforts to secure the release of these brave men. We must do everything possible to bring the day closer when we can pick up our morning newspapers and read: "Last Americans Released by Hanoi."

## ADDRESS BY SENATOR HOLLINGS AT UNIVERSITY OF GEORGIA

Mr. TALMADGE. Mr. President, the University of Georgia was honored last week by the presence of Senator ERNEST HOLLINGS at the Blue Key service fraternity annual banquet.

Blue Key at the University of Georgia in Athens holds an annual banquet to pay tribute to selected distinguished Georgians for outstanding service to the university and education. This year's awards went to the university's longtime and respected Dean of Men William Tate and State Representative Chappelle Matthews, of Clarke County.

The Senator from South Carolina delivered the keynote address at the banquet, and I bring his remarks to the Members of the Senate and ask unanimous consent that they be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

### TEXT OF ADDRESS BY SENATOR ERNEST F. HOLLINGS

My temptation today is to give a rip roaring speech, because we in Georgia and South Carolina live hard, we work hard, and we are proud of our progress. But, somehow it strikes me that we have had enough rips and roars in our society today and that what is needed most is a talking of sense to our people. For truly America is fed up—America is in turmoil. Everyone is shouting and no one is listening. And, rather than bring us together, the mood at this moment is—leave us alone. Gone is the old sense of community that united us for the challenges of the past. We don't face problems together anymore. We meet them as special interest groups, as members of impatient minority blocs and organizations. We identify not as Americans, but as hard hats or students or militants or women liberators or as members of the silent majority.

As little groups and cliques we shout our non-negotiable demands, attempting to drown out all differing points of view. We fight for a spot in front of the television camera in the street, on the misguided assumption that emotional outbursts will somehow bring needed change. Our own group is always right. Our own group, if given its way, could usher in the millennium. The radical demands thorough change by sun-up tomorrow. "I have seen the vision," he says. "Follow me to Utopia." The archconservative sits, stubborn as a mule, refusing to concede that any change is desirable. Each group must have things its own way. Each would construct an America in its own straight jacket image. And the creed is—do things my way or get out. "America, love it or leave it"—but always with the stipulation that "I will decide what America means." The hard hat wants no dialogue with the student—he wants the student to shut up. The student seeks no compromise with the hard hat—he hopes for an America without hard hats. The clamour of rhetoric increases decible by decible until the voices of reason are now effectively silenced. Meanwhile, everyone is in flight—fleeing from the city to the suburb, fleeing from the disorder of crime and violence, fleeing from government. And, more important, fleeing from responsibility to one another. A country once excited by the challenge of change is now beset by fear. And so, the challenge tonight is the same as 100 years ago—"shall we meanly lose or nobly save the last best hope on earth."

I say, in all solemnity, there is a disturbing similarity between our America of 1970 and the America of 1860. A hundred years ago we lost patience with one another—we ran out of tolerance. We lost the spirit of compromise. We came apart at the seams. The nation disintegrated and it took the bloodiest war in our nation's history to put this country together again. It seems that everyone would realize that America did not grow to maturity on a one-way street of non-negotiable demands. It progressed instead on a broad avenue of give and take—of reasonable argument and of taking what was best from the many diverse groups who settled in this land. It seems that everyone would remember the day when we depended on each other—when Franklin set the mood of this country with his cry, "We must all hang together, or assuredly we shall all hang separately." It seems that we would realize that a society wherein each group sees itself infallible will choke on its pride—a society in which each insists on doing his own thing is a society wherein nothing gets done. And, it seems that we would remember our 100 years of trying it alone without national government.

South Carolina is presently celebrating its 300th birthday. But the nation is only 200 years old. We are just now refreshing our memory of that hundred years without a representative national government. Just above the name of John Hancock is written the founding spirit of this Republic, "We mutually pledge each other our lives, our fortunes, and our sacred honor." We cannot be

reminded too forcefully that in the Declaration of Independence, there was also a declaration of dependence. "United we stand, divided we fall." That was the challenge of the 1770's. That is the challenge of the 1970's.

No one can visit a college campus and discuss the nation's problems without giving attention to the role of youth today. Many of my friends are annoyed by the attention public officials now accord the students. Twenty years ago, the only attention the student received from a Senator was a commencement talk on graduation day. It was a one-time appearance. We spoke and the students listened. Today, the average campus will be visited by four or five Senators or Congressmen. Some students won't listen to anything. But, the overwhelming majority are listening. They are more concerned about the future of this country and what it stands for than my generation. They approach their vision of what America should be with a religious zeal. They ask questions—they want results.

The student will want to know why people still go hungry in this land of plenty. Why do we want to start another Vietnam in Cambodia? And, why do we in America want to emulate the sayings of Mao that all power is derived from the barrel of a gun? There will be dialogue—there will be questions that you can't answer—and there will be questions that you can't leave unanswered. Students will have an effect. The Senator takes his homework back to Washington and the legislative mill begins to grind.

We can credit the students with consumer protection, automobile safety, meat inspection and the fairness doctrine. The test for each Senator now is—is it fair? The draft law—is it fair? The tax law—is it fair? And, many times while the best brains of industry are telling us it can't be done, the students prove otherwise.

I have just left Washington with America's automotive industry up in arms. Not just because of a strike, but because of a requirement under consideration for the production of an emission free automobile engine. The House bill required a 90 percent emission free standard by 1980 and the Senate is prepared to require this by 1975. Impossible say the Detroit industrialists. Yet, this past Labor Day a group of some 50 students under the sponsorship of MIT drove their self-designed automobiles across the country and two of the winners actually exceeded the standards envisioned for 1980. What the industrial establishment says can't be done, the students have done. So, society learns from its students.

Of course, the students must learn from society. For one thing, once the students decide a matter, they believe it is right for America. Students must learn that they are not a majority. Even if all America's students agreed upon a point, there are nearly 200 million other citizens and 75 million other voters. In fact, they are a minority of the young. The Bureau of the Census reports that there are 10½ million 18, 19 and 20 year olds. Only a quarter of these are students. Fifty percent—or five million—of this age group are breadwinners, workers and hard hats. One million are new mothers. So, when we discuss finding out what the young people want, we go not just to the campus, but to those other vital groups too.

Many times, the students seem to know the cost of everything and the value of nothing. They come into your office and, in expert fashion, describe and psychoanalyze the Viet Cong. They can give you his height and weight, how he lives, and how he thinks, and give you his reaction. But, the student has not the remotest idea of how the hard hat lives, what he thinks, and why he reacts the way he does. Yes, the student knows all there is to know about an Asian peasant 10,000 miles away, but often shows no understanding whatever for the guy next door who, in his way, is working and building this country.

Impatience is the mark of the student. Born and bred on instant food, raised and schooled on instant credit, they expect instant government. The student movement that followed Gene McCarthy was motivated by the hope for peace and new leadership. The students made their mark in over a dozen primaries. But, when they failed in Chicago, they immediately cried fraud and quit. Our generation would have savored the progress made, come back and tried again. But, not today's generation—they fail to appreciate that America and the road to freedom is not the 100 yard dash, but the endurance contest.

We in the establishment must understand that we are responsible for the contest; that we need self-discipline just as much as the students—that we need to listen. And, we must be responsive.

I don't speak politically. I don't speak as a member of one political party, for I realize as DeTocqueville said over 130 years ago, "There are many men of principle in both parties in America, but there is no party of principle." That has not changed. Lyndon Johnson is just as much responsible for today's inflation as is Richard Nixon. Lyndon Johnson stumbled and fumbled on the war just as much as Richard Nixon and, unfortunately, both lead from concensus rather than concern. Both attacked the politics of the problem rather than the problems themselves. If we can outlive the age of demonstrations—if we can outlive government by political polls, we shall be a blessed nation indeed.

On the other hand, how many of you really feel that government is responsive to the needs and desires of the average American? How many really find credible the words and actions of our government? Who knows what the policy is? Who can truthfully say they feel a sense of trust in the nation's leadership? Who feels that the idea of America persists—"All government shall derive its just powers from the consent of the governed"? If I sense the tempo of America today, people feel that government is deriving its just powers from dissent rather than consent. People just don't feel themselves a part of government anymore.

Part of the fault lies with a government too quick to politick. We never have come clean with a position on this war. The policy is retreat, but the rhetoric is attack. You ask why would anyone politick with war. We know that President Nixon would like to end it all in the next hour. But each President has feared the reaction of the home front when it learned we had failed at the battle front. No one has wanted to be in the chicken coop when the chickens come home to roost. Kenneth O'Donnell writes that President Kennedy's decision to get us out of Vietnam was delayed by his not wanting to face the reaction of the people on the heels of withdrawal. President Johnson thought he could politic it. It would be a painless war—there would be no threat of World War III because there would be no threat to annihilate the enemy. We would come with men and machines, bluff and gusto—but we wouldn't let the military really fight. We would minimize casualties so as to minimize complaints from home. No one would stay over a year. We wouldn't call up the National Guard or Reserve. We would have guns and butter both—business as usual. If the people at home didn't suffer—if they didn't feel any real impact of war, then his mandate for a Great Society in 1964 could be repeated in 1968.

At first, it appeared that Mr. Nixon and the Congress would stop trying to outpolitic each other on the war and get in step with a clear policy. Mr. Nixon stated that he no longer sought military victory and announced in June of last year a policy of withdrawal. In the same month the United States Senate approved Senator Fulbright's commitment resolution, stating that hereafter no foreign commitment of the United States would be considered valid unless approved by the Congress as well as the Executive. President Nixon approved this policy. When debate ensued on Laos and Thailand, 81 Senators joined together and approved the first Cooper-Church Amendment prohibiting U.S. ground combat troop activity in Laos and Thailand. Cambodia was not specifically included because of Administration statements that it was a sanctuary and no action was contemplated there. The President stated that he was pleased with the amendment and signed it into law on December 29th.

However, when the Cambodian fiasco occurred and the United States Senate with the second Cooper-Church Amendment tried to get back in step with the President so that we could present a united front to the people of this land, the President chose the political route of his predecessor. At no time did Mr. Nixon object to the substance of this measure. He did not object to the restriction on combat activity. In fact, he said no American troops would be used in Cambodia after July 1st. And he denied any commitment to the Lon Nol government. But, instead of working with Congress, which after six years of bloody warfare was trying desperately to set a policy as to our Far-Eastern commitments, the President filibustered. Cooper-Church advocates were pictured as less than 100 percent Americans. They were accused of undercutting his authority as Commander-in-Chief. They were even said to be encouraging the first military defeat the United States had ever suffered. The President's floor leader stated that the introduction of the amendment was an affront to him as an American. But, later, he voted "aye" and so did 75 percent of the people's representatives in the United States Senate.

Relishing the popularity shown in political polls on this score, Mr. Nixon supplanted his Southern strategy with a "Support the Commander-in-Chief Strategy." It is somehow un-American to criticize the President. The strategy is applied now not just to the South, but to the entire land by sending the Vice President to the attack. And, for an Administration dedicated to "Bring us Together" the Vice President in ranting rhetoric rips us apart.

The office of Vice President over the years has been built to one of responsibility. The Vice President could bring us together as Chairman of the President's Council on Youth Opportunity. But, in his first 16 months in office, Mr. Agnew has not once convened a council meeting. Quite a record for the self-styled expert on youth. And, while I have been trying desperately for an oceans program, Mr. Agnew refused for ten months to meet with the Marine Science Council—yet he is its chairman. In February, the President created a new Office of Intergovernmental Relations. The Vice President is its head, charged with improving federal relations with state and local governments. But, when the governors met in Missouri this summer, the Vice President was absent. Last Spring, the President named Mr. Agnew to chair a cabinet committee on school desegregation. But, the Vice President missed its last seven meetings in the critical weeks before the schools opened this Fall. The Vice President is Chairman of the National Aeronautics and Space Council; the President's Council on Indian Opportunity; and the President's Council on Physical Fitness. But, he has ignored all three. Most importantly, he has ignored his primary constitutional duty—President of the United States Senate. As campaigner-in-chief for the "Support the Commander-

in-Chief Strategy," he has been absent 98 percent of the time roaming the land, tearing down the Senate as an institution.

The "Support the Commander-in-Chief" or else "you are un-American" jag is supposed to carry until November 3. Come 1971, dramatic Vietnamization will occur. The news of large numbers of returning troops will be laid on for the 1972 election. For whatever reason, we will welcome it.

But when the day arrives when it will no longer be unpatriotic to ask the question why, the exacerbation of disappointment and disillusionment fostered by Mr. Agnew will certainly make a chaotic country for our boys to come home to.

Leadership by political bamboozle is equally rampant when it comes to the issues of domestic life. We have heard much about the hunger issue in the past couple of years. The President held a top-level White House Conference on Hunger and told it, "that hunger and malnutrition should persist in a land such as ours is embarrassing and intolerable." Yet, he has given no leadership on the problem of eradicating hunger.

On another front, the school board member sacrifices good name and good will in his community when he agrees to implement controversial guidelines to bring progress on the racial front. What happens? He is quickly cut down by another department of government. The assistant secretary of commerce who tells it like it is, is promptly fired. The leader dedicated to a program is turned away by being told that his first allegiance must be politics. And, the Cabinet member who opens his eyes is swiftly blindfolded with a White House rebuff. And just last week a top Justice Department official warned federal employees that those who publicly differ with the Nixon Administration can expect to possibly lose their jobs.

What confidence can there be in an Administration whose announced creed is "judge us by what we do, not by what we say?" Why must there be any difference between what government says and what it does? We have been practicing the art of self-government for nearly 200 years. I believe we are mature enough to face the truth. We won't be practicing self-government very much longer if that government tells us to ignore what it says. That is not the way Andrew Jackson or Woodrow Wilson or Harry Truman ran the Presidency. Perhaps they made mistakes, but at least the people knew where their government stood. The great Presidents used rhetoric to implement action, not to obscure it. Courthouse politics is not good enough for the courthouse, leave alone the White House. By no means can we afford courthouse politics at the highest level. We can't say "no more Vietnams" and then start another one in Cambodia under the guise of self-defense. We cannot have a Nixon plan for the East and a Marshall plan for the West. We can't go to New Orleans saying we don't like Northerners pointing their fingers at the South and then when we try to get equal treatment for the South with the Stennis Amendment have the President order his congressional lieutenants to kill the amendment. We can't, in the name of eliminating the separate but equal doctrine, establish a separate but unequal policy by calling segregation in the South de jure and the same segregation in the North de facto. We can't jawbone against inflation by publicly vetoing education and hospital bills while refusing to jawbone the labor and business leaders to stop the spiral of wages and prices. We cannot signal the creed of this Administration as "Bring us Together" and then legislate us apart with a take over of the electoral college and by direct elections, write into the law status for every divisive group in America.

I cannot honestly tell you what the President's intention was when he invaded Cambodia. If I told you that I knew what the President's plan to end the war is, what his terms are, I would be less than candid. I don't know what the President really thinks about civil rights, and neither does anybody I talk to in Washington. I don't know where he stands on stopping inflation, eradicating poverty, on school busing, on textile imports, or on anything else.

We must quit playing politics and lead. The country stands in need of a clarion call, a summons to greatness. It was Paul in his first epistle to the Corinthians who said, "If the trumpet give an uncertain sound, who shall prepare himself for battle." We are not preparing and the reason is the uncertain trumpet of our national leadership. The road ahead is by no means clear. Shall we continue down this clamorous road of drift and division, insuring the collapse of all that has been built by patient toil and sweat? Or, can we get back on the road of a forgotten America?

The first thing we must do is go to work. We have given up on politics too soon. John Gardner recently said, "Out of thousands of years of experience in domesticating the savagery of human conflicts, man has distilled law and government and politics. As citizens we honor law—or we have until recently. We neglect government and we scorn politics. No wonder we are in trouble." Gardner went on to say, "It is precisely in the political forum that free citizens can have their say, trade out their differences and identify their shared goals. Where else, how else can a free people orchestrate their conflicting purposes?"

There is no other way. Only through rational government and politics can we find the road to meaningful change. The hard hat will not find a pot of gold at the end of the rainbow simply by ridding America of the student. Nor will the young find a brave new world simply by insistence on everyone doing his own thing.

Like 100 years ago, the politics of hope have given way to the politics of despair. Too many of us are seeking change outside the political realm, outside all the institutions which can make productive change possible. Our problems cannot be solved in the streets. A just society cannot be built on the ashes of burned buildings or the beaten bodies of those with whom we disagree. A just society cannot be built when so many of us sit home in front of the TV, cheering for our side as our adversaries receive their comeuppance.

No problem confronts this country that cannot be solved within the system. We must all do our part. The citizen must rededicate himself to the spirit of tolerance and compromise that makes meaningful change possible. This demands self-discipline. A just society must be an orderly society. We must discipline to fulfill our responsibilities as citizens. The blessing of civilization is to have open exchange and open expression and a pursuing of one's talent to its ultimate development. This open-ended pursual and free expression can only be done within an ordered system. From the Supreme Court on down to the average citizen, we must act on the belief that while the First Amendment says you can think as you please and speak as you please, you cannot do as you please. The law of the jungle cannot co-exist with the rule of law.

This movement must be led. We in the Congress, those in city hall and statehouse, all in government must realize that our function is to make headway and not headlines. Government must be responsive. The Congress cannot legislate truth-in-lending and practice secrecy in voting. Most importantly, the President must summon the American people to renewed greatness. We stand in need of Presidential leadership that will move decisively to tackle the many issues which currently plague us. Action must supplant rhetoric, and government must come clean with the people. In an era of grave dissension, we can ill afford leadership that feeds on the disunity of the nation.

Finally, a just society must have compassion. It was a wise doctor who prayed that he would never lose the sense of pain felt by his patients. One cannot heal wounds that he cannot feel. The Negro is edgy that his newly-won gains of the past decade might be lost. His fear is deeply felt. All the while he is being pressured by the black militant. Unless we feel this sense of pain and fear, the militant will gain influence in the black community. The housewife is disillusioned at the grocery bill, and there must be compassion for her when we contemplate costly new welfare programs. The mother wonders when drugs will hit her child. The workingman wonders how long he can hold his job. The head of the House worries for the safety of his family as the crime statistics soar ever higher. In the meantime, our sons continue to die without knowing the reason why. Unless we realize that every man has hopes and dreams, grievances and fears, we will lack the spirit of community necessary to a united fight against our many problems. We need not only confidence in government, but confidence in each other. Wise leadership can encourage that dedication, but first we must find it in our will to make a national declaration of dependence.

Whatever decision we make, there is a new America around the corner. What kind of America will it be? It is up to you and me to decide.

---

## NASA CONTRADICTS ITSELF ON SPACE PROGRAM COSTS

Mr. PROXMIRE. Mr. President, some time ago the National Aeronautics and Space Administration announced that it had decided to cancel the flights of Apollo 15 and Apollo 19, for budgetary reasons. It was obvious that canceling these flights would not only bring about savings from future appropriations, but would also free up some of the hardware formerly earmarked for these flights for other missions.

To get a more specific understanding of the savings that will be achieved, the Senator from Minnesota (Mr. MONDALE) and I wrote to the NASA Administrator and asked the following questions:

What additional funds will be made available to NASA as a result of these cancellations?

Do you anticipate that any of these funds will be applied to the space shuttle/station project? If so, how much additional money will be made available and how will it be used?

Will any of these funds be applied to the Skylab project? If so, how much additional money will be made available and how will it be used? Will there be an earlier launch date for Skylab?

To what other projects will these funds be applied?

In addition to releasing funds by canceling these moon flights, what hardware will be freed for use in other programs? How will this hardware be used? What is the cash value of this hardware?

The answer from Acting NASA Administrator George M. Low arrived Tuesday. It indicates that very substantial savings will be achieved. In fiscal year 1971, the savings will amount to $50.1 million. And NASA says the cancellations will "result in much greater reductions in Apollo funding requirements in fiscal year 1972 and subsequent years."

In addition, NASA's letter points out that hardware from Apollo 15 and Apollo 19 will be saved for use on other missions. This hardware includes two Saturn V launch vehicles, which cost NASA $185 million each; one command and service module, costing $55 million; and one lunar module, costing $40 million. These four items add up to a total saving of $465 million. And these are just the major pieces of hardware—there are undoubtedly many smaller items which would boost the total still higher.

Mr. President, I am delighted to know that such substantial savings can and will be achieved. But I wish NASA would get its story straight. Last year, I wrote to NASA and suggested possible cutbacks in the Apollo program—from three flights a year to two, or from three flights a year to one—and asked how much could be saved with such cutbacks. NASA told me that cutting back Apollo from three flights a year to two—a cutback of one-third—would save only $30 million a year. Cutting back from three flights a year to one—a cutback of two-thirds—would save only $45 million a year.

These are pitifully small by comparison to the total fiscal year 1970 Apollo budget of $1.691 billion. I found it difficult to reconcile savings of only 1.8 percent or 2.7 percent in the budget with the proposed program cutbacks of 33 percent or 66 percent.

NASA's letter to Senator MONDALE and me has cleared this up. Congress now has the facts with which it can appraise the enormous cost that the space program entails, and the very substantial savings that can be achieved when relatively modest cutbacks are imposed. I hope Congress will take this into account when the NASA budget for this fiscal year comes before it again later this year.

Mr. President, I ask unanimous consent that the NASA letter to me dated September 12, 1969, and the NASA letter to Senator MONDALE and me dated September 18, 1970, be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
*Washington, D.C., September 28, 1970.*

Hon. WILLIAM PROXMIRE,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR PROXMIRE: This is in response to your letter of September 10, also signed by Senator Mondale, on NASA's decision to cancel two of the remaining Apollo lunar missions. I am sending a similar letter to Senator Mondale.

This decision was one of the actions taken by NASA in establishing an interim operating budget for FY 1971 at the level of the appropriations for NASA included in H.R. 17548, the Independent Offices and HUD Appropriations Bill which was vetoed by the President. In total, the appropriations for NASA approved by Congress in this bill amounted to $3,268.7 million, a reduction of $64.3 million from the FY 1971 budget request of $3,333 million.

In view of the already austere level of the budget request for FY 1971, the $64.3 million reduction forced NASA to face some very difficult decisions. After considering all the alternatives we concluded that the best course in the long-term interest of the space program was to cancel two Apollo flights—formerly designated Apollos 15 and 19—and reschedule the remaining flights to complete the Apollo program prior to the launch of Skylab in 1972.

These decisions permitted a reduction of $50.1 million in our FY 1971 budget ($42.1 million in the Apollo project and $8 million in Tracking and Data Acquisition activities). Also, *the decisions result in much greater reductions in Apollo funding requirements in FY 1972 and subsequent years* which will help us to move ahead affirmatively with the top priority space programs for the 1970's without an undue peaking of the total NASA budget during this period.

We came to the decision to cancel the two Apollo missions reluctantly because it curtails by two the number of scientifically important regions of the moon that we will be able to explore in the Apollo program. Faced with a hard choice, however, we concluded that a higher priority must be given to activities which over a period of years will give the nation new capabilities and accomplishments in space and, in particular, to programs which will also bring about a substantial reduction in the cost of space flight, both manned and unmanned.

For these reasons we have elected to accommodate the reduction in our FY 1971 budget primarily through the cancellation of two Apollo missions rather than by disrupting or cancelling other major on-going programs pointed at new capabilities and accomplishments, such as Skylab and the Viking unmanned landing missions to Mars. We also decided that it is especially important to maintain the full amount budgeted in FY 1971 for studies and preliminary design work on the space shuttle and space station projects. In the years to come, these projects will bring about a major and dramatic reduction in the cost of space operations and, at the same time, give us important and exciting new capabilities in space.

The role of the space shuttle is especially important. It is to be a fully reusable system like an airplane which can fly to and from earth orbit. In addition to serving as a transport for men, supplies, and scientific equipment to and from space stations of the future, it will by itself be a versatile vehicle for performing manned and man-tended experiments in earth orbit and for placing scientific, weather, earth resources, and other *unmanned* satellites in earth orbit and bringing them back to earth for repair and reuse. A major feature is that the space shuttle system, when developed, will have for both manned and unmanned missions a recurring operating cost per mission substantially lower than the current cost of most of our unmanned systems. This reduction will result from two factors: (1) significant reductions in the cost of scientific and applications payloads because of the relaxation of size and weight constraints and the capability for recovery, repair, and reuse of payloads, and (2) reduction in launch costs because the space shuttle vehicles will be reusable.

With this background for the basis of our decision to cancel the two Apollo missions, let me turn to your specific questions:

"What additional funds will be made available to NASA as a result of these cancellations?"

No additional funds will become available to NASA in FY 1971 as a result of the cancellation of two Apollo missions. The FY 1971 savings of $50.1 million associated with the cancellation of these missions enables NASA to accommodate a portion of the $64.3 million reduction in the NASA budget request made by Congress in H.R. 17548. The savings in the Apollo program in FY 1972 and subsequent years will serve to reduce NASA's budget requirements in those years below what would otherwise be the case. The amounts to be provided in FY 1972 and subsequent years will be considered and presented each year in the annual budget process and are subject to Congressional review and approval in the annual authorization and appropriation bills.

"Do you anticipate that any of these funds will be applied to the space shuttle/station project? If so, how much additional money will be made available and how will it be used?"

"Will any of these funds be applied to the Skylab project? If so, how much additional money will be made available and how will it be used? Will there be an earlier launch date for Skylab?"

"To what other projects will these funds be applied?"

As stated above, no additional funds will become available to NASA in FY 1971 as a result of the cancellation of the two Apollo missions. Under our interim operating budget, the funding for space station/shuttle in FY 1971 will be at the level of the budget request ($110 million). The planned FY 1971 funding for Skylab under our interim operating budget is also at the same level as our budget request ($405.2 million). The Skylab launch schedule has not been changed. For FY 1972 and subsequent years the amounts to be applied to these and other major NASA projects will, as previously stated, be determined each year in the annual budget, authorization, and appropriation process.

"In addition to releasing funds by cancelling these moon flights, what hardware will be freed for use in other programs? How will this hardware be used? What is the cash value of this hardware?"

The deletion of the two Apollo missions has freed for other uses two Saturn V launch vehicles. These vehicles will be "mothballed" and stored for future use. No specific manned or unmanned missions have been selected at this time. However this will be the only heavy lift capability remaining in the United States since future production of these vehicles has been suspended. The average production cost of the Saturn V launch vehicles we have produced is approximately $185 million each. The cancellation also leaves us with one completed Command and Service Module (CSM) and one completed Lunar Module (LM). These spacecraft will also be placed in storage and be available for future use if required. The average cost of the CSM's we have produced is $55 million each and of the LM's $40 million each.

I would be pleased to discuss personally with you, if you wish, these and any other matters related to NASA and its programs.

Sincerely yours,

GEORGE M. LOW,
*Acting Administrator.*

---

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION,
*Washington, D.C., September 12, 1969.*

Hon. WILLIAM E. PROXMIRE,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR PROXMIRE: This responds to your letter of September 8 regarding the NASA authorization bill for FY 1970 which, as reported by the Senate Committee on Aeronautical and Space Sciences, would authorize appropriations of $1.691 billion for the Apollo program, the amount recommended by President Nixon. As you are aware, this is $40 million over the amount recommended in the initial budget request by President Johnson which was subsequently amended to provide for the development and production of augmented systems and new mobility devices to significantly increase the scientific return from future manned lunar flights.

The answers to the specific questions you raise concerning the make-up of the $1.691 billion for Apollo, as well as the sensitivity of this funding level to alternative assumptions on the rate of manned lunar flights are set forth below. Based on an examination of these data and our experience to date, it is abundantly clear to me that given a com-

mitment to sustain manned space flight capability, the rate at which flights take place is not of major economic significance in the short term. On the other hand, the flight rate is of paramount importance in considering the rate of scientific, technological and other returns on our national investment, as well as economical utilization of plant capacity, operational efficiency and, consequently, overall mission success and crew safety.

After eight years of intense effort we have reached the point, with Apollo 11, of proven capability to conduct manned flight operations out as far as the lunar surface. Development of this capability has had many secondary benefits including the enhancement of technological competence of American industry and universities. Now that it is developed, greater emphasis can, and will, be placed in succeeding Apollo flights on the scientific return from lunar flights, and on the direct application of the benefits from space operations in our other programs—manned and unmanned. The scientific return and impact on opinion around the world of Apollo 11 exceeded almost every expectation, and the following flights to sites of greater scientific interest, with longer staytime, more complex and productive scientific equipment, and greater surface mobility will far exceed Apollo 11 in terms of scientifically useful returns.

I would like to discuss several points, which I believe are not generally understood, as background for our answers to your questions.

1. From its inception, the Apollo program has focused on developing a basic national capability to conduct manned operations in space and to demonstrate this capability through a safe manned lunar landing and return in this decade. In the early planning for this program we projected a requirement for fifteen Saturn V launch vehicles and twelve Saturn IB launch vehicles with associated spacecraft to assure successful accomplishment of this goal. These were reasonable assumptions with the total undertaking of the design, development, production, test, launch and operations in space of manned space vehicles still before us. No one predicted, or certainly could have planned on, the unparalleled successes achieved in the Apollo program. With early success, only six Saturn V's and five Saturn IB's with associated spacecraft were required to demonstrate our manned lunar landing capability. Thus, through a significant investment in launch vehicles and spacecraft made over the years when NASA's expenditures approached $6 billion, we have available an inventory of space vehicles larger than we could have reasonably anticipated which can now be applied to the scientific exploration of the moon and to operational missions in earth orbit.

As of now all major hardware has been completed or is under contract and in the production process. The twelve initial Saturn IB's have been completed. Of the authorized fifteen Saturn V's, nine have been completely fabricated, assembled and accepted by NASA; two vehicles are now being tested prior to acceptance; and the remaining four vehicles are in various stages of final assembly. Over half of the initially ordered CSM and LM spacecraft have been assembled and delivered; two more of each will be delivered in this fiscal year; and the remaining spacecraft are in various stages of production.

In recent years NASA's annual expenditures have rapidly declined—by over $2 billion—to the projected rate of $3.9 billion in FY 1970. We are in effect flying out an inventory of space vehicles authorized, ordered, and largely funded in earlier years. The manpower directly involved in NASA work has decreased from a peak of 420,000 toward an estimated 185,000 by next June. With these significant reductions, which came about in part by the completion of heavy design and development effort required in the earlier years, but mostly as a result of extreme national fiscal pressures, we have been forced to face the basic issue posed by each of your questions: namely, at what rate this Nation is willing to continue manned space flight programs or indeed, whether manned lunar missions are to be continued at all. In 1966, NASA's future planning—based on the efficient and economic utilization of the capabilities then well along in development—envisioned the production and launch of six Saturn V's and six Saturn IB's with associated spacecraft per year to carry out launch and earth orbital programs. From those early recommendations, we have been forced to a production rate of four of each per year, then two, and finally in 1968 to the point where we were forced to take steps to suspend production of Saturn V's and to halt production of Saturn IB's.

2. President Johnson's FY 1970 budget for NASA was based on a "holding plan" designed to arrest the drastic three year decline in U.S. aeronautics and space research and development and to defer major decisions to the new Administration. President Nixon in his budget amendments, reduced the overall estimates for NASA by $131 million, but then added $86 million to implement two important decisions: to preserve the production capability of the Saturn V launch vehicle, the largest space booster in the world, and to initiate the development and production of augmented systems and new mobility devices to provide a significant increase in the scientific return from a lunar exploration program utilizing the remaining authorized Saturn/Apollo hardware. The decision to provide additional lunar exploration funds was coupled with the decision to reduce the Apollo mission rate from five a year to three a year once the initial lunar landing and return was accomplished. It is significant that these decisions were reviewed and unanimously endorsed by the Space Task Group established by the President to study the future goals and objectives of this Nation in space.

3. The success of Apollo 11, in the first month of FY 1970, has allowed us to proceed on the assumptions underlying the amendments to the original FY 1970 budget including such actions as the reduction in workforce by over 5,000 at the Kennedy Space Center, phase-out of four Apollo tracking ships and other actions tied to reducing the planned flight rate in Apollo from five to three per year. These actions are estimated to result in a savings of about $39 million in the Apollo program this fiscal year as reflected in the amendments to the budget.

4. The final, and most important point I must make is that there is a minimum flight rate below which I, and the Apollo mission directors, believe we could not undertake manned flights with sufficient confidence or economy to justify proceeding with a manned space flight program. Such a judgment is, of course, necessarily qualitative. For example, in reducing our flight rate from five to three, we have reduced the size of the workforce at Kennedy Space Center to essentially a one-crew operation. Therefore, at a rate of one flight a year, much of the workforce at the Kennedy Space Center, at the Marshall Space Flight Center in Alabama, and at the Manned Spacecraft Center in Houston would not be fully employed for most of each year. The same would be true in the many contractor plants and at test sites which are required in support of launch and flight mission operations. I would seriously question our ability to sustain the necessary quality, reliability, and safety requirements with such an under-utilized workforce. Many view three manned flights per year as the minimum that NASA should undertake. In my view, it cannot be less than somewhere between two and three. The optimum rate from a standpoint of safety and especially efficiency is considerably higher.

The preceding discussion should not be taken as advocating space flight solely for its own sake. The benefits we are deriving and which we will continue to accrue from the space program in fields such as communications, meteorology, earth resources, advancing science and technology, education and human fulfillment clearly justify continuation of the balanced program of space exploration and application at a reasonable rate. To do this will require authorization and appropriation of the full amount recommended for NASA for FY 1970 by the President and by the Senate Committee on Aeronautical and Space Sciences.

*In answer to your specific questions we estimate that approximately $30 million could be saved in FY 1970 by reducing the launch rate from three per year to a rate of two per year and $45 million by reducing to one per year.* These savings represent mission unique cost such as recovery, trajectory analysis, pad refurbishment, systems engineering, expendable supplies, propellants, overtime, and multi-shift staffing at the Mission Control Center. As set forth in the attachments, the relatively small impact on the 1970 fund requirement caused by launch rate adjustments results from the fact that we are so far along in the production of the launch vehicles and spacecraft which are already authorized that little can be done to alter the production process without incurring significant cost penalties. If we were to terminate lunar missions at the completion of the currently authorized program, the amounts required would be substantially the same as the amount requested in the 1970 budget. We would be able to reduce this amount by $11 million which is included to conduct studies of future lunar missions beyond those currently authorized. However, if an immediate decision were made to terminate all manned space flight activity including the termination of current hardware contracts and the close-down of all manned space flight centers, significantly greater savings could be achieved. The amount of savings would depend, generaly, on how rapidly such a decision could be implemented and the extent of the Government's liability to the contractors.

Details supporting these estimates and conclusions are attached. Please let me know if we can be of further assistance on this matter.

Sincerely yours,

T. O. PAINE,
*Administrator.*

## NGUYEN CAO KY NOT TO ATTEND "VICTORY RALLY"

Mr. DOLE. Mr. President, I am pleased the Vice President of South Vietnam, Nguyen Cao Ky, has wisely decided not to attend the October "victory rally" sponsored by radio evangelist Rev. Carl McIntire. The appearance of Vice President Ky at this rally could have brought nothing but harm to President Nixon's successful Vietnam policy which consists of Vietnamization, U.S. troop withdrawals and the Paris peace talks.

I ask unanimous consent to have printed in the RECORD William S. White's column entitled "U.S. Should Prevent Gen. Ky's Attendance at McIntire's Rally."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer, Sept. 17, 1970]

UNITED STATES SHOULD PREVENT GEN. KY'S ATTENDANCE AT MCINTIRE'S RALLY

WASHINGTON.—It is of the most urgent importance that the United States Government

do whatever may be necessary to prevent the political puppeteer, the Rev. Carl McIntire, from bringing Vice President Nguyen Cao Ky of South Vietnam into this country for a so-called "victory rally" in October.

Everything possible is wrong with this mischievous business. Nothing whatever can be said to be either right or proper about it. Mr. McIntire, who is commonly called "a radio preacher," had no business whatever to issue this invitation in the first place, for he has been elected by nobody to anything. Vice President Ky had even less business to accept it, as it appears he has done—and it is profoundly to be hoped that he will yet be dissuaded from this meddlesome and disastrous affair.

The language used by Mr. McIntire—that Ky's speech at the rally would "out-Agnew" is both an insult to the Vice President of the United States and the biggest break ever yet given to the extreme doves of this nation.

For it hands to them the opportunity to associate the responsible hawks of the United States with an extremist and exhibitionist parson and a South Vietnamese politician who, whatever his good qualities, clearly himself tends toward exhibitionism.

The fact that the "peace" extremists have again and again "demonstrated" and "protested"—and that their spokesmen in the Senate have again and again unwittingly encouraged the North Vietnamese enemy simply to hang on until we quit—has nothing to do with the case, in adult reason.

The pride and the strength of the responsible pro-war movement in the United States is precisely that it has steadfastly refused to adopt either the language or the methods of extremism, no matter what others may have chosen to do. The McIntire-Ky sorties—unless the administration puts a stop to this thing before it starts—will inevitably to some extent stain a record of which no reasonable hawk need ever to have been ashamed.

To be sure, there have been Americans who have gone to Hanoi to traffic intellectually, and in moral effect to negotiate, with the heads of an enemy power which is killing American troops. But let them do it and do it again and again if they wish. This is their onus and the time may come when their memories will be bitter ones.

The responsible hawk, for his part, has no need—and far too much taste—to go over the heads of the elected Government of the United States to bring foreign hell-fire evangels in here to support a cause that requires no such crude and intrusive defense.

Mr. McIntire, moreover, is very wrong on quite another count. Not only is he, too, in effect negotiating, as a private person with a foreign power, he is also meddling in our coming Congressional and senatorial elections. His prediction that the team of Ky and McIntire will make it "open season for doves" in the elections is both offensive and self-defeating.

If anything could save the Senate doves who ought to be beaten it would be the spectacle of this "radio preacher" and a foreign official presuming to instruct and to marshal the people of the United States in a so-called victory rally.

Napoleon once in substance asked the Lord to save him from allies and the White House of today is undoubtedly tempted to put up the same petition to the Almighty. Vice President Ky is a good soldier and—for South Vietnam—also no doubt a useful leader.

But the first duty of a good soldier is to do nothing, however indirectly, to serve the enemy's cause. And the first duty of this particular national leader is not to make difficulties for the leaders of the nation that has done so much to help save his own.

Ky ought to give the most ceremonious of Oriental farewells—forever to Mr. McIntire and Mr. McIntire ought to be content with his activities in the pulpit.

## MANY RELIGIOUS GROUPS FAVOR RATIFICATION OF THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, various organizations have urged the U.S. Senate to ratify the Genocide Convention of the U.N. Action by religious organizations in the field of human rights should not be unexpected, as most of these organizations are deeply concerned when any portion of the world population is denied the natural human right to life.

Religious organizations such as the National Council of Churches, the United Methodist Church, the American Baptist Convention, the Unitarian Universalist Association, the American Jewish Congress, and B'nai B'rith presented statements to the subcommittee on the Genocide Convention of the Senate Foreign Relations Committee urging U.S. ratification. In 1964 the Episcopal Church, meeting in its National General Convention in St. Louis, Mo., went on record in favor of ratification of the Genocide Convention and other human rights documents by the U.S. Senate.

It is time that the U.S. Senate fulfill its obligation to the people of the world. We should heed the religious organizations who have urged ratification of the human rights conventions of the U.N.

Mr. President, in this regard I ask unanimous consent that the resolution adopted by the general convention of the Protestant Episcopal Church in 1964 be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

UNITED NATIONS HUMAN RIGHTS CONVENTION

Whereas, The United States as a nation, and many church bodies within it, have firmly supported efforts to expand full human rights; and

Whereas, The various international conventions on specific human rights, namely those on genocide, slavery, forced labor and the political rights of women, have been approved by scores of civilized nations, but not the United States; and

Whereas, The failure of the United States Senate to ratify any of these conventions is both an embarrassment to our nation in world affairs and a deterrent to the development of human rights in newly-emerging nations of the world; therefore be it

Resolved, That this Triennial Meeting strongly urge the United States Senate to ratify all of these conventions; and be it further

Resolved, That copies of this resolution be sent to each Senator and to the appropriate section of the State Department.

## VOLUNTARY BLOOD DONOR PROGRAM

Mr. EAGLETON. Mr. President, the Senate recently approved a joint resolution declaring January as "National Blood Donor Month," for the second year. As the chief sponsor of the joint resolution, I hope that the House will agree to the measure before the end of this session.

The voluntary blood donor program is of vital importance to health care in this country. Recently, two worthwhile articles on the blood donor program were brought to my attention by the American Association of Blood Banks.

I ask unanimous consent that the articles written by Bernice M. Hemphill and Dr. Enold H. Dahlquist, Jr., be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AABB NATIONAL CLEARINGHOUSE BLOOD PROGRAM

(By Bernice M. Hemphill)

In Montreal, Canada, a 41 year old father of three with a super-rare blood type—Group A Vel Negative—occurring in one person in 90,000, was scheduled for vascular surgery, following an accident. Not a single compatible blood donor was found in Canada.

Through the Canadian Red Cross, the hospital appealed for help from the American Association of Blood Banks' Central File for Rare Donors. This round-the-clock, no-fee service, located in Chicago, includes the names of some 4,500 persons with rare blood. Donors with the Group A Vel Negative blood needed by the patient were located in San Mateo, Calif., Portland, Ore., Charlotte, N.C., and Casper, Wyo. Each donor gave a unit of blood at a nearby blood bank, and the blood, packed in refrigerated boxes, was flown to Montreal, where it was instrumental in saving the patient's life.

In Austin, Texas, a 26-year-old hemophiliac (bleeder), now studying for his Doctorate in Biochemistry at the University of Texas, has used hundreds of units of plasma for transfusion therapy during the past few years. To offset the cost of these transfusions—representing thousands of dollars in replacement fees for the blood used—the patient's father, who lives in Washington, D.C., has obtained blood donations from scores of co-workers in the United States Weather Bureau. The blood was donated in the Nation's Capital and the credits transferred to the patient's medical account in Austin.

In San Francisco, a 35-year-old physician, received two transplanted kidneys during 1969, both of which were subsequently rejected by his body. The patient, who received over 40 units of blood during the surgery, is currently dependent on a kidney machine while waiting for his third transplant. He continues to receive transfusions of packed red blood cells to fight anemia. One of his colleagues, learning of his plight, appealed to the local medical society, and another physician wrote to the patient's former classmates pointing out the need for blood replacements. The response was spontaneous and blood donations made by physicians throughout the country were credited to the patient's account.

(The author conceived the original idea for a blood bank clearinghouse for the exchange of blood and donor replacement credits and coordinated the first clearinghouse program, sponsored by the California Blood Bank System in 1951. She has served as chairman of the American Association of Blood Banks National Committee on Clearinghouse since its inception and directs the program on a volunteer basis.)

These three patients are among thousands who have benefited from the exchange of blood or blood replacement credits through the American Association of Blood Banks' National Clearinghouse Program . . . a service which has been called "one of the Nation's most valuable banking systems."

Day after day, this "nationwide pipeline" helps communities to supply lifesaving blood of the right types and in the right amounts to patients needing transfusions.

The program makes it possible for a per-

son in one part of the country to donate blood for another person receiving transfusions, regardless of residence. It enables a traveler, needing blood almost anywhere in the United States to draw on blood credits "banked at home in advance of need" by himself or by associates who share the benefits of an employees' or fraternal blood donor club plan.

Most significantly, it permits blood banks with *surpluses* to lend to those with *shortages* as a means of preventing outdating of whole blood, which has a refrigerator life of only 21 days.

To conserve blood supplies—a vital national resource—it is the responsibility of blood banks to "care and share" . . . to keep close watch on each day's inventory of the various blood groups and Rh types, to borrow blood when needed through the clearinghouse, and to lend blood when called upon to help other blood banks in short supply.

Nearly 6,500,000 units of blood are transfused in the United States each year and the demand for blood is growing along with its increasing use in surgery and therapy. In spite of the soaring need, only three per cent of those persons eligible to donate blood actually do so. For these reasons, the original purposes of the National Clearinghouse Program—to encourage voluntary blood replacements, to keep transfusion costs at a minimum, and to utilize available blood supplies as effectively as possible—are more meaningful than ever.

At present, more than 800 blood banks and drawing centers share the benefits of reciprocity under the National Clearinghouse Program which serves more than 3,000 hospitals and transfusion services. During 1969, more than 700,000 blood and blood credit exchanges were handled through the national program.

No formal system of reciprocity existed among blood banks prior to 1951. However, when shortages occurred in those days, blood was often rushed refrigerated from one blood bank to another—a complicated procedure which required numerous phone calls and the need for blood banks to maintain separate accounts with one another.

The idea for solving this problem was based on our monetary clearinghouse system. Since it was possible for a person to write a check on a bank in one area and withdraw the money in another, why couldn't "paper credits" representing units of blood be exchanged in the same way? From this germ of an idea evolved the clearinghouse system for blood banks, which has been patterned from its inception on the national fiscal clearinghouse system.

Originally, nine community blood banks joined forces in 1951 to form the California Blood Bank System, and set up a central bookkeeping agency—the original clearinghouse office in San Francisco—through which all transactions among the participating blood banks were channeled.

Each participating blood bank had a single account with the clearinghouse, rather than maintaining many separate accounts with other blood banks. The clearinghouse had no direct responsibility for recruiting donors, procuring or processing blood. It functioned primarily as a "locator" of blood, and as a bookkeeping agency for the blood banks.

A donor in one community wishing to give blood for a patient in another would donate a pint of blood at his local blood bank. A paper credit (I.O.U.) would then be transferred through the clearinghouse to the blood bank supplying blood for transfusion. The blood bank, in turn, would credit the blood replacement to the patient's account, thereby cancelling the replacement fee which the blood bank charges when donor replacement cannot be obtained for blood used.

The clearinghouse maintained daily records of each bank's exchanges, balanced the accounts at the end of each month, and arranged for any necessary shipment of blood to cancel indebtedness between the blood banks.

These same procedures were adopted when the American Association of Blood Banks, a voluntary organization of community and hospital blood banks, initiated the *National* Clearinghouse Program in 1953.

Five District Clearinghouse Offices were established, each serving participating blood banks in a designated area. Although the original District Clearinghouses were separately incorporated, the AABB took over ownership of all five clearinghouses by 1961, and the National Clearinghouse Office was established in San Francisco to coordinated the overall program.

In 1961 also, the American Association of Blood Banks and the American National Red Cross, which between them supply more than 80 per cent of the blood used in the United States entered into a nationwide agreement for the exchange of blood credits between AABB blood banks and the Red Cross's own network of Regional Blood Centers.

The advantages of the National Clearinghouse Program in emergencies was dramatically illustrated during the Chicago blizzard of 1967 when the program was instrumental in averting a serious local blood shortage.

On the morning of February 1, a record 23 inch snowfall halted transportation preventing blood donors from reaching local blood banks. When it was learned that another seven inches of snow was due before evening, the director of the University of Illinois Blood Bank appealed for assistance from the AABB District Clearinghouse in Chicago.

The appeal was relayed by the Telex communication system which links the clearinghouse offices across the United States.

Within minutes, four community blood banks in California, 2,000 miles away, had agreed to provide most of the needed units. The blood was flown from these communities to Los Angeles International Airport and from Los Angeles to Chicago, where all shipments—181 units in all—arrived by 7 p.m. and were rushed by the Chicago Police Department to Michael Reese Hospital for distribution.

Another example of the effectiveness of the clearinghouse was demonstrated also during the New York transit strike in 1966. Coupled with the added difficulties in making normal blood collections was the depletion of the New York Blood Center's blood inventory due to the long New Year holiday. A call for assistance was sent out, and through the efforts of the district clearinghouses, 572 units of blood were shipped from 24 blood banks in all parts of the country.

The significance of the National Clearinghouse Program also has grown with the advancement of surgical techniques. For example, in 1956, Irwin Memorial Blood Bank of the San San Francisco Medical Society, supplied the blood needed for *ten* open heart operations performed that year. Today, the blood bank provides blood for approximately 16 open heart surgery cases a week, or *over 800 cases* a year, each operation requiring from six to 15 units of fresh blood.

Although the fresh, specially processed type-specific blood needed to prime the heart-lung machines and to provide post-operative transfusions must be obtained locally, a large proportion of the patients come to the San Francisco area for surgery from communities outside the areas served by the blood bank. Many come from distant States.

To encourage blood replacement, a letter is sent by the blood bank to the patient's next-of-kin, informing him of the replacement responsibility and giving the name of the nearest blood procurement facility. By availing themselves of the services of the Clearinghouse Program, resourceful families can help to assure that blood will be available for others needing it, and they may save hundreds—even thousands—of dollars in replacement fees which would otherwise be charged to the patient.

One such instance involved the wife of a former official of the California State Department of Industrial Relations, who needed 58 units of blood to control bleeding after open heart surgery.

Although the couple had lived in California for many years, they had moved to Washington, D.C. The patient has returned, however, for her third heart operation at the West Coast's famed cardiac center, Presbyterian Hospital of Pacific Medical Center in San Francisco.

Without the blood supplied for her locally, the patient could not have survived.

Her husband had numerous contacts with statewide labor and employee and professional organizations. To obtain replacements for the blood received by his wife, he arranged to have announcements published in the publications of these organizations, appeals made at membership meetings, and by word of mouth. The response was heartwarming. Blood donations for the patient were made at seven widely scattered California blood banks, and credits "deposited in advance of need" were generously released by various organizations. As a result, replacement credits were obtained through the Clearinghouse Program for every one of the 58 units of blood the patient had used.

The spirit of "caring and sharing" which is so necessary to the success of the National Clearinghouse Program, was demonstrated recently when eleven Florida blood banks joined in a search for rare blood needed for vascular surgery on a 47-year-old retired manufacturer's representative, in Clearwater.

The search began when the hospital ordered six units of blood from R. E. Hunter Memorial Blood Bank in Clearwater, to be crossmatched and available for the surgery, scheduled the following day. The patient was found to have Group O, Rh negative blood, which occurs in one person out of 15 and in addition, antibody studies demonstrated that he had an Fya (Duffy) antibody, which further limited the number of prospective donors who could be recruited. (Approximately 35 percent of those individuals having O negative blood have the Fya antibody.)

Although the patient's blood was not so rare as to warrant a search by the Rare Donor File in Chicago, it was sufficiently rare that no units could be found locally.

The blood bank's laboratory supervisor, Mrs. Alice B. Miller, phoned the AABB Southeast District Clearinghouse in Jacksonville, which issued an immediate appeal for compatible blood in the Jacksonville area and Orlando. Mease Hospital Blood Bank at Dunedin, near Clearwater, screened all available Group O, Rh negative units and found two compatible ones, which were shipped that morning to Clearwater. The Community Blood Bank and St. Anthony's Hospital Blood Bank in St. Petersburg found three units each of the rare blood and these, too, were promptly shipped. The response from more distant Florida blood banks was equally successful. Blood Banks in Miami, Orlando, Gainesville, West Palm Beach and Tallahassee also shipped units. In all, 19 units of the rare blood were made available.

Commending the teamwork of the technologists in the various blood bank laboratories, Mrs. Miller said, "They took time from their busy routines to do the screening test for the Fya antibody, which required a minimum of 30 to 60 minutes per unit. Also the blood banks cheerfully depleted their own supplies of hard-to-obtain O negative blood to share the rare blood units needed by the Clearwater patient.

According to physicians, the successful surgery could not have been performed without available blood.

Two AABB-sponsored programs which are helping to conserve local blood supplies are the Maryland Blood Exchange and the New Jersey Blood Exchange.

The Maryland Blood Exchange, established in 1963 at the request of pathologists in the Baltimore area, now includes 15 participating hospitals. From a central office, a daily inventory is taken by telephone of all available blood in these hospitals and arrangements are made to transfer blood among them when shortages occur. All transactions are channeled through the Northeast District Clearinghouse in New York. This exchange service is available 24 hours a day, seven days a week, and since its inception has been able to move more than 12,300 units of blood fulfilling 80 percent of all requests received.

The New Jersey Blood Exchange, operating in the same manner, was established in 1965 with seven participating Passaic County hospitals, and is now being coordinated through the North Jersey Community Blood Bank Program in cooperation with the American Association of Blood Banks' Northeast District Clearinghouse Office.

The AABB National Clearinghouse Program has continued its sponsorship of these programs which are demonstrating their value by preventing units of blood from outdating by rotating them, and by saving lives as they share blood in emergencies.

Another special program, made possible by the AABB National Clearinghouse system, is the National Blood Reserve program established in 1967 by the Nobles of the Mystic Shrine. Through this program, Shriners and their families in all parts of the country may donate blood for the Shrine Orthopedic Hospitals and Burns Institutes. A master account of all donations is maintained by the Association's National Clearinghouse Office, and credits or blood are transferred as needed to help orthopedically handicapped or badly burned children. Since the inception of this program, more than 3,000 blood donations have been made for this purpose.

Through the overall National Clearinghouse Program more than 2,000,000 blood replacement credits have been exchanged to date and close to 1,000,000 units of blood have been shipped nationwide to alleviate shortages or in settlement of clearinghouse indebtedness. The program is guided by a volunteer committee of professionals, is self-supporting, and operates with the total paid staff of 12 full-time and three part-time employees.

In addition to the exchange of blood and blood credits, other services in the public interest are carried on through the blood bank network established under the National Clearinghouse system. For instance, by requiring that banks making blood shipments under the clearinghouse system be inspected and accredited by the AABB, the National Clearinghouse Program is helping to raise the standards of blood banks and improve the quality of blood transfusion. By promoting the voluntary donor concept and minimizing the need for blood banks to turn to commercial sources, it is helping to assure a safer, more economical blood supply.

The potential of the AABB National Clearinghouse network for expediting the distribution of blood for national defense or in a national emergency has been formally recognized by the federal government.

A Defense Mobilization Order, adopted in April, 1967, provides that "the blood collection activities of federal agencies shall be administered so as to make maximum efficient use of available sources while assuring minimum impact on provision of normal blood supplies for the civilian community."

The order was a prelude to the signing, in October, 1968, of a standby agreement between the government and the AABB for the procurement of blood in the event of a national emergency, or if a need should arise to recruit civilian donors to provide supplementary blood supplies for Vietnam and other overseas military needs, now the sole responsibility of military donors. A similar agreement was made between the government and the American Red Cross, and a joint statement of cooperation was issued by the AABB and the Red Cross.

Future goals of the AABB National Committee on Clearinghouse Program include working toward greater standardization of replacement fees and transfusion charges, and the development of new methods of recruiting voluntary blood donors so that the nation's blood-lifeline, through the National Clearinghouse Program, may render even-greater lifesaving service.

BLOOD PROGRAMS AND BLOOD DONOR PROCUREMENT—A CHALLENGE FOR INDUSTRIAL NURSES

(By Enold H. Dahlquist, Jr., M.D., Associate Director, Blood Bank, Rhode Island Hospital, Providence, R.I., President of the American Association of Blood Banks)

Industrial nurses have key roles in assuring safe and adequate blood supplies for many communities. If more could be enlisted in this vital activity, essential blood procurement could be made more equitable and efficient and the problems of hospital and community blood banks greatly reduced.

Use of blood and blood components in surgery and therapy has increased steadily in recent years. The 1,276 hospital and community blood banks with institutional membership in the American Association of Blood Banks last year reported 5,548,807 units of blood or blood components transfused. This compares with 5,008,170 units by 1,219 banks in 1968 and 4,935,084 units by 1,192 banks in 1967.

PROCUREMENT OF DONORS

A total of more than 6,500,000 pints of blood a year is estimated to be required this year, and blood requirements are increasing ten percent a year at many hospitals. To assure safety and also to keep medical costs down, it is desirable that as much of this blood as possible come from volunteer donors.

Eighty-five percent does come from this source, through replacement by relatives or friends of blood users, through predeposit plans or blood donor groups, or as a result of special, emergency appeals sometimes necessary in January and during the summer months. The remainder generally comes from commercial blood banks and some paid donor sources, with considerable risk of hepatitis. While progress is being made, there is as yet no 100 percent effective test for detecting the donor carrying the hepatitis virus. Paid donors may misrepresent their medical history; volunteers have no reason to do so.

If all of the more than 100 million Americans qualified by age and health to give blood did so, procurement would be no problem. An individual would then need to donate only about every 16 years, and certainly no oftener than once a decade. Unfortunately, we are faced with the fact that only two to three percent of those qualified to donate in our population actually do so.

A few, notably Christian Scientists and Jehovah's Witnesses, object on religious grounds. These are not numerous. The big Catholic, Protestant and Jewish faiths not only approve of blood donation but urge it as the greatest expression of brotherly love.

Blood is human, living tissue and can be stored and used only for a brief 21 days. This means hospitals and blood banks must constantly be recruiting donors to obtain and replenish their supply. There is as yet no substitute for blood and while freezing keeps it indefinitely this process is still too expensive and is available only at a few large centers.

The great majority of people fail to donate blood because of apathy, fear or inconvenience. These are all factors which can be dealt with by education and by the expansion of donor groups and predeposit plans. Industrial nurses and medical directors, industrial relations managers and union leaders can all help on this front.

GROUP PROGRAMS

At the Rhode Island Hospital, 60 percent of the blood used comes from 45 group programs with industrial companies, communities, churches, schools and colleges, and fraternal organizations. Donations, in groups or singly, are spread throughout the year and, as much as possible, scheduled as needed. Press and radio-TV appeals are reserved for emergencies.

At the Irwin Memorial Blood Bank of the San Francisco Medical Society, such groups supply blood to 59 hospitals in eight California counties. Registered nurses are chairmen of five of these: Norita Colamarino, American Telephone & Telegraph Co.; Elizabeth Hanses, Fairchild Semiconductor Corp.; Florence Lebbert, Hartford Insurance Group; Barbara Hummel, U.S. Plywood-California Operations; and Margaret Halliday, Marin County Employees' Association.

All of these groups celebrated National Blood Donor Month last January by pledging increased donations.

The Jacksonville Community Blood Bank in Florida, which at one time bought part of its blood, has become a 100 percent voluntary operation with the support of groups, especially in the insurance field. A Florida plant of the American Cyanamid Company allows employees to give blood on company time and provides them with transportation to the blood bank. Some steel and automobile companies and their unions also have effective blood programs.

ORGANIZING A PROGRAM

Anyone contemplating organizing a program can obtain the American Association of Blood Banks' "Recommendations for Individual and Family Blood Assurance Plans."* There is naturally some variation in these plans and programs because of varying local organizations, situations and donor response. Usually, a single blood donation covers an individual's blood needs for two years or a family's for one year. Through the Reciprocity Agreement between the American Association of Blood Banks' National Clearinghouse Program and the American National Red Cross Blood Program, blood coverage is generally available, under most plans, anywhere in the country. Percentage plans, in wide use, provide that if the group agrees to have a certain percent (usually 20–25 percent) of its membership donate during the year, unlimited coverage is given even for individuals who are unable to donate blood.

It is important in starting a program for your company that this be done through whatever system exists in your community—whether this be a hospital or community blood bank system or a Red Cross Program, all provide roughly similar programs and coverage.

THE INDUSTRIAL NURSE'S ROLE IN RECRUITMENT OF DONORS

By virtue of her position, her uniform and her training, an industrial nurse can do much to allay the fears of the average person about blood donation. There is little pain and no danger. One man, Alfred Ross, a New York musician, has given more than 16 gallons without incident. Scores have given more than ten gallons. Donors are now accepted routinely until their 66th birthday and, in more and more states, 18-year-olds can donate blood without needing to obtain parental consent.

Company bulletin boards, internal news

---

*Available free from American Association of Blood Banks, 30 N. Michigan Avenue, Chicago, Illinois 60602.

sheets or publications, and payroll envelopes offer opportunities for a continual education program on the importance and ease of blood donation. Where new employees are given physical examinations and their medical records are already being kept, an industrial nurse, with the right relationship with her company and its unions, can recruit blood donors easier and quicker than most hospital or community banks.

Many donors who are apathetic to general appeals respond with alacrity when a friend or co-worker needs blood, or even when they know where it is going. The apathy similarly disappears under a well organized plan in a company plant.

REASONS FOR DEMAND FOR BLOOD

There are many reasons for the demand for blood. Its availability has made possible a revolution in surgery, which calls for still more blood. Surgeons now perform, routinely, long and serious operations they dared not undertake in the past for fear of sending the patient into shock. Open heart surgery as usually performed is possible only with ample blood. A nine-year-old Florida girl recently required 69 pints.

Heart and kidney transplants (and more than 1,000 of the latter have been performed) are the latest and most dramatic developments. Realistically, the American Medical Association's long-standing Committee on Blood has changed its name to the Committee on Transfusion and Transplantation.

About 25 percent of all blood transfused now goes to cancer patients. Aggressive and hopeful treatment of leukemia accounts for much of it. Blood platelets and chemotherapy are extending for years the lives of children with acute leukemia who formerly died in a few weeks. Blood is the best, and sometimes the only, treatment for severe anemias and badly hurt accident victims. Automobile fatalities and injuries are still rising. Hemophiliacs now can have a normal life span, but may need blood or blood components all their lives.

A bleeding ulcer patient may require 20 to 30 pints of blood in a few hours. Some babies are now transfused before they are born (i.e., while still in the mother's uterus) in order to save their lives. In some desperate cases, a complete exchange of new blood for old is the only hope of life for adults as well as babies.

THOUSANDS OF DONORS NEEDED

Component therapy, the use of blood fractions instead of whole blood where indicated, is to some extent stretching our blood supply. Some banks are finding computers useful in keeping track of blood and donors, thereby also helping to stretch the available supply. But we still need thousands of healthy volunteers to donate blood, not just in dramatic emergencies but at regular intervals throughout the year to constantly replenish the supply and furnish a fresh supply of this tremendously valuable, yet perishable, bit of life. Industrial nurses can help greatly in locating and enrolling these donors. I hope that you will.

## NEED FOR A SOUND FARM BILL

Mr. ALLEN. Mr. President, giving emphasis to the vital need to enact a sound farm bill is an Associated Press article which appeared in the Montgomery, Ala., Advertiser of September 5.

The article makes it painfully evident that the American farmer is caught in a vicious cost-price squeeze and that his plight becomes worse with each passing day.

Mr. President, on September 15, the Senate passed its version of a farm bill which, in my opinion, takes a constructive approach toward restoring purchasing power in agriculture. I am sorely distressed over the adamant opposition of the Nixon administration to H.R. 18546 as passed by the Senate. I would hope that the economic experts down at the White House, the Budget Bureau, and the Department of Agriculture will soon come to realize that a strong and viable agriculture is essential to the continued economic strength and security of our Nation.

Let me point out, Mr. President, that, if we do not enact a farm bill this year, we shall revert to the outmoded 1958 farm program. This would mean that we would be returning to the disastrous era of huge Government investments in loans. It would also mean bulging warehouses again with all the attendant expense to the Commodity Credit Corporation, which ran to more than $7 billion in 1958, more than twice the budget request for the Agriculture Department for the 1971 fiscal year. History tells us that such conditions would not benefit the farmer, the consumer, nor the taxpayer.

I should like to make the observation that President Nixon, perhaps more than anyone else down at the other end of Pennsylvania Avenue, should recognize the necessity of avoiding a return to the unworkable 1958 farm program inasmuch as he was serving as Vice President of the United States during the time when farm units in our Nation were being liquidated by the thousands and the Public Treasury was being depleted by the billions.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARMERS IN BIG TROUBLE DESPITE FEDERAL FUNDS

WASHINGTON.—The farm program package before Congress is the most topical issue in agriculture at the moment but there are longer-range economic patterns that are even more complex and bothersome.

With few exceptions, no one has seriously advocated the immediate scrapping of government controls and subsidies aimed at keeping U.S. farm production in line with demand.

But almost everyone has urged that something be done about inflation, high interest rates and soaring taxes.

Government economists, while privately noting that federal subsidies to agriculture are here to stay for a long time, also are becoming more alarmed over the possibility that farmers may be squeezed out of business despite billions of dollars paid them for cooperating in the federal programs.

An illustration of how higher costs are eating up the "benefits" of federal farm subsidies was included in an Agriculture Department report last week on recent market developments in farm real estate.

For the year ended last March 1, the report said, the national average value of farm land rose 4 per cent, the smallest annual gain since 1963.

The slowdown has been on for some time, primarily because prospective land buyers—about six out of ten are farmers themselves—have realized that farming is not as profitable as it once was thought to be.

This has occurred despite a gradual increase in direct government farm payments or subsidies. Last year these payments totaled almost $3.8 billion and equaled almost one-fourth of the country's net farm income of $16.2 billion.

Unless Congress comes up with a radically different final version, farm programs for the next three years will not include substantial increases in direct payments. Inflation and the other important cost factors of turning out food and fiber, however, are not under such definite restraints imposed by Congress.

Few periods in U.S. agriculture have been more dramatic than the past 20 years. In 1949, a period just after the post-World War II boom and before the Korean war flurry, there were still 24 million people on farms, more than 16 per cent of the nation's population.

Last year only 10 million were on farms, 5 per cent of the population.

Last year, to net a little more than $16 billion, farmers had to spend $38.5 billion to meet production expenses. Of this outlay, actual production costs amounted to little more than $26 billion. The difference was eaten up by depreciation, taxes and interest payments.

According to the most recent Crop Reporting Board index, taxes that cost farmers $10 in 1957–59 were $22.90 last month, up from $21.30 in August 1969.

Interest paid on borrowed capital last month averaged $33.70 for every $10 spent on the same size loan 10 years earlier. A year ago the rate was $31.10 for the same money.

Thus, as some authorities believe, farm program payments can be important supplements to over-all income but the most serious, pervasive and far-reaching factor affecting agriculture is the inflation and high cost of capital that plagues the U.S. economy as a whole.

## SUPPLY OF FUEL OIL AND OTHER ENERGY SOURCES

Mr. PELL. Mr. President, the administration yesterday announced several steps it is taking in regard to the supply of fuel oil and other energy sources.

After studying the administration's statement, I must say I have mixed feelings.

On one hand, I am pleased that the administration has at last and at least conceded that there is indeed a serious national problem of potential shortages of heating oils during the coming severe winter weather.

On the other hand, I am deeply disappointed that the administration is unwilling to take more aggressive action to assure that the schools, the hospitals, the businesses, and the people of the Northeast are assured of an adequate supply of fuels at reasonable prices.

Several weeks ago, I wrote to President Nixon urging that the administration authorize an emergency allocation of an additional 100,000 barrels a day of No. 2 fuel oil for New England under the oil import quota system. I believed and continue to believe this was the minimal action necessary to prevent actual shortages and severe and unwarranted price increases.

The response of the administration has been to extend the existing special import allocation of 40,000 barrels a day, with a provision that up to 80,000 barrels a day may be imported during the first quarter of 1971, with the excess to be deducted from import allowances later during the year.

In addition, the administration relaxed somewhat the existing restrictions on topping of imported crude for fuel oil,

and eased restrictions on importation of Canadian crude oil and of Western Hemisphere liquid gas.

Mr. President, the administration response to the fuel and energy situation is half-hearted and inadequate.

What is particularly disturbing to me are the statements that the administration intends to rely primarily on price increases to bring forth increased fuel supplies. There might be some argument for this approach if we were operating in a free market situation. But the plain truth of the matter is that with a mandatory Federal Government import quota system, we are not in a free-market situation.

It is absurd for the administration to rely upon a market mechanism of supply and demand when the Government itself controls supply through a quota system.

The administration has the power, through the oil import quota system, to increase heating oil supplies sufficiently to avoid both shortages and excessive price increases. The administration's failure to use that power is a measure of its concern for the average working man and his family who must bear the cost of sharply increased fuel prices during the coming winter months.

## A SUPERB NOMINATION

Mr. PERCY. Mr. President, on September 25 President Nixon nominated nine distinguished Americans to serve on the Board of Governors of the U.S. Postal Service.

One of the nominees is from my State. He is George E. Johnson, founder, president, and chief executive officer of Johnson Products Co. of Chicago.

From modest beginnings, Mr. Johnson has built his cosmetic company into a major enterprise with sales in 1969 of $10 million. His clearly demonstrated business acumen should be invaluable to the new postal panel as it attempts to provide the American public with more efficient mail service, unhampered by the influence of politics.

Mr. President, Mr. Johnson's record as a business and civic leader in Chicago is a long and impressive one. He is chairman of the board of the Independence Bank of Chicago, vice president of Junior Achievement of Chicago and of the Chicago Economic Development Corp., and a member of the board of the Chicago Urban League, Wesley Memorial Hospital, the Economic Club of Chicago, the Lyric Opera of Chicago, and Urban Ventures, Inc.

Many of us in the Federal Government have drawn on Mr. Johnson's experience and expertise as we attempted to legislate responsibly in the area of minority enterprise, and we have always found him most helpful. I am confident that he will be an asset to the board of governors of the postal service, and wish to take this opportunity to salute the President for a superb nomination.

## THE FATE OF THE FEDERAL BLUE-COLLAR WORKERS IN A REPUBLICAN ADMINISTRATION

Mr. PELL. Mr. President, the administration makes much of their attention to the workingman, the so-called blue-collar worker. Administration spokesmen seem to do a very good job of appealing to the workingmen's disenchantment with dissenting students, war protestors, and new life-styles in general.

However, the administration's real concern for the blue-collar workers of this country can probably be best seen in their treatment of those blue-collar workers for whom they have direct responsibility, the Federal wage board employees.

In my own State of Rhode Island, after many years of delay, the Monroney amendment was finally implemented and raises were announced. Yet, the Department of Defense has still to provide their workmen the retroactive payments due them.

The Senate and the House recently passed legislation designed to make some minor reforms in the antiquated Federal wage board system and to provide for some minimal increases in salary for wage board employees. The administration's response to this needed legislation has been a threatened veto and a suggestion that they would rather fire workers than pay them a decent salary. I hope the Senate and House conferees will not be intimidated by these threats.

Mr. President, the blue-collar worker is now beginning to understand the administration's message to them, "Law and order slogans—yes; fair wages—no."

I ask unanimous consent that a letter to the editor of the Providence Evening Bulletin of September 23, 1970, expressing the sentiments I outlined, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WHAT THE GOP HAD BETTER KNOW ABOUT A BLUE COLLAR'S LOT

This is in reference to our Republican friends in Washington, D.C. on the subject of the blue collar worker and his wages. To begin with your article of September 9, 1970, "Blue Collar Raise Up for House Action," states that a third round of pay increases for the blue collar worker would boomerang and cause the layoff of nearly 40,000 such workers in the DOD alone. Now if I may, I would like to backtrack a few months. In April we had a wage survey under the new federal coordinated wage system which is not much better than the old system that we had. We averaged 20 cents per hour in the journeymen's rate, plus another 29 cents on the conversion of the wage structure which was to bring the Navy's pay scale in line with the other services.

But as far as a pay raise is concerned we have averaged between ten cents and 20 cents over a period of years, no matter how the cost of living has increased. Uncle Sam is very frugal when it comes to his blue collar workers; after all he must figure what can they do about it? Next, the Monroney Amendment which became law in October, 1968, meant that if a comparable wage did not exist in the prevailing wage area, you could go outside the wage area to obtain wage data. Well the Civil Service Commission just could not come up with the proper guidelines to implement this amendment, therefore no one could use this. The Civil Service Commission felt that to designate certain trades such as aircraft would be discriminatory. This was the intent of the amendment if no comparable trades were in the area. So as of now this new Monroney Amendment is in effect, except for one detail they forget about. No one thought about appropriating funds for this; so far, no one has been paid retroactively.

Now to get back to the article that was in the Journal, the six per cent raise for all federal workers as of last January did not apply to the blue collar workers. The additional eight per cent boost for postal workers has nothing to do with us. The prevailing wage paid by private industry that our wages have been figured on in the past have not helped us, because they are not comparable to our type of work, the aircraft trades. The bill that was up for House action on the ninth of September would increase the journeymen from three steps in trade to five steps, which the supervisors were given under the new wage system. The percentages paid between three steps and five steps are minute, seeing that we are not being paid comparable wages to begin with. This is not the first time that we federal blue collar workers have been threatened with a reduction in force in order to keep us quiet. I don't remember these same people raising a fuss when they voted themselves over a 40 per cent raise not too long ago, or has everyone forgotten about that? Also I don't think that most people outside of government service realize that we pay as of now 76 per cent of our Blue Cross. This is for the pay period ending September 5, 1970 (we are paid every two weeks).

Regular Wages—$315.20

Deductions—$22.06 (retirement, $44.12 a month)

$17.30 (Blue Cross, $34.60 a month)

The above is correct and I believe that most industry in the private sector does better than this for their employees. We do accumulate sick leave and can accumulate up to 30 days of annual leave. But I know that anyone working in the private sector either gets a good bonus and/or a good amount of vacation after he has been employed for a reasonable amount of time. I am not complaining about working conditions with the government except for their policy on treating their blue collar workers on wages and benefits.

As I have stated before, I like my job, but that doesn't mean that I have to like the conditions under which myself and my fellow employees have labored so long.

VINCENT E. LUCAS.

COVENTRY.

## DIRECT POPULAR ELECTION OF THE PRESIDENT

Mr. BAYH. Mr. President, on September 21, the Senator from North Carolina placed in the RECORD a letter from the Honorable Ed Gossett, a former Member of Congress and coauthor of the Lodge-Gossett plan. The letter contained a criticism of the method by which the Chamber of Commerce of the United States purportedly came to its decision to endorse the concept of direct popular election.

At the time, I indicated to the Senator from North Carolina that I believed the letter to be incorrect. I ask unanimous consent to place in the RECORD the text of a letter from the Chamber of Commerce of the United States to Mr. Gossett, explaining the manner in which the Chamber's position was arrived at and making it clear that the allegations contained in Mr. Gossett's letter are, in fact, incorrect.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHAMBER OF COMMERCE OF THE UNITED STATES,
*Washington, D.C., Sept. 28, 1970.*

Hon. ED GOSSETT,
*Dallas County Courthouse,*
*Dallas, Tex.*

DEAR MR. GOSSETT: Your letter of September 21 to Senator Ervin of North Carolina, which appeared on Page 33367 in the *Congressional Record* of September 23, 1970, is a complete misrepresentation of the facts on the procedure utilized by the National Chamber in developing policy on Electoral College Reform.

Your allegation that the National Chamber did not treat the proportional method fairly is an absolute misstatement of the facts.

First, the National Chamber's educational pamphlet on electoral reform, published in 1963 and widely distributed over a two-year period prior to the development of Chamber policy, included a detailed description of the proportional method.

Secondly, you will recall that you, yourself, were a member of the National Chamber's first electoral reform study group. You will recall, too, that you had the floor for at least thirty minutes of the two-hour meeting of this group the first time it met on March 25–26, 1965, and that you devoted your time almost exclusively to an explanation of the proportional method.,

Also, you may recall that the first National Chamber informal opinion poll of member organizations in February, 1965, covered all major alternatives—including the proportional method. Five choices were offered in that opinion poll which resulted in the nationwide popular vote receiving as many votes as the four other alternatives combined. The proportional method was preferred by only 18% of the responding member organizations.

Following the completion of your service to the National Chamber's Electoral College Reform Subcommittee, the group continued its study and ultimately, in the fall of 1965, voted unanimously in favor of eliminating the Electoral College as an institution. It rejected the proportional method and other alternatives in endorsing the nationwide popular vote by a subcommittee vote of 6–3. Those who voted in the minority favored the district method. Subsequently, the full Public Affairs Committee of the National Chamber endorsed the Nationwide Popular Vote by a vote of 24–16 and recommended its endorsement to the Chamber's Board of Directors.

The Board of Directors, noting the majority sentiment in favor of the nationwide popular vote and the minority sentiment in favor of the district method, decided to propose a dual policy in a membership referendum. The policy which was approved by membership referendum in January, 1966, by over 90% of the votes cast, is as follows:

"The Chamber of Commerce of the United States supports the adoption of an amendment to the Constitution that would:

1. Abolish the Electoral College

2. Provide for the election of the President and Vice President of the United States on one of the following bases:

A. Nationwide Popular Vote; i.e., a plurality of the popular votes cast in the nation at large.

B. The District Method; i.e., one electoral vote for each Congressional district and two electoral votes at large within each state, with a majority of electoral votes in the nation required for election."

Moreover, this policy was reaffirmed at the National Chamber's 1967 Annual Meeting Policy Session.

The latest reflection of membership opinion was produced through an informal opinion poll taken at our 1969 Annual Meeting, where all alternatives, including the proportional method, were listed. This poll showed that 78% of those responding preferred the nationwide popular vote.

The facts, then, show:

(a) the proportional method was indeed considered in the development of National Chamber policy;

(b) the proportional method was rejected on three occasions: in the first opinion poll, by the Chamber's Electoral College Reform Subcommittee, and in the latest opinion poll;

(c) every test of membership sentiment shows that the predominant opinion favors the nationwide popular vote for President of the United States.

Your disappointment that the Chamber did not endorse the proportional method is understandable in view of your long advocacy of that plan. However, we feel that you have done a disservice to the National Chamber, and to the cause of electoral reform by attempting to cast doubt on the validity of the Chamber's policy.

The National Chamber's study and policy development procedure were described in detail in the 1966 hearings before the Senate Subcommittee on Constitutional Amendments, in later testimony before the Senate Subcommittee in 1967, before the House Judiciary Committee in 1969, and again before the Senate Subcommittee in 1970. I believe that no other organization has made a more thorough study of electoral reform or a more concerted effort to determine the opinion of its membership than the Chamber of Commerce of the United States.

I am sending a copy of this letter to each United States Senator to counter any false impressions that may have been developed because of your unfortunate communication to Senator Ervin.

Sincerely,

HILTON DAVIS,
*General Manager, Legislative Action.*

---

SAM J. ERVIN, Jr.,
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR: No one living has worked longer or harder for Electoral Reform than I. The Lodge-Gossett Amendment—the proportional system of electoral reform—passed the Senate in 1950 by a vote of 64–27. As I recall, at that time, the only Senator advocating the direct election system was Senator Langer.

More recently, I have served on a five-man committee on Electoral Reform, which committee was headed by the late Senator Edwin C. Johnson of Colorado, and also included the late Senator Scott Lucas of Illinois. We secured the passage by 13 State legislatures of resolutions calling for an equitable division of the States Electoral vote (see attached memo). None of us endorsed the direct election formula.

I opposed the direct election system for many reasons, the chief of which is that it would destroy the Federal System.

However, the purpose of this letter is to tell you that the United States Chamber of Commerce's purported endorsement of the Direct Election system is completely false. Notwithstanding, the Senate action in 1950, and notwithstanding the continued efforts of many of us since that time, the United States Chamber of Commerce in taking their so-called poll on the subject completely omitted the proportional system. Their poll was dishonest and misleading. I'm convinced that a vast majority of their membership are strongly opposed to the Bayh Amendment.

Cordially yours,

ED GOSSETT.

P.S.—This letter may be used in any way you wish.

## CURRENT CAMPUS PROBLEMS—ADDRESS BY DR. ERNEST L. WILKINSON

Mr. ALLOTT. Mr. President, a close and admired friend of mine has been kind enough to make available to me a thoughtful address he recently delivered on the subject of current campus problems.

My friend is Dr. Ernest L. Wilkinson, the distinguished president of Brigham Young University. He delivered the speech on September 3 at the Oakland, Calif., Rotary Club.

Dr. Wilkinson has always combined scholarly detachment with a practical mastery of important responsibilities.

The speech is both idealistic and practical. It does not pull any punches in cataloging failures—failures by any Nation, and failures by the academic community.

But Dr. Wilkinson is not a passive, pessimistic man. His deep religious faith and his noble patriotism lead him to fight failures when other men are content to complain.

Dr. Wilkinson offers 11 suggestions for improving the condition of our colleges and universities. So that all Senators may profit from his stimulating speech, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ACADEMIC ANARCHY VERSUS MANAGEMENT OF UNIVERSITIES

(By Ernest L. Wilkinson)

INTRODUCTION

I want it understood that what I have to say will be said on my own responsibility as an individual, and not as president of Brigham Young University, for it has not been cleared with my Board of Trustees.

Since my time is necessarily limited, I may have to sound somewhat dogmatic. If I had more time I might make some mild, but only mild, reservations on what I say to you. I find myself in somewhat the same position as a federal judge before whom I practiced law at one time. He would generally announce a decision at the end of a trial and always preface his remarks with the comment that "this court may be wrong but it is never in doubt."

EXTENT OF DISTURBANCES AND RIOTS

I need not go into detail as to what has been happening on the campuses of America, but as a preface for suggestions I intend to make I will quickly summarize the extent of the student disturbances and riots and the demands and objectives of the militants. The problem is not one of normal academic unrest, but of academic disruption, violence and anarchy.

According to the report of J. Edgar Hoover on campus disturbances for year ending in June 1970, there were 1785 demonstrations on the 2300 college campuses. On some campuses there were many. On many other campuses, as at Brigham Young University, which now in terms of full-time students is the largest private university in the country, there were none. We don't claim to be entirely unique. We are probably, however, the only large campus which has been free from trouble.

The closing months of the last school year brought more riots, demonstrations, boycotts, protests, open warfare, vandalism and other

disorders in American colleges and universities than at any other time in the history of the nation. These resulted in student deaths from shooting, the wounding and injury of scores of persons, and the arrest of hundreds. Damage ran into the millions of dollars, while the loss of time and work in education is inestimable. Let me give you just a few examples of these riots.

At Santa Barbara, the students completely burned a Bank of America branch.

At Cornell fire gutted the black studies center.

At Rice, fire which was started with kerosene, did extensive damage to the ROTC Building.

At Berkeley police fought a pitched battle for three days with radicals who hurled rocks, smashed windows, ripped down the American flag, attacked a faculty club, destroyed the furniture and smashed down the doors.

At Kansas a fire bomb destroyed much of the Union Building. Damage was estimated at $2 million.

At Stanford fire from arson destroyed the *life's work of several scholars* at Stanford's Center for Advanced Study in the Behaviorial Sciences. Total property destruction at Stanford was estimated at $580,000 in six weeks.

At Fresno State College fire bombs destroyed a $1 million computer.

After President Nixon announced our entry into Cambodia there were scores of disorders. The most serious of these riots were at Kent State and Jackson State resulting in the tragic deaths of several students. On May 8 a new "Strke Information Center" at Brandeis University reported there were 356 schools striking with faculty and administrative support. These were accompanied by a rash of attacks on the ROTC. Records kept by the Army, Navy, and Air Force show more than 400 anti-ROTC incidents at many of the 364 schools where ROTC units function. There were 73 attempts to blow up ROTC buildings.

Fire bombs were thrown into ROTC buildings at Oregon State, Princeton, Hobart College and Washington Univeristy at St. Louis. Shots were fired into the home of the Stanford ROTC commander. At Southern Illinois students threw fire bombs out of windows. About 300 students went on a fire-setting spree at Michigan State. The National Guard was called in as 1500 rampaging students sacked the ROTC building at Maryland.

There were 67 instances of vandalism in which ROTC offices were entered, records were destroyed, weapons and ammunition stolen and property defaced. One hundred forty-five assaults involving personal injury and damage to property were launched.

At the University of Michigan on May 7, a group of students occupied the ROTC building for nearly 24 hours. A fire was started in the basement. No one was punished—university authorities said none of the vandals could be identified. If during a 24-hour period no method could be found to identify at least part of these students, those responsible for identification either did not want to find out or were overly naive.

ROTC enrollment has dropped from 298,-952 in 1961–62 to 157,830 in 1969–70, or nearly 50%.

Since April 30 nine schools have voted to discontinue ROTC including Harvard, Dartmouth, Yale and Columbia, despite the fact that in the past decade 63% of all newly commissioned officers in the Army came from ROTC units. This to my mind shows the schools which closed out ROTC have little regard for duty to their country.

One reason for the zeroing in on Kent State University by so many radicals is that it houses the Liquid Crystal Institute, home of research projects with military potential.

With this background of student disturbances and riots (1785 during the last fiscal year) you will appreciate the story that is going the rounds of academic circles that a college president died and was consigned to Hell. But he was there for six months before he knew where he was. The current joke among college presidents themselves is that becoming an administrator in higher education today is comparable to buying a ticket on *The Titanic!*

OBJECTIVES OF THE REVOLUTIONARY LEADERS

The tragic aspect of most of these destructive riots is that the leaders openly admit they are intent upon the "destruction of our existing social order." Their heroes are the leaders of the most ruthless dictatorships—Lenin, Mao-tse-tung, Castro, Ho Chi Minh, Che Guevera. During the riots at Columbia, members of "Students for a Democratic Society" wrote on college buildings, "Lenin won, Castro won, and we will too." In some of their rioting they have carried the red flag of the Communist Revolution and the black flag of anarchy.

Michael Klonski, National Secretary of SDS, has written, "The National Liberation Front in Vietnam and the oppressed peoples in the U.S. are fighting the same enemy, American Imperialism . . . Remember Ho, Mao, Fidel, etc."

Eldridge Cleaver expressed the same philosophy in saying, "We're out to destroy the present machinery of the ruling class."

The National Liberation Front, another militant student organization, sometime ago published and mailed to citizens of California its "Declaration of Entity and of Purpose," which declared, "The current government of the United States of America to be an unlawful and illegal one," and gave notice of their intent to "conduct a controlled punitive action against United States Federal forces and municipal forces on a limited scale from the City of San Francisco on the south, to the Oregon border on the north." It ended by declaring "All citizens are hereby notified that a state of revolution shall begin as of March 15, 1970, all power to the people." There is no question but that the hard-core leaders of these students riots were either Communists or believe in Communism. There is no question either but that some have engaged in treasonable activities, which is that of giving aid and comfort to the enemy even though they have not been legally charged with such activities.

These leaders are willing to seize on any issue that will accomplish their aims. At the beginning of the disturbances in Berkeley, the chief grievance was the racial issue. This permitted them to inflame not only blacks but sympathetic and sometimes gullible whites against the so-called "establishment."

What is not generally known is that the decision to exploit this issue was originally made in Moscow in 1928. Instructions were then given to use the Negro question to incite trouble and revolution in the United States. As has been pointed out by Manning Johnson (a former ranking Negro Communist in the United States, who later broke with the Party and became an undercover worker for the FBI), the Communists from then on busied themselves with the Negro. They infiltrated Negro churches and social groups in order to prepare the Negroes to be sacrificed in the revolution to come. It is a distinct tribute to most American Negroes that most of them did not fall for the Red blandishments.

Later, as the war in Vietnam became unpopular, the revolutionists emphasized the Vietnam war issue. When, in turn, the administration let it be known that our troops would be withdrawn from Vietnam as soon as practicable and the Vietnam war issue was dying out, they seized upon the Cambodian issue, and now that our troops have been withdrawn from Cambodia, the revolutionists are emphasizing air pollution, the decay of our cities and the athletic programs of our universities. These shifting issues are consistent with the instructions that have been continually issued by the national leaders of the Students for a Democratic Society, which are that its members should make use of any issue which is locally most popular.

While a number of university administrative officers blame the war in Vietnam or the incursion in Cambodia as the cause of student unrest, this claim is patently false. The foreboding of campus disturbances occurred long before today's activists even knew where to find Vietnam on the map. Nearly all unbiased authorities agree that the termination of the Vietnam war will only shift the emphasis of the campus militants. To me, attempts to blame President Nixon's decisions for campus unrest represent nothing but an attempt by university administrators to cover up their own failure to govern their universities. If Vietnam and Cambodia were the cause of campus disorders, why is it that there are scores of universities and colleges in this country who have had no real disturbances or riots and who have consequently received no publicity?

I admit that the decision to go into Cambodia gave the student revolutionists a much needed opportunity to further inflame their fellow students, but this was because the fuse of revolution had already been lighted and because somehow our universities had failed to teach our students the lofty concept of freedom which gave us birth and has sustained us as a nation and to which the Vietnamese are entitled as much as are we. Our students have not been inspired with Douglas MacArthur's hallowed words of "duty, honor, country."

SUGGESTIONS FOR BETTER MANAGEMENT OF UNIVERSITIES

I now come to what should be the constructive part of my talk—my suggestions for better control of the University—in other words, *Proper University Management* vs. *Academic Anarchy.*

At the outset may I make it plain that the universities themselves are not primarily to blame for the attitude and lack of proper motivation on the part of students who come to their campuses. We will not entirely reform our universities in this country until we reform our society. We are failing as a nation because parents are not fulfilling their roles as parents but are excessively concerned with their occupations or social life and pay too little attention to the proper training of their sons and daughters. They have not taught adequate standards to their children, or assumed responsibility for their proper spiritual, cultural and patriotic motivation.

We are failing as a nation because too many teachers are less concerned with effective teaching than they are with "research grants," the number of hours they teach, the class load they carry, their rate of pay, their retirement benefits, and in general "what's in it for me." Many have lost the sense of dedication which is the hallmark of every good teacher.

We are failing as a nation because too many men of the cloth have forgotten to minister to their flocks and have discontinued preaching the word of God. They have turned into politicians and preach that which is the uncertain opinion of man rather than the sure word of God.

Nevertheless, I do think that the universities themselves must plead guilty to having permitted and in many cases encouraged destructive disturbances and riots on their various campuses. What suggestions I have today will be in this area.

*My first suggestion* is that we must abandon the idea that the university is a law unto itself and that a campus is an asylum for

those who would spawn seditious ideas and otherwise violate the law. The medieval custom or tradition which permitted sinners and violators of the law to flee from civil justice by gaining sanctuary in a monastery or university, where they could do penance for their misdeeds, has no vestige of justification in our modern civilization. The only sound concept was enunciated by the late Theodore Roosevelt who declared that, "No man is above or below the law." This should apply with special force to university students for they are the ones who ought to set an example to society.

I suspect that up until recently, the preponderant feeling of university presidents has been that universities ought to govern themselves and be essentially free from any civil or criminal restraint. Admitting that it would be better if the universities did govern themselves, the fact is that many have not properly done so. I suggest that the moment an unlawful disturbance occurs, or other laws are violated, police, with or without invitation from school authorities, should enter the campus and see that the laws are enforced. I think the first duty of any citizen, especially a university president, is to assist in the enforcement of the law.

*Second,* a reappraisal needs to be made of the philosophy of many academicians that legislatures should not interfere either with the governance of universities or what is being taught there—that education is not the business of the legislature. My answer is that since the taxpayers put up the money for the creation and maintenance of the universities, their representatives, namely our legislators, should be very much concerned with what is going on in our universities. The discipline of many universities in recent years does not indicate to me that they have a celestial glory deserving to be free from close scrutiny. I submit also that there have been instances of seditious teachings and pornographic performances on our campuses, where legislators, in the absence of responsible action by university administrators, have been justified in stepping into the breach and taking action. Admittedly legislators are not above criticism, but they are on the whole responsible men, and I am willing to trust their combined judgment. With a clear recognition of their own limitations, they should nevertheless supervise education more, not less.

*My third suggestion* is that boards of trustees throughout the country ought to reassert their duties and prerogatives as trustees. In too many instances, over a long period of years, they have known relatively little of what transpires in their universities and have failed to set the policy of the institutions over which they presumably, but in some cases perfunctorily, preside. It has become the custom in many instances for trustees to delegate policymaking powers to faculties of the institutions, who often have a conflict of interest in resolving policy questions. While, of course, boards of trustees should use proper restraint in passing on the minutia of purely academic matters, that should not preclude them from overall decisions as to the propriety of courses to be offered or discontinued, in particular to pass on courses which would truly be in the public interest and not in the interest of pressure groups—courses which would lift and improve the quality of our civilization rather than destroy the established morals of a great civilization.

I read recently of a new course proposed by students in which the class was to photograph and reveal undercover police activity. This course is entitled, "Repression and the Movement." The description of the course reads as follows: "We will publish leaflets and pamphlets, sponsor rallies, photograph and reveal undercover pigs and anything else we can search our minds for. The course shall be run and controlled by those of us who participate." While this is not contained in the university catalogue, I am informed certain departments will give credit for it under the heading of "research." To assert, as in this situation, that the board of trustees should have no authority to step in and either initiate or veto courses is tantamount to saying that we should do away with our trustees and give academic anarchy full sway.

As in the case of legislatures, there ought to be more and not less supervision of our universities by boards of trustees.

*My fourth suggestion* is that boards of trustees should give almost exclusive power to the presidents of institutions to carry out decisions of the boards and to administer the affairs of the institutions. Unfortunately in many institutions the boards have delegated so many administrative functions to the faculty that when a crisis arises the president is often powerless to act.

The often impossible situation of a university president is described in a short parody entitled, "The Lament of a University President."

I'm not allowed to run the train,
The whistle, I can't blow.
I'm not the one who designates
How far the train will go.
The students rant and rave and scream
For this privilege or that.
The faculty is wont to change
Curriculum format.
I'm not allowed to blow off steam,
Or even ring the bell.
But let the damn thing jump the track,
And see who catches hell.

The fact of the matter is that faculty members usually are not hired as administrators, and many of them have little competence in this respect. While, of course, the stature of a university is directly correlated with the quality of its faculty, we must remember that administrative decisions often cannot wait on the slow, deliberative process of faculty analysis. Imagine Dr. Hayakawa having to wait for a faculty senate to tell him whether he could jerk the wires off an unauthorized sound truck.

My own view is that (1) the trustees should determine the policies of the university, (2) the president should have the authority and responsibility to carry out those policies, and (3) the teachers should focus their activities on teaching and related activities. This division of duties has been tragically ignored in many institutions. Obviously the president should obtain the advice of faculty members on academic matters. I can't imagine that a responsible president would not welcome, and depend on suggestions from his faculty on many matters, for faculty expertise is the great resource of any university. But there is no way that the faculty can possibly share the perspective or respond to the responsibility that a president must assume. When it comes to overall discipline on the campus, the President must be the Commander-in-Chief. Consequently, when a new president takes charge, he should have the right to choose his entire administrative staff. Otherwise he runs the risk of failure in carrying out his policies.

The power to nominate faculty members should be restored to him also. They should not be chosen exclusively by their friendly peers on the faculty without a careful, independent investigation by the president. When faculty members, department heads, or even deans have complete freedom in selecting fellow faculty members, it is only natural that they select people of their own kind, including their own academic and political preferences and biases. This makes for an imbalanced faculty which can hardly be obective in searching for the truth. Admittedly the president may also make mistakes in suggesting faculty appointments, but surely he is as concerned as any dean or department chairman and is less likely to be governed by departmental friendship and traditions. Furthermore he is directly accountable to his trustees whereas faculty members are not. When he has to "face the music" he is more likely to play a responsible tune.

*My fifth suggestion* is that there should be much more emphasis on teaching on the part of faculties. I do not believe in the prevailing philosophy of "publish or perish." While of course research should be encouraged, I would rather have an undergraduate child of mine in a classroom under a teacher of limited scholastic reputation who had the ability to inspire, than under a Nobel Prize winner, who either never had the ability to teach or has lost the zest for it because of his being absorbed in research. While research is indispensable for the university as a whole, it is not necessary for all teachers to be engaged preponderantly in research—indeed some ought to be required to do very little. I understand that in certain leading institutions of higher learning in this country most undergraduate classes are taught by student assistants. That is a tragedy and a serious indictment of an administration which permits it. Indeed, freshmen should be taught by the most experienced and inspirational teachers. Many teachers do not want to teach these classes. They therefore prevail upon their friend (the department chairman) to free them from these classes. That is why there needs to be a strong president with supporting officers—who can help see that proper assignments are made.

*In the sixth place* universities should not condone any encouragement of riots or revolution by faculty members. Any teacher who either *encourages or participates* in such conduct should be discharged forthwith.

A staff report of the Florida House of Representatives (1/16/70) Select Joint Committee on Campus Unrest and Drug Abuse, reported in part: "In nearly every instance of campus unrest problems which could be documented, we find that the leaders were for the most part being counseled, guided and occasionally directed by faculty members."

Robert Nisbet, University of California professor of sociology, writes in the British magazine Encounter: "Without faculty stimulus, financial contributions and other forms of assistance, the student revolt could never really have got off the ground.

"Not obviously, all of the faculty . . . But it was . . . a powerful minority, often contained within it Nobel Prize winners and others of equal stature . . ."

Dr. S. I. Hayakawa, President of San Francisco State College has said: "The worst enemies of American higher education are professors, or a minority of professors within it. They've got an awful lot of routine undergraduate teaching to do, and they are bored stiff. The only way they can get a little excitement . . . is to appeal to their students for admiration and they appeal therefore to the most radical and most immature of their students."

*My seventh suggestion* is to eliminate our loose ideas of permissive education and lack of discipline and restore to the campus the rigorous discipline which made our institutions great centers of learning—not of revolution.

In order to gain immunity for the unlawful acts which they have already committed and still threaten to commit, many of the rioters such as those at Columbia demanded amnesty for all of their violations of law; others, such as students at the University of Colorado, would remove from college administrators all rights to discipline any student and would have the discipline in each case administered by the courts; and to cap it all, students at the State University of New York at Onconta demanded that agitating students be given a weekly allowance of twenty-five

dollars for spending money so they could continue their agitation.

In my judgment students who would destroy either the government which gives them more opportunities than any other nation in the world for both their material and educational advancement, or who would destroy the educational institutions created by our government or made possible by our system of free enterprise, should be expelled forthwith. There should never be appeasement or capitulation or amnesty for these militant students, for any show of weakness will only result in further academic anarchy.

*My eighth suggestion* is that boards of trustees and/or presidents, and/or faculties should not be permitted to close schools early and give academic credit for courses not completed or without the requisite examinations. *Higher Education & National Affairs* reported on May 22 that fourteen universities and colleges had closed for the year. The total was probably much higher than that.

I understand that at one of our leading state universities this year the student assistants who taught 60% of the undergraduate students struck for an entire month, in the middle of the semester, during which time there were no classes. Also when trouble arose near the end of the year they dismissed classes at least a month early. Yet the students received full credit. This is academic anarchy. This is a violation of the contractual obligation of the university, a fraud on its students and the employers who subsequently employ them.

In a letter published in the *New York Times*, five students took the Harvard faculty to task for its vote on May 6 to allow students not to complete their academic year but get credit for their courses anyway.

This action, the students said, constituted "a complete abandonment of academic standards by a university faculty, previously considered among the world's greatest." I agree with these students. Indeed, to my mind, and I say this as a Harvard man, it will not long continue to be among the world's greatest unless, instead of abandoning, it improves its standards of conduct and requirements of scholarship.

It is gratifying that the viewpoint of these Harvard students has been vindicated by the Court of Appeals for the State of New York (the highest court in that State). In a recent ruling that court, in an action filed by the New York and Rutgers Universities Schools of Law, unanimously held that law school students who (1) had not taken the number of classroom periods specified for any particular course in the catalogs of their respective approved law schools, and (2) who had not taken final course examinations to test their understanding of the context of the course, were not eligible to take the bar examinations in New York State, even though they had been given credit for those courses and had been graduated by their respective institutions. This of course applied not only to New York and Rutgers Universities, but to other universities as well. The tragedy is that students who had paid tuition for full courses, but were not given them, are now being denied the right to take bar examinations. Thanks to the Court of Appeals the integrity of legal education was preserved despite the lack of integrity of educational administrators.

Nor is there any excuse for the suggestion that colleges should close down so students may take a week or more to engage in politics just before the elections. With their meager knowledge of what makes our country "tick" and without having yet made any major contribution to our country, there is ground for the argument that they have done too much politicking already.

*My ninth suggestion* is that our laws ought to be more vigorously enforced and our judges ought to be more severe in their judgments. It is shocking to me as a lawyer to note that although hundreds of students have been arrested around the country, few have been brought to trial. Those who have faced a judge have escaped, for the most part, with small fines for misdemeanors.

There have been only three arrests on federal charges of sabotage and destruction of government property.

More information should be given by universities to their students as to federal laws. College students and faculty are shocked when they learn how tough these laws are:

A 1917 law making any attempt to interfere with and obstruct the United States in preparing for and carrying on defense activities an act of criminal sabotage. This carries a penalty of 30 years in prison and a $10,000 fine.

The destruction of Government property is punishable by 10 years in jail. It also carries a $10,000 fine.

Law enforcement officials complain they have trouble getting students or school authorities to identify anyone involved in the anti-ROTC incidents. No wonder that the revolutionaries on campus repeat the same acts time and time again on the same and different campuses.

*My tenth suggestion* is that there ought to be better business management among institutions of higher learning. If business men, who pay the taxes, ran their businesses with the profligacy as many institutions of higher learning they would go broke overnight. I have time for only one example. In 1958 the Educational Facilities Laboratories conducted a survey of the utilization of buildings of 60 four-year, degree-granting liberal arts colleges in the North Central region of the United States. Of the 53 colleges reporting, there was an average utilization of only 40 percent of classrooms and 25 percent of laboratories. Yet most of them planned new buildings or the renovation of old buildings, and many were clamoring for federal funds for this purpose. This to my mind indicates an extravagance which should not be condoned either by the tax payer or private benefactors.

*My eleventh and final suggestion* (you will note I have one more than the Ten Commandments given to Moses) is that instead of our states giving fixed appropriations to our state institutions of higher learning, they should give a certain sum to each student which he can use for his tuition or educational expenses in any accredited university of his choice, public or private, church-related or otherwise. When most of us were in college three-fourths of the students attended private colleges; now three-fourths of them attend public institutions. Some of these state institutions have become so large they have lost the intimate touch indispensable for proper education, which is one of the genuine causes for dissatisfaction on our campuses.

This change in appropriations would permit a student, if he desired, to attend some well-recognized private institution where there have been no riots or disturbances and where there is the proper climate for obtaining an education. This would bring about a competition in education comparative with competition in business. This would be healthy for education and do away with the monopoly and uniformity that state institutions are fast developing. It would make both state and private institutions responsive to the will of the legislature and to the parents who, after all, are the ones who pay the money for the education of their children. It would also force educational institutions to be more economical in operation, which is badly needed. I do not claim credit for this idea. It is being increasingly asserted by prominent educators, many in state institutions. Stated briefly, the effect of this could be that universities would have to satisfy the students and their parents rather than their own smug selves.

In conclusion may I say just one word with respect to the claim advanced by some extreme militants—that the demonstrations and riots are necessary to preserve the traditional concept of free speech. This is nonsense. A survey of 60,447 faculty members conducted last year under a sponsorship of the Carnegie Commission on Higher Education found more than 80 percent of those who replied agreed that "campus demonstrations by militant students, instead of being necessary to preserve free speech are a threat to academic freedom."

May I also comment with respect to the claim that the disruptions on our campuses are caused by a lack of money. In the words of Sidney Hook that is "noisome hogwash." The universities which have had the most trouble have been those which have had the most money. All the money in the world will not correct the false notion that the purpose of a university is to engage in political reformation rather than education. It will only accelerate and aggrevate the present malady. Political reformation should be left to our law-makers, not the noisy militants on our campuses.

When our university administrators abandon their administrative cowardice and show the courage necessary to conduct sound and sensible educational programs instead of attempting to usurp the functions of our legislatures then, and only then, will there be bright hope for the future of higher education in America, for only then will universities and colleges receive the support of the American public.

---

## WILL THE TURBOTRAIN DIE?

Mr. PELL. Mr. President, in past weeks there has been much discussion about the advantages and disadvantages to the public weal of building an airplane capable of transporting people across the ocean at supersonic speed. In New England where our airports are saturated, our highways are filled with bumper-to-bumper traffic, and trains are nearly nonexistent, we have been concerned with a more immediate and practical problem; that is, whether the one ray of hope New Englanders have had for improved transportation, the turbotrain, will be taken off the tracks by the Department of Transportation.

Mr. President, I ask unanimous consent that an editorial in the Providence Evening Bulletin of September 22, 1970, speaking of this problem, and an editorial in the New York Times, September 29, be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Providence (R.I.) Evening Bulletin, Sept. 22, 1970]

WILL TURBOLINER DIE?

If the high speed TurboLiner train service between Boston and New York is to be continued and expanded, it is as shatteringly obvious as a runaway freight train that the live-or-die decision rests in the hands of Transportation Secretary John A. Volpe. Fortunately, few men in Washington are as keenly aware as Mr. Volpe of the need to strengthen passenger rail service in southern New England.

Department of Transportation officials are frank to admit that the continuance of the service is in doubt. Contractual relations with United Aircraft, builders of the low-slung high speed trains, are about to run

out. Further, no new money is in sight for the trains in the department's new budget—a budget still not approved by the Congress.

Creation of the service, said a D.O.T. spokesman, was an investment in an "equipment demonstration," and not a marketing project as was the MetroLiner service between New York and Washington. It is possible that the TurboLiners may be reclassified as a "marketing demonstration," but no decisions have been reached. The situation, said one spokesman, is "really fluid."

The first comment that comes to mind is simple. If the TurboLiner was simply a testing of gadgetry, why pour millions into a job that was scheduled to be a dead end operation? If the testing was done to determine practical usefulness in the market, why weren't plans made two or more years ago to find the money to support extension of the service when and if it proved successful?

Penn Central is happy with the kind of service the two trains have given. Despite publicized breakdowns now and then, the railroad reports that the trains completed 96 per cent of their scheduled runs. Further, patronage has held in the vicinity of 85 per cent of capacity, a figure that seems almost astronomical in terms of volumes on standard passenger runs.

There is talk that a new surge of life for the experimental trains may come if Rail Pax orders them. Under pending legislation, Rail Pax may be created as a federally-sponsored agency to help railroads in financing new equipment. Well and good—if it happens. Acceptability of the trains by Rail Pax would be good news for United Aircraft, the manufacturers.

But what of the immediate problem—the preservation of the TurboLiner service between Boston and New York this fall? There have been suggestions for adding four new cars to the two trains and then for going to Congress for more money to turn the "equipment demonstration" into a "marketing demonstration"—but no decisions on the issues are in sight.

Because of the contractual arrangements among the government, the manufacturer, and Penn Central, railroad officials are unable to determine the exact relationship between fare income and operating expenses. A study of that relationship would be highly useful; if adding more cars to the two trains would increase the revenue potential, perhaps Penn Central could go it alone.

But Penn Central is in trouble financially, and it cannot be expected to assume the fiscal risks of continued service if it does not have some clear figures on revenues and costs. Since the trains have proved themselves mechanically successful and operationally attractive, it would be a sad blow at mass transporation in southern New England if they went out of service just by default of D.O.T. action.

There is reason to hope that Mr. Volpe, who has shown himself to be thoroughly aware of the need to revive and strengthen mass transporation in the public interest, will take immediate hold of the Turbo-Liner situation and get busy at the task of keeping it going as a marketing venture. If he needs help, southern New England waits only for a call.

SLOW TRAIN

Two statistics tell the story of topsy-turvy Federal transportation policy. In the fiscal year that ended on June 30, the Federal Government provided $2.2 billion for urban highways. All programs for urban mass transit in the coming year—bus lines, subways, commuter railroads—total $214,000,000, less than one-tenth as much.

A six-lane or eight-lane highway cutting through a densely populated city disrupts neighborhoods and evokes intense bitterness. Such a highway is not nearly so efficient or economical in carrying a high volume of rush-hour traffic as is a subway or a railroad. Yet the money pours forth for the superhighways from the Highway Trust Fund, while mass transit languishes for want of appropriations.

Against this background, the two bills which the House of Representatives considers today are pitifully small. The first authorizes $3 billion for matching grants to states and cities for mass transit facilities and equipment over the next five years. So many cities across the country—San Francisco, Chicago, New York, Washington, D.C.—are undertaking to build or rebuild their mass transit that this sum could usefully be spent in one year instead of five. Even so, the House version is substantially better than the Senate bill which authorized only $1,860,000,000.

A second bill, already passed by the Senate, would extend the high speed ground transportation act for another year and authorize $21 million for research and demonstration projects. It is under this program that the Penn Central has received modest financial help in developing the Metroliner between Washington and New York and the Turbotrain between New York and Boston. Both are good projects which have only partially realized their potential. A rational transportation policy would lead to a substantial investment in rebuilding the roadbed, increasing the frequency of service and modernizing ticket selling.

The opportunities in ground transportation are there if the Administration and Congress would get off the slow train and begin giving this problem the express treatment it deserves.

## GALLUP POLL ON McGOVERN-HATFIELD AMENDMENT

Mr. CRANSTON. Mr. President, recently the George Gallup American Institute for Public Opinion issued the results of a nationwide survey on the McGovern-Hatfield "amendment to end the war" of which I was a cosponsor. In a questionnaire that went to 1513 households across the country the question was asked:

A proposal has been made in the Congress to require the United States Government to bring home all United States troops before the end of next year. Would you like to have your Congressman vote for or against this proposal?

Significantly, 55 percent of those asked responded positively to this question, 36 percent indicated a negative response, and 9 percent had no opinion. I recommend a close and careful scrutiny of the findings of this important survey to Senators and therefore ask unanimous consent that the complete poll and article be printed in the RECORD.

There being no obection, the items were ordered to be printed in the RECORD, as follows:

PULLOUT FAVORED BY MOST IN POLL—HATFIELD-McGOVERN PLAN IS BACKED IN GALLUP SURVEY

PRINCETON, N.J., Sept.—A majority of the United States Public favors the Hatfield-McGovern plan, which would end troop involvement in Vietnam by the end of 1971, according to the findings in the most recent Gallup Poll.

The public's favorable vote, recorded in a survey from Sept. 11 to 14 contrasts with the vote in the Senate on Sept. 1, when by a 55 to 39 vote the plan was rejected.

If the vote on withdrawal were left to the men of the nation, a fairly even division of opinion would be recorded. The scales are tipped dramatically in favor of withdrawal when the vote of women is taken into account. The latter favor getting out of Vietnam by the end of next year by the ratio of more than 2-to-1.

The difference in the views of men and women is one of the greatest recorded on any national issue in recent years.

The issue of Vietnam has acquired more and more partisan overtones during the last year, with rank-and-file Democrats now favoring withdrawal by a ratio of 61 per cent to 29 per cent—while Republicans are almost evenly divided. Significantly, the Democrats in the Senate voted in favor of the plan by a 3 to 2 ratio.

One consolation for those who oppose a fixed-time withdrawal is that the best-educated group—with the highest voting turnout—are almost evenly divided.

DETAILS OF BILL

The Senate bill was sponsored by Senator Mark O. Hatfield, Republican of Oregon, and Senator George S. McGovern, Democrat of South Dakota, provided that the only military funds that could be spent in Vietnam after April 30, 1971, were those for the orderly termination of operations and the systematic withdrawal of armed forces by Dec. 31, 1971.

The Vietnam issue has lately not loomed large in the minds of voters, compared to earlier days, but it does lie smouldering and could easily become an issue between now and Nov. 3.

To obtain the results reported today, a total of 1,513 adults were interviewed in person in more than 300 scientifically selected cities, towns and rural areas of the nation. This question was asked:

A proposal has been made in Congress to require the United States Government to bring home all United States troops before the end of next year. Would you like to have your Congressman vote for or against this proposal?

The following table shows the results nationally and by key groups in the population:

| | For | Against | No opinion |
|---|---|---|---|
| Midwest | 56 | 35 | 9 |
| South | 49 | 38 | 13 |
| West | 51 | 44 | 5 |
| **OCCUPATIONS** | | | |
| Professionals and business | 50 | 43 | 7 |
| Clerical and sales | 52 | 42 | 6 |
| Manual | 59 | 33 | 8 |
| Farmers | 50 | 31 | 19 |
| **COMMUNITY SIZE** | | | |
| 1,000,000 and above | 61 | 28 | 11 |
| 500,000 and above | 61 | 28 | 11 |
| 50,000 to 499,999 | 50 | 43 | 7 |
| 2,500 to 49,999 | 61 | 33 | 6 |
| Under 2,500 | 52 | 38 | 10 |

## HEALTH MANPOWER FINANCIAL NEEDS

Mr. HART. Mr. President, we shall soon have before us for consideration the Labor-HEW appropriation bill.

One of the sections of this bill, one that is critically important for every American, young or old, is the section providing funds for what we call health manpower. By that, we mean Federal assistance to our institutions for the training of students of medicine, osteopathy, dentistry, veterinary medicine, podiatry, and optometry.

There is a lot of talk, both in Congress and around the country, about the impending crisis in delivery of medical service. The HEW appropriation bill is the place to do something about it.

I ask unanimous consent that there be printed in the RECORD the testimony I presented on June 16 to the Senate Appropriations Subcommittee on this sub-

ject. Additionally, I ask unanimous consent to insert excellent, factual summaries of the financial need at Wayne State University and the University of Michigan.

I hope that these recent, hard figures—which I am sure are typical of the situation across the Nation—will be persuasive in encouraging both Congress and the Chief Executive to permit us to provide more adequately for the health of our people.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

HEALTH MANPOWER

(Testimony of Senator HART)

Mr. Chairman, this nation faces a serious crisis in its system of delivering health care to people.

Two major causes of this crisis appear to be a shortage of health professionals and the inefficient use of medical personnel and facilities.

There is little your subcommittee can do about the latter cause.

However, the level of funding of health manpower programs does fall within the jurisdiction of this subcommittee, and quite frankly, the Administration's budget requests are inadequate to meet the nation's health crisis.

You have heard testimony that the nation faces a shortage of 52,000 doctors and 140,000 nurses. Even if part of that shortage could be eliminated through more efficient use of personnel, the nation clearly is in need of more health professionals, not to speak of the shortage of people entering allied health fields.

In his testimony before your subcommittee, John A. D. Cooper, President of the Association of American Medical Colleges, gave three reasons for the continuing shortage of medical personnel. I would like to repeat just one of those reasons—his third:

"Admitting the contribution of the two previous factors to the continuing problem of the M.D. shortage, I believe that the single most crucial determinant of the situation we face is our utter failure as a nation to make the M.D. shortage a high-priority item in the expenditure of our efforts and resources."

It seems that concern for misplaced priorities is not confined to public officials.

Congress has established several programs designed to help ease this crisis but unhappily, despite recognition of the crisis, the Administration has not seen fit to request the fully authorized appropriation for these programs. That failure is magnified because the demand even outstrips the authorization ceiling.

Perhaps the best way to make these gaps clear is to list the demand, the authorization and the administration budget requests for these programs.

*Grants for construction of medical teaching facilities*: demand, $600 million; authorization, $225 million; budget request, $118 million.

*Loans for Medical Students*: demand, $43 million; authorization, $35 million; budget request, $12 million.

*Loans for Student Nurses*: demand, $27 million; authorization, $21 million; budget request, $9.6 million.

In addition, I understand that more than one-half of the nation's medical schools have received special project grants under the Institutional and Special Project Grants program of the Public Health Service Act.

The demand for these grants underscores the crisis many of the medical schools face in meeting operating expenses.

Unmet needs to modernize medical teaching facilities and medical school curricula may well sentence the people of this nation to health services one might expect to find in a developing country rather than in one with an annual gross national product approaching the $1 trillion mark.

But here again the budget request is far beneath the authorized ceiling for the Institutional and Special Project Grants program. The Administration could ask for $168 million; it has asked for only $113 million.

Mr. Chairman, your subcommittee has heard and will hear witnesses far more knowledgeable in this area than I, but even a layman can read the unmistakable signs that a health care gap exists in this nation, and that the gap is widening.

We in Congress should take the lead in doing at least as much as present laws allow. I urge that the Senate approve appropriations matching the full authorization for each of these programs.

In a related area, I support a budget increase of $4 million over the budget request of $11 million for staff support of University-affiliated centers, authorized by PL 88–164.

These centers provide interdisciplinary training for persons working in the field of mental retardation and related disabilities.

The Association of Directors and Administrators of University-affiliated centers reports that more than 60 universities are conducting training programs and centers have been or are under construction at 19 universities.

Last year, the Senate approved $11 million for this activity, but Administration released only $9 million, its original request.

As a result of the Administration's cutback, programs for which facilities already had been constructed at Georgetown University, Boston Children's Hospital, the University of California at Los Angeles and the University of Colorado had to be delayed for a year.

In addition to making up for that delay, new centers and programs are being started at other universities. It seems to me that the normal growth of this program justifies an increase in the appropriation to $15 million.

Dr. Julius S. Cohen, associate director of the Institute for the Study of Mental Retardation at the University of Michigan, has a more detailed presentation on this program which I commend to your attention.

---

FINANCIAL AID FOR MEDICAL STUDENTS—OUTLOOK FOR 1970–71

The outlook for financial aid for medical students at Wayne State University has deteriorated markedly over the past year. The reasons for this are both national and local in nature.

NATIONAL FACTORS

The Federal Health Professions Loan and Scholarship Program has been sharply curtailed over the past few years. This program provides aid to students in the following professional schools: medicine, osteopathy, dentistry, veterinary medicine, podiatry, and optometry.

Table I shows the reductions in national funding over the past few years and the proposed funding for 1970–1971.

TABLE I

| | FHP loan | FHP scholarship |
|---|---|---|
| 1968–69 | [1] $26,400,000 | [1] $11,200,000 |
| | [2] 14,200,000 | [2] 5,200,000 |
| 1969–70 | 15,000,000 | 15,400,000 |
| | 7,900,000 | 7,200,000 |
| 1970–71 | 12,000,000 | 15,000,000 |
| | 6,300,000 | 7,000,000 |

[1] Total for all professional schools.
[2] Allocation for all medical schools.

While there has been a slight increase in scholarship funds (5.2–7.0 million dollars), loan funds have been slashed by more than 50%. The future decrease in loan funds in the proposed budget for 1970–1971 is based on the assumption that scholarships and loans will go to students from families with gross incomes below $10,000. The government expects that students from higher income families will take advantage of the federal guaranteed loan program. Our experience, and that of most medical schools, with the latter program has not been good. Only a few banks are prepared to provide loans under this scheme.

Table II shows the effect of reduction in federal money on financial aid available to Wayne medical students. For the year 1968–1969 we received $364,727 while the funding for 1969–1970 was $245,368, a 33% reduction. Total resources for 1969–1970 were more than $100,000 short compared with funds available for 1968–1969. This reduction coincided with an increase in total medical student enrollment at Wayne and the largest single increase in tuition in the school's history.

TABLE II.—FINANCIAL AID FOR MEDICAL STUDENTS

| | 1966–67 | 1967–68 | 1968–69 | 1969–70 | 1970–71 |
|---|---|---|---|---|---|
| Health professions loans | $365,000 | $289,301 | $282,927 | $133,968 | $81,409 |
| | | | [1] ($28,292) | [1] ($13,968) | [1] ($8,140) |
| Health professions scholarships | 22,000 | 50,143 | 81,800 | 111,400 | 85,000 |
| Total | 387,000 | 339,444 | 364,727 | 245,368 | 174,549 |

| Nonresident | $1,500 | $1,500 | $1,750 | $2,350 | $2,350 |

[1] University contribution.
[2] Wayne State University sponsored.
[3] National average for State supported medical schools $687—Wayne's tuition is 2d highest in United States for this category.

LOCAL FACTORS

*1. Tuition increase*

Tuition has increased markedly at Wayne Medical School over the past few years. In 1967–68 residents of Michigan paid $750 annually while non-resident students paid $1,500. Tuition now amounts to $1,150 for residents and $2,350 for non-residents.

Tuition for residents for 1969–1970 was the second highest nationally for state-supported medical schools (see Table III). Not only is there lower tuition at the other medical schools, but many have provided students with free microscopes or microscopes for rental. (Microscopes for rent will be available at Wayne for the first time for 1971–1972).

TABLE III.—YEARLY TUITION IN STATE-SUPPORTED UNIVERSITIES WITH MEDICAL SCHOOLS

| | Medical school [1] | | Undergraduate school [2] | |
|---|---|---|---|---|
| | Resident | Non-resident | Resident | Non-resident |
| Highest | [3] 1,225 | 2,350 | 1,035 | 1,877 |
| Lowest | 200 | 206 | 202 | 232 |
| Average | 687 | 1,409 | 357 | 920 |
| Wayne | 1,150 | 2,350 | 310 | 750 |

[1] Medical College Admissions Requirements 1969–70; AAMC.
[2] Comparative Guide to American Colleges 1968–69; James Cassand Max Birnbaum.
[3] University of Louisville.

*2. Increased enrollment of students from low income families*

a. Enrollment of black students increased significantly for the year 1969–1970. Nearly all of these students have little or no financial resources of their own and must depend on financial assistance provided by the school. Furthermore, the number of black students will increase each year.

b. Wayne State University is an urban university in a working class city and many of our students come from lower income families.

*3. Cost of living increase*

Cost of living increased 6% for the U.S. over the past year, but 6.4% for the City of Detroit. Nearly all of our students live in Detroit while at school and thus suffer the consequences of this inflation. Special items that hit our students harder than at many other schools are:

a. Lack of housing: There is no university dormitory or housing available.

b. Transportation needs: Nearly every medical student needs an automobile to commute to school, and for travel to various city hospitals for clinical education. This age group of students is particularly hard hit by high insurance rates.

PROJECTION OF FINANCIAL NEEDS

The projection of needs is based on experience of the past year. For the year 1969–1970, 311 (or 57%) of a student body of 548 applied for financial aid and 250 (or 50%) were awarded funds. More students merited support but could not be funded, while in most instances funds awarded to students were short of need.

a. Black students: Enrollment of black students for 1970–1971 is 39 (an increase of 16). Average financial support required for each student is $2,000—total $78,000.

b. Support for all students: The average support per student for 1969–1970 was $514. ($282,000 per 548 students). Using this inadequate figure as a baseline for 1970–1971, we need $291,000 for 566 students. However, additional funds of $58,000 are needed for black students ($78,000—20,000 $514 per student x 39).

Funding from Federal Health Programs for 1970–1971 is $166,409 for 566 students. Thus, additional funds of $183,000 are urgently needed.

---

THE UNIVERSITY OF MICHIGAN MEDICAL SCHOOL,
*Ann Arbor, Mich., September 10, 1970.*

Hon. PHILIP A. HART,
*Old Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR HART: The Health Professions Scholarship and Loan allocation to The University of Michigan Medical School was drastically reduced again this year. The situation is much worse than when I wrote you in March, 1969. This is to request your assistance in conveying our plight to Congress and urging strong support for the fullest possible funding of the program.

The President's 1970 Fiscal Budget proposed the following Health Professions Scholarship and Loan allocation:

| | Loans | | Scholarships | |
|---|---|---|---|---|
| | All schools | Medical schools | All schools | Medical schools |
| Number of participating schools | 253 | 102 | 269 | 102 |
| Enrollment in participating schools | 79,520 | 38,240 | 84,000 | 38,240 |
| Number of students assisted | 10,502 | 5,191 | 17,666 | 7,484 |
| Percent of students assisted | 13 | 14 | 21 | 20 |
| Amount requested | $43,381,803 | $23,448,899 | $17,549,751 | $8,091,320 |
| Amount allocated | $12,000,000 | $6,339,000 | $15,000,000 | $6,828,000 |
| Percent of request funded | 27.7 | 27.0 | 85.4 | 84.3 |
| Per capita allocation | 151 | 166 | 179 | 179 |

The University of Michigan Medical School's actual 1970–71 Health Profession allocation compares as follows:

| | Loans | Scholarships |
|---|---|---|
| Enrollment | 845 | 845 |
| Amount requested | $808,002 | $169,000 |
| Amount received | $126,691 | $145,855 |
| Percent of request funded | 15.6 | 86.3 |
| Per capita allocation | $149.93 | $172.60 |

The University of Michigan Medical School expected to share in this retrenchment, but we are extremely distressed that we were awarded 11.4% *less* than the average 27% of loan requests funded for all medical schools.

Our enrollment has increased (from 809 in March 1969, when we last wrote, to 845) in an effort to meet the national demand for more physicians. More of our students than ever before come from disadvantaged backgrounds. Sixty-three of 125 first-year students requesting financial assistance came from families whose income was less than $10,000. Forty-seven such students entered last year and now are in their second year of studies. In the face of rising tuition and living costs, more students need more dollars than ever before. Guaranteed Loans do not help bridge the gap, not only because the $1,500 limit per person per year is unrealistic, but also because most banks will not participate in that program.

This may well be the first year in the recent history of the University of Michigan Medical School when a student may have to drop out of Medical School because of lack of funds. Should that happen, there will be one fewer medical doctor to provide health care for a growing nation.

We are deeply concerned that inadequate funds for students may jeopardize our achieving the goal of providing more health manpower for the nation. It is indeed deplorable if the Federal Government is unwilling to invest in the very product they say is desired for the people of the United States. It is especially untenable when such an investment is in the form of repayable loans.

We hope you will carry our message to Congress.

Sincerely yours,
ROBERT A. GREEN, M.D.,
*Associate Dean for Student Affairs.*

---

## THE PRESIDENT'S REPORT, COMMISSION ON OBSCENITY AND PORNOGRAPHY

Mr. DODD. Mr. President, during the past few hours, the report of the President's Commission on Obscenity and Pornography has been released to the public.

The contents of the report, of course, are not entirely new; a preliminary report was leaked to the news media less than 2 months ago and caused a considerable uproar among the public and Members of Congress; indeed, there was some indication that the preliminary findings of the Commission were repudiated by the President himself.

To be sure, the findings of the earlier draft report have been considerably toned down in the final report before the public today.

The draft report boldly said that "pornography does not have any ascertainable causal relationship with crime, juvenile delinquency, deviancy, or disturbance."

This conclusion was reduced in the final report to read that extensive investigation "finds no evidence of such a relationship."

Although the change in the conclusion is slight, it seems curious that it was made at all.

Did the Commission find new evidence to soften its conclusion?

Did it give way to the popular outrage caused by the preliminary report?

Was the Commission upset about the President's reaction to its findings?

Whatever the answer, the report before us indicates that it was by no means as scientifically arrived at as the Commission insists.

If the Commission indeed did find new evidence to soften its conclusion, then it follows that it did not explore all the scientific evidence that, with thorough research, was available before it made its preliminary or final reports.

If the Commission gave way to popular outrage over its first report, then its entire conclusion must be dismissed as scientifically invalid.

And if it was upset about the President's initial reaction, and changed its findings, then the report is totally useless: if it was valid, the Commission would stand behind it no matter what public or Presidential reaction is.

But, of course, the Commission's report may not have any scientific validity at all.

Witnesses before our Juvenile Delinquency Subcommittee said it consisted of hearsay, slipshod "investigations," palpably false "evidence," and unwarranted conclusions.

There are such gems as the suggestion that sex crimes in Denmark have dropped by 31 percent since they opened the floodgates of pornography last year.

In fact, that 31-percent reduction is due to the fact that vast numbers of crimes, such as pandering and the like, are no longer crimes, so obviously there is a reduction of crime statistics just as there would be here if we omitted larceny as a punishable offense.

The most clearcut evidence about the sometimes slipshod, sometimes questionable, and sometimes unscientific procedures of the Commission has come from a witness who appeared before the Juvenile Delinquency Subcommittee just a week ago.

Dr. Victor B. Cline, a professor in the department of psychology, University of Utah, adduced massive evidence last week about some of the unreliable and unscientific methods adopted by the Commission and its investigators.

Indeed, the Commission's report is so grossly inadequate and distorted in his opinion that one cannot help suspect that it was written with a predetermined conclusion in mind.

I ask unanimous consent that Dr. Cline's statement be printed in the RECORD because I believe it is of supreme importance for Senators to be aware of it when they evaluate the Commission's findings which, no doubt, will play an important part in the legislation under consideration by Congress.

Lest the Commission's report misguide

Congress and the American people, we should be very careful to see it in its proper light.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF DR. VICTOR B. CLINE[1]

1. INTRODUCTION

By way of introduction it would probably be wise and appropriate to indicate how and why I am here today critiquing the Final Report of the Commission on Obscenity and Pornography.

I find myself in the awkward and difficult position of being asked to review and evaluate a report which as yet is unpublished or officially released. However, an early draft of the "Effects Panel Report," the heart of the whole study, was unofficially released in early August to the media with great attendant publicity and with at least one major newspaper printing the text verbatim. In addition, some members of the Pornography Commission staff have been giving frequent interviews to the press citing research results, Commission Report recommendations, etc. Also some of the research has been reported in open scientific meetings with attendant press coverage and review. So a critique at this time may not be too inappropriate.

For some years, as a professor of psychology, I have been keeping a literature file relative to the "effects of pornography on behavior" and related issues, and have over this time participated in an occasional symposium or made presentations relative to the pornography issue.

On May fourth of this year I testified before the Presidential Commission on Obscenity and Pornography at their Los Angeles hearings—reviewing some of the literature on the subject, as well as such related issues as porno-violence, the "satiation theory," limitations of some of the published research, and so forth. One of the recommendations made to the Commission on May fourth was that a panel of independent and unbiased social scientists be allowed to review their research and the conclusions which might legitimately be drawn from them. It was general knowledge at this time that the Commission was sharply divided ideologically with charges and counter charges of bias and vested interest imputed to some of its members. The specific text of the May fourth recommendation is quoted below:

"I would respectfully suggest to the Commission that with regards to the various research projects which they have contracted out, that a panel of social scientists, experts on human research, carefully evaluate the research results and especially the kinds of conclusions which might be drawn from them. If this, or something like this is not done, the Commission could run considerable risks when the Final Report comes out. If even only several of the commissioned studies are badly flawed methodologically and incorrect inferences were drawn from the, there could exist the strong possibility of attack and criticism by the scientific community which might result in a casting of doubt on the validity of all of the studies, which would greatly lessen the impact of the whole report. But probably the important issue is in the interest of truth. The issue of pornography and its dissemination is very emotionally loaded for those on both sides of the fence. We have witnessed in the recent past a real abuse of statistics and studies about pornography which are little more than myths, but passed on and thought of as valid sometimes by the most reputable of professional personnel."

On about July 27 one of the minority members of the Commission sent to me a copy of the first draft of the "Effects Panel Report" asking for comment on its scientific merit, accuracy, etc. This report was gone over with some care. It was possible to compare some of its discussions and conclusions against some of the research it was based on which was available in the open scientific literature. However, my critique was limited by the fact that none of the Commission sponsored and financed studies (all unpublished) were available for review and cross checking. Despite this limitation there was sufficient research available in the open literature, such as that of the Kinsey Institute on sex offenders, social indicator data on sex crimes statistics, etc., to obtain a fairly good idea of what they were doing with their data. This critique and analysis revealed many very serious flaws in this report as well as instances of not reporting data and findings contrary to the Commission majority point of view. These opinions and quite critical comments by this speaker were expressed in the letter sent to this Commission member. Several days later the "Effects Panel Report" was leaked to the press with great attendant publicity about how empirical research had demonstrated pornography "harmless." Quite concerned, I sent a letter to every member of the Commission including its chairman, repeating my critical evaluation of the scientific basis of portions of this report. Point by point documentation was given. Again a recommendation was made that an independent panel of behavioral scientists be allowed to review all of the research to determine what conclusions might be legitimately drawn from their data. As my letter to each Commission member expressed it:

"If what your hired professional staff has written and prepared is true, scientific, valid, and without major flaws, then they should welcome a careful, thorough evaluation of what they have done by those peers having high competence and professional ability. Since this Commission's report undoubtedly will have a profound effect on legislation before Congress, the judiciary, educators, the media, ministers and even parents, a flawed report being issued under the Commission's imprimatur would represent a major dereliction of responsibility as well as contributing even further to the tensions and conflicts which beset our society. This is especially so now since in my view this report has limited credibility and is certain to be vigorously attacked by knowledgeable critics, as well as others. . . . If you really are interested in ascertaining the truth about pornography's potential harm or non-harm, I see that you have little to lose by such an endeavor."[2]

I also requested access to the original Commission studies for evaluation and review. None of these requests were honored.

Shortly after this I was asked to testify before the House Postal Operations Subcommittee about my critique of the Commission's "Effects Panel Report", which somehow they had heard about. This I did, on August 11, giving lengthy documentation to the serious flaws in the Commission report and for the third time, now publicly, urging the Commission to allow a panel of unbiased independent behavioral scientists to evaluate their research and their conclusions drawn from it. Once again, the Commission did not respond to this suggestion.

About a week following my testifying before the House Subcommittee, Father Morton Hill, a member of the Commission minority group, phoned me indicating that he had in his possession some copies of the Commission's original research reports which up to this time had been kept confidential and unavailable to anyone outside of the Commission. He mentioned that some 85 studies and research projects had been contracted out by the Commission. I agreed to come to his New York office and evaluate these studies if he could obtain copies of all of them for me to review. This he agreed to do, but was unable to secure them only with the greatest difficulty. The Commission staff most reluctantly released the last of these research documents, which were vital in the writing of the minority report, only hours before the final deadline for submission of this report in early September.

During August and early September the speaker spent 14 days in New York going through all of the Commissions research reports bearing on the "effects" question.

This involved first going through and evaluating each research, its strong points and its limitations, and determining whether its conclusions were valid and backed up by the data and proper methodology. While all of the research projects had their limitations, some were done with great skill and represent important contributions to the scientific literature. Others were very badly flawed in various ways which meant the results were inconclusive or of little value, and therefore that few legitimate conclusions or generalizations could be made about them. Following this the speaker went through the final version of the "Effects Panel Report" and the other Commission reports to check what conclusions they had reached in their review of the scientific literature, noting the references they cited. Then I went back to the individual research documents to cross check the adequacy of their conclusions, if the research was valid, etc. The results of this analysis will be reviewed here today. Because, of time limitations, this will necessarily be condensed and some lengthy commentaries omitted.

Several very important considerations should be noted before we proceed further. The Commission-sponsored research ran into many thousands of pages, some ten volumes of material, highly technical in nature. And with the addition of the outside scientific literature also comprising many thousands of pages, most commission members did not have the time[3] nor expertise to read or

[1] Dr. Cline is currently a professor in the Department of Psychology, University of Utah, where he teaches courses in experimental, clinical and child psychology. He has been with the University of Utah since 1957. Prior to this he was a Research Scientist with the George Washington University's Human Resources Research Office engaged in a broad variety of human factors research. He has been a practicing clinical psychologist engaging in psychodiagnostics and psychotherapy for some 15 years. He is also the author of over thirty published research papers, principal investigator on a number of research projects funded by the National Institutes of Health, Office of Education, Office of Naval Research, etc. He is the Program Director of the Southern Utah Guidance Clinic (a traveling mental health clinic) and consultant to various government agencies, industrial firms, etc.

[2] Since the occasion of this critical review of their first "Effects Panel Report", their report has been almost totally rewritten twice, though still coming to the same conclusions (e.g., no evidence that pornography is "harmful"). These later versions have tended to be more modest, cautious, have used more correct and up to date data, and represent in many ways a more adequate review of the literature, though still possessing shortcomings, to be discussed later in this paper.

[3] None of the Commissioners lived in the Washington, D.C. area where the Commission Headquarters, Research Reports, and staff were located. It took this speaker 14 very long days to go through just the Commission studies. It is unlikely that many Commission members, who continued in their regular employment, coming to Washington for occasional meetings, had the opportunity to systematically review all of the original research documents.

evaluate all of this. Chairman Lockhart, a law professor, has even indicated not reading all of his own Commission's studies. This has meant that a small professional staff, hired full time, have done most of the work of reading and evaluating this material and writing up the scientific results and interpreting it to the Commission. And while the Commission members on the Effects Panel include men with training in the social sciences, if their biases and attitudes toward pornography were similar to that of the professional staff, this could conceivably result in a report slanted to a particular point of view.

In any event, this means that most of the Commission members, who are non-scientists and untrained in statistics and the techniques of research methodology are at the "mercy", in a sense, of the small professional staff and the scientifically trained members of the Effects Panel. If their interpretations of the research data are in error there is no way the other Commission members would ever know this, including Chairman Lockhart. *Since the basis of all recommendations made by the Commission derive in whole or part from the "empirical scientific evidence"*, if this evidence has been slanted, tampered with, etc., it then calls into question the basis for many of their conclusions and of course the credibility of the entire Commission Report.

### 2. OVERVIEW OF PROBLEM

There are at least two reasons for the existence of laws regulating and controlling the traffic in obscene and pornographic materials. The *first* has to do with potential harmful or adverse effects such materials may have on the user, child or adult (e.g., corrupt ones morals, deprave, feed a neurosis, awaken and provoke the sex appetite in an unstable individual who might thereby sexually harm or molest another, etc.). The *second* involved an "offense to public morality or taste." Examples might include prostitution, public exposure and nudity, etc., the control of which has its basis in the Judeo-Christian values from which our national culture and heritage is derived.

The majority report of the Commission on Obscenity and Pornography has made recommendations which essentially involve repeal of all laws restricting the distribution, sale or exhibition of any kind of pornography[4] to adults and the same for non-pictorial pornography for children.

However, whenever sweeping changes in social policy, laws, regulations, etc. (such as this) are recommended which might affect the health and welfare of the nation's citizens (which their own and other surveys suggest a significant proportion of the population believe to be the case), the burden of proof for demonstrating "no harm" or "no adverse results" is ordinarily thought to be on the shoulders of the innovators or "changers."

Thus our task here will be to look carefully at the research presented and see if "no harm" has been adequately demonstrated. The issue of pornography being "an offense to public morality and taste" which involves values will not be an issue in this discussion.

### 3. THE PROPER STUDY

The Commission in the summary of their Effects Panel Report conclude:

"In sum, the empirical research has found no evidence to date that exposure to explicit sexual materials plays a significant role in the causation of delinquent or criminal behavior among youth or adults. The Commission cannot conclude that exposure to erotic materials is a factor in the causation of sex crime or sex delinquency."

[4] They would approve control of unsolicited mailed advertisements for pornography and certain open displays of same.

Based on the above paragraph, cited again and again in various forms throughout the whole report, we have the basis for recommending the removal of all pornography controls for adults and all controls (except pictorial pornography) for children.[5]

Yet if we review the research of Propper, in his study of 476 reformatory inmates (see Table 1) we noted again and again a relationship between high exposure to pornography and "sexually promiscuous" and deviant behavior at very early ages, as well as affiliation with groups high in criminal activity and sex deviancy. This study was financed and contracted by the Commission, and while they refer to Propper's study often, no mention is made of any of these specific results in the Commission Report. This study was for many months in the hands of the professional committee that assembled and wrote the report as well as available for inspection of any of the Commission members who wished to read it (but no one else). As the reader can scarcely fail to note, there are striking statistical relationships between heavy use of pornography and various kinds of sexual "acting out," deviancy, and affiliation with high crime risk groups.

### 4. THE DAVIS AND BRAUCHT RESEARCH

Davis and Braucht (1970) in a study of seven different populations of subjects comprising 365 people assessed the relationship between exposure to pornography and moral character, deviance in the home, neighborhood, sex behavior, etc. Samples of city jail inmates, Mexican-American college students, black college students, white fraternity men, conservative protestant students and Catholic seminarians were studied intensively. In addition each had one female friend fill out a character scale about their behavior.

TABLE 1.—"EXPOSURE TO SEXUALLY ORIENTED MATERIALS AMONG YOUNG MALE PRISON OFFENDERS" (1970)

(By Martin Propper)

[Sample: 476 male reformatory inmates, ages 16 to 21]

| Activity engaged in | Percent: Subjects having low exposure to pornography | Percent: Subjects having higher exposure to pornography | Source |
|---|---|---|---|
| 1. Age of 1st intercourse 11 or under. | 37 | 53 | Table 31. |
| 2. Age of 1st intercourse 14 or under. | 65 | 86 | Do. |
| 3. Having sex intercourse 3 or more times a week prior to incarceration. | 28 | 45 | Table 29. |
| 4. Having intercourse with 7 or more partners. | 63 | 96 | Table 28. |
| 5. Intercourse with more than 1 person at a time. | 35 | 59 | Page 68. |
| 6. Engaged in passive mouth sex organ contact (sometimes or frequently). | 27 | 56 | Table 34. |
| 7. Engaged in active mouth sex organ contact (sometimes or frequently). | 16 | 49 | Table 33. |
| 8. No homosexual experience. | 53 | 37 | Page 66. |
| 9. Several times to frequently did anal intercourse. | 20 | 40 | Table 35 |
| 10. Belongs to a high sex deviant peer group.[1] | 44 | 78 | Table 36, page 72. |
| 11. Belongs to high anti-social crime group.[2] | 55 | 82 | Table 37, page 73. |
| | Seeing textual depictions of homosexual activity | | |
| | Never (percent) | 10 or more times (percent) | |
| 12. Participation in homosexual activity 1 or more times | 12 | 40 | |
| 13. Table 32 in the Propper study also reveals among the younger age boys a very high relationship between (a) the age at which they saw a picture of sexual intercourse and (b) the age at which they first engaged personally in sexual intercourse. This means that if a boy saw pictures of intercourse at a very early age he engaged in intercourse at a very early age. If he saw intercourse pictures later he engaged in intercourse later. While the data do not provide evidence of causal linkage it certainly raises the possibility. It also reminds one of Bandura's work in "imitative learning" where children learn by imitating what they've seen | | | |

[1] The sex behaviors which constituted this measure included: (a) sex intercourse, (b) gang bangs, (c) going to a whore, (d) getting a girl pregnant, (e) participating in orgies.

[2] The activities which constituted this measure included: (a) friends, suggestions to violate the law, (b) friends in jail or reform school, (c) friends in trouble with the law, (d) purchase of stolen goods by friends, and (e) friends who were members of gangs.

In their study, which was impressive in its rigorous methodology and statistical treatment, they state, *"One finds exposure to pornography is the strongest predictor of sexual deviance among the early age of exposure subjects* [p. 35]." Later they again note, *"In general, then, exposure to pornography in the 'early age of exposure' subgroup was related to a variety of precocious heterosexual and deviant sexual behaviors* [p. 36]." They note that since exposure in this subgroup is NOT related to having deviant peers (bad associations and companions) and similar type variables, it would be difficult to blame the sexual promiscuity and deviancy of these subjects on other influences such as being influenced by friends (rather than pornography) into these kinds of anti-social activities.

It should be noted that this research was contracted and financed by the Commission, was in the hands of the Commission staff for many months, is referred to many times in their report—but not a single mention is made of these negative finds. In fact, the September 3 issue of *The New York Daily News* and an earlier edition of the *Washington Post* carried stories on their research linking exposure to pornography with sex deviancy. This is a particularly important finding in that it suggests real dangers in exposing children and young adolescents to heavy quantities of pornography, the strong implication being that pornography can affect and stimulate precocious heterosexual activity and deviant sex behavior (homosexuality). Obviously more research must be done here, but like with the early studies linking smoking with lung cancer, it would seem most irresponsible not to report such findings and especially in the Commission's Effects Panel Report when so few people have access to the original research, and where publication in the scientific literature would be at least one or two years in the future.

### 5. THE BERGER RESEARCH

Alan Berger and associates in Illinois had contracts with the Commission to do two

[5] Control of unsolicited mail order pornography and open public displays are recommended.

studies. In one they surveyed 473 adolescents primarily in the age range of 14–18 (from working class backgrounds) with an extensive questionnaire which asked questions about their exposure to pornography, their sexual behavior, etc. In the second study 1177 college students were interviewed about similar issues. In carefully reviewing these findings it is once again distressing to note that those data "not favorable" to the majority point of view are either played down or not mentioned.

The two most significant (highest) relationships (between independent variables) were between having been exposed to large amounts of pornography and engaging in high levels of sexual activity. This was true for both high school students (gamma .394 [males] page 48) and college age subjects (gamma .380, page 62). These relationships are lower (but still significant) for women. An example of this relationship can be seen in Table 2 below.

TABLE 2

| | Amount of pornography exposed to student | Percent college males engaging in sex, intercourse, etc |
|---|---|---|
| High | 5-6 | 77 |
| | 4 | 62 |
| | 3 | 60 |
| | 2 | 44 |
| Low | 1 | 4 |

There are also substantial relationships between exposure to pornography (high) and grades (low), especially in high school, but also college for males (gammas of —.256, page 30; and —.216, page 67). The relationship between these two in college declines when one controls out the influence of high school grades, but still remains true for the top college men academically (who have low pornography exposure indices).

In their study of the 473 high school students they found a relationship between frequency of seeing movies depicting sexual intercourse and the adolescent engaging in intercourse (their Table 46, page 101, is duplicated in part below).

TABLE 3

| | Frequency of adolescents seeing movies depicting sex intercouse | | | |
|---|---|---|---|---|
| | Not at all | 1 to 4 times | 5 to 10 times | 11 or more times |
| Percent of males engaging in premarital intercourse | 53 | 62 | 73 | 88 |
| Percent of females engaging in premarital intercourse | 10 | 29 | 44 | |

The above data are in the Commission financed reports, but are not discussed or presented, despite the fact that they have an important bearing on the "effects" question.

And while it is recognized that there are some people in our society with more libertarian views who would not be concerned if pornography did "cause" more young people to engage in premarital intercourse, there are still others, including many parents, who would be concerned and would wish to be so informed. The Commission Report fails in fully informing its readers about such associations or linkages as noted above.

6. THE MOSHER AND KATZ STUDY

In another Commission sponsored study by Mosher and Katz (1970) studying male aggression against women in a laboratory setting, they concluded (page 25) that, "The data clearly support the proposition that aggression against women increases when that aggression is instrumental to securing sexual stimulation (through seeing pornography)." This finding was particularly true for men with severe conscience systems as well as for those feeling guilt about being aggressive. This suggests that the need for sexual stimulation (via pornography) can overrule conscience and guilt in "permitting" aggressive behavior towards women. And while this is only a laboratory demonstration, with many limitations, it still constitutes another "negative effects" type of evidence in which virtually no attention is paid by the writers of the Commission report.

7. THE GOLDSTEIN STUDY

In another Commission financed research project by Goldstein (1970)[6] a study was made of the exposure to pornography and its relationship to sex activities of groups of sex offenders and others. In all, nine separate groups of male subjects were studied and compared. They found that the rapists were the group reporting the highest "excitation to masturbation" rates by pornography both in the adult (80%) as well as teen (90%) years. Considering the crime they were imprisoned for, this suggests that pornography (with acompanying masturbation) did not serve adequately as a catharsis, prevent a sex crime or "keep them off the streets." Fifty-five percent of the rapists report being "excited to sex relations by pornography." When reporting on "peak experiences" in exposure to pornography during their teens, 80% of the rapists report "wishing to try the act" that they had witnessed or seen demonstrated in the pornography exposed to them. This is far higher than with any other group. When asked if in fact they did follow through with such sexual activity immediately or shortly thereafter 30% of the rapists replied "yes." An even higher number of blacks (38% replied "yes") which is consistent with many studies showing very high rates of sexual activity early in life for this group. Even among the "normal" controls 28% replied "yes." If we can accept what they say at face value, this would suggest that pornography potentially does affect behavior and possibly adversely. This would also suggest serious concerns about exposing young people, especially to thematic material involving pornographic-violence. Since the writers of the Commission Report base most of their findings on data using "verbal self report" there is little reason not to at least consider as partially valid what these people say about pornography and its influence in their lives. When one asks them about their adult years and to what extent they "tried out behaviorally" what pornography had suggested to them, the figures drop somewhat (15% for rapists, 25% for child molesters, etc.) but still suggest an "effect."

8. THE OPINIONS OF PROFESSIONAL WORKERS ABOUT PORNOGRAPHY

In their summary section the Commission states, "Professional workers in the area of human conduct generally believe that sexual materials do not have harmful effects." While this appears to be true these conclusions are based on a mail-back survey in which only a third of their sample responded. They also neglect to state that in this study 254 psychiatrists and psychologists had cases where they reported they had seen/found a direct causal linkage between involvement with pornography and a sex crime. While another 324 professionals reported seeing cases where such a relationship was suspected, this totals in actual numbers 578. While these therapists represent a minority group percentagewise, it would seem to this reviewer irresponsible to gloss over them as if they didn't exist. What if 900 of 1000 physicians indicated that they had observed no relationship between cancer of the cervix and use of the coil contraceptive, but the other 100 physicians indicated that in their practice they had come across cases where there was a suspected or definite relationship. Do we discount the experience of the minority because they are outvoted where a possible health hazard is involved?

Additionally they do not report (though they were aware of its existence) of another survey conducted by a religious group, the Archdiocese of New Jersey, in 1967 of professionals seeing a relationship between involvement with pornography and anti-social sex behavior. The majority of therapists here reported noting such a relationship at some time during their practice. This study is also flawed because of a low return of "mail-backs" by the professionals. But such is also true of the Lipkin and Carns study. Such omission of contrary evidence is difficult to understand.

9. SEX OFFENDERS REPORT PORNOGRAPHY CONTRIBUTED TO THEIR CRIME

In another Commission sponsored study by Walker (1970) seven groups of adult males (sex offenders, mental hospital patients, university students, etc.) were tested and interviewed relative to exposure to pornography and a great deal of personal background data. In their analysis of the data they found that the sex offenders significantly, more often than their controls (non-sex offenders who they were compared with), increased their sexual activity after viewing pornography. A significant minority (39%) of the sex offenders indicated that "pornography had something to do with their committing the sex offense they were convicted of." The researchers also found that their offenders significantly more often claimed that they had been influenced by pornography to commit a sexual crime.

The writers of the Commission Report note this evidence and rightly raise the possibility that these sex offenders may be "scapegoating" here (blaming something or somebody else for their problem). This possibility is certainly a reasonable one. The alternate possibility, that they might indeed be telling the truth, however, *is* another reasonable alternative. And until this issue is settled it would seem most injudicious and unwise to claim that pornography has "no effects" or that "no effects" can be demonstrated which would constitute the basis for major social change, repeal of laws, etc.

10. THREE EXAMPLES OF IMPROPER REPORTING OF RESEARCH DATA

(a) The Berninghausen and Faunce Study.
(b) The Kutschinsky Study.
(c) The Walker Research.

(a) *The Berninghausen and Faunce Study*

In Chapter V of the Effects Panel Report, the Commission states:

"A comparison study of thirty-nine delinquents and thirty-nine non-delinquent youth (Berninghausen & Faunce, 1964) found no significant differences between these groups in the number of "sensational" (obscene) books they had read. Non-delinquent youth were somewhat more likely (75%) than delinquent youth (56%) however, to report having read at least one 'possibly erotic' book."

But what the Commission doesn't tell the reader is that:

(a) a significantly greater number of delinquent boys (than non-delinquent) had read two or more adult books (with erotic content); and a significantly greater number of delinquents had read three or more "erotic books" than the non-delinquents.

(b) the authors of the research concluded that "limitations of the study precluded having any great confidence in the stability of the conclusion" meaning the findings are unreliable and probably shouldn't be cited.

[6] Table 9–10.

The writers of the Commission Report make three errors:

(a) They cite data to prove a point from a "worthless" study.

(b) They don't tell the reader that the study is flawed.

(c) They present only that evidence which favors their point of view. They again fail to cite contrary findings.

Since most readers will never read the original study they are "at the mercy" of the writers of this report to present complete and honest data. Once again we see an example of where this did not occur.

(b) *The Kutschinsky study*

In the final "Effects Panel Report" the Commission staff writes:

"A survey (Kutschinsky, 1970) of Copenhagen residents found that neither public attitudes about sex crimes nor willingness to report such crimes had changed sufficiently to account for the substantial decrease in sex offenses between 1958 and 1969."

In the Final Report summary section they put it even more strongly:

"Other research showed that the decreases in reported sexual offenses cannot be attributed to concurrent changes in the social and legal definitions of sex crimes or in public attitudes toward reporting such crimes to the police. . . ."

The average reader and most social scientists will never get an opportunity to see what this Danish psychologist actually wrote in this report or what he did. He, of course, was studying the issue of why with increasing pornography in Denmark has the rate of sex crimes apparently dropped. Maybe pornography has a "therapeutic effect" on sex criminals. What Kutschinsky did, in fact, was intensively interview a carefully drawn sample of adult men and women throughout Copenhagen surveying (a) whether they had ever been a victim in a sex crime, (b) did they report it, (c) would they report certain types of sex crimes now (or ignore them), (d) have they changed their minds over the past few years about the seriousness of certain sex offenses, and (e) how did they feel about these same things ten years ago. He found that 26% of the men[7] and 61% of the women of Copenhagen had been victims of some category of sex crime (some minor, some serious). However, only 6% of the males interviewed and 19% of the female victims reported it to the police. This is consistent with statements made by the U.S. Department of Justice in their 1970 Unified Crime Reports referring to rape. "This offense is probably one of the most under reported crimes due primarily to fear and/or embarrassment on the part of the victims." This means overall that sex crimes statistics are very "shaky" and have to be viewed with caution simply because most are probably never reported.

Kutschinsky concludes after a careful and extended analysis of his data that, *"The decrease in (sexual) exhibitionism registered by the police during the last ten years may be fully explained by a change in people's attitudes toward this crime and towards reporting it to the police."* He concludes in about the same terms with regards to the sex crime of *"indecency towards women"* (which can involve anything short of a direct rape attempt on a female). If the reader will go back and read again what the Commission said about the Kutschinsky findings, we again get an example of critical omissions and misrepresentations of important factual data.[8]

The Commission's presentation of the Denmark sex crimes data omits certain types of sex offenses such as incest (apparently unavailable) which many people would regard as fairly serious. If as Kutschinsky's study suggests, there have been no real declines in sex crimes in certain categories, only a change in people's conception about their seriousness and a lessened inclination to report them, this should be given thoughtful and careful consideration. That the Danish people have liberal sex attitudes has been documented by various surveys including another by Kutschinsky which indicated that only thirty-two percent of Danes regard sex intercourse with a "consenting" fourteen year old as a crime and only twelve percent would regard the rape of a female as a crime where she permitted the rapist to engage in prior petting.

The kind of sex crime most people would be concerned with would involve a personal assault as in rape, or on a child, or the situation involving exhibitionism which might "traumatize" some women and possible affect their psychosexual feelings and attitudes negatively.

If we look at the Copenhagen rape statistics (combining, rape, rape with robbery, attempted rape, and intercourse on threat of violence) which all involve a sexual assault on another—we get the following picture.

| Year | Rape (all categories) |
|---|---|
| 1958 | [1] 57 |
| 1959 | 55 |
| 1960 | 37 |
| 1961 | 48 |
| 1962 | 53 |
| 1963 | 50 |
| 1964 | 39 |
| 1965 | [2] 42 |
| 1966 | 70 |
| 1967 | 44 |
| 1968 | 50 |
| 1969 | 35 |

[1] Cases.
[2] Pornography freely available.

If one looks at the table and notes that it was about 1965 when pornography became generally available (even though legal recognition of this wasn't to come for several years). It presents a rather puzzling picture in that until 1969 there were no major changes in rape rate other than the normal fluctuations common to preceding years. In any event it would certainly be injudicious to conclude that there has occurred a true change or decline in some sex crimes, at least yet, in the light of the above statistics or in view of Kutschinsky's findings that with certain sorts of sex offenses the "decline" can be partially or fully attributable to changes in people's attitudes about certain sex crimes and their changes in "reporting" practices. Other sorts of data which would be useful to have in studying this whole problem would be divorce rate figures for the past ten years, venereal disease rates, changes in extra-marital sex patterns, and prostitution figures for the decade.

(c) *The Walker research*

In Chapter V of the Effects Panel Report the Commission reviews the research of Walker (1970) studying sex offenders and non-offenders:

"The mean age of first exposure (to pornography) of the rapists was one half a year or more later than that of the matched non-sex-offenders in reference to eight of the fifteen items (types of pornography) and one half a year or more earlier in reference to two. The biggest difference between the groups occurred in relation to depictions of heterosexual intercourse for which non-sex-offenders had a mean age of first exposure of 14.95 and rapists a mean age of first exposure of 18.19."

The Commission blandly reports this as a fact when a quick look at Walker's tables shows that this is undoubtedly in error. The table below is produced directly from their data.

| Type of pornography seen | Mean age when sex offenders first saw pornography (years of age) |
|---|---|
| Male-female sex intercourse | 18.19 |
| Humans having sex relations with animals | 16.94 |
| Mouth-sex organ contact | 17.46 |
| Homosexual activities | 17.70 |

| Type of pornography seen | Mean age when nonoffenders first saw pornography (years of age) |
|---|---|
| Male-female sex intercourse | 14.95 |
| Nude female with breasts exposed | 15.09 |
| Nude female showing sex organ or pubic hair | 15.87 |
| Nude males with sex organs | 16.25 |
| Nude or partially nude couple kissing | 15.10 |

To claim that the non-sex offenders (see above) saw pictures of a male and female having intercourse 1.3 years *before* they first saw a picture of a male sex organ, or nude female with the breasts exposed, etc. demands a great deal of credulity from the reader. It likewise stretches the imagination for one to believe that the Sex Offender group witnessed pictures of animal-human intercourse, oral intercourse, and homosexual relations a year or less *before* ever seeing pictures of male-female intercourse. These data are obviously in error. And while it is not too difficult to imagine a single typographical error, we have two independent errors here both occurring in the same area. Common sense would have dictated a check on this. Both Walker and the Commission staff say nothing.

11. THE PURCHASES VS. CONSUMERS OF EROTICA

The Commission Report suggests that the primary purchasers of erotica appear to be well educated, middle class, males in their 30's and 40's. It should be noted that this is based on studies nearly all in downtown urban areas where a surveyor "guessed" at the age, socio-economic level, etc., of those he saw in "adult bookstores" and movies. Where interviews were conducted they consisted of approaching men as they emerged from an "adult movie" and having an "informal conversation over coffee" with them (no notes were taken until later). And of 270 people approached in the Winick study, only 100 agreed to "have coffee," creating sampling problems. When they tried to get people to fill out questionnaires (as in the Nawy study of the "San Francisco Marketplace") only 29 out of 150 bookshop customers cooperated, and 190 out of 800 movie patrons so obliged. This makes generalizing about these data extremely risky. Massey (1970) in his analysis of the Denver area concluded that the type of customer is related to the *location of the store* and *time of day*.

Probably the major issue is who *consumes* and *uses* pornography, not so much who buys it. Because for every purchaser of hard core materials there may be 10–100 viewers or users of the merchandise. In the Abelson National Survey of Youth and Adults we find that girls 15 to 20 see most pornography (for

[7] Involving primarily "homosexual molestation."

[8] With regards to "peeping" a non-violent sex crime which has declined 79.9% in the last decade his data suggest that the availability of all sorts of visual pornography, films and live sex shows probably have reduced the need of the peeper to risk arrest looking through people's windows when he can see more in any porno shop. We would agree with this conclusion. In the only other sex crime which he evaluated, "Indecency toward girls" his data suggested little or no change in public attitudes towards its seriousness or lack of willingness to report it. The decline in the reporting of this offense remains a puzzle, with Kutschinsky suggesting the possibility of pornography being a (poor) substitute for little girls for this type of offender.

females) and young men in the age range of 15 to 29 get the heaviest doses. Abelson found that more boys than adult men have seen visual pornography (87% vs. 80%) and more girls have seen this than adult females (80% vs. 53%). This means in sum that the heavy users and most highly exposed people to pornography are adolescent females (among women) and adolescent and young adult males (among men).

Though his samples are not random, in Nawy's study of the "San Francisco Marketplace" 70% of the patrons of erotica he surveyed attend sex movies once a month or more. He also found that 49% of these people were currently having sex with two or more partners in and out of their households and 25% had been having sex with 6 or more partners in the past year. Frequency of intercourse rates were very high for his sample, suggesting that erotica may have a "booster" or "accelerating" effect on sex activity. In any event, the data outside the laboratory where people are studied in their own environment, suggest that those interested in erotica or pornography consume it regularly and for "sexual" reasons. But this is suggestive only because of flawed sampling.

12. MISUSE OF QUESTIONNAIRE AND VERBAL SELF REPORT DATA

Nearly all of the studies presented in evidence relied heavily on "verbal self report" without outside verification. Caution must be exercised in interpreting these kind of data. A number of factors can make these data suspect: (a) The subjects may consciously falsify or distort (especially if the questions might "incriminate" or would require revealing damaging evidence against oneself—this might be particularly true for the prison sex offender inmates), (b) Questions in the sexual area in particular could lead to defensiveness, distortion, or "protective dishonesty" of response (such as having married couples, as in the Commission's Mann study (1970), check off in a daily diary (kept home) whether or not they had had an extramarital sexual experience the night before, and "Did you orally stimulate your partner's genitals to climax?" etc.), (c) The fact that it has been repeatedly demonstrated that slight changes in wording of a question can make major differences in the number of people who will respond 'yes' or agree. This was demonstrated in this study in a most dramatic fashion when in the commission sponsored national survey (by Abelson) only 23% of the males admitted that pornography sexually aroused them vs. 77% agreeing to this in the Kinsey studies. Similar differences were found for women (8% Abelson, 23% Kinsey). Who can you believe? Similar gross differences were found when asking people if they felt pornography should be controlled by legislation and laws. Not only is this true across several different studies but also across several questions within a single study.

Example: (Abelson, 1970) 88% of a national sample would prohibit sex scenes in movies that were put in for entertainment; but only 50% say that no one should be admitted to movies depicting sexual intercourse.

The problem with the above example has to do with what question preceded the critical one (which may have established a certain "set" in answering it), or what alternatives were there available in answering; or confusion as to what you mean by a movie depicting sexual intercourse? It could mean a scene in which a couple are in bed together covered by blankets in which intercourse is only suggested or it might mean an explicit stag film. The Commission Report writers tend to treat "verbal report" as fact, and when there are discrepancies they consider as significant and present or emphasize that data which favor their point of view.

Example: Harris Poll (1969): 76% of U.S. wants pornographic literature outlawed.

Gallup Poll (1969): 85% of the U.S. favor stricter laws on pornography.

Abelson (1970): 2% of U.S. viewed pornography as a serious national problem. (A Commission Study)

However, when one looks at the question which Abelson in this Commission financed study asked U.S. citizens, it's not difficult to figure out why they got such a low percent: *"Would you please tell me what you think of the two or three most serious problems facing the country today?"* It is doubtful that even the most concerned citizen would list "pornography" as among the first two or three when the country is faced with the problems of war, racial conflict, youth rebellion, law and order disruption, drugs, pollution, etc. And as might be expected these head the list.

Thus when in recommending abolition of nearly all laws regulating pornography the Commission report justifies this by saying: *"A majority of the American people presently are of the view that adults should be legally able to read or see explicit sexual materials if they wish to do so."* They are basing this only on *some* of the responses of U.S. citizens to *Abelson's* survey but not other data from the *same* survey (e.g., 88% would prohibit putting sex scenes in movies that were put there for entertainment)[9] and of course are rejecting out-of-hand results of the Harris and Gallup polls (see above) who have been in business for several decades. This kind of manipulation of statistics and reporting of data is indefensible especially when most Americans or even social scientists will never have an opportunity to view the original data on which these recommendations are based.

13. THE ISSUE OF WHETHER SEX OFFENDERS COME FROM SEXUALLY DEPRIVED BACKGROUNDS

The Commission in their Effects Panel Report, and elsewhere again and again cite data to show that sex offenders come from conservative, repressed, sexually deprived backgrounds. Quotations from Chapter V, Effects Panel Report, capture well the essence of their conclusions:

"Sex offenders generally report sexually repressive family backgrounds, immature and inadequate sexual histories and rigid and conservative attitudes concerning sexuality."

Or another quote:

"The early social environment of sex offenders may be characterized as sexually repressive and deprived. Sex offenders frequently report family circumstances in which, for example, there is a low tolerance for nudity, or absence of sexual conversation, punitive or indifferent parental responses to children's sexual curiosity and interest. Sex offenders' histories reveal a succession of immature and impersonal sociosexual relationships, rigid sexual attitudes, and severally conservative behavior."

Or still another quote:

"Suggest that sex offenders' inexperience with erotic material is a reflection of their generally deprived sexual environment. The relative absence of such experience probably constitutes another indicator of atypical and inadequate sexual socialization."

There are a number of things very wrong about these conclusions. In some of the studies where they compare sex offenders and non-offenders they, inexcusably, lump all different types of offenders together "into one bag" (e.g., Cook & Fosen, and Johnson et al., 1970). The problem here, as the Kinsey Institute studies well demonstrate, is that there are at least 21 categories of sex offenders, who show striking differences in family, sexual and psychosocial backgrounds. To draw general conclusions about such a diverse group is like doing a study on what religious people are like and include in your group Catholics, Unitarians, Buddhists and Black Panthers, treating them as a single "type." For example aggressive rapists are very impulsive, having extremely high levels or sexual activity from an early age with very high degrees of criminality. They are very dangerous. The "peeper" on the other hand tends to have very low rates of sexual experience, tends not to marry and is poorly socialized and is an entirely different "breed of cat."

Another type of problem is the use of inadequate control groups or none at all. To illustrate how this might cause serious problems, consider the following: "Protestants are a more criminally inclined group of citizens than atheists." We study a group of protestants at the state prison and compare them with atheists taken from the general population, and sure enough our conclusion is correct. Or another (again made purposely absurd to illustrate the point), "Men who drink carrot juice will have a high sex drive" and we compare men 20–25 years of age who drink carrot juice with men age 90 and over who don't drink it, on a variable like frequency of intercourse. If we conclude this study shows that drinking carrot juice is related to or causes a "high sex drive," we are in error. It has demonstrated no such thing. If we report this and *also* fail to mention that we didn't have a comparable control or comparison group, or not mention that the controls exceeded 90 years of age, then we've made a second serious error.

One of the studies that the Commission cites as giving evidence that "sex offenders" come from sexually deprived backgrounds is that of Thorne and Haupt (1966). Six percent of their college students report True "I have never had a sexual orgasm" vs. almost 30% for the rapists. While they don't have a matched control group to compare the rapists to, they do have data on murderers and property crimes offenders who one might guess would tend to be more similar in social class background, intelligence and age to the rapists (than the college students). When we look at their responses to this question we find an amazing 40% who indicate never having had a sexual orgasm. Since by the very nature of their offense it would be difficult to believe that 30% of the rapist sample never had orgasm, and in view of the Kinsey findings that very nearly all of rapists (which they studied) engaged in premarital intercourse and nearly 80% engaged in extramarital sex after they married, these findings appear even more difficult to believe. However, if one is aware of the fact that most rapists, murderers, and property crimes felons who are convicted come from lower socio-economic backgrounds, have lesser education, etc. a very simple explanation offers itself. A significant number of these men didn't understand what the term "sexual orgasm" meant. Again, incorrect inferences are drawn from data.

Thus one can see the extreme importance of having matched control groups. If we use the murderers and property crimes felons as controls for the rapist sample (a risky thing to do) and compare how this typical sex offender group compares on sexual repression, deprivation, etc. we find that (because they are in jail) they *do* tend to feel more guilty about their sex behavior, but there are no real differences overall. However, if one compares the sex offenders or total prison population against the college students on attitudes we do find them a little more prudish in what they say—but not apparently in what they do, compared to the college students. This undoubtedly

[9] When the question is worded slightly differently we, as might be expected, get slightly different results: "If a sexual scene were essential to plot development" (not just for entertainment) only 69% would wish to prohibit it.

reflects the differences between current middle and lower class cultures out of which they emerge.

In the study of Goldstein and associates (1970) they attempted to obtain a good control sample to compare their sex offenders against. But unfortunately they were not too successful. Their controls were significantly younger and better educated than the sex offender groups. (Example: nearly 80% of his controls were under 30 vs. only 25% for one of the child molester groups.) This makes it very dangerous to say that sex offenders are different or the same compared to "normals" when your comparison group is different. Remember the carrot juice example and its relation to sexual activity?

The seeming disregard for these very elementary considerations in evaluating research literature. The Commission Report writers leaves one very concerned about how they arrived at their other conclusions.

The evidence from many studies would indeed suggest that certain types of sex offenders are sexually immature and regressed, but other types are sexually aggressive and very promiscuous starting at very early ages. Making these kinds of distinctions would be seen as most important in any evaluation of the research literature. The Commission Report fails badly in this regard.

14. DOES PORNOGRAPHY ALTER BEHAVIOR?

The Commission Report states in their conclusions, "When people are exposed to erotic materials some persons increase masturbatory of coital behavior, a smaller proportion decrease it, but the majority of persons report no change in these behaviors. In general, established patterns of sexual behavior were found to be very stable and not altered substantially by exposure to erotica." There are a number of problems in drawing these conclusions: (a) In a number of the 16 studies reviewed (focusing on this problem) behavior was studied only for the 24 hours before and after exposure to the pornography, (b) In some other studies (Amaroso, 1970) the total exposure time to erotica for all subjects was only 50 seconds, in another study (Byrne & Lamberth, 1970) total exposure time was 6½ minutes (hardly sufficient to conclude that exposure to erotica has or has not an effect) but (c) probably the major methodological problem is the fact that 13 of the 16 groups who were deliberately exposed to pornography were limited to young college students, plus one group of middle aged couples almost all college educated, and a final two groups who were "sex offenders." Since a great deal of evidence from the Commission studies indicate that young college educated persons are those already having high exposure to pornography (compared to conservative, older, lower class subjects)—this means *that most or all of their subjects have already been repeatedly exposed to pornography* which means that if it were to have a "corrupting" effect this would probably have *already* started to occur. This also would mean that one wouldn't expect experimentally great changes in sexual behavior before and after exposure even if in fact pornography were indeed to have a "viciously depravine influence." Failure to control for this factor makes the conclusions drawn by the Commission writers very questionable. And (d) it is highly unlikely that any subject in such an experimental study under such close scrutiny would engage in any anti-social sex behavior, and even if he did admit to it in most studies reported *they fail to even ask this type of question.* (e) All samples were restricted to volunteers who chose to be exposed to pornography which would introduce a systematic bias. And (f) finally, as Davis and Braucht point out these samples (young college educated) are not the people of "popular concern" (e.g., the unstable, more vulnerable, from defective environments). For scientists to confidently conclude that there are essentially no significant sex behavior changes or increase in antisocial sex activity on the basis of these kinds of data takes a considerable amount of "faith, ESP, and some admixture of divine revelation."

15. ADDITIONAL SIGNIFICANT LIMITATIONS IN COMMISSION'S RESEARCH

(a) No Longitudinal Studies: There were no longitudinal studies considered or contracted by the Commission studying the long range effects of exposure to pornography and its effect on sexual activities, sex offenses, changes in moral values, etc. Nearly all studies cited covered only a few days or weeks for the subjects (and in most cases only an hour to two). The longitudinal study properly done would give the most powerful evidence concerning pornography's effects. There were none here.

(b) No Clinical Studies: There were no in-depth clinical studies of individuals assessing the impact of use of pornography on attitudes, sex offenses, character, anti-social behavior, etc.

(c) Omission of Studies on "Porno-Violence": No attention was paid to the problem of porno-violence where pornography and violence are linked together in fiction and increasingly in motion pictures. This omission is particularly surprising in view of the findings in the Final Report of the National Commission on the Causes and Prevention of Violence (1969) which link visual presentations of violence to aggressive acting out behavior. Their findings would appear to have some implications for situations where violence and pornography are combined (e.g., sexual abuse and physical injury inflicted on the female/male, etc.).

(d) Omission of Studies and Evidence in "Imitative Learning" Area: There is an omission of discussion of studies in the area of imitative and social learning by such investigators as Albert Bandura and his associates at Stanford University. Since this body of research suggests that a significant amount of learning occurs through watching and imitating the behavior of others this would logically appear to have great relevance to any pornography "effects" studies. If Bandura's work (as well as others in this area) have any validity, it would suggest that certain types of pornography involving whole sequences of behaviors probably would effect some individuals if they saw it consistently modeled on the screen or in fiction (e.g., suggest to them anti-social sex behaviors which they might imitate or repeat). This is certainly indicated by the findings of the violence literature. In view of the type of evidence and findings presented by the Bandura "school" it would seem, at the very least, that the Commission staff would indicate some cautions or concerns. There are none.

(e) Absence of Youth Studies: While the Commission in their Final Report state ". . . [there] is no evidence that exposure to or use of explicit sexual materials play a significant role in the causation of social or individual harms such as crime, delinquency, sexual or nonsexual deviancy, or severe emotional disturbances . . . or plays a significant role in the causation of delinquent or criminal behavior among *youth* or *adults*," they do not mention that there was *not a single* experimental study, longitudinal study, or clinical case study involving youth. The only information they have is from questionnaires which are subject to the usual problems of willingness to be truthful (especially about sex data), memory, misinterpretation of questions, etc. Their conclusions about youth would appear extremely incautious in view of the limitations of significant data.

(f) Possible Bias in Using Only Volunteers Who'd Submit to Pornography: All studies which probed sexual histories, or exposed individuals to pornography were to some degree biased by using only those people who would submit to such exposure or questioning. This would be especially true for female subjects. Those rejecting of pornography would not be studied.

(h) Varying Definitions, Types and Amounts of Erotic Material Used: While some studies used similar pornographic slides or movies, there still existed great variation in the type of pornography which was used (sometimes pictures, sometimes movies, sometimes written material). These varied greatly in their erotic and "offensive" qualities. In the case of "retrospective reports" where people were interviewed or filled out questionnaires they often had to necessarily rely on their subject's own definition or unique interpretations of what constituted pornography. Thus saying that one witnessed sexual intercourse on the screen could involve something bland or explicity offensive.

In some studies (Amoroso, 1970) subjects saw 27 slides projected on a screen for two and one half seconds each, and only twenty of which could be regarded as "pornographic" which means a total viewing time of fifty seconds for the erotic material. To conclude that pornography effects or does not effect behavior on the basis of such limited exposure and no control group would seem incautious at most.

SUMMARY AND CONCLUSIONS

1. The Commission on Obscenity and Pornography (majority report) is recommending major changes in laws and social policy in an area of controversy, public concern, and also in an are having health and welfare implications for adults and minors (e.g., remove all controls on pornography for adults and children—except, in the latter case, pictorial materials).

The basis for recommending these changes is that the Commission found no empirical scientific evidence showing a causal relationship between exposure to pornography and any kind of harm to minors or adults.

2. However it should be stated that conclusively proving causal relationships among social science type variables is extremely difficult if not impossible. Among adults whose life histories have included much exposure to pornography it is nearly impossible to disentangle the literally hundreds of causal threads or chains that contributed to their later adjustment or maladjustment. Because of the extreme complexity of the problem and the uniqueness of the human experience it is doubtful that we will ever have absolutely convincing scientific proof that pornography is or isn't harmful. And the issue isn't restricted to, "Does pornography cause or contribute to sex crimes?" The issue has to do with how pornography affects or influences the individual in his total relationship to members of the same as well as opposite sex, children and adults, with all of its ramifications.

The "burden of proof" or demonstration of no harm in a situation such as this, is ordinarily considered to be on the shoulders of he who wishes to introduce change or innovation. It might be noted that in areas where health and welfare are at issue, most government agencies take extremely conservative measures in their efforts to protect the public. In the case of monosodium glutamate which was recently removed from all baby food by government order, the evidence against it, in animal studies, was quite weak. However, because the remote possibility of harm existed, measures were immediately taken to protect children from consuming it.

3. The evidence the Commission presents does not clearly indicate, "no harm." There

are also many areas of "neglect" relative to the Commission's studies of pornography's effects (e.g., no longitudinal studies, no in depth clinical studies, no porno-violence data, no studies in modeling or imitative learning, etc. etc.).

4. In the Commission's presentation of the scientific evidence there are frequent errors and inaccuracies in their reporting of research results as well as in the basic studies themselves. Frequently conclusions which are not warranted are drawn inappropriately from data. There is a frequent failure to distinguish or discriminate between studies which are badly flawed and weak and those of exceptional merit. But, most serious of all, data from a number of studies which show statistical linkages between high exposure to pornography and promiscuity, deviancy, affiliation with high criminality groups, etc. have gone unreported. This suggests a major bias in the reporting of results which raises a major issue of credibility of the entire report. Regardless of why it occurred, it suggests that at the very least, a panel of independent scientists be called in to reevaluate the Commission research and the conclusions which might be validly drawn from it before any major changes occur in laws and social policy regarding pornography's control.

APPENDIX

*A. Sex crimes in the United States and pornography*

The Commission after being criticized for inaccuracies in their early reports on incidence of sex crimes in America have made a number of corrections. However, it still is incomplete and a summary of this data would be in order here. Some have argued that because sex crimes have apparently declined in Denmark while the volume of pornography has increased, we need not be concerned about the potential effect in our country of this kind of material (because, essentially, of Denmark's benign experience). However two considerations must be noted. First we are a different culture with a greater commitment to the Judeo-Christian tradition; and secondly we are actually only a year or so behind Denmark in the distribution and sale of pornography. Hardcore written pornography can be purchased anywhere in the U.S. now. Hardcore still pictures and movies can now be purchased over the counter in some cities. Anything can be purchased through the mails. And in a few cities people can attend hardcore pornographic movies. About the only thing we don't have, which Denmark has, are live sex shows. What is most relevant are sex crime statistics in this country, not Denmark. Since it was in about 1960, at the beginning of the decade, that pornography began to flower in the U.S. relevant statistics should be examined carefully. One cannot impute cause and effect here, though the Commission infers it (in the other direction) with the Denmark sex crime data:

Reported rapes (verified): Up 116%, 1960–69 (absolute increase). Up 93%, 1960–69 (controlled for pop. growth).

Rape arrests: Up 56.6%, all ages 1960–69. Up 85.9%, males under 18 1960–69.

Source: Unified Crime Statistics 1970.

"Sex offenses" (homosexual acts, statutory rape, etc.): All ages: 1960–69: Down 17%. Under 18: 1960–69: Down 21%. This is a spurious not true decline. Is due to change in law enforcement policy, primarily involving homosexual acts between consenting adults—which are now rarely prosecuted though early in the decade were.—U.S. Justice Dept.

Source: Unified Crime Report 1970.

Prostitution and commercialized vice: Up 80.1%, 1960–69, all ages. Up 120.2%, 1960–69, girls under 18 (numbers are small here).

(NOTE.—The bulk of prostitutes are 15-24 years, peak age: 22, and only 13% of sex offenses (arrests) are women.)

Source: Unified Crime Statistics 1970.

Illegitimate births: 1. General Note: During decades 1947–67 rate of illegitimacy doubled per 1,000 never married females. 1960–67 illegitimacy ratio up 71% (which is the number of illegitimate births per 1,000 live births).

Source: P. 31, 1970 Natality Statistics.

2. Illegitimate birth rate: Under 15, 1940, 2.1; 1967 6.9 (350% increase). 15–19, 1940 40.5, 1967 144.4 (350% increase). During this period the population of the U.S. increased 50%.

Source: 1970 New York Times Enyclopediac Alamanac.

3. "The greatest current rate of increase in illegitimacy is with 15–19 year olds." (Source: page 31, 1970 Natality Statistics, U.S. Public Health Dept.)

V.D.—Gonorrhea: All ages: 1960–69: Up 76%.

Females 15–19: Up 52% 1965–68.

Females 20–40: Up 36% 1965–68.

Females 25–29: Up 25% 1965–68.

Source: V.D. Fact Sheet, 1969, U.S. Public Health Service.

Divorce rate: 1960, 393,000; 1969, 660,000. Up 70%. (2.2 per 1000 pop.) (3.3 per 1000 pop.)

Source: Monthly Vital Statistic Report, March 12, 1970, U.S. Public Health Service.

The above data suggest increases in most types of social pathology in the U.S. While this is associated with an increase in pornography, no claims as to a causal relationship can be made from this data.

*B. Do people get satiated through over exposure to pornography?*

In the Commission's single study investigating satiation of sexual arousal and interest in pornography after 15 days of heavy exposure to it on the part of 23 college males, they have pretty well demonstrated the obvious (e.g., that people can get weary of it). But as physician John Cavanaugh has commented, "It is generally recognized that the sex appetite and interest is the one most quickly satisfied but also the one quickest to return." Voltaire's Candide also found this to be true. Clinical experience indicates that a man may be stimulated by his partner's nude body for many years, even though there may be temporary periods of satiation as to need for sex and erotic stimulation. The periodicity of the sex drive suggests continued cycles of interest and satiation continuing throughout life. The Commission's conclusion implies that if people get all the pornography they want, they'll soon get tired of it and not want more. This is certainly one popular theory advanced by some students of the issue. But the evidence here suggests only that if college males are given a great glut of pornography in a laboratory setting they will temporarily satiate. But, essentially the same may be said of having sexual intercourse, eating, drinking, etc. Considering the limited time this experiment ran—not much more can be said about this issue. Another limitation of the Commission study was that it did not approximate a real life situation or use of pornography in one's own milieux. It involved a deliberate forced "over feeding" of pornography for pay. It also meant removing all clothing and putting on a loose robe, hooking up one's penis to a condom and electrodes, attaching electrical instruments to both ears, putting a bellows around one's chest, being observed through a one way window and sitting in an "isolation booth" for 1½ hours a day for 15 days.

According to other Commission studies (such as those by Charles Winick) of consumers of explicit sexual materials "out in real life" (e.g., patrons of "adult" movies and bookstores) 52% are regular customers and are "regular or heavy users" of erotica. In other words there is no evidence that people "satiate" in real life. The consumption of pornography is regulated to the tastes of the individual consumer. In Nawy's study of the "San Francisco Marketplace" 70% of the patrons of erotica he surveyed attend sex movies once a month or more. He also found that 49% of these people were currently having sex with two or more partners in and out of their households, and 25% had been having sex with 6 or more partners in the past year. Frequency of intercourse rates were very high for his sample suggesting that erotica may have a "booster or accelerating" effect on sex activity. In any event the data outside the laboratory where people are studied in their own environment and "on the hoof" suggest that those interested in erotica or pornography consume it regularly and for "sexual" reasons.

Berger (1970) in his survey of 473 working class adolescents concludes, "It would appear that even high levels of exposure to sexually explicit materials did not bore the young people who participated in this study." None of this is mentioned in the Commission report; even though all of this data comes from commission studies.

*C. Ethical considerations in exposing young people to pornography*

The Commission provided many of the researchers with a number of slides and movies depicting explicit hardcore pornography. Certain ethical issues might be raised in exposing large numbers of young people (18 and over) to what sometimes involved large quantities of pornography. And while consent was obtained, sometimes the young people (male and female) were brought together at the research room before being told that the experiment would involve being shown hardcore pornography. They were told that they need not participate if they did not wish to. However backing out at this point and conceivably "losing face" with their peers could create a problem for some people. Since the data from a number of studies did indicate that some people were "emotionally upset", sexually aroused, felt guilty, disgusted, etc., the ethical problems and protection of the rights of human subjects would be a matter for discussion and review here.

## NATIONAL ENERGY CRISIS

Mr. GORE. Mr. President, at midnight tonight, unless some 11th hour action transpires, electric power rates will be increased an average of 23 percent throughout the area served by the Tennessee Valley Authority which includes nearly all of Tennessee.

No miracle is necessary to stop this highly inflationary increase in the cost of living and in the cost of doing business. It could have been forestalled by the President under powers given him by the Congress. Unless he has chosen, or between now and midnight chooses, to use these powers, then a very heavy burden will fall upon the people. Once in effect, these Nixon rates will be hard to throw off, but I will try to roll them back.

Though these higher electric rates fall heavily on the people of Tennessee, it is not within my region alone that power blackouts and brownouts are threatened this year. It is not in my State alone that schoolchildren, for the first time since the great depression, may be asked to stay home because there is not enough heat in the classroom to warm them. It is not alone in my mid-America, but along the eastern seaboard, too, that talk of rationing is serious conversation. Neither are we talking of another

poverty problem—though it sounds like that—but of affluent people, living in otherwise comfortable homes, who in normal circumstances send their children to well-equipped schools.

The crisis to which I refer is not one caused by forces beyond our control, either. There were indications last evening that the administration would attempt to make it appear so when one of its spokesmen, Paul McCracken, asked Americans to be prepared for a fuel shortage this fall because disruption in Libya by Palestinian guerrillas—and those are his words—have disturbed our fuel oil supply.

This but diverts attention from the limitations on fuel oil imports imposed by Executive orders only recently, and from deliberate production limitations imposed by the oil industry in the Southwest for the purpose of holding up prices and profits. To blame Mid-East bandits for industrial banditry will never suffice to explain why the lights dim along the Atlantic this winter, or why Tennesseans pay more for less electricity.

I suggest, as others have, that the basic fuels from which we derive the energy necessary to our very survival are today concentrated in the hands of a relatively tiny band of super-rich men. These giant corporations not only manipulate supply and demand, but they are arrogantly trying, with the same wealth extracted from the public, to dictate who will serve the public in elected offices everywhere.

At the well's bottom, it is oil. The oil corporations now have effective monopolistic control of oil, natural gas, and coal. Thus, they control fossil fuels wherever it is raised from American soil and they control, too, much of the oil pumped from the tense Middle East. There is the strongest evidence that they dictate imports and exports, shutting and shifting that international valve to gauge and coordinate them with the opening and closing of domestic quotas—always to serve an insatiable demand for higher profits.

Moreover, these same interests now reach for control of nuclear fuel.

They have been benefitted by tax favoritism for years. They have lubricated the wheels of politics and fed political budgets of their supporters.

The result of inside political machinations will touch the pocketbook of every household and every business in Tennessee. This is particularly unfortunate for TVA customers because we have come to depend upon reasonably priced electricity to cook our food, to heat our homes, to milk our cows and to drive the wheels of our industry. Many poor people are going to find the high cost of power hard to pay, as is business and industry.

There appears to be spread out before us the complex, almost unfathomable, outline of a giant puzzle whose jigsaw pieces defy comprehension. The pieces keep changing shapes every time the hand reaches out to slide one into what seems at the moment its place. The pieces are slippery—as slick as oil—and the puzzle's object seems designed to assure that it is never sufficiently worked to allow a player to make out the picture.

But somebody goofed this time. Somebody got greedy and the patterns of trust cannot now be hid. Monopoly is clearly the name of this game. The victims are the people, almost all the people. I call on this body, in the obvious absence of administrative resolve, to become the instrument that saves the people from unbearable cost, unfair tax burdens, and almost total reliance upon manipulated control of the fuels essential to all our great public utilties, because the worst has not come.

It is time, I believe, that the ugly alliance between politics and oil be looked into.

It is time, I think, that the Congress determine the extent of unsavory influence.

I ask that the U.S. Senate, through the Antitrust and Monopoly Subcommittee, make a deep investigation of the economic factors behind this electric rate increase.

The national interest is involved. My appeal is not for the Tennessee Valley alone. As I have warned since 1966, a national crisis in energy is upon us.

## ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

## DIRECT POPULAR ELECTION OF THE PRESIDENT AND THE VICE PRESIDENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The ACTING PRESIDENT pro tempore. The joint resolution will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. Calendar No. 1135, Senate Joint Resolution 1, proposing an amendment to the Constitution of the United States relating to the election of the President and the Vice President.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Montana

The Chair hears none, and it is so ordered.

The Senate resumed the consideration of the joint resolution.

## ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## EQUAL EMPLOYMENT OPPORTUNITIES ENFORCEMENT ACT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business, Senate Joint Resolution 1, be temporarily laid aside and that the Senate turn to the consideration of S. 2453, which was laid before the Senate last night and which, the Senate was informed, we would take up about this time.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. BAYH. Mr. President, reserving the right to object, and I shall not object, for the record I would like to advise our colleagues that those of us who are deeply concerned about the refusal of the Senate on yesterday, for the second time, to permit the Senate to vote on electoral reform have not given up our efforts to try to persuade them to see that a different course of action might be in the better interests of the country. However, the Senator from Indiana is not inclined to impose his feelings and to inconvenience the Senate; and again I wish to express personal appreciation for the patience and tolerance of the distinguished majority leader.

Mr. President, I do not object.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk read the bill by title, as follows: S. 2453, a bill to further promote equal employment opportunities for American workers.

The ACTING PRESIDENT pro tempore. The Senator from New Jersey is recognized.

Mr. MANSFIELD. Mr. President, will the Senator yield to me without losing his right to the floor?

Mr. WILLIAMS of New Jersey. I yield.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOMINICK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, we are taking up a very important bill.

The ACTING PRESIDENT pro tempore. The Chair will state that the Senator from New Jersey (Mr. WILLIAMS) has the floor.

He yielded to the Senator from Montana without yielding his right to the floor.

Mr. DOMINICK. Will the Senator yield to me?

Mr. WILLIAMS of New Jersey. I yield.

Mr. DOMINICK. We have a rather important bill here, as I am sure the Senator from New Jersey will agree. I think that the amendments I am prepared to

offer are fundamental to the bill. I submitted them last night for printing. The Government Printing Office apparently is bogged down for some reason, and they have not yet arrived. We are checking on that now.

Since I think they are important, and that they ought to be available to Senators when we get around to debating them, it is my intention, as soon as I possibly can, to ask for a live quorum, to find out who is here and give us a little time to get these amendments up here.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. WILLIAMS of New Jersey. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the unfinished business, Senate Joint Resolution 1, remain in a temporary status until the conclusion of morning business tomorrow.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. GRIFFIN. Mr. President, I object.

The ACTING PRESIDENT pro tempore. Objection is heard.

Mr. BYRD of West Virginia. Mr. President, I do not believe the Senator understood my request.

Mr. ERVIN. I did not. I could not hear it.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendments in the nature of a substitute to S. 2453.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum. This quorum call will be live.

The ACTING PRESIDENT pro tempore. Does the Senator from New Jersey yield to the Senator from Colorado for that purpose?

Mr. WILLIAMS of New Jersey. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. JAVITS. Mr. President, I ask unanimous consent that Eugene Mittelman, of the Committee on Labor and Public Welfare, may have the privilege of the floor during the debate on this bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ERVIN. Mr. President, I ask unanimous consent that Rufus L. Edmisten and Lawrence M. Baskir, members of the staff of my subcommittee may have the privilege of the floor during the debate on this bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator will state it.

Mr. DOMINICK. Is there a rule that a Senator's staff member cannot be on the floor without unanimous consent?

The ACTING PRESIDENT pro tempore. There is no rule to that effect.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, to make it perfectly clear, is it not true that only four staff members of a committee may be allowed on the floor without unanimous consent?

The ACTING PRESIDENT pro tempore. Four staff members, pursuant to a regulation promulgated by the Committee on Rules.

Mr. DOMINICK. Mr. President, I ask unanimous consent that my own staff member, Mr. Wise, who is also really a member of the committee staff on the minority side, may have the privilege of the floor during the debate on this bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that Mr. Blackwell, Mr. Nagle, and Mr. Ellisberg, of the committee staff, may have the privilege of the floor during the debate on this bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk called the roll, and the following Senators answered to their names:

[No. 339 Leg.]

| | | |
|---|---|---|
| Allen | Eagleton | Mansfield |
| Boggs | Ervin | McCarthy |
| Byrd, W. Va. | Griffin | McIntyre |
| Dodd | Hatfield | Pell |
| Dole | Javits | Thurmond |
| Dominick | Kennedy | Williams, N.J. |

Mr. KENNEDY. I announce that the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from New Mexico, (Mr. MONTOYA), the Senator from Maine (Mr. MUSKIE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Mississippi (Mr. STENNIS), the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL), the Senator from North Carolina (Mr. JORDAN), the Senator from Alabama (Mr. SPARKMAN), the Senator from Texas (Mr. YARBOROUGH), the Senator from Ohio (Mr. YOUNG) are absent on official business.

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Utah (Mr. BENNETT), the Senator from New York (Mr. GOODELL), the Senator from Nebraska (Mr. HRUSKA), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH) and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Oklahoma (Mr. BELLMON) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Iowa (Mr. MILLER) is detained on official business.

The PRESIDING OFFICER (Mr. EAGLETON). A quorum is not present.

Mr. BYRD of West Virginia. Mr. President, I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from West Virginia.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

After some delay, the following Senators entered the Chamber and answered to their names:

| | | |
|---|---|---|
| Allott | Goldwater | Pastore |
| Anderson | Gore | Pearson |
| Baker | Gurney | Percy |
| Bayh | Hansen | Prouty |
| Bible | Hart | Proxmire |
| Brooke | Holland | Randolph |
| Burdick | Hollings | Russell |
| Case | Hughes | Saxbe |
| Church | Jackson | Schweiker |
| Cook | Jordan, Idaho | Scott |
| Cooper | Long | Smith, Maine |
| Cotton | Mathias | Spong |
| Cranston | McClellan | Stevens |
| Curtis | McGovern | Symington |
| Eastland | Metcalf | Talmadge |
| Ellender | Mondale | Williams, Del. |
| Fannin | Moss | Young, N. Dak. |
| Fong | Nelson | |
| Fulbright | Packwood | |

The PRESIDING OFFICER. (Mr. EAGLETON). A quorum is present.

The Senate will be in order.

The question is on agreeing to the committee amendment in the nature of a substitute. The Senator from New Jersey is recognized.

Mr. DOMINICK. Mr. President, we have all kinds of amendments to the committee amendment. I thought we would follow the normal procedure and have the Senator from New Jersey outline the bill before we presented amendments.

The PRESIDING OFFICER. The Senator from New Jersey is recognized.

Mr. GRIFFIN. Mr. President, before the Senator begins his statement, will the distinguished chairman yield for a brief interruption that might be helpful to Members of the Senate?

Mr. WILLIAMS of New Jersey. I yield.

Mr. GRIFFIN. Mr. President, a number of Senators are very much interested in this bill and they are trying to become acquainted with it, and they consider it very important. I have just asked for a copy of the printed hearings and I do not seem to be able to get copies from the pages. I wish to ask the chairman of the committee whether there were hearings and, if so, whether they were printed and are available.

Mr. WILLIAMS of New Jersey. There were hearings and printed copies certainly should be available.

I have copies of the hearings, as well as the report, on the desk.

Mr. GRIFFIN. They are printed and available?

Mr. WILLIAMS of New Jersey. Yes.

Mr. MANSFIELD. Mr. President, will the Senator from New Jersey yield?

Mr. WILLIAMS of New Jersey. I yield

## ORDER FOR ADJOURNMENT TO TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

(Later in the day the above order was changed to provide for the Senate to adjourn until 11 a.m. tomorrow.)

## ORDER FOR ADJOURNMENT FROM THURSDAY TO FRIDAY, OCTOBER 2, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business tomorrow, it stand in adjournment until 12 noon Friday.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR ADJOURNMENT FROM FRIDAY TO MONDAY, OCTOBER 5, 1970

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business on Friday, it stand in adjournment until 12 noon Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

## EQUAL OPPORTUNITIES ENFORCEMENT ACT

The Senate continued with the consideration of the bill (S. 2453) to further promote equal employment opportunities for American workers.

Mr. WILLIAMS of New Jersey. Mr. President, too often when we discuss the need for equal employment opportunity, we focus on the desirability of insuring "fairness" in employment, the "right to have a decent job", and the obligation of all citizens to help our disadvantaged Americans. However, in these discussions, we somehow fail to perceive that this area too is an important part of our basic law and order problem. The fact is that many of the institutions and individuals in our society responsible for providing equal employment opportunity, are deliberately disregarding their obligation to contribute to law and order in society when they violate the Civil Rights Act of 1964. As we all know, that act declares that it is an unlawful employment practice to fail or refuse to hire or promote, or to otherwise discriminate against a person with respect to his employment because of race, color, religion, sex or national origin. When these violations take place, they cause the loss of economic security and the inability to maintain a decent household just as surely as the burglar in the night steals money, savings, and possessions.

I think it is useful in illustrating the results of this continued and flagrant disregard of the law to examine into this unlawful conduct as it affects the ability of so many members of minority groups in this country to participate in the economic life of our society.

The statistics are vivid and I would like to recite just a few of the more significant results. In 1969 the average unemployment rate for Negroes and other minorities was 6.4 percent. By comparison, the rate of white unemployment was less than half—3.1 percent. For minority youth, in 1969, the unemployment rate was 19 percent, while the unemployment rate for white youth was 7.9 percent.

By July of 1970, the unemployment rate for minorities had leaped to 9.3 percent, compared with a white unemployment rate of 4.8 percent. The unemployment rate of nonwhite teenagers skyrocketed to 28.7 percent.

Looking at the problems in dollar terms, the median family income of Negroes was $5,999 in 1969. This was 39 percent less than the median family income of $9,794 for white families.

The outlook for the future is equally grim unless new efforts are made.

Just a little more than 6 years ago, Congress enacted Title VII of the Civil Rights Act of 1964. This act recognized the prevalence of discriminatory unemployment practices in the United States and the need for Federal legislation to deal with the problem of such discrimination.

Title VII of the Civil Rights Act established the equal employment opportunities commission as an independent bipartisan agency charged with the administration of the act's substantitive provisions.

The act contemplated informal methods of conciliation and persuasion as the primary mechanism for obtaining compliance. Only when a pattern or practice of resistance to the statutes was indicated did it make provision for enforcement by the Government and then only by the Attorney General.

Title VII quite frankly has not been a notable success. In 1964, employment discrimination tended to be viewed as a series of isolated and distinguishable events, for the most part due to ill will on the part of some identifiable individual or organization. It was thought that a scheme that stressed conciliation rather than compulsory processes would be most appropriate for the resolution of this essentially human problem, and that litigation would be necessary only on an occasional basis in the event of determined recalcitrance. Unfortunately, this view has not been borne out by experience. Not enough is being done to obey the act and improve the situation. In its first 5 years of existence, the Equal Employment Opportunity Commission has received over 58,055 actionable charges of which approximately 50-percent complained of discrimination because of race; 22 percent were concerned with sex discrimination, with the remainder of the charges involving national origin and religion.

Furthermore, during each year of the Commission's existence, the number of charges coming per year has increased in fiscal year 1970 alone, the commission received 17,780 new charges, and the indications for the current year are that incoming charges will continue to multiply at the same rate.

Compliance reviews and employment surveys continually reflect the same traditional situation. Minority workers—Black, Spanish-surnamed, Oriental, Indians—are relegated to the lowest paying, least desirable jobs—if they get hired. Often, seniority systems further perpetuate the problem by locking the minority worker into a line of progression that tops out at an hourly income far below the highest positions in an all-white line of progression.

The burden of unfair employment practices does not just fall on our minority citizens. A major area of compliance ignored by employers is the rights of female workers.

There were 30.5 million women workers 16 years of age and over in the United States in 1969. In fact, about 40 percent of all workers are women. More than three million or 8 percent of all women who were not working in 1969, reported that they wanted jobs. I wish to stress that women who are working or who express a desire to work are not necessarily women who have chosen to pursue careers for their own satisfaction.

Many families absolutely cannot manage without the mother's earnings. Of all working mothers with children under 6 years of age in March 1969, one-third were either widowed, divorced or separated from their husbands, or had husbands whose incomes in 1968 were below $5,000.

Nevertheless, employers continue to discriminate against female workers and, in particular, I am talking about money. In 1968, the average American woman who worked full time earned only $58.20 for each $100 earned by the average American man. Furthermore, Government figures indicate that even a high degree of education and training does not necessarily bring the woman a salary comparable to a man's. In 1968, a woman with 4 years of college was typically earning $6,694 a year while a man with an 8th grade education averaged $6,580—just a fraction less. Remember we are often talking not just about woman's right to use her resources for self-fulfillment, we are also talking about a woman's right to be able to provide for her children. Without a doubt, the problem of female underemployment presents deep sociological ramifications, and employers, employment agencies, and labor unions cannot deny the responsibility they have to abide by the law and therefore work to treat women on an equal basis with men.

All of this statistical data and recitation of the sad history of compliance with this act has very real significance to our efforts in trying to make a better world in which we live. Unless we are able to bring some measure of hope for progress for a better life in our society to the sons and daughters of our citizens and make absolutely clear that they have a stake in the system, we are all going to suffer with their disillusionment.

I realize that enactment of this bill will not automatically and overnight end employment discrimination in this country. But this bill will take us forward. The time has come to bring an end to job discrimination once and for all and to insure to every American the opportunity to the decent self-respect that goes with a job. The hopeful prospects that title VII offered millions of Americans in 1964 must be revised and brought to fruition if we are to contribute to maintaining a healthy society and a nation dedicated to justice.

The bill, as reported by the committee, provides for significant revisions in the primary enforcement mechanisms of title VII. The Commission would continue to seek voluntary resolution of disputes, but if conciliation efforts were unsuccessful, the Commission would be authorized to issue complaints, hold hearings, and where unlawful employment practices are found, issue appropriate orders subject to review by the courts of appeals. Upon petition by either the Commission, the respondent, or the person alleged to be aggrieved, a court of appeals may enter an order enforcing, modifying, or setting aside the order of the Commission. In accordance with the recommendations of the Administrative Conference of the United States, petitions for review must be filed within 60 days of the Commission's order. This avoids the burdensome experience encountered by the NLRB, which alone among all regulatory agencies, does not possess authority to issue orders that are in some measure self-enforcing.

The committee has taken pains to see that the rights of all parties to EEOC proceedings are protected. The right to a hearing on the record before a disinterested trial examiner is specifically provided for, and all proceedings must be conducted in accordance with the Administrative Procedure Act. Interested persons may intervene or appear as amicus curiae, and all parties to proceedings before the Commission may take part in any review in the court of appeals. Finally, provision is made for review by the U.S. Supreme Court as provided in 28 United States Code 1254.

The bill also contains provision for individual recourse to the Federal district courts if the Commission dismisses a charge, or if it has not issued a complaint or entered into a conciliation agreement agreeable to the parties within 60 days after filing of a charge. Under certain circumstances, the private right of action would also obtain if the Commission has issued a complaint but taken no action on it for 6 months. In any event, duplication of proceedings is avoided by termination of one at the commencement of the other. For example, if an individual should perfect and exercise his right of court action, the Commission would thenceforth be divested of jurisdiction over the matter. Likewise, if the Commission issued a complaint and proceeded with reasonable speed, its jurisdiction would remain exclusive prior to the institution of enforcement or review proceedings in the court of appeals. The committee concluded that this scheme would protect aggrieved persons from undue delay, as well as prevent respondents from being subjected to dual proceedings.

Two other significant changes were made in the statute's enforcement provisions: First, with respect to cases pending before the Commission at the time of the bill's enactment, court enforcement rather than cease-and-desist mechanisms would be available to the Commission—this should obviate time difficulties involved in "tooling up" cease-and-desist machinery, and second, the authority of the Attorney General to institute court actions directed at "patterns or practices" of resistance to the act would be transferred to the Commission after 3 years, contingent upon certification by the Attorney General and three members of the Commission that such transfer would be appropriate.

The bill also makes a number of changes in the coverage of the act. Title VII's jurisdiction is expanded over a period of 3 years to reach employers and unions with eight or more employees or members; it is also extended to State and local governments, and educational institutions. In addition, provision is made for transfer of the Civil Service Commission's equal opportunity responsibilities with respect to Federal employment to the EEOC. All of these changes are intended to provide for a more universal and effective application of the national policy against job discrimination.

The bill would make a number of other changes in title VII involving filing requirements for charges, Commission organization, terms and compensation of members, and revision of the record-keeping requirements of section 709(d) to lessen the duplicatory effect of overlapping Federal and State regulations. The investigations language of section 11 of the National Labor Relations Act has also been incorporated to complement the new enforcement authority bestowed on the Commission.

In the interest of time, I leave further explanation of the bill's provisions to the debate which will follow. I would urge the Senate to proceed with a sense of urgency, and recommend the bill's prompt passage. This legislation is long overdue and can wait no longer.

Mr. JAVITS. Mr. President, I fully support S. 2453, as reported out by the Committee on Labor and Public Welfare. I think this is a most significant bill for the United States, because it deals with one of the principal causes of tension in this country.

There are generally ascribed three causes for such serious domestic problems as we have. One is the Vietnam war, the second is the rebellion of youth, as shown by the so-called college disturbance syndrome, and the third is racial tension.

This is a landmark measure, an effort to bring up to date the historic Civil Rights Act of 1964.

While I speak on this point, Mr. President, I should mention the name of Everett Dirksen, our late minority leader. Without Everett Dirksen, there would never have been a Civil Rights Act of 1964. Though he was one of the principal factors in the construction of this particular provision, the equal employment opportunity provision, in the form which it took, which was rather pallid and has been proved to be inadequate by time, he was deeply convinced it was necessary at that time to leave it in that form in order to have this landmark legislation pass at all.

I believe now, after 6 years, the time is properly before us to endeavor to repair what has been shown to be an inadequate structure in a critically important field so far as minorities are concerned. So I call this a piece of unfinished national business.

In title VII of the Civil Rights Act the Congress guaranteed to every American the right to be free from racial or religious or sex discrimination in employment. We also established the Equal Employment Opportunity Commission to administer the law but, unfortunately, as the result of compromises necessary to overcome a filibuster, we had to agree to strip the Commission of any effective power to enforce the act. Thus, under present law, if the Commission is not successful in inducing voluntary compliance with the act, it is up to the person who is the subject of the unlawful discrimination to institute his own law suit against the employer or union guilty of violating the law, unless it can be shown that a pattern or practice of discrimination exists, in which case the Justice Department has the power to sue.

The purpose of S. 2453 is to remedy this wide gap in the Civil Rights Act of 1964 by granting to the Equal Employment Opportunity Commission the power to issue administrative cease-and-desist orders similar to those issued by other administrative agencies, such as the National Labor Relations Board.

When the 1964 act was under consideration, I and a number of other Senators were convinced that a governmental agency with some form of enforcement power was absolutely necessary to guarantee the fulfillment of the basic rights created by title VII of the act. We had to swallow hard to accept the emasculation of the Commission necessary to secure the votes needed for cloture.

Sadly enough, experience under title VII to date has borne out the worst of our fears. Conciliation alone—really only sweet talk at best—has not succeeded in ending discriminatory employment practices, nor does it show any reasonable promise of doing so. The statistics of the cases before the Commission speak for themselves: By mid-1969, 4 years after the effective date of the 1964 act, the Commission had investigated over 24,000 charges and had found reasonable cause to believe unlawful practices had been committed in over 63 percent of them. Less than half of these cases were successfully conciliated by the EEOC, leaving over 8,000 cases in which vindication of the rights of charging parties had to depend on either the Attorney General bringing a pattern or practice suit or their bringing their own

lawsuits. Out of these 8,000 cases fewer than 100 pattern or practice suits, and probably no more than 200 private suits, were filed.

These numbers add up to a stark failure to make a reality of the guarantees of equal employment opportunity contained in title VII, and demonstrate beyond doubt the need for legislation giving the EEOC power to enforce title VII.

Mr. President, the tables which are contained on page 5 of the committee report not only bear out the figures I have just given, but also demonstrate that the situation, both in discrimination on account of color and other minority distinctions, and on the ground of sex, has not very materially improved in the years since 1964; hence, the validity of our being here with this act and the critical importance of making it into Federal law.

This matter has been pending for a long time. There still are controversies which will need to be settled by the Senate, but I hope very much the general disposition will be to settle them expeditiously and to get on with the fundamental promise which is contained in the Civil Rights Act of 1964.

I may say, too, Mr. President—and I think this is a great tribute to the sense of decency and the sense of justice in our country—that I see a new attitude by those who on ideological or policy grounds or grounds of principle opposed all Federal civil rights legislation. The effort, as I see it now, is to do their utmost, in accordance with their rights, to shape the legislation according to the way they feel it ought to be shaped, but no longer to go for the jugular, as it were, and to seek to kill it by filibuster or otherwise. I think this is a much more creditable pattern than we faced at other times in the last two decades and that the country should take great heart from it. I should like to pay my respects and credit to the men who were intelligent enough and understood the national will enough so that they could adapt their own attitudes, which are deeply and sincerely held, to what is properly the national pattern in respect of civil rights legislation today.

APPROPRIATENESS OF CEASE-AND-DESIST POWER

I believe that the most appropriate type of power for the Commission is the traditional cease-and-desist order remedy available to other administrative agencies with essentially quasi-judicial functions, such as the NLRB. This leads me to disagree with the administration proposal to permit the Commission to initiate proceedings in the Federal district courts, although I recognize that even that procedure would be a great step forward over existing law.

All of the traditional arguments usually advanced to justify the administrative order approach are fully applicable to the EEOC. Thus, there is clearly a need for uniformity in decisions under title VII which a single decisionmaking agency can much better insure—at least until the Supreme Court decides a number of cases—than the different Federal courts can. There is also a great need for expertise in interpreting and applying the provisions of title VII which only a specialized agency can insure. For example, one of the most critical areas under title VII is testing of applicants for employment. Whether or not a given test is appropriate in a given case presents difficult psychological and sociological issues, as well as difficult problems in the analysis of job content and personnel policy. The Commission has already initiated important work in this area, but under the administration's proposal it will have to educate not only itself, but every Federal judge in the country on the proper resolution of these issues.

There is also the question of speed in case handling. While it is true that the Commission now has a large backlog of cases, its calendar is certainly no worse than that in some of our busier district courts. The committee bill does include provisions encouraging the Commission to dispose of cases within 6 months; that figure will rarely, if ever, be attained in Federal district courts.

For these reasons, I support the granting of cease-and-desist power to the EEOC, as S. 2453 does, and shall oppose the administration proposal to permit direct court enforcement.

EXPANSION OF COVERAGE—EMPLOYEES OF STATE AND LOCAL GOVERNMENTS

S. 2453 makes several other highly desirable changes in existing law, among which are the expansion of coverage to include employees of employers with eight or more employees, employees of educational institutions, and employees of State and local governments.

Coverage of State and local governments, in particular, is a change which I long have urged. Of all the classes of employment which should be subject to title VII the most obvious, it seems to me, is employment in State and local government which, under the 14th amendment, must be free from arbitrary discrimination.

As noted in the committee report on the bill, the employment discrimination problem is particularly acute in those governmental activities which are most visible to the minority communities—notably education, law enforcement, and the administration of justice—with the result that the credibility of Government's claim to exist "for all the people—by all the people" is called into serious question. This point was made particularly strongly by the Civil Rights Commission in its 1969 report on equal opportunity in State and local government employment. The Commission found that minorities are denied equal access to State and local government jobs through both institutional and overt discriminatory practices. Perpetuation of past discriminatory practices through de facto segregated job ladders, invalid selection techniques, and stereotyped supervisory opinions as to the capabilities of minorities as a class were found to be widespread, and if anything, more pervasive than in private employment.

When the special nature of the State and local governmental activity involved is considered, the case for ending this kind of discrimination is even stronger. As the Commission pointed out in the introduction to its report:

> State and local governments are the nearly constant companions of every citizen of the United States. Most personal contacts with governments—so routine as to be taken for granted—are with State or local government. Policemen, firemen, and garbage collectors are included in its work force. From the time a birth is recorded at the city or county health department, to the time a burial permit is issued by the city or county, the daily activities of the citizen—education, employment, commerce, recreation—bring him into constant contact with State and local governments."

TRANSFER OF OFCC AND PATTERN OR PRACTICE SUITS

One of the more controversial changes which the committee did not make in existing law is the transfer to the EEOC of the Office of Federal Contract Compliance, which is responsible for implementing the nondiscrimination and affirmative action requirements of Executive Order 11246 covering Federal contractors. This transfer was contained in S. 2453 as originally introduced, but was stricken from the bill by the unanimous vote of the Committee on Labor and Public Welfare. I strongly support the committee's action in striking the transfer relating to OFCC. Transfer, at least at this time, would be highly undesirable for the following reasons:

First, the Commission presently has a large backlog of cases. It is almost 2 years behind in processing its caseload. We have tried to help the Commission by appropriating the administration's full budget request in order to give the Commission additional manpower, but the fact is that the Commission is now overloaded and will remain so for some time. Giving the Commission enforcement power under title 7 will further increase its workload greatly. Under these circumstances it would be inappropriate to give the Commission the added responsibility for enforcement of Executive Order 11246.

Second, the nature of the Executive order program, involving as it does the cooperation of every single Federal executive agency, requires that its implementation come from the highest level of Government. A Cabinet-level officer, such as the Secretary of Labor can, with complete propriety, consult with the President with respect to implementation of the Executive order program and speak with the President's authority when issuing orders for compliance with its provisions by other Federal agencies and their contractors. The Chairman of the Equal Employment Opportunity Commission, an independent quasi-judicial agency, is not a Cabinet-level officer, and could not speak with a direct line of authority from the President without severely impeding his status as a quasi-judicial officer.

Third, there are sound political reasons for not, at this time, concentrating the entire equal employment opportunity program of the Federal Government in one agency. It is still of vital importance in achieving equal employment opportunity that the public recognize that all agencies of the Federal Government are committed to achieving this goal, not just one independent agency. Furthermore concentration of all equal employment opportunity activity in one agency

would make it extremely easy for those who are opposed to the achievement of full quality of employment opportunity in America to strangle the program through a limitation on appropriations.

Fourth, the problems of coordination which existed among the various Federal programs dealing with equal employment opportunity have largely been solved through the steps which this administration has taken to insure much closer harmony among the Civil Rights Division of the Justice Department, the OFCC, and the EEOC. In particular, the EEOC and the OFCC have entered into a memorandum of understanding designed to avoid overlap, conflict, and duplication of the kind which regrettably did exist in prior years.

Finally, and this is the heart of the matter, the potential significance of the ongoing OFCC program, compared to the title 7 program, particularly in the short range, is such that any proposal to transfer the OFCC program to the EEOC at this time would be like the tail wagging the dog. The virtue of the OFCC program is that it makes it possible to achieve fairly immediate broadscale impact in given areas and industries. The Philadelphia plan, which has more than met its first-year goals, is an example of the type of program that can be generated under the Executive order, with its "affirmative action" requirements, which cannot be implemented under title 7. Title 7 involves a case-by-case, complaint-oriented approach, and requires affirmative action only in response to proven cases of discrimination. While the EEOC and the courts will undoubtedly accomplish a great deal through judicious use of this power over the course of time, it simply cannot be brought to bear immediately, in the manner OFCC has been doing now under the Executive order.

It bears emphasis, in this connection, that this administration after a slow start, for which it received justifiable criticism, has demonstrated beyond doubt that it means business with the OFCC program. In addition to the Philadelphia plan, plans have been promulgated or are in the process of being promulgated for Washington, D.C., and a number of other cities. Moreover, order No. 4 of the Department of Labor has been promulgated spelling out affirmative action requirements for all Federal contractors, not just those under specific plans or in the construction industry.

What a tragedy it would be if a bill designed to strengthen equal employment opportunity of Americans should be transformed into one which would vitiate the only program now in existence making any substantial progress toward that end.

Mr. President, I ask unanimous consent that releases from the Department of Labor concerning Philadelphia-type plans, Order No. 4, sex discrimination guidelines, and a memorandum describing OFCC accomplishments be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, some of the factors I have just discussed also apply to the refusal of the committee to provide for immediate transfer of "pattern or practice" suits from the Justice Department to EEOC. The committee was of the belief, and I share that view, that a transition period will be necessary to permit the Commission to hire the staff and gain experience in handling its new enforcement responsibilities. It would be a waste of time and resources if, during this transition, we should forgo use of the expertise gained by the Justice Department in prosecuting pattern or practice suits and the services of the trained lawyers in the Civil Rights Division. Hence, I support the provisions of the bill which permit transfer of pattern or practice suits after 3 years if the Attorney General and a majority of the Commissioners agree that the EEOC is ready to handle such suits.

The other controversial transfer provision in the bill is section 715, which gives the EEOC, rather than the Civil Service Commission final responsibility for assuring equal opportunity for Federal employees. This provision does not mean that the EEOC will take over the function now being performed by the Civil Service Commission in this area, but merely that it will have the final rulemaking and review power. The committee expects the EEOC to delegate much of its responsibility back to the Civil Service Commission. As the committee report states:

> Internal problems posed by regulating certain aspects of Federal employment practices through an agency not having the primary responsibility for personnel matters is avoided through the use of a rulemaking scheme, rather than flat application of the statute. This will permit the Equal Employment Opportunity Commission to delegate responsibility for certain aspects of the program to the Civil Service Commission, while retaining ultimate review authority and the power to issue appropriate guidelines and standards. It is expected that the Commission will, in exercising its rule-making powers in this area, work closely with the Civil Service Commission in developing orderly and efficient procedures for eliminating unlawful discrimination in Federal employment.

The committee report also summarizes very well the shortcomings of the existing program for Federal employees and I ask unanimous consent that a portion of the report—pages 8 to 9—dealing with this matter be printed in the RECORD.

COVERAGE OF SEX AS WELL AS RACIAL AND RELIGIOUS DISCRIMINATION

In conclusion, I would like to call attention to the fact that title 7, and hence this bill, covers discrimination in employment on account of sex as well as race, color, religion, and national origin. While much of the impetus for this bill comes from the need to end discrimination against racial and religious minorities, it is too often overlooked that sex discrimination is an equally urgent problem in America. The committee report calls attention to the regrettable fact that the proscription of sex discrimination in title 7 has been regarded in some circles as a kind of legislative accident. So far as this committee, and this Senator, are concerned, nothing could be further from the truth.

The committee report contains a table which demonstrates the truly invidious discrimination faced by women in the employment market today. I ask unanimous consent that the table be printed in the RECORD at this point.

There being no objection the table was ordered to be printed in the RECORD, as follows:

NATIONAL AVERAGES OF ANNUAL WAGES FOR FULL-TIME, YEAR-ROUND WORKERS, 1968 [1]

| Occupation | Men | Women |
|---|---|---|
| Professional and technical workers (includes doctors, lawyers, science, draftsmen, etc.) | $10,151 | $6,691 |
| Nonfarm managers, officials and proprietors (includes office managers, local, State and Federal Government officials; business owners, etc.) | 10,340 | 5,635 |
| Clerical workers (includes bookkeepers, file clerks, stenos, etc.) | 7,351 | 4,789 |
| Operatives (mostly factory workers) | 6,738 | 3,991 |
| Service workers (excludes private household workers; includes laundry workers, barbers, beauty operators etc.) | 6,058 | 3,332 |
| Salesworkers | 8,549 | 3,461 |

[1] Latest figures available.

Source: Women's Bureau, U.S. Department of Labor.

Mr. JAVITS. Mr. President, it seems clear to me that despite such measures as the equal pay in employment, in the Fair Standards Labor Act, and inclusion of sex discrimination in title VII, there is a long way to go before discrimination on grounds of sex with respect to employment is truly ended.

Therefore, I believe that the firming up of the procedures and the strengthening of the procedures by which this may be done in the bill should be of most burning interest to all those who are supporting the drive for equality of women's rights. I hope very much that they will regard this bill as an element of implementation in that regard.

Thank you, Mr. President. I yield the floor.

EXHIBIT 1

MEMORANDUM FROM DEPARTMENT OF LABOR REGARDING OFCC ACCOMPLISHMENTS

On February 4, 1969, the U.S. Commission on Civil Rights presented to the Secretary of Labor an evaluation of the Federal Contract Compliance Program. This report from the Commission concluded that the Federal Contract Compliance program had not achieved its maximum potential in delivering EEO to minority groups primarily for these reasons.

1. Lack of staff resources; 2. lack of standards to contractors and to contracting agencies; and 3. lack of systematic approach to program administration.

Since receiving the Commission's evaluations and recommendations concerning the contract compliance program, the OFCC under the leadership of the Secretary of Labor, George P. Shultz and Secretary of Labor James D. Hodgson, and Assistant Secretary of Labor Arthur A. Fletcher, has instituted measures under which the Federal Contract Compliance program has achieved maximum capabilities to deliver Equal Employment Opportunities to minority groups:

1. Staff resources of the OFCC have tripled. In addition, the staff resources of the compliance agencies that are under the guidance of OFCC in administering the EO are also expected to triple. 2. Uniform and effective compliance standards have been de-

veloped for the benefit of the contractors, contracting agencies and minority groups. These standards include (a) *model-area-wide agreements* containing goals and timetables for the utilization of minorities in the construction industry; (b) *Order No. 4* containing the requirement of goals, targets and timetables for the employment of minorities in all industries other than construction; (c) *Guidelines on sex discrimination;* and (d) an affirmative action program requirement similar to Order No. 4 is under development to be applicable to sex discrimination. 3. The program is now very soundly and effectively administered under the leadership of Assistant Secretary Fletcher, who has become a national leader in the field of equal employment opportunity.

Outlined below is only a partial list of accomplishments thus far that have resulted from the above-increased resources, improved standards, and the leadership of Assistant Secretary Fletcher in the Department of Labor.

1. CONSTRUCTION INDUSTRY

In this important industry, there have been established area-wide agreements in 14 major cities. These area-wide agreements will create 25,000 jobs for minorities in the skilled crafts. There are now activities underway for establishing similar voluntary agreements in an additional 88 cities where interested parties have requested the assistance of the OFCC in establishing voluntary agreements in their hometowns. The agreements in these cities will produce a total of 175,000 jobs for minorities in the skilled crafts in this important industry.

2. OTHER INDUSTRIES

In other industries Order No. 4, calling for goals and timetables for providing minority opportunities, have resulted thus far in over 15,000 projected opportunities for minorities in five companies alone. For Fiscal Years 1971 and 1972, the systematic plans developed by the OFCC project 2½ million hiring and promotion opportunities for minority groups with Federal contracts.

---

NEWS RELEASE OF FEBRUARY 9, 1970

A national program for achieving equal employment opportunity in Federally-funded construction work in 18 U.S. cities was announced today by Labor Secretary George P. Schultz.

The Labor Department's 1970 compliance program for the construction industry calls for special efforts to develop equal employment opportunity programs in these cities including possible installation of "Philadelphia-type Plans" for those local communities which are unable to develop on their own initiative acceptable area-wide agreements.

The cities—covering all major regions of the country—are:

Atlanta, Boston, Buffalo, Cincinnati, Denver, Detroit, Houston, Indianapolis, Kansas City, Los Angeles, Miami, Milwaukee, Newark, New Orleans, New York, San Francisco, Seattle and St. Louis.

Based on indications of need and availability of limited resources, the Office of Federal Contract Compliance first would focus attention on six "priority" cities.

The six priority cities are Boston, Detroit, Atlanta, Los Angeles, Seattle and Newark.

Recognizing that underutilization of minority group members in some construction crafts has become a widespread problem, the Labor Department has examined several criteria in selecting the 18 cities.

The criteria include: labor shortages, availability of minority craftsmen, number of minorities, volume of Federal construction, minority representation in critical trades, labor market location, total area population, proportion of minorities in total population and cohesion of minority organizations.

Under the Philadelphia Plan concept, bidders on Federally-assisted construction projects exceeding $500,000 must submit affirmative action plans setting specific goals and timetables for hiring minority-group members in higher-paying crafts.

"We have made it quite clear that in solving these problems of the cities we favor voluntary, area-wide agreements to the imposition of specific requirements by the Government," Mr. Shultz said. "In fact provision for such agreements was written into the original Philadelphia Plan."

"I, therefore, urge contractors, unions, minority group organizations and local officials in these 18 cities to speed development of area-wide agreements that would make equal employment in construction work a reality."

Secretary Shultz said his agency "stands ready right now to help the parties in every possible way to reach their own agreements that will meet the requirements of Federal equal opportunity regulations."

He offered technical assistance to the parties, saying the Labor Department is able to provide them with appropriate guidelines and suggested ingredients for model area-wide agreements that will meet Federal requirements.

Parties interested in more details about model agreements or technical assistance are invited to write: Director, Office of Federal Contract Compliance, U.S. Department of Labor, Washington, D.C. 20210.

The compliance effort outlined by the Secretary is being carried out under provisions of Executive Order 11246. This Presidential directive prohibits discrimination in Federal contract work on the basis of race, color, religion, sex or national origin and requires contractors to take affirmative action to insure equal job opportunity.

---

MODEL AREAWIDE AGREEMENT

(NOTE.—The purpose of this "model" is to set forth suggested ingredients for areawide agreements. The language should not be considered "boilerplate", i.e., a standard or unvariable format. It is recognized that adjustments for local conditions will often need to be made. Nonetheless this model should provide a useful framework for communities endeavoring to work out areawide agreements designed to provide approvable affirmative action programs for equal employment opportunity.)

1. *Statement of Purpose:* The purpose of this Agreement is to increase minority employment and consequent union membership in the construction industry in this area. Unions, Contractors, Building Trades Council, General and Specialty Contractors Associations, participating community officials and other parties representing and concerned with the minority community pledge themselves to achieving this objective.

2. *Participants:* The participants in this program shall be the Building Trades Council, the General Contractors Association, the Specialty Contractors Association and other parties concerned with increasing minority employment in the construction trades. The other parties may include minority civic organizations, minority training and recruiting organizations, and public officials of state or local governments.

3. *Goals:* The plan should include specific numerical or percentage goals for new minority employment in the construction industry in the area for the coming year, and estimates of increases in future years. Specific increase goals should be established equitably among the trades, taking into account the wishes of minority persons seeking employment and the history and level of minority participation in the particular trades. Numbers to be agreed upon as overall goals shall be based on such factors as anticipated increases in the labor force, comparison with existing levels of apprenticeship programs, anticipated industry needs or other factors considered relevant by the parties.

4. *Scope:* This agreement covers all construction work performed by contractors who are members of the participating Association, and is not limited to Federal or Federally-assisted construction, and all work of any other contractors who may sign this Agreement.

5. *Implementation:* Development of the program and its policies should be undertaken jointly by labor and management with suitable participation and involvement of other parties to this Agreement. The Agreement should provide for an impartial chairman to resolve disputes in its administration. In the administration of the plan, it is recognized that because recruitment, counselling, classification of applicants' assignment to the trades and follow-up on the operation of the program is of special concern to the minority community that community should be extensively involved in these phases of the program. Administration may require a full time staff person or such other regular arrangements as the parties can work out. Staff persons should be sensitive to the problems of the minority community and knowledgeable in the construction trades.

6. *Elements in the Program:*

a. *Recruitment and counselling.* An extensive recruiting and counselling program shall be undertaken in the minority community, publicizing and advising the members of that community of the opportunities available under this program.

b. *Classification of minority applicants.* Minority applicants shall be classified on the basis of their experience as follows:

1. *Journeymen.* Persons who (1) are licensed by public authority in a trade, (2) have in fact functioned as a journeyman, (3) have performed at a level of skill equivalent to that of a journeyman, (4) have completed the Advanced Trainee Program under this agreement, (5) otherwise qualified. Journeymen shall be advised of their classification in writing. When covered by a labor contract they shall be paid the journeyman rate as established by collective bargaining and admitted to full union membership in accordance with established practice for non-minority employees.

2. *Apprentices.* Minority persons who have equivalent experience or meet existing valid qualifications and so desire they shall be eligible for admission to the relevant apprenticeship program on the same basis as others.

3. *Advanced trainee.* Persons not qualified as journeymen who have some related training, construction experience or its equivalent but do not meet the requirements of or seek admission as apprentices shall be eligible for placement in job-related training programs which seek to assist them in becoming journeymen within a reasonable period. They shall be paid at appropriate apprenticeship rate levels and may be advanced to Journeyman more rapidly than established apprenticeship time sequences if they reach higher proficiency levels more rapidly.

4. *Trainees.* Persons not qualified as journeymen or advanced trainees or apprentices, or who do not wish to be apprentices shall be eligible for employment and placed in job related training programs which seek to permit them to become advanced trainees within a year. Trainees shall be paid at a rate equivalent to that paid apprentices of comparable levels of proficiency and may be made advanced trainees within a year if they reach that level of proficiency.

c. *Fulfillment of Goals.* Employment of minority persons as apprentices, advanced trainees and trainees shall be counted toward fulfillment of the goals set forth in paragraph 3.

d. *Training Programs.* Training programs for trainees and advanced trainees shall be

established which shall provide, as nearly as may be practical, the education equivalent in quality and content to the training programs afforded apprentices.

e. *Probationary Periods.* Trainees or advanced trainees who, at the end of the year are not performing adequately for advancement may be allowed an additional six month period in each category to develop additional skill and experience.

f. *Assignment to trades.* The administrator or other official of the program will assign a minority group person to a designated trade after examination of background information and consultation with him and in accordance with the basic goals established in this agreement.

7. *Existing programs.* Existing outreach, pre-apprenticeship programs shall continue.

8. *Financing.* Costs of administration of the program shall be worked out among the parties to the agreement. Federal funds may be sought for training programs and other purposes.

9. *Subcontractors* of contractors party to this agreement shall be bound by this agreement.

10. *Provisions of collective bargaining agreements* or practices under collective bargaining shall be harmonized with this agreement as far as practical.

11. *Records and reports* of the operation of the program shall be kept by the Administrator on forms available from the Department of Labor. These reports and records will be available as a basis for evaluation of the program by private parties and Federal, state and local government agencies.

12. *Grievance Procedure:* A grievance procedure shall be established to resolve disputes concerning the interpretation or application of this agreement, any question arising thereunder, or any other question concerning the operation of this program. The first step shall be consultation and discussion by affected parties. If the dispute is not resolved, it may be submitted to the Committee for recommendation, or for final and binding decision, as the parties decide, or the matter may be referred to a neutral work stoppage, picketing, lockout or other arbitrator for a binding decision, if the parties so choose. There shall be no strike, work stoppage, picketing, lockout or other interference with construction activity during the term of this agreement with respect to any matter which is the subject of the procedures established in this section.

13. *Review, Modification and Duration:* This agreement shall last for one year or such longer period as the parties may agree, and shall be automatically renewed from year to year unless written notice of intention to terminate or modify the agreement is given to all parties not more than 90 nor less than 60 days prior to the annual renewal date hereof. Ninety days prior to the end of the first, and each succeeding year of this agreement, the parties shall review its effectiveness and the adequacy of the goals set forth herein.

14. *Compliance with Executive Order:* Participation in the program set forth in this agrement and good-faith performance by all parties thereunder, shall during the first year of the program, be evidence of general compliance with E. O. 11246 with respect to employment opportunity. This agreement or participation hereunder shall have no effect on the obligations of E.O. 11246 or any Federal or state statute, ordinance or regulation, with respect to *specific acts or incidents* which may violate the provisions of the Order or applicable law.

NOTE.—Recognition of the inter-relationship of minority construction industry contractors and matters involved in an area-wide agreement on equal employment opportunity is desirable. As agreed to by the parties the Administrator of the program may make available to the contractors a list of minority contractors, and assist minority contractors in securing technical assistance with respect to the contracting process in the construction industry.

---

July 9, 1970.

EQUAL EMPLOYMENT OPPORTUNITY PUSH LAUNCHED

An intensive summer program to assist cities in achieving "hometown" solutions for equal employment opportunity in the construction industry was announced today by Labor Secretary J. D. Hodgson. "There has been too much of a lag in this work and the big push is on," the Secretary said.

"Our skilled manpower reserves are tight but we are borrowing from other programs so that every one of these cities will get help in putting their good faith to work."

"The Labor Department intends," Secretary Hodgson said, "to give metropolitan areas every opportunity and assistance to work out agreements because experience shows that they provide broader employment opportunities than imposed solutions which are limited to Federal Government contractors.

"Where an area-wide agreement is not possible, the Labor Department will continue its policy of imposing solutions, such as the Philadelphia Plan and the Washington Plan.

"In Philadelphia, the Department is planning enforcement proceedings against contractors who are not making good-faith efforts to utilize minorities, as the Philadelphia Plan requires," Secretary Hodgson said. He noted that the Department of Health, Education and Welfare recently issued a show-cause against six Philadelphia contractors which may lead to debarment. The Department of Housing and Urban Development has issued one such show-cause.

About 30 Labor Department officials are being trained for the new program, Secretary Hodgson said. Seven of the newly-trained officials are already in the field providing technical assistance to municipalities, minority groups, unions and contractors.

Secretary Hodgson emphasized that this program was developed in response to requests for assistance from about 70 cities. These cities are in addition to the 18 announced on February 9. The Labor Department announced then that 18 cities would receive priority attention for compliance programs in the construction industry. Appropriate guidelines and suggested ingredients for model area-wide agreements meeting Federal requirements were provided.

The names of 73 additional cities and areas designated for assistance are carried at the end of this release.

The hometown solution aims at voluntary, area-wide agreements between contractors, unions and minority groups. It applies to both Federally-funded and private construction.

Secretary Hodgson reiterated the Department's desire to help the interested parties in these cities reach hometown agreements before the end of the year.

The Secretary of Labor said that while he is not satisfied with overall progress toward hometown agreements, he is happy to note several agreements have recently been consummated including one reached in Los Angeles the day before yesterday. Of the other 18 cities, he noted that hometown solutions have been reached in Denver, Boston and St. Louis.

Seattle is being assisted in assuring equal employment opportunity by a court order obtained by the Department of Justice at the request of the Department of Labor.

Chicago and Pittsburgh, which are not among the 18 cities, have also worked out hometown agreements.

The other cities in the group of 18 are Atlanta, Buffalo, Cincinnati, Detroit, Houston, Indianapolis, Kansas City, Miami, Milwaukee, Newark, New Orleans, New York and San Francisco.

"The Department's expanded program is being carried out by the Office of Federal Contract Compliance (OFCC) headed by Director John Wilks," the Labor Secretary said. "The assignment of these trained officials to the field will provide technical assistance so cities can develop suitable plans acceptable to city officials, the general public, the black minority, the unions and contractors."

The compliance effort outlined by the Secretary is being carried out under provisions of Executive Order 11246. This Presidential directive prohibits discrimination in Federal contract work on the basis of race, color, religion, sex or national origin, and requires contractors to take affirmative action to insure equal job opportunity.

The 73 additional cities and areas are:

1. Akron, Ohio.
2. Albany, N.Y.
3. Albuquerque, N.M.
4. Bakersfield, Cal.
5. Baltimore, Md.
6. Baton Rouge, La.
7. Birmingham, Ala.
8. Cairo, Ill.
9. Camden, N.J.
10. Carbondale, Ill.
11. Charleston, S.C.
12. Charlotte, N.C.
13. Cleveland, Ohio.
14. Columbus, Ohio.
15. Dallas, Tex.
16. Dayton, Ohio.
17. Des Moines, Ia.
18. East St. Louis, Ill.
19. Fort Worth, Tex.
20. Fresno, Cal.
21. Gary, Ind.
22. Gulfport-Biloxi, Miss.
23. Harrisburg, Pa.
24. Hartford, Conn.
25. Jefferson City, Mo.
26. Kansas City, Kan.
27. Las Vegas, Nev.
28. Lexington, Ky.
29. Little Rock, Ark.
30. Louisville, Ky.
31. Memphis, Tenn.
32. Minneapolis-St. Paul, Minn.
33. Mobile, Ala.
34. Mount Vernon, N.Y.
35. Nashville, Tenn.
36. New Haven, Conn.
37. Norfolk, Va.
38. Oklahoma City, Okla.
39. Omaha, Neb.
40. Pasco-Richland-Kennewick, Wash.
41. Peoria, Ill.
42. Phoenix, Ariz.
43. Portland, Ore.
44. Portsmouth, Va.
45. Providence, R.I.
46. Pueblo, Colo.
47. Reno, Nev.
48. Richmond, Va.
49. Rochester, N.Y.
50. Rockfort, Ill.
51. Rock Island, Ill.
52. Sacramento, Cal.
53. San Antonio, Tex.
54. San Bernadino-Riverside, Cal.
55. San Diego, Cal.
56. San Francisco Bay Area, Cal.
57. Seaside-Monterey, Cal.
58. Spokane, Wash.
59. Springfield, Ill.
60. Springfield, Mo.
61. Stockton, Calif.
62. Syracuse, N.Y.
63. Takoma, Wash.
64. Toledo, Ohio.
65. Topeka, Kan.
66. Trenton, N.J.
67. Tucson, Ariz.
68. Vallejo, Cal.
69. Ventura, Cal.

70. Waterloo, Ia.
71. Wichita, Kans.
72. Wilmington, Del.
73. Youngstown, Ohio.

ORDER NO. 4: U.S. DEPARTMENT OF LABOR, OFFICE OF FEDERAL CONTRACT COMPLIANCE

CHAPTER 60—OFFICE OF FEDERAL CONTRACT COMPLIANCE, EQUAL EMPLOYMENT OPPORTUNITY, DEPARTMENT OF LABOR

*Part 60–2—Affirmative action programs*

Pursuant to Executiv Order 11246, sections 201, 205, 211 (30 F.R. 12319), and 41 CFR 60–1.6, 60–1.28, 60–1.29, 60–1.40, Title 41 of the Code of Federal Regulations is hereby amended by adding a new Part 60–2 to read as set forth below.

Subpart A—General

Sec.
60–2.1 Title, purpose and scope.
60–2.2 Agency action.

Subpart B—Required Contents of Affirmative Action Programs

60–2.10 Purpose of affirmative action program.
60–2.11 Required utilization analysis and goals.
60–2.12 Additional required ingredients of affirmative action programs.
60–2.13 Compliance status.

Subpart C—Suggested Methods of Implementing the Requirements of Subpart B

60–2.20 Development or reaffirmation of the equal employment opportunity policy.
60–2.21 Dissemination of the policy.
60–2.22 Responsibility for implementation.
60–2.23 Identification of problem areas by organization unit and job categories.
60–2.24 Establishment of goals and timetables.
60–2.25 Development and execution of programs.
60–2.26 Internal audit and reporting systems.
60–2.27 Support of action programs.

Subpart D—Miscellaneous

60–2.30 Use of goals.
60–2.31 Supersedure.

AUTHORITY: The provisions of this Part 60–2 issued pursuant to sec. 201, E.O. 11246 (30 F.R. 12319).

Subpart A—General

§ 60–2.1 Title, purpose and scope.

This part shall also be known as "Order No. 4," and shall cover nonconstruction contractors. Section 60–1.40 of this chapter, Affirmative Action Compliance Programs, requires that within 120 days from the commencement of a contract each prime contractor with 50 or more employees and a contract of $50,000 or more develop a written affirmative action compliance program for each of its establishments. A review of agency compliance surveys indicates that many contractors do not have affirmative action programs on file at the time an establishment is visited by a compliance investigator. This part details the agency review procedure and the results of a contractor's failure to develop and maintain an affirmative action program and then sets forth detailed guidelines to be used by contractors and Government agencies in developing and judging these programs as well as the good faith effort required to transform the programs from paper commitments to equal employment opportunity.

§ 60–2.2 Agency action.

(a) Any contractor required by § 60–1.40 to develop an affirmative action program at each of his establishments who has not complied fully with that section is not in compliance with Executive Order 11246 (30 F.R. 12319). Until such programs are developed and found to be acceptable in accordance with the standards and guidelines set forth in §§ 60–2.10 through 60–2.31, the contractor is unable to comply with the equal employment opportunity clause.

(b) If, in determining such contractor's responsibility for an award of a contract it comes to the contracting officer's attention, through sources within his agency or through the Office of Federal Contract Compliance or other Government agencies, that the contractor has not developed an acceptable affirmative action program at each of his establishments, the contracting officer shall declare the contractor-bidder nonresponsible unless he can otherwise affirmatively determine that the contractor is able to comply with his equal employment obligations: *Provided,* That during the preaward conferences provided for in § 60–1.6(d)(3), every effort shall be made through the process of conciliation, mediation and persuasion to develop an acceptable affirmative action program meeting the standards and guidelines set forth in §§ 60–2.10 through 60–2.31 so that, in the performance of his contract, the contractor is able to meet his equal employment obligations in accordance with the equal opportunity clause and applicable rules, regulations and orders: *Provided further,* That when the contractor-bidder is declared nonresponsible more than once for inability to comply with the equal employment opportunity clause a notice setting a timely hearing date shall be issued concurrently with the second nonresponsibility determination in accordance with the provisions of § 60–1.26 proposing to declare such contractor-bidder ineligible for future contracts and subcontracts.

(c) Immediately upon finding that a contractor has no affirmative action program or that his program is not acceptable the contracting officer shall notify officials of the approprate compliance agency and the Office of Federal Contract Compliance of such fact. The compliance agency shall issue a notice to the contractor giving him 30 days to show cause why enforcement proceedings under section 209(b) of Executive Order 11246, as amended, should not be instituted.

(1) If the contractor fails to show good cause for his failure or fails to remedy that failure by developing and implementing an acceptable affirmative action program within 30 days, the compliance agency, upon the approval of the Director, shall issue a notice of proposed cancellation or termination of existing contracts or subcontracts and debarment from future contracts and subcontracts pursuant to § 60–1.26(b), giving the contractor 10 days to request a hearing. If a request for hearing has not been received within 10 days from such notice, such contractor will be declared ineligible for future contracts and current contracts will be terminated for default.

(2) During the "show cause" period of 30 days every effort shall be made by the compliance agency through conciliation, mediation and persuasion to resolve the deficiencies which led to the determination of noncompliance or nonresponsibility. If satisfactory adjustments designed to bring the contractor into compliance are not concluded, the compliance agency, with the prior approval of the Director, shall promptly commence formal proceedings leading to the cancellation or termination of existing contracts or subcontracts and debarment from future contracts and subcontracts under § 60–1.26(b).

(d) During the "show cause" period and formal proceedings, each contracting agency must continue to determine the contractor's responsibility in considering whether or not to award a new or additional contract.

Subpart B—Required Contents of Affirmative Action Programs

§ 60–2.10 Purpose of affirmative action program.

An affirmative action program is a set of specific and result-oriented procedures to which a contractor commits himself to apply every good faith effort. The objective of those procedures plus such efforts is equal employment opportunity. Procedures without effort to make them work are meaningless; and effort, undirected by specific and meaningful procedures, is inadequate. An acceptable affirmative action program must include an analysis of areas within which the contractor is deficient in the utilization of minority groups and, further, goals and timetables to which the contractor's good faith efforts must be directed to correct the deficiencies and, thus to increase materially the utilization of minorities at all levels and in all segments of his work force where deficiencies exist.

§ 60–2.11 Required utilization analysis and goals.

Affirmative action programs must contain the following information:

(a) An analysis of all major job categories at the facility, with explanations if minorities are currently being under-utilized in any one or more job categories (job "category" herein meaning one or a group of jobs having similar content, wage rates and opportunities). "Under-utilization" is defined as having fewer minorities in a particular job category than would reasonably be expected by their availability. In determining whether minorities are being underutilized in any job category, the contractor will consider at least all of the following factors:

(1) The minority population of the labor area surrounding the facility;

(2) The size of the minority unemployment force in the labor area surrounding the facility;

(3) The percentage of minority work force as compared with the total work force in the immediate labor area;

(4) The general availability of minorities having requisite skills in the immediate labor area;

(5) The availability of minorities having requisite skills in an area in which the contractor can reasonably recruit;

(6) The availability of promotable minority employees within the contractor's organization.

(7) The anticipated expansion, contraction and turnover of and in the work force;

(8) The existence of training institutions capable of training minorities in the requisite skills; and

(9) The degree of training which the contractor is reasonably able to undertake as a means of making all job classes available to minorities.

(b) Goals, timetables and affirmative action commitments must be designed to correct any identifiable deficiencies. Where deficiencies exist and where numbers or percentages are relevant in developing corrective action, the contractor shall establish and set forth specific goals and timetables. Such goals and timetables, with supporting data and the analysis thereof shall be a part of the contractor's written affirmative action program and shall be maintained at each establishment of the contractor. Where the contractor has not established a goal his written affirmative action program must specifically analyze each of the factors listed in "a" above and must detail his reason for a lack of a goal. In establishments with over 1,000 employees, or where otherwise appropriate, goals and timetables may be presented by organizational unit. The goals and timetables should be attainable in terms of the contractor's analysis of his deficiencies and his entire affirmative action program. Thus, in establishing his goals and timetables the contractor should consider the results which could be reasonably expected from his good faith efforts to make his overall affirmative action program work. If he does not meet

his goals and timetables, the contractor's "good faith efforts" shall be judged by whether he is following his program and attempting to make it work toward the attainment of his goals.

(c) Support data for the above analysis and program shall be compiled and maintained as part of the contractor's affirmative action program. This data should include progression line charts, seniority rosters, applicant flow data, and applicant rejection ratios indicating minority status.

(d) Based upon the Government's experience with compliance reviews under the Executive order programs and the contractor reporting system, over the past eight (8) years, minority groups are most likely to be underutilized in the following six (6) categories as defined by the Employer's Information Report, EEO—1: officials and managers, professionals, technicians, sales workers, office and clerical, and craftsmen (skilled). Therefore, the contractor shall direct special attention to these categories in his analysis and goal setting.

§ 60—2.12 Additional required ingredients of affirmative action programs

Effective affirmative action programs shall contain, but not necessarily be limited to, the following ingredients:

(a) Development or reaffirmation of the contractor's equal employment opportunity policy in all personnel actions.

(b) Formal internal and external dissemination of the contractor's policy.

(c) Establishment of responsibilities for implementation of the contractor's affirmative action program.

(d) Identification of problem areas (deficiencies) by organizational units and job categories.

(e) Establishment of goals and objectives by organizational units and job category, including timetables for completion.

(f) Development and execution of action oriented programs designed to eliminate problems and further designed to attain established goals and objectives.

(g) Design and implementation of internal audit and reporting systems to measure effectiveness of the total program.

(h) Active support of local and national community action programs.

§ 60–2.13 Compliance status.

No contractor's compliance status shall be judged alone by whether or not he reaches his goals and meets his timetables. Rather each contractor's compliance posture shall be reviewed and determined by reviewing the contents of his program, the extent of his adherence to his program, and his good faith efforts to make his program work toward the realization of the program's goals within the timetables set for completion. There follows an outline of suggestions and examples of procedures that contractors and federal agencies may use as guidelines for establishing, implementing, and judging an acceptable affirmative action program.

Subpart C—Suggested Method of Implementing the Requirements of Subpart B

§ 60–2.20 Development or reaffirmation of the equal employment opportunity policy.

(a) The contractor's policy statement should indicate the chief executive officers' attitude on the subject matter, assign overall responsibility and provide for a reporting or monitoring procedure. Specific items to be mentioned should include, but not limited to:

(1) Recruit, hire, and promote all job classification without regard to race, color, religion, sex, or national origin, except where sex is a bona fide occupational qualification.

(2) Base decisions on employment so as to further the principle of equal employment opportunity.

(3) Insure that promotion decisions are in with principles of equal employment opportunity by imposing only valid requirements for promotional opportunities.

(4) Insure that all other personnel actions such as compensation, benefits, transfers, layoffs, return from layoff, company sponsored training, education, tuition assistance, social and recreation programs, will be administered without regard to race, color, religion, sex, or national origin, except where sex is a bona fide occupational qualification.

(b) The contractor should periodically conduct analyses of all personnel actions to insure equal opportunity.

§ 60–2.21 Dissemination of the policy.

(a) The contractor should disseminate his policy internally as follows:

(1) Include it in contractor's policy manual.

(2) Publicize it in company newspaper, magazine, annual report, and other media.

(3) Conduct special meetings with executive, management, and supervisory personnel to explain intent of policy and individual responsibility for effective implementation, making clear the chief executive officer's attitude.

(4) Schedule special meetings with all other employees to discuss policy and explain individual employee responsibilities.

(5) Discuss the policy thoroughly in both employee orientation and management training programs.

(6) Meet with union officials to inform them of policy, and request their cooperation.

(7) Include nondiscrimination clauses in all union agreements, and review all contractual provisions to ensure they are nondiscriminatory.

(8) Publish articles covering EEO programs, progress reports, promotions of minority employees, etc., in company publications.

(9) Post the policy on company bulletin boards.

(10) When employees are featured in product or consumer advertising, both minority and nonminority employees should be pictured.

(b) The contractor should disseminate his policy externally as follows:

(1) Inform all recruiting sources verbally and in writing of company policy, stipulating that these sources actively recruit and refer minorities for all positions listed.

(2) Incorporate the Equal Opportunity clause in all purchase orders, leases, contracts, etc., covered by Executive Order 11246, as amended, and its implementing regulations.

(3) Notify minority organizations, community agencies, community leaders, secondary schools and colleges, of company policy, preferably in writing.

(4) When employees are pictured in consumer or help wanted advertising, both minorities and nonminorities should be shown.

(5) Send written notification of company policy to all subcontractors, vendors and suppliers requesting appropriate action on their part.

§ 60–2.22 Responsibility for implementation.

(a) An executive of the contractor should be appointed as director or manager of company Equal Opportunity Programs. Depending upon the size and geographical alignment of the company, this may be his sole responsibility. He should be given the necessary top management support and staffing to execute his assignment. His responsibilities should include, but not necessarily be limited to:

(1) Developing policy statements, affirmative action programs, internal and external communication techniques.

(2) Assisting in the identification of problem areas.

(3) Assisting line management in arriving at solutions to problems.

(4) Designing and implementing audit and reporting systems that will:

(i) Measure effectiveness of the contractor's program.

(ii) Indicate need for remedial action.

(iii) Determine the degree to which the contractor's goals and objectives have been attained.

(5) Serve as liaison between the contractor and enforcement agencies minority organizations, and community action groups.

(6) Keep management informed of latest developments in the entire equal opportunity area.

(b) Line responsibilities should include, but not be limited to, the following:

(1) Assistance in the identification of problem areas and establishment of local and unit goals and objectives.

(2) Active involvement with local minority organizations and community action groups.

(3) Periodic audit of hiring and promotion patterns to remove impediments to the attainment of goals and objectives.

(4) Regular discussions with local managers, supervisors and employees to be certain the contractor's policies are being followed.

(5) Review of the qualifications of all employees to insure minorities are given full opportunities for transfers and promotions.

(6) Career counseling for all employees.

(7) Periodic audit to insure that each location is in compliance in areas such as:

(i) Posters are properly displayed.

(ii) All facilities including company housing, are fact desegregated, both in policy and in use.

(iii) Minority employees are afforded a full opportunity and are encouraged to participate in all company sponsored educational, training, recreational and social activities.

(8) Supervision should be made to understand that their work performance is being evaluated on the basis of their equal employment opportunity efforts and results, as well as other criteria.

§ 60–2.23 Identification of problem areas by organizational unit and job categories.

(a) An in-depth analysis of the following should be made, paying particular attention to apprentices and those categories listed in § 60–2.11(d):

(1) Racial composition of the work force.

(2) Racial composition of applicant flow.

(3) The total selection process including position descriptions, man specifications, application form, interview procedures, test administration, test validity, referral procedures, final selection process, and similar factors.

(4) Transfer and promotion practices.

(5) Facilities, company sponsored recreation and social events, and special programs such as educational assistance.

(6) Seniority practices and seniority provisions of union contracts.

(7) Apprenticeship programs.

(8) All company training programs, formal and informal.

(9) Work force attitude.

(10) Technical phases of compliance, such as poster and notification to labor unions, retention of applications, notification to subcontractors, etc.

(b) If any of the following items are found in the analysis, special corrective action should be appropriate.

(1) An "underutilization" of minorities in specific work classifications.

(2) Lateral and/or vertical movement of minority employees occurring at a lesser rate (compared to work force mix) than that of nonminority employees.

(3) The selection process eliminates a higher percentage of minorities than nonminorities.

(4) Application and related preemployment forms not in compliance with local, State, or Federal legislation.

(5) Position descriptions inaccurate in relation to actual functions and duties.

(6) Man specifications not validated in

relation to position requirements and job performance.

(7) Test forms not validated by location, work performance and inclusion of minorities in sample.

(8) Referral ratio of minorities to the hiring supervisor or manager indicates an abnormal percentage are being rejected as compared to nonminority applicants.

(9) Minorities are excluded from or are not participating in company sponsored activities or programs.

(10) De facto segregation still exists at some facilities.

(11) Seniority provisions contribute to overt or inadvertent discrimination, i.e., a racial disparity exists between length of service and types of jobs held.

(12) Nonsupport of company policy by managers, supervisors, or employees.

(13) Minorities underutilized or underrepresented in apprenticeship programs or other training or career improvement programs.

(14) No formal techniques established for evaluating effectiveness of EEO programs.

(15) Lack of access to suitable housing inhibits employment of qualified minorities for professional and management positions.

(16) Lack of suitable transportation (public or private) to the workplace inhibits minority employment.

(17) Labor unions and subcontractors not notified of their responsibilities.

(18) Purchase orders do not contain EEO clause.

(19) Posters not on display.

§ 60–2.24 Establishment of goals and timetables.

(a) The goals and timetables developed by the contractor should be attainable in terms of the contractor's analysis of his deficiencies and his entire affirmative action program. Thus, in establishing the size of his goals and the length of his timetables, the contractor should consider the results which could reasonably be expected from his putting forth every good faith effort to make his overall affirmative action program work. In determining levels of goals, the contractor should consider at least the factors listed in § 60–2.11(a).

(b) Involve personnel relations staff, department and division heads, and local and unit managers in the goal setting process.

(c) Goals should be significant, measurable and attainable.

(d) Goals should be specific for planned results, with timetables for completion.

(e) Goals may not be rigid and inflexible quotas which must be met, but must be targets reasonably attainable by means of applying every good faith effort to make all aspects of the entire affirmative action program work.

§ 60–2.25 Development and execution of programs.

(a) The contractor should conduct detailed analyses of position descriptions to insure that they accurately reflect position functions, and are consistent for the same position from one location to another.

(b) The contractor should validate man specifications by division, department, location, or other organizational unit and by job category uisng job performance criteria. Special attention should be given to academic, experience and skill requirements to insure that the requirements in themselves do not constitute inadvertent discrimination. Specifications should be consistent for the same job classification in all locations and should be free from bias as regards to race, color, religion, sex, or national origin, except where sex is a bona fide occupational qualification. Where requirements screen out a disproportionate number of minorities, such requirements should be professionally validated to job performance.

(c) Approved position descriptions and man specifications, when used by the contractor, should be made available to all members of management involved in the recruiting, screening, selection and promotion process. Copies should also be distributed to all recruiting sources.

(d) The contractor should evaluate the total selection process to insure freedom from bias and, thus, aid the attainment of goals and objectives.

(1) All personnel involved in the recruiting, screening, selection, promotion, disciplinary, and related processes should be carefully selected and trained to insure elimination of bias in all personnel actions.

(2) The contractor should validate all selection criteria (Note Department of Labor Order of Sept. 9, 1968) (33 F.R. 44392, Sept. 24, 1968) covering the validation of Employment Tests and Other Selection Techniques by Contractors and Subcontractors Subject to the Provisions of Executive Order 11246.

(3) Selection techniques other than tests may also be improperly used so as to have the effect of discriminating against minority groups. Such techniques include but are not restricted to, unscored interviews, unscored application forms, arrest records, and credit checks. Where there exists data suggesting that such unfair discrimination or exclusion of minorities exists, the contractor should analyze his unscored procedures and eliminate them if they are not objectively valid.

(e) Suggested techniques to improve recruitment and increase the flow of minority applicants follow:

(1) Certain organizations such as the Urban League, Job Corps, Equal Opportunity Programs, Inc., Concentrated Employment Programs, Neighborhood Youth Corps, Secondary Schools, Colleges, and City Colleges with high minority enrollment, the State Employment Service, specialized employment agencies, Aspira, LULAC, SER, the G.I. Forum, the Commonwealth of Puerto Rico are normally prepared to refer qualified minority applicants. In addition, community leaders as individuals shall be added to recruiting sources.

(2) Formal briefing sessions should be held, preferably on company premises, with representatives from these recruiting sources. Plant tours, presentations by minority employees, clear and concise explanations of current and future job openings, position descriptions, man specifications, explanations of the company's selection process, and recruiting literature should be an integral part of the briefings. Formal arrangements should be made for referral of applicants, follow-up with sources, and feedback on disposition of applicants.

(3) Minority employees, using procedures similar to (2) above, should be actively encouraged to refer applicants.

(4) A special effort should be made to include minorities on the Personnel Relations staff.

(5) Minority employees should be made available for participation in Career Days, Youth Motivation Programs, and related activities in their communities.

(6) Active participation in "Job Fairs" is desirable. Company representatives so participating should be given authority to make on-the-spot commitments.

(7) Active recruiting programs should be carried out at secondary schools, junior colleges, and colleges with minority enrollments.

(8) Special employment programs should be undertaken whenever possible. Some possible programs are:

(i) Technical and nontechnical co-op programs with the predominantly Negro colleges.

(ii) "After school" and/or work-study jobs for minority youths.

(iii) Summer jobs for underprivileged youth.

(iv) Summer work-study programs for faculty members of the predominantly minority schools and colleges.

(v) Motivation, training and employment programs for the hard-core unemployed.

(9) When recruiting brochures pictorially present work situations, the minority members of the work force should be included.

(10) Help wanted advertising should be expanded to include the minority news media on a regular basis.

(f) The contractor should insure that minority employees are given equal opportunity for promotion. Suggestions for achieving this result include:

(1) An inventory of current minority employees to determine academic, skill and experience level of individual employees.

(2) Initiating necessary remedial, job training and work-study programs.

(3) Developing and implementing formal employee evaluation programs.

(4) Being certain "man specifications" have been validated on job performance related criteria. (Minorities should not be required to possess higher qualifications than those of the lowest qualified incumbent.)

(5) When apparently qualified minorities are passed over for upgrading, require supervisory personnel to submit written justification.

(6) Establish formal career counseling programs to include attitude development, education aid, job rotation, buddy system, and similar programs.

(7) Review seniority practices and seniority clauses in union contracts to insure such practices or clauses are nondiscriminatory and do not have a discriminatory effect.

(g) Make certain facilities and company-sponsored social and recreation activities are desegregated. Actively encourage minority employees to participate.

§ 60–2.26 Internal audit and reporting systems.

(a) The contractor should monitor records of referrals, placements, transfers, promotions and terminations at all levels to insure nondiscriminatory policy is carried out.

(b) The contractor should require formal reports from unit managers on a schedule basis as to degree to which corporate or unit goals are attained and time tables met.

(c) The contractor should review report results with all levels of management.

(d) The contractor should advise top management of program effectiveness and submit recommendations to improve unsatisfactory performance.

§ 60–2.27 Support of action programs.

(a) The contractors should appoint key members of management to serve on Merit Employment Councils, Community Relations Boards and similar oragnizations.

(b) The contractor should encourage minority employees to actively participate in National Alliance of Businessmen programs for youth motivation.

(c) The contractor should support Vocational Guidance Institutes, Vestibule Training Programs and similar activities.

(d) The contractor should assist secondary schools and colleges with significant minority enrollment in programs designed to enable graduates of these institutions to compete in the open employment market on a more equitable basis.

(e) The contractor should publicize achievements of minority employees in local and minority news media.

(f) The contractor should support programs developed by the National Alliance of Businessmen, the Urban Coalition and similar organizations.

Subpart D—Miscellaneous

§ 60–2.30 Use of goals.

The purpose of a contractor's establishment and use of goal is to insure that he meet his affirmative action obligation. It is

not intended and should not be used to discriminate against any applicant or employee because of race, color, religion. sex or national origin.

§ 60–2.31 Supersedure.

This part is an amplification of and supersedes a previous "Order No. 4" from this Office dated November 20, 1969.

*Effective date.* This part is effective January 30, 1970.

Signed at Washington, D.C. this 30th day of January 1970.

GEORGE P. SHULTZ,
*Secretary of Labor.*
JOHN L. WILKS,
*Director, Office of Federal Contract Compliance.*

LABOR DEPARTMENT ISSUES GUIDELINES TO BAR SEX DISCRIMINATION ON GOVERNMENT CONTRACT WORK

Guidelines to assure equal job opportunity for women on work paid for by Federal funds were announced today by Mrs. Elizabeth Duncan Koontz, Director of the Labor Department's Women's Bureau.

The guidelines, issued by Secretary of Labor George P. Shultz, become effective immediately. They apply to employment with Government contractors and subcontractors covered by Executive Order 11246.

This Presidential directive now prohibits discrimination because of sex as well as race, color, national origin and religion. It also requires affirmative action for achieving equality.

In announcing the guidelines, Mrs. Koontz said, "Equal employment opportunity is one of this Administration's priority goals. These guidelines will be vital in our efforts to insure equal job opportunity for America's women."

The guidelines, she added, constitute "a great step forward for those Americans whose talents have too often been wasted simply because they are women. This is a most appropriate milestone of women's progress. I am especially pleased that the guidelines are being issued as the Women's Bureau is celebrating its 50th anniversary."

Under the guidelines, covered contractors must maintain written personnel policies expressly indicating that there shall be no discrimination against employees on account of sex. Collective bargaining agreements on conditions of employment must be consistent with the guidelines.

The new guidelines also prohibit covered employers from:

Making any distinction based upon sex in employment opportunities, wages, hours, or other conditions of employment.

Advertising for workers in newspaper columns headed "Male" or "Female" unless sex is a bona fide occupation qualification.

Making any distinction between married and unmarried persons of one sex unless the same distinctions are made between married and unmarried persons of the opposite sex.

Denying employment to women with young children unless the same exclusionary policy exists for men.

Penalizing women in their conditions of employment because they require time away from work for childbearing. Whether or not the employer has a leave policy, childbearing must be considered a justification for leave of absence for a reasonable length of time.

Maintaining seniority lines or lists based solely upon sex.

Discriminatorily restricting one sex to certain job classifications and departments.

Specifying any differences for male and female employees on the basis of sex in either mandatory or optional retirement age.

Denying a female employee the right to any job that she is qualified to perform in reliance upon a State "protective" law.

The guidelines also specify that covered employers shall take affirmative action to recruit women to apply for those jobs where they have been previously excluded.

The guidelines point out that "women have not been typically found in significant numbers in management" and that "traditionally, few, if any, women" have been admitted into management training programs.

The guidelines state that an "important element of affirmative action shall be a commitment to include women candidates in such programs."

Secretary Shultz and John L. Wilks, Director of the Office of Federal Contract Compliance (OFCC), signed the document establishing the guidelines.

The guidelines will be used by Federal contracting agencies in their compliance activities under the supervision of OFCC. They were developed by OFCC and by a Labor Department-appointed panel which heard the opinions of companies, women's group representatives, and other interested persons.

The panel included Mrs. Koontz; Miss Elizabeth Kuch, Commissioner of the Equal Employment Opportunities Commission; Robert D. Moran, Administrator of the Labor Department's Wage-House and Public Contracts Divisions; and Mrs. Grace Gill Olivarez of Phoenix, Arizona.

---

TITLE 41—PUBLIC CONTRACTS AND PROPERTY MANAGEMENT

CHAPTER 60—OFFICE OF FEDERAL CONTRACT COMPLIANCE EQUAL EMPLOYMENT OPPORTUNITY DEPARTMENT OF LABOR

*Part 60–20—Sex discrimination guidelines*

On January 17, 1969, proposed guidelines were published at 34 F.R. 758 to amend Chapter 60 of Title 41 of the Code of Federal Regulations by adding a new Part 60–20. Persons interested were given an opportunity to file written data, views or argument concerning the proposals. Also, public hearings were held on August 4, 5, and 6, to receive oral presentations from interested persons.

Having considered all relevant material, 41 CFR Chapter 60 is hereby amended by adding a new Part 60–20 to read as follows:

*Part 60–20—Sex discrimination guidelines*

60–20.1 Title and Purpose.
60–20.2 Recruitment and Advertisement.
60–20.3 Job Policies and Practices.
60–20.4 Seniority Systems.
60–20.5 Discriminatory Wages.
60–20.6 Affirmative Action.
60–20.7 Effective Date.

AUTHORITY: The provisions of this Part 60–20 issued Under Sec. 201, E. O. 11246, 30 F.R. 12319, and E. O. 11375, 32 F.R. 14303.

60–20.1 Title and Purpose.

The purpose of the provisions in this part is to set forth the interpretations and guidelines of the Office of Federal Contract Compliance regarding the implementation of Executive Order 11375 for the promotion and insuring of equal opportunities for all persons employed or seeking employment with Government contractors and subcontractors or with contractors and subcontractors performing under Federally-assisted construction contracts, without regard to sex. Experience has indicated that special problems related to the implementation of Executive Order 11375 require a definitive treatment beyond the terms of the Order itself. These interpretations are to be read in connection with existing regulations, set forth in 41 CFR Chapter 60, Part 1.

60–20.2 Recruitment and Advertisement.

(a) Employers engaged in recruiting activity must recruit employees of both sexes for all jobs unless sex is a bona fide occupational qualification.

(b) Advertisement in newspapers and other media for employment must not express a sex preference unless sex is a bona fide occupational qualification for the job. The placement of an advertisement in columns headed "Male" or "Female" will be considered an expression of a preference, limitation, specification or discrimination based on sex.

60–20.3 Job Policies and Practices.

(a) Written personnel policies relating to this subject area must expressly indicate that there shall be no discrimination against employees on account of sex. If the employer deals with a bargaining representative for his employees and there is a written agreement on conditions of employment, such agreement shall not be inconsistent with these guidelines.

(b) Employees of both sexes shall have an equal opportunity to any available job that he or she is qualified to perform, unless sex is a bona fide occupational qualification. (Note: In most Government contract work there are only limited instances where valid reasons can be expected to exist which would justify the exclusion of all men or all women from any given job.)

(c) The employer must not make any distinction based upon sex in employment opportunities, wages, hours, or other conditions of employment. In the area of employer contributions for insurance, pensions, welfare programs and other similar "fringe benefits" the employer will not be considered to have violated these guidelines if his contributions are the same for men and women or if the resulting benefits are equal.

(d) Any distinction between married and unmarried persons of one sex that is not made between married and unmarried persons of the opposite sex will be considered to be a distinction made on the basis of sex. Similarly, an employer must not deny employment to women with young children unless it has the same exclusionary policies for men; or terminate an employee of one sex in a particular job classification upon reaching a certain age unless the same rule is applicable to members of the opposite sex.

(e) The employer's policies and practices must assure appropriate physical facilities to both sexes. The employer may not refuse to hire men or women, or deny men or women a particular job because there are no restroom or associated facilities, unless the employer is able to show that the construction of the facilities would be unreasonable for such reasons as excessive expense or lack of space.

(f) An employer must not deny a female employee the right to any job that she is qualified to perform in reliance upon a State "protective" law. For example, such laws include those which prohibit women from performing in certain types of occupations (e.g., a bartender or a core-maker); from working at jobs requiring more than a certain number of hours; and from working at jobs that require lifting or carrying more than designated weights.

Such legislation was intended to be beneficial, but, instead, has been found to result in restricting employment opportunities for men and/or women. Accordingly, it cannot be used as a basis for denying employment or for establishing sex as a bona fide occupational qualification for the job.

(g) Women shall not be penalized in their conditions of employment because they require time away from work on account of childbearing. When, under the employer's leave policy the female employee would qualify for leave, then childbearing must be considered by the employer to be a justification for leave of absence for female employees for a reasonable period of time. For example, if the female employee meets the equally applied minimum length of service

requirements for leave time, she must be granted a reasonable leave on account of childbearing. The conditions applicable to her leave (other than the length thereof) and to her return to employment, shall be in accordance with the employer's leave policy.

If the employer has no leave policy, childbearing must be considered by the employer to be a justification for a leave of absence for a female employee for a reasonable period of time. Following childbirth, and upon signifying her intent to return within a reasonable time, such female employee shall be reinstated to her original job or to a position of like status and pay, without loss of service credits.

(h) The employer must not specify any differences for male and female employees on the basis of sex in either mandatory or optional retirement age.

(i) Nothing in these guidelines shall be interpreted to mean that differences in capabilities for job assignments do not exist among individuals and that such distinctions may not be recognized by the employer in making specific assignments. The purpose of these guidelines is to insure that such distinctions are not based upon sex.

60–20.4 Seniority system

Where they exist, seniority lines and lists must not be based solely upon sex. Where such a separation has existed, the employer must eliminate this distinction.

60–20.5 Discriminatory wages

(a) The employer's wage schedules must not be related to or based on the sex of the employees. (Note. The more obvious cases of discrimination exist where employees of different sexes are paid different wages on jobs which require substantially equal skill, effort and responsibility and are performed under similar working conditions.)

(b) The employer may not discriminatorily restrict one sex to certain job classifications. In such a situation, the employer must take steps to make jobs available to all qualified employees in all classifications without regard to sex. (Example: An electrical manufacturing company may have a production division with three functional units: one (assembly) all female; another (wiring), all male; and a third (circuit boards), also all male. The highest wage attainable in the assembly unit is considerably less than that in the circuit board and wiring units. In such case the employer must take steps to provide qualified female employees opportunity for placement in job openings in the other two units.)

(c) To avoid overlapping and conflicting administration the Director will consult with the Administrator of the Wage and Hour Administration before issuing an opinion on any matter covered by both the Equal Pay Act and Executive Order 11246, as amended by Executive Order 11375.

60–20.6 Affirmative action.

(a) The employer shall take affirmative action to recruit women to apply for those jobs where they have been previously excluded. (Note. This can be done by various methods. Examples include: (1) including in itineraries of recruiting trips women's colleges where graduates with skills desired by the employer can be found, and female students of co-educational institutions and (2) designing advertisements to indicate that women will be considered equally with men for jobs.)

(b) Women have not been typically found in significant numbers in management. In many companies management trainee programs are one of the ladders to management positions. Traditionally, few, if any, women have been admitted into these programs. An important element of affirmative action shall be a commitment to include women candidates in such programs.

(c) Distinctions based on sex may not be made in other training programs. Both sexes should have equal access to all training programs and affirmative action programs should require a demonstration by the employer that such access has been provided.

60–20.7 Effective date.

This part is effective June 9, 1970. Signed at Washington, D.C. this 2nd day of June, 1970.

GEORGE P. SHULTZ,
*Secretary of Labor.*
JOHN L. WILKS,
*Director, Office of Federal Contract Compliance.*

## STATUS OF UNFINISHED BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business, Senate Joint Resolution 1, not be laid before the Senate at 12 o'clock and that the Senate continue considering the pending business.

The PRESIDING OFFICER. Without objection, it is so ordered.

## EQUAL OPPORTUNITIES ENFORCEMENT ACT

The Senate continued with the consideration of the bill (S. 2453) to further promote equal employment opportunities for American workers.

AMENDMENT NO. 976

Mr. DOMINICK. Mr. President, I call up my amendment No. 976 and ask that it be stated.

The PRESIDING OFFICER (Mr. HOLLINGS). The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. DOMINICK. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and the amendment will be printed in the RECORD.

The text of the amendment is as follows:

On page 53, beginning with line 17, strike out all through page 55, line 20.

On page 55, line 21, strike out "SEC. 11." and insert in lieu thereof "SEC. 10."

Mr. DOMINICK. Mr. President, a brief explanation of the amendment is in order because it was not read in full and without looking at the bill the amendment might not mean too much. The bill as now presented to the Senate for debate provides for transfer of all discrimination cases for Federal employees from the Civil Service Commission to the EEOC. This involves 3 million people. In addition, the bill also transfers within the jurisdiction of the EEOC all State and local employees, which consists of another 10 million people. Over and beyond that, the bill reduces from 25 to 8 the number of requisite employees an employer must have, in order to be subject to the bill. We estimate that this is another 6½ million people. So. we are, in effect, saying that we will increase the load on the EEOC by 19½ million people at a minimum.

Mr. President, we have already heard the discussions made by the distinguished Senator from New York and the distinguished Senator from New Jersey, pointing out that the Commission is already 2 years behind in trying to investigate and conclude the complaints which have been made under its existing jurisdiction.

Now we are considering this bill, with all good heart and with all good intent, a bill which I think has a great deal of merit in a number of places—and proposing to add to the committee's jurisdiction a block of new complaints that will arise from the 19.5 million additional people which will be placed within its jurisdiction.

It seems obvious to me that the work of the commission will be further bogged down and, if I may say so, this is borne out quite conclusively by the testimony of the chairman of the commission, as well as by testimony of other administration spokesmen who came before the committee.

With respect to this particular bill, what I am simply saying is that the Civil Service Commission now has jurisdiction over Federal employees, and that is where the jurisdiction should remain.

We should not have a personnel situation or a personnel grievance committee or a personnel management for Federal employees only on race, sex, color, and national origin. That would be the effect of the bill as now written. The bill provides that all the usual matters of grievance of Federal employees in connection with working conditions, with jobs, with promotions, with every aspect of personnel relationship, shall remain within the Civil Service Commission. But the bill excepts the charges of discrimination on the grounds I have mentioned.

It seems to me that the changes proposed by the bill will not render any good service to Federal employees but, in fact, will do them a disservice and seriously impair the President's program on equal employment.

President Nixon issued an Executive Order No. 11478 in August of 1969, a few days before the Civil Service Commission Chairman, Robert E. Hampton, testified before the Labor Subcommittee. That Executive order embodies a new concept, that of closely integrating equal employment and personnel management. It is based on the premise that to be effective, equal employment opportunities must be an integral part of the personnel-management system and must be built into it the every day actions taken by managers on the job.

I would think, Mr. President, that this would be self-evident when we think about it. How can we build in proper personnel management if we are going to take out the single element of discrimination and say, "Oh, no, that is on a different plane with a different commission for enforcement and personnel managers shall have no voice in it."

It would seem to me that this would be a grave mistake because progress has been made under Executive Order 11478 in assuring equal opportunity in the Federal service.

Heaven knows, we are not through with discrimination. There is still discrimination—we all know it—and we are

working on it. The question is: "Does the bill provide a mechanism for really trying to solve the problem?"

The results of a survey made as of November 30, 1969, shows an upward movement of minority groups in the Federal personnel system. For example, between 1967 and 1969, Negro employment rose from 14.9 percent to 15 percent of the total work force.

However, Negroes in GS–9 through 11 rose from 12,631 to 16,318, a 29-percent increase; and in grades 12 through 15 from 4,589 to 6,448, a 40-percent increase.

As I noted, Chairman Hampton testified just a few days after issuance of that Executive order. Since that time, the following substantive changes to enhance equal opportunity within the Government have been taken by the Civil Service Commission.

First, a new office has been established within the Civil Service Commission to provide leadership to government agencies;

Second, full-time equal employment opportunity representatives have been established in each of the Commission's 10 regional offices to carry equal employment opportunities directly to field installations;

Third, for the first time, agencies have been authorized to maintain statistics on minority employment on automatic data processing equipment and to monitor progress on a current basis.

One may recall that in prior years, it was considered discriminatory in and of itself to enter on anyone's application or job record what nationality, creed, color, or race he might be.

The fourth substantive change is that government-wide surveys of minority employment are being made every 6 months instead of every other year; and

Fifth, agencies have been directed to include evaluation of performance on equal employment opportunity in the rating of their supervisory personnel.

This is very significant. We have to evaluate supervisory personnel to determine whether they are directly or indirectly exercising discrimination in a field prohibited under our law.

The sixth substantive change is that an incentive awards program to stimulate supervisors, managers, and others for exceptional performance in this area has been instituted;

Seventh, new training programs have been established both on an individual and agency basis. These programs are significant in that it is the individual manager and supervisor who eventually will be the ones to make equal employment a reality because of their responsibility for hiring, developing, and advancing employees.

A number of other steps have been taken. Agencies have been directed to develop affirmative action plans, with specific details, and the Commission has already returned a large proportion of these to agencies for shoring up or for lacking the desired specificity.

The Commission has released to agencies, guidelines on ways to assure upward mobility for lower level employees. This is particularly important because around 20 percent of Federal employees are minorities, but those concentrated in the lower grades must be provided opportunity for the necessary training so they can qualify to move up the ladder.

The Commission is strengthening its inspection program aimed at agency equal employment opportunity programs and is requiring agencies to undertake self-evaluation programs and to provide progress reports.

The Commission is working on the development of a cooperative education program with predominantly Negro colleges to work out plans so that the work-study program will reach minority students and encourage them to come into the Federal Government.

As the central personnel agency, the Commission is in the best possible position to get to the heart of equal employment opportunity in the Federal service, and it is reviewing all its testing devices to assure that its examinations are a valid basis for selection of employees.

The Civil Service Commission feels it must take affirmative action to achieve equal employment opportunity and cannot rely upon complaints to point out problem areas. EEOC is necessarily complaint orientated.

That is not to say that the Civil Service Commission does not handle complaints. In July 1969, it installed a completely revised complaint procedure which provides for informal counseling for employees to resolve their problems at the lowest possible level, and this has worked out well. It has cut in half the number of formal complaints and has resulted in a significant increase in the number of corrective actions taken where employees have brought their problems to counselors for action. Third-party appeals examiners are provided where a complaint reaches the formal hearing stage so that a complaint is heard by a person having no connection with the agency involved in the dispute. This service, which the Civil Service Commission already provides, is essentially what the EEOC could provide if it had responsibility for the Federal program.

In addition, the direct coverage of Federal employees will add some 3 million employees to the work force covered by title VII. It does not make sense to remove this large a number of employees from the coverage of a workable, ongoing program where their rights are receiving adequate protection and to place them under an administrative process already as burdened as the EEOC is today.

Mr. President, I think it would be helpful at this point in the RECORD to indicate what some of the witnesses before our committee said on this particular subject. First I will turn to page 51 of the hearings record where we have a statement on that page from Mr. William Brown, who was chairman of the Equal Employment Opportunity Commission, not chairman of the Civil Service Commission.

This is what he said, talking about the Executive order which I have just mentioned in my previous statement.

> In the context of this significant step forward, it would not be desirable to transfer jurisdiction over these matters from the Civil Service Commission to the Equal Employment Opportunity Commission, especially if E.E.O.C. is now to assume cognizance over the employment practices of State and local governments, and employers of 8 or more persons. The added burden would simply be too great.
>
> A better course would be to afford the Civil Service Commission the opportunity to implement the new Order until such time as a reasonable assessment of its performance can be made, and if necessary, alternative systems considered.

That testimony was given before the committee on August 11, 1969. Since that time, as I have pointed out, the Civil Service Commission has implemented the order and has gone forward with procedures and systems which would eliminate discrimination as rapidly as possible. It will take quite awhile to get it all done, even though we would all like to get it done overnight. The Civil Service Commission is really moving ahead.

Mr. President, at this point I would like to read a few more statements from the record. First of all I will refer to the statement of Mr. Hampton, who was Chairman of the Civil Service Commission. His testimony starts at page 127 and can be read by all Senators when they get a chance. However, I want to emphasize a couple of things.

At the bottom of page 128, Mr. Hampton said:

> That progress is demonstrable and is probably greater than in any previous comparable period. At the end of 1967 (the latest date for which figures are available), almost one-fifth of total Federal employment was minority group. This was one-half million jobs filled by minority Americans. Also, the nonwhite proportion of the Federal work force was approximately 16 percent compared with 10.8 percent of nonwhites in the work force generally.

Turning to page 132 of his testimony, he said:

> Section 717 (a) and (b) of S. 2453 raise, in my judgment, serious legal questions which involve the authority of the Civil Service Commission under the Civil Service Act. The Civil Service Commission has statutory responsibility in connection with the employment process in the Federal Government and this makes it impractical to place oversight responsibility for equal employment in another agency.

That is the point I brought up at the very beginning: How difficult and complex this makes the situation as far as the Civil Service Commission is concerned.

He goes on to say:

> But, aside from the legal questions, the transfer of responsibility for equal employment to EEOC is bad in principle for the reasons I have cited.
>
> The EEOC is necessarily complaint oriented. The recipient and adjudication of complaints of discrimination is an important aspect of assuring equal employment opportunity, but it is far from the total program. Affirmative action—the moving out by agency heads and their managers to take the steps necessary to make equal employment opportunity a reality in every aspect of

personnel operations—is the road to meaningful equal employment opportunity.

Then, he goes on to point out what the Commission has done toward achieving these goals.

Mr. President, a question was raised in committee as to whether or not any of the minority groups were in the upper echelon of the Federal Government. This question was raised by the Senator from New Jersey. The question appears on page 135 and is replied to by Mr. Hampton on page 136.

In the first place, we have a minority commissioner for the first time in the eighty-six year history of this agency.

Secondly, I have an assistant for Equal Opportunity. He is sitting here on my right.

He then submits the study that was made. I call the attention of my colleagues to the study to show the proposed actions and positive recommendations that were made from that study which have now been implemented since 1969.

In short, what I am saying at the present time is that we have a lot of problems in trying to solve discrimination cases. As the manager of the bill knows full well I have been a very strong supporter of legislation on behalf of civil rights ever since I have held public office. There are an enormous number of problems connected with it, but one of them is the day-by-day dealings between people.

Where there is responsibility in a Commission, it has line authority from itself down to its various branches throughout the country. It seems to me they should have not only the right but also the responsibility of following through on discrimination cases. The matter was spelled out carefully in the 1964 act and great strides and great steps have been taken along this line since that time, and, as a matter of fact, since President Nixon took office.

I do not see how there can be a separation of all the personnel functions that go into the vast Federal service from the question of whether or not someone, because of race, creed, sex, color, or national origin, has been discriminated against. It just does not make any sense to me. When we have the chairman of the EEOC and the chairman of the Civil Service Commission both testifying it should not be transferred, why in the world do we go forward and do it?

Mr. President, I yield the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. WILLIAMS of New Jersey. Mr. President, very briefly, with great respect for the interest and concern of the Senator from Colorado in those matters where there is a question of enforcement of safety and health requirements of law, I do find that it is somewhat surprising for the Senator from Colorado to be advocating here that all of the aspects of the requirements of law be contained within one agency of our Government, the Civil Service Commission.

Here we have a mandate of law that states there shall be no discrimination for various reasons. That is a mandate that goes to the Civil Service Commission. When it comes to the enforcement of that mandate, as it is now, charges of discrimination can work up within the Civil Service Commission and be investigated, prosecuted, and judged, all within the Civil Service Commission.

I have had the great pleasure of listening to the Senator from Colorado as he analyzed the problems of being the investigator, the prosecutor, and the judge; this, in a sense, is part of what we are dealing with here.

I am not dogmatic in any degree to say that should not be part of the line of authority, but it does come as a surprise from the Senator from Colorado that this is the approach. Beyond that it would seem to me if this transfer does take place to the Equal Opportunity Commission, in terms of the consideration of charges of discrimination, the whole hearing process, and the basic quasi-judicial decisions would be made for or all employees coming under this law, and here would reside in one place the wisdom and the expertise to solve equal employment problems.

There is a great deal to be said for the affirmative thrust of the Civil Service Commission in the elimination of any aspect of discrimination, and the Executive orders call for affirmative action in this regard. There is nothing antithetical about a transfer of the quasi-judicial part of the investigation, hearing, and decision with that affirmative action and responsibility.

Section 715(b) clearly provides that:

The Equal Employment Opportunity Commission shall have authority to enforce the provision of subsection (a) and shall issue such rules, regulations, orders, and instructions as it deems necessary and appropriate to carry out its responsibilities hereunder, and the head of each executive department and agency and the appropriate officers of the District of Columbia shall comply with such rules, regulations, orders, and instructions.

Under the rules and authority of the rulemaking provision, clearly the EEOC can provide for the program of affirmative action that deals with the elimination of discrimination in the Federal employment establishment.

The authority will reside in the EEOC to delegate to the Civil Service Commission such functions under this act as it desires.

I will say that there is a transitional period of 1 year before the effective date of the transfer from the Civil Service Commission to the EEOC. So there is that period of time for the adjustment. The second opportunity for adjustment is under the rulemaking authority of the EEOC.

Mr. President, I yield the floor.

Mr. DOMINICK. Mr. President, I just want to make a few comments, and then perhaps ask for a quorum call to see if we can have enough Senators present to have the yeas and nays ordered.

I am sorry, but not surprised, that the manager of the bill does not want to accept the amendment. I think he is making a mistake, and I think it is a fundamental mistake.

If Senators will look at section 715 of the bill, which my amendment would strike, it reads:

All personnel actions affecting employees or applications for employment . . . in military departments . . . in executive agencies . . . and in those portions of the government of the District of Columbia, and the legislative and judicial branches of the Federal Government having positions in the competitive service, shall be made free from any discrimination based on race, color, religion, sex, or national origin.

That is great. That is exactly what we want to do. There is no doubt about it whatsoever.

Subsection (b) then goes on to say, however:

The Equal Employment Opportunity Commission shall have authority to enforce the provisions of subsection (a) and shall issue such rules, regulations, orders, and instructions as it deems necessary and appropriate to carry out its responsibilities hereunder . . .

I have never seen anything that is clearer than this saying that the EEOC is taking over primary responsibility in the personnel field for 3 million Federal employees who are already under the Civil Service Commission.

It can do nothing but create a clash between the two commissions. It can do nothing but interfere with the practical working operations of each employee, whether it be in an executive agency, a judicial agency, a legislative agency, or the military.

Why in the world should we take an ongoing program and say, "You are out, Civil Service Commission; we are going to put it in a new one that already is two years behind" and say further that the new Commission is going to do any good insofar as providing protection for those who are being discriminated against is concerned, I cannot understand.

Mr. ERVIN. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield.

Mr. ERVIN. I notice this language in the amendment on page 26, beginning on line 11: The term "employer" does not include the United States.

Mr. DOMINICK. That used to be in the 1964 Civil Service Act.

Mr. ERVIN. Yes. Do I understand the Senator from Colorado correctly as saying that, under the proposed transfer of power provided by the bill from the Civil Service Commission to the EEOC, that EEOC would have the power to process and decide complaints of discrimination in the civil service work force of the Federal Government?

Mr. DOMINICK. The Senator is correct.

Mr. ERVIN. The Senator from North Carolina is also correct, is he not, in saying that this would in effect be a proceeding either by an employee or an applicant for employment against a department or agency of the United States?

Mr. DOMINICK. Yes. It would be brought up by a complaint from an em-

ployee against a particular practice or a particular person, which would be filed with the EEOC.

Mr. ERVIN. Would not the same be true of an applicant for employment in the U.S. Government who would claim he was denied employment for one of the reasons covered by the 1964 Civil Rights Act?

Mr. DOMINICK. The Senator is correct, because it also refers to applicants for employment.

Mr. ERVIN. I direct the attention of the Senator to page 33, beginning with line 3. I will read this language for the purpose of laying a premise for a question:

"(2) After the Commission issues a complaint, it may, upon application by the person aggrieved, compensate such person for reasonable expenses in connection with the preparation for the hearing and in connection with participation in the hearings, including the cost of expert witness fees, transcripts, and copying. Not more than $1,000 will be allocated in any single proceeding to carry out the provisions of this paragraph. The Commission may perform the services for which the aggrieved party would otherwise seek reasonable expenses under this subsection.

If the bill should pass making the proposed transfer of jurisdiction of complaints of personnel already in the Government service or complaints of applicants for employment in the Government from the Civil Service Commission to the EEOC, then that would bring into play the section I have just read; would it not?

Mr. DOMINICK. I think it would, but I will yield to the manager of the bill on that point.

Mr. WILLIAMS of New Jersey. No; that does not apply. Those provisions of the bill that deal with the transfer of the discrimination questions now in the Civil Service Commission do not incorporate the earlier parts of title VII of the act.

Mr. ERVIN. Would the Senator from New Jersey be so kind as to inform the Senator from North Carolina what provision of the bill makes that plain, because, frankly, I have been so busy that I did not get a chance to read the bill until last night?

Mr. WILLIAMS of New Jersey. We will try to find that with precision.

Mr. ERVIN. It would seem to me this is clearly covered by the enforcement powers. I am not an expert on the bill, but I do want to be informed. I could not find anything that would distinguish between a complaint from a person already employed by the Government or seeking employment in the Government and any other person.

Mr. WILLIAMS of New Jersey. If the Senator will refer to page 26 of the bill, subparagraph (b), it describes the areas of employment that are covered by title VII of the bill. The term "employer" does not include the United States, a corporation wholly owned by the Government of the United States, an Indian tribe, or any department or agency of the District of Columbia.

These are the words that exclude the Federal Government employment situation from the section that the Senator was reading from on page 33.

Mr. ERVIN. On page 26, on line 1, it states:

(1) In subsection (a) insert "governments, governmental agencies, political subdivisions," after the word "individuals".

That is sufficient to bring the Government of the United States into it.

Mr. WILLIAMS of New Jersey. No. There are other coverages. Here the words "governments, governmental agencies, political subdivisions" refer to a definition of persons and not employers.

Mr. ERVIN. Let us see. To get this back into context, then, would the Senator read how that entire section would read, as amended?

As I see it, the way that would read, with that put in there, would be that section 701(a) would read:

The term "persons" includes one or more individuals, governments, governmental agencies, political subdivisions, labor unions, partnerships, associations, corporations, legal representatives, mutual companies, joint stock companies, trusts, unincorporated organizations, trustees, trustees in bankruptcy, or receivers.

That would cover the Government of the United States, as far as the definition of persons is concerned, just as it would a State.

Mr. WILLIAMS of New Jersey. Except that it is excluded as an employer.

Mr. ERVIN. Well, that is a question.

Mr. WILLIAMS of New Jersey. I just gave the answer. The answer is that the Government of the United States is excluded.

Mr. ERVIN. Then how are you going to have the EEOC with jurisdiction, if the EEOC cannot proceed against the Government?

Mr. WILLIAMS of New Jersey. The provisions dealing with discrimination within the Federal Government are covered under a separate section, and that appears as section 715(a). It is a wholly separate, distinct section, under the heading "Nondiscrimination in Federal Government Employment." It stands on its own foundations in this legislation.

Mr. ERVIN. What page is that on?

Mr. WILLIAMS of New Jersey. That is on page 53. To come back, I did describe that accurately. This is a unit unto itself, this area of coverage.

In subsection (b) on page 54, the EEOC has its own separate, defined authority to enforce the provisions of the preceding subsection, 715(a).

Mr. ERVIN. This gives it the right to issue rules, regulations, orders, and instructions, as it deems necessary?

Mr. WILLIAMS of New Jersey. Yes.

Mr. ERVIN. Then does it have no enforcement provisions, no complaint procedure? Will they not have to issue a complaint to a department?

Mr. WILLIAMS of New Jersey. This is within the Federal Establishment, of course.

Mr. ERVIN. I know.

Mr. WILLIAMS of New Jersey. One agency of the Government is telling another. I would imagine that they would not end up in a court, with a separate agency.

Mr. ERVIN. I do not know. We had here quite a controversy between the Department of Justice and the Department of Labor, and the General Accounting Office. So there are controversies between governmental agencies.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield, so that we might ask for the yeas and nays?

Mr. ERVIN. I do not have the floor. The Senator from Colorado has the floor.

Mr. DOMINICK. I ask for the yeas and nays on this amendment.

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I think the Senator from North Carolina has brought up a very interesting point. I do not think the bill is clear on it. I do welcome the record clarification of the Senator from New Jersey.

Section 715 itself, which deals with Federal employment, and which I am trying to have stricken insofar as it transfers authority from the Civil Service Commission to the EEOC, does not seem to me to be particularly clear as to which provisions of the basic law apply to its responsibility under this particular provision. But it certainly does say that the Commission has the authority to "issue rules, regulations, orders, and instructions as it deems necessary and appropriate to carry out its responsibilities, and the head of each executive department and agency and the appropriate officers of the District of Columbia shall comply."

This, as far as I can see, puts the EEOC right directly into the personnel management of every single agency of the Federal Government, whether it is legislative, executive, military, or anything else; and it does seem to me that we have gone much too far in this respect.

Mr. ERVIN. It provides here expressly, at the bottom of page 54, on lines 17, 18, 19, and 20:

That such rules and regulations shall provide that an employee or applicant for employment shall be notified of any final action taken on any complaint filed by him thereunder.

Certainly that contemplates that an employee can file a complaint with the EEOC. Then it says:

Within thirty days of receipt of notice, given pursuant to subsection (b) or a previously issued Executive order, of final action taken on a complaint of discrimination based on race, color, religion, sex, or national origin, or after ninety days from the filing of the initial charge until such time as final action may be taken, an employee or applicant for employment, if aggrieved by the final disposition of his complaint, or by the failure to take final action on his complaint, may file a civil action as provided in section 706(q), in which civil action the head of the executive department or agency, or the District of Columbia, as appropriate, shall be the respondent.

In other words, it especially recognizes that either an employee or an applicant for Government employment can file a complaint, and that that complaint will be processed by the EEOC, and if the EEOC takes adverse action on his complaint, then he can bring a civil action.

I am unable to comprehend how that rules out the provisions on page 33, where the Commission has issued a complaint.

Mr. DOMINICK. I think the Senator has made a very good point.

Mr. ERVIN. In other words, it seems to me it certainly is unclear, at best, whether or not the Government is going to finance a Federal Government employee or applicant for employment to the extent of $1,000 in his controversy as to the reasons for his denial of employment.

Mr. DOMINICK. As to his denial of employment or as to his denial of promotion or as to his general working conditions. It could be anyone of those, so far as I can see.

I would be happy, however, to yield to the Senator from New Jersey for any further explanation he wants to give.

Mr. WILLIAMS of New Jersey. This all arose with the question of whether the provisions on page 33 of the bill do apply to section 715, and the answer is that they do not.

Am I responding to the inquiry as to the part of the bill about which the Senator from North Carolina was inquiring? Is that page 33?

Mr. ERVIN. Yes, page 33.

Mr. WILLIAMS of New Jersey. This provides for compensation to such person for reasonable expenses in connection with the preparation for the hearing, in connection with participation in the hearing. That does not apply to section 715, dealing with nondiscrimination in Federal Government employment. I thought that was the question we opened on, and the answer is clearly that the provisions on page 33 do not apply to Federal employment.

Mr. ERVIN. By all rules of construction page 54 necessarily implies that the EEOC has brought action against a department or agency of the Federal Government on the basis of complaints made by employees or applicants for employment on the grounds prescribed in the act. Then it says, in effect, that if EEOC takes favorable action, if it issues a complaint itself against the department, manifestly there is nothing to keep page 33 from applying on the hearing of that complaint. If they take unfavorable action, then the employee or applicant can go into the Federal court and sue the Government for employment and for back pay.

There are many other provisions in the bill, such as appointing counsel, in a one-sided manner, for parties involved in these things. I do not know whether or not they apply to the Government. If they do not apply to the Government, why should they not apply to the Government, just as they do to individuals?

Mr. WILLIAMS of New Jersey. I did not follow the reasoning of the Senator. The Senator said that manifestly the provisions on page 33 would apply, and I do not understand, when it is clear that they do not apply, how manifestly they can apply.

Mr. ERVIN. It reads:

After the Commission issues a complaint, it may, upon application by the person aggrieved, compensate such person for reasonable expenses in connection wtih the preparation for the hearing and in connection with participation in the hearings, including the cost of expert witness fees, transcripts and copying. Not more than $1,000 will be allocated in any single proceeding to carry out the provisions of this paragraph.

Page 54, which is a part of section 715, relating to nondiscrimination in Federal Government employment, reads:

The Equal Employment Opportunity Commission shall have authority to enforce the provision of subsection (a) and shall issue such rules, regulations, orders, and instructions as it deems necessary and appropriate to carry out its responsibilities hereunder, and the head of each executive department and agency and the appropriate officers of the District of Columbia shall comply with such rules, regulations, orders, and instructions: Provided, That such rules and regulations shall provide that an employee or applicant for employment shall be notified of any final action taken on any complaint filed by him thereunder.

That is an express statement that the regulations must provide for the filing of complaints by employees or applicants for employment and that the Commission must process them. In the event that the Commission does not render favorable action, the employee or the applicant for employment has a right to bring suit in the Federal courts. This clearly implies that EEOC will issue a complaint if it is going to take action at all and conduct a hearing. Page 33, by its terms, would apply to that kind of complaint as well as to any other.

Mr. WILLIAMS of New Jersey. It has never occurred to anybody but the Senator from North Carolina that it did apply. It just plain does not apply.

Mr. ERVIN. I would say that despite my great veneration for the expert knowledge of the Senator from New Jersey on this subject, and despite the fact that I never had an opportunity to study this bill until after the Senate adjourned yesterday afternoon, I am left with the impression that under this bill it does apply, because the EEOC is going to have to issue complaints against the executive agencies and it is going to have to process those complaints against the executive agencies because that is expressly stated in the proviso on page 54.

Mr. DOMINICK. I may say to the Senator that I think he has brought up a most interesting point. But I would say that the distinguishing thing perhaps in support of what the manager of the bill has suggested is that on page 33, subsection (2), the key words are "after the Commission issues a complaint." On pages 54 and 55 I do not see any specific provision concerning a complaint by the Commission, although there are complaints by employees to the Commission, which is a different situation.

Mr. ERVIN. That may be a distinction. It is a distinction about as wide as the difference between tweedledum and tweedledee, the Senator from North Carolina submits. Is the Commission going to issue notices to the departments on the basis of complaints made by the Commission or on the basis of complaints made by the employee?

I invite the Senator's attention to the words following this proviso on lines 21, 22, 23, and 24:

Within thirty days of receipt of notice, given pursuant to subsection (b) or a previously issued Executive order, of final action taken on a complaint of discrimination based on race, color, religion, sex, or national origin, or after ninety days from the filing of the initial charge until such time as final action may be taken, an employee or applicant for employment, if aggrieved by the final disposition of his complaint, or by the failure to take final action on his complaint, may file a civil action as provided in section 706-(q), in which civil action the head of the executive department or agency, or the District of Columbia, as appropriate, shall be the respondent.

It is crystal clear that it certainly contemplates a complaint filed by somebody.

Mr. DOMINICK. Yes.

Mr. ERVIN. The question in my mind is that under other provisions of the bill, as I construe it, if the individual files a complaint claiming discrimination, the Commission makes a preliminary investigation of it, and then it does not act on the basis of the individual's complaint but issues a complaint of its own.

Mr. DOMINICK. The Senator is correct on that.

Mr. ERVIN. So, under its power to adopt rules and regulations under section 715, it can provide exactly the same procedure in the case of Government employees and applicants for Government employment as it provides with respect to persons who seek or apply for private employment.

Mr. DOMINICK. As a matter of fact, I might say to the Senator that it seems pretty hard for me to determine how they are going to issue the so-called rules, regulations, orders, and instructions without having a complaint and some kind of hearing ahead of time so that the agency head will know why these orders are being put in, and under those circumstances I suppose we might stretch it. But the manager of the bill is saying it was not intended that be included; is that correct?

Mr. WILLIAMS of New Jersey. That is correct.

Mr. ERVIN. What will control is not the intention of the floor manager of the bill but what the plain words of the bill say.

Mr. DOMINICK. That is correct. It is another good reason why we should strike the whole of section 715, which I think is a monstrosity.

Mr. WILLIAMS of New Jersey. I still do not see how the provisions of the earlier part of the bill, as suggested by the Senator, apply to the section which stands on its own. There is no reference in section 715 at all to the section the Senator is talking about, except for the right to file suit.

Mr. JAVITS. Mr. President, will the Senator from North Carolina yield?

Mr. DOMINICK. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Colorado has the floor.

Mr. DOMINICK. I am happy to yield to the Senator from New York.

Mr. JAVITS. I think I see the concern of the Senator from North Carolina and would like to introduce two facts into the RECORD. One is the fact that when the scheme of legislation in section 715 is

read with the definition of the word "employer," which appears on page 26, lines 11 and 12, which excludes the United States or a corporation owned by the United States, this lends support to the argument made by the manager of the bill that section 715, and so forth, is an autonomous scheme for dealing with employees of the United States.

The second point which I understood the Senator to make, which is more relevant, that under the broad construction given to EEOC, it may issue orders or such instructions as it deems necessary and appropriate to carry out its responsibility. There is, as I understand it, the Senator's concern here about importing counsel fees and other provisions and parts of the bill which do not legislate for the Federal Government. In my judgment, I think this is important for the record, because the Senator is perfectly right to take the precaution in the interpretation of the whole of the section I have just referred to, as made by the manager of the bill, in which I join as the ranking member of the committee, so that the EEOC would not be within its power and would not be making rules, regulations, and orders carrying out its responsibilities if it simply imported the procedures of this bill respecting other employees to apply in cases involving Federal employees.

Mr. ERVIN. I thank the distinguished Senator from New York, but while page 26, section 701, subsection 2, and subsubsection (b) can be amended, it takes the United States out. Certainly the United States is brought back in by section 715's provision, and that certainly makes it implied that the EEOC has jurisdiction to issue orders to all the departments and agencies of the Federal Government, as well as the appropriate officers of the District of Columbia. But I hope that we are not giving the EEOC jurisdiction over the staffs of Senators.

Can the Senator from North Carolina receive the assurance of the Senator from New Jersey that the bill does not give the EEOC the power to supervise the employment of members of the staff of U.S. Senators?

Mr. WILLIAMS of New Jersey. The legislative branch is excluded.

Mr. DOMINICK. If I could interject there, could I say to the Senator from North Carolina that the legislative branch is included in employees, but only as to those under civil service.

Mr. WILLIAMS of New Jersey. That is correct.

Mr. DOMINICK. There are employees on the Hill not under civil service, and for that purpose——

Mr. ERVIN. Then I have the assurance, from that statement, that the word "individual" as used in section 701, subsection (a), and the words "government" and "governmental agencies," and so forth, do not include Senators of the United States; that their right to select their own staff members shall remain exempt from supervision by the EEOC.

Mr. WILLIAMS of New Jersey. It was stated by the Senator from Colorado that only those are covered who have positions in the legislative branch in the competitive civil service. The others are not.

Mr. ERVIN. That is true. That is undoubtedly so. That is expressed in section 715.

Mr. WILLIAMS of New Jersey. That is right.

Mr. ERVIN. I am also concerned about the definition of "persons" in section 701. We are not the Government of the United States. We are not exempt under that. We are individuals, I fear. We may be part of the Government.

Mr. WILLIAMS of New Jersey. Referring back to section 701, this operates under the term "employer," and not under the term "person." The term "employer" is then defined but does not include the United States as the employer but the people included within the legislative branch, which description is on page 54.

Mr. ERVIN. I am not the United States. I am an individual though, even if I happen to be a Senator of the United States.

Mr. WILLIAMS of New Jersey. Those people who are not competitive in the civil service.

Mr. ERVIN. That is section 715.

Mr. WILLIAMS of New Jersey. They are not covered. This is further evidence that section 715 should be separate and apart and on its own.

Mr. ERVIN. Then I understand the distinguished Senator to say that none of the provisions of the bill apply to the Federal Government or to any officer of the Federal Government except section 715.

Mr. WILLIAMS of New Jersey, That is right.

Mr. ERVIN. That satisfies me on that point. I am not asking these questions to be facetious but I have been so busy—as indeed has every other Member of the Senate—these harried days, that I could not get around to doing all my homework and I got to this just last night.

I thank the Senator for his information.

Mr. WILLIAMS of New Jersey. Mr. President, for myself, I would not have traded this legal exercise for anything.

Mr. DOMINICK. Mr. President, I am almost ready to vote. For the information of those who have not had the opportunity to be present, my amendment would leave in the Civil Service Commission the Federal employees. Instead of transferring that portion of personnel management to the EEOC, it would leave it in the Civil Service Commission.

This has been recommended by the Chairman of the EEOC, Mr. Brown, and by the Chairman of the Civil Service Commission, Mr. Hampton.

Why in the world we would take 3 million Federal employees and take one portion of personnel management and put it in a whole new agency, I cannot understand.

Mr. GRIFFIN. Mr. President, would the Senator answer a question for me if he is able to do so? What would be the rationale of the committee in exempting the employees of Senators? How would we justify that?

Mr. DOMINICK. I think that we did not get around to it at all. Actually, I would presume it is a pretty subtle distinction, because they are Federal employees, but they are not under civil service. The only ones covered were the employees under civil service. I do not see why they should have been exempted, but they were.

Mr. WILLIAMS of New Jersey. Mr. President, I believe that we covered those now covered under the Executive order. It was to be limited to that group, rather than broadening it beyond the Executive order as it exists.

Mr. GRIFFIN. Mr. President, it seems to me that it would be a difficult point to explain. Apparently we would be interested in bringing all other employers under the jurisdiction of the EEOC with respect to guarantees against discrimination, but we would leave ourselves free to discriminate.

Mr. JAVITS. Mr. President, if Congress votes for this legislation, I think we have a right to assume that Congress will in its personal conduct act in good faith. I think there is great jealousy over Executive interference with our functions and having any executive function in the executive department have the power to deal with the respective exercise of the Members of Congress. I respect that balancing of the two equities.

Even if we had done this in an advised way, I would still omit those employees because the separation of powers is, in my opinion, so critical that we should not jeopardize that concept with an executive department agency.

Mr. GRIFFIN. Mr. President, may I ask the Senator from Colorado, the sponsor of the amendment—since I did not hear all of the debate—do I correctly understand that the EEOC and the Civil Service Commission would favor the amendment of the Senator from Colorado?

Mr. DOMINICK. The Senator is correct. Chairman Brown of the EEOC and the chairman of the Civil Service Commission both testified in support of what my amendment would do—in other words, not transfer jurisdiction.

Mr. GRIFFIN. I certainly hope the amendment will be agreed to.

Mr. JAVITS. Mr. President, I wish to say just a word. The Senator from Colorado was very sparing in taking time. I am going with the committee on the whole bill.

My reason for supportng this particular provision of the bill is that there is, in my judgment, a proper case to be made for the fact that the agency which handles the personnel policies—namely, the Civil Service Commission—should not also be its own supervisor with respect to discrimination in employment.

It is for that reason that I saw some sense—I was not passionate about it, but I saw some sense—in giving rulemaking and the review power to the EEOC, so that it may make a consistent nondiscriminatory policy both in the Federal Government and in the State and local governments and for private employers.

I submit that the rationale of the committee's action is that it represents a sanction outside of the operation of the personnel policy of the Civil Service Commission itself. Experience has demonstrated, because of the very setup, that the personnel practice—the type of

examination, and so forth—seems to open the door to discrimination.

I, therefore, think this is a healthy correction that is being made.

Mr. ERVIN. Mr. President, I wish to make one observation. The EEOC can give an applicant for employment with the State government $1,000 to litigate his case. But under the explanation that has been given, they cannot give 1 cent to an applicant for Federal employment. I do not see why we make that discrimination between the Federal Government and the State agency.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. BYRD of West Virginia (after having voted in the affirmative). Mr. President, on this vote I have a live pair with the senior Senator from Washington (Mr. MAGNUSON). If he were present and voting he would vote "nay." If permitted to vote, I would vote "yea." Having already voted in the affirmative, I now withdraw my vote.

Mr. RANDOLPH (after having voted in the affirmative). On this vote I have a live pair with the Senator from Maine (Mr. MUSKIE). If he were present and voting he would vote "nay." I have already voted "yea." I withdraw my vote.

Mr. KENNEDY. I announce that the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Senator from Maine (Mr. MUSKIE), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Mississippi (Mr. STENNIS), the Senator from Maryland (Mr. TYDINGS), and the Senator from Minnesota (Mr. MCCARTHY), are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL), the Senator from North Carolina (Mr. JORDAN), the Senator from Alabama (Mr. SPARKMAN), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Ohio (Mr. YOUNG) are absent on official business.

I further announce that, if present and voting, the Senator from Oklahoma (Mr. HARRIS), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from Utah (Mr. MOSS) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Utah (Mr. BENNETT), the Senator from Arizona (Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Nebraska (Mr. HRUSKA), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Oklahoma (Mr. BELLMON) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Iowa (Mr. MILLER) is detained on official business.

If present and voting, the Senator from Utah (Mr. BENNETT), the Senator from Iowa (Mr. MILLER), the Senator from South Dakota (Mr. MUNDT), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "yea."

On this vote, the Senator from California (Mr. MURPHY) is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from California would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 37, nays 29, as follows:

[No. 340 Leg.]

| Goldwater | Miller | Tower |
| Goodell | Montoya | Tydings |
| Gravel | Moss | Yarborough |
| Harris | Mundt | Young, Ohio |
| Hartke | Murphy | |

So Mr. DOMINICK's amendment No. 976 was agreed to.

Mr. DOMINICK. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BYRD of West Virginia. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## ANNOUNCEMENT OF BRIEFING ON SOVIET SUBMARINE BASES IN CUBA

Mr. CHURCH. Mr. President, at 2:30 tomorrow afternoon the Foreign Relations Subcommittee on Western Hemisphere Affairs, of which I am chairman, will receive an intelligence briefing on the reports we have had of the construction of a Russian submarine base in Cuba.

Senators will recall that the last reports we had of Soviet military activities in Cuba led to one of the crucial crises of our generation.

I do not know whether the present situation is of such significance as the earlier confrontation in Cuba, but I believe that it is essential that Senators know precisely what the situation is, so that we need not rely on press reports and rumors.

The briefing tomorrow afternoon will be conducted by members of the Defense Intelligence Agency in room S-116 at 2:30 p.m. and any Senator who is interested is invited to attend.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of an editorial on this subject, published in this morning's New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOVIET SUB BASE IN CUBA?

It is curious that neither Moscow nor Havana has reacted publicly to the White House warning against construction of a Soviet strategic submarine base in Cuba. On occasion in the past the Soviet Government has been quick to deny much less serious accusations appearing even in obscure publications. But in this case, when a White House spokesman raised the possibility that the Kremlin had secretly begun work that would violate the spirit, if not the letter, of the 1962 Khrushchev-Kennedy agreement, there has not been a word of Soviet comment.

Pessimists will conclude that this silence confirms Washington's worst fears. Optimists will argue that Soviet leaders are taking another look at whatever plans may be underway for the Cuban port of Cienfuegos and have not yet decided what to do in the light of the White House statement.

The world was probably closer to thermonuclear war during the Cuban missile crisis of October 1962 than at any time before or since. In reporting the agreement which had resolved the crisis, President Kennedy said that the Soviet leaders had promised to remove all "weapons systems capable of offensive use" and "to halt the further introduction of such systems into Cuba." In return the United States agreed to lift its naval quarantine and to "give assurances against an invasion of Cuba." President Kennedy was thinking of land-based missiles capable of delivering nuclear weapons, but submarines having similar missiles and nuclear weapons are also "weapons systems capable of offensive use."

Violations of this understanding, coming on top of the current Soviet violations of the cease-fire pact in the Suez Canal zone, would certainly undermine any confidence in agreements with the Soviet Union. In this situation any Soviet move to create a submarine base in Cuba would only intensify tension between the two superpowers and strengthen retrogressive forces in both countries that would intensify the arms race.

---

## MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 3730) to extend for 1 year the act of September 30, 1965, as amended by the act of July 24, 1968, relating to high-speed ground transportation, and for other purposes.

The message also announced that the House had passed, without amendment, the joint resolution (S.J. Res. 110) to

amend the joint resolution entitled "Joint resolution to establish the first week in October of each year as National Employ the Physically Handicapped Week," approved August 11, 1945 (59 Stat. 530), so as to broaden the applicability of such resolution to all handicapped workers.

The message further announced that the House had passed the bill (S. 3154) to provide long-term financing for expanded urban mass transportation programs, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H.R. 14485) to amend sections 501 and 504 of title 18, United States Code, so as to strengthen the law relating to the counterfeiting of postage meter stamps or other improper uses of the metered mail system.

The message further announced that the House had agreed to the amendments of the Senate to the joint resolution (H.J. Res. 236) authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week."

The message also announced that the House had agreed to the amendments of the Senate to the joint resolution (H.J. Res. 1154) authorizing the President to proclaim National Volunteer Firemen's Week from September 19, 1970, to September 26, 1970.

The message further announced that the House had agreed to the amendments of the Senate to the concurrent resolution (H. Con. Res. 675) expressing the sense of the Congress with respect to the conquest of cancer as a national crusade.

The message also announced that the House had disagreed to the amendment of the Senate to the bill (H.R. 17604) to authorize certain construction at military installations, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. RIVERS, Mr. HAGAN, Mr. CHARLES H. WILSON, Mr. NICHOLS, Mr. DANIEL of Virginia, Mr. BRAY, Mr. CLANCY, Mr. KING, and Mr. FOREMAN were appointed managers on the part of the House at the conference.

The message further announced that the House had passed a bill (H.R. 18126) to amend title 28 of the United States Code to provide for holding district court for the eastern district of New York at Westbury, N.Y., in which it requested the concurrence of the Senate.

## ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (S. 3558) to amend the Communications Act of 1934 to provide continued financing for the Corporation for Public Broadcasting, and it was signed by the Acting President pro tempore (Mr. ALLEN).

## EQUAL OPPORTUNITIES ENFORCEMENT ACT

The Senate continued with the consideration of the bill (S. 2453) to further promote equal employment opportunities for American workers.

AMENDMENTS NO. 978

Mr. DOMINICK. Mr. President, I call up my amendments No. 978.

The PRESIDING OFFICER. The amendments will be stated by the clerk.

The legislative clerk proceeded to read the amendments.

Mr. DOMINICK. Mr. President, I ask unanimous consent that further reading of the amendments be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments (No. 978) are as follows:

On page 27, insert between lines 22 and 23, the following:

"SEC. 4. (a) Subsections (g) and (h) of section 705 of the Civil Rights Act of 1964 (78 Stat. 253; 42 U.S.C. 2000e–4) are amended to read as follows:

"'(g) The Commissions shall have power * * * (6) to refer matters to the Attorney General with recommendations for intervention in a civil action brought by an aggrieved party under section 706, or for the institution of a civil action by the Attorney General under section 707, and to recommend institution of appellate proceedings in accordance with subsection (h) of this section, when in the opinion of the Commission such proceedings would be in the public interest, and to advise, consult, and assist the Attorney General in such matters.

"'(h) Attorneys appointed under this section may, at the direction of the Commission, appear for and represent the Commission in any case in court: *Provided*, That the Attorney General shall conduct all litigation to which the Commission is a party in the Supreme Court or in the courts of appeals of the United States pursuant to this title. All other litigation affecting the Commission, or to which it is a party, shall be conducted by the Commission.'"

On page 27, line 23, strike "SEC. 4. (a)" and insert in lieu thereof "SEC. 4. (b)"; in line 25, strike "2000e–5(a)–(d)" and insert in lieu thereof "2000e–5 (a)–(e)."

On page 31, beginning with line 23, strike all through line 19, page 43, and insert in lieu thereof the following:

"(f) If within thirty days after a charge is filed with the Commission or within thirty days after expiration of any period of reference under subsection (c) or (d), the Commission has been unable to obtain voluntary compliance with this Act, the Commission may bring a civil action against the respondent named in the charge: *Provided*, That if the Commission fails to obtain voluntary compliance and fails or refuses to institute a civil action against the respondent named in the charge within one hundred and eighty days from date of the filing of the charge, a civil action may be brought after such failure or refusal within ninety days against the respondent named in the charge (1) by the person claiming to be aggrieved, or (2) if such charge was filed by an officer or employee of the Commission, by any person whom the charge alleges was aggrieved by the alleged unlawful employment practice. Upon application by the complainant and in such circumstances as the court may deem just, the court may appoint an attorney for such complainant and may authorize the commencement of the action without the payment of fees, costs, or security. Upon timely application, the court may, in its discretion, permit the Attorney General to intervene in such civil action if he certifies that the case is of general public importance. Upon request, the court may, in its discretion, stay further proceedings for not more than sixty days pending the termination of State or local proceedings described in subsection (c) or further efforts of the Commission to obtain voluntary compliance."

On page 43, beginning with line 20, strike all through line 12, page 44, and insert in lieu thereof, the following:

"(c) Subsections (f), (h), (j), and (k) of section 706 of such Act are redesignated as subsections (h), (j), (l), and (m), respectively.

"(d) Subsection (g) of section 706, is redesignated as subsection (i) and a new subsection (g) is inserted in lieu thereof as follows:

"'(g) Whenever a charge is filed with the Commission and the Commission concludes on the basis of a preliminary investigation that prompt judicial action is necessary to carry out the purposes of this Act, the Commission may bring an action for appropriate temporary or preliminary relief pending final disposition of such charge. It shall be the duty of a court having jurisdiction over proceedings under this section to assign cases for hearing at the earliest practicable date and to cause such cases to be in every way expedited.'"

"(e) Subsection (i) of section 706 of such Act is redesignated as subsection (k) and subsection (g) of such Act as redesignated as subsection (i) is amended to read as follows:

"'(i) If the court finds that the respondent has engaged in or is engaging in an unlawful employment practice, the court may enjoin the respondent from engaging in such unlawful employment practice, and order such affirmative action as may be appropriate, which may include, but is not limited to, reinstatement or hiring of employees, with or without back pay (payable by the employer, employment agency, or labor organization, as the case may be, responsible for the unlawful employment practice), or any other equitable relief as the court deems appropriate. Interim earnings or amounts earnable with reasonable diligence by the person or persons discriminated against shall operate to reduce the back pay otherwise allowable. No order of the court shall require the admission or reinstatement of an individual as a member of a union or the hiring, reinstatement, or promotion of an individual as an employee, or the payment to him of any back pay, if such individual was refused admission, suspended, or expelled or was refused employment or advancement or was suspended or discharged for any reason other than discrimination on account of race, color, religion, sex, or national origin or in violation of section 704(a).'"

On page 49, strike out lines 6 through 18.

On page 49, line 19, strike out "SEC. 8" and insert in lieu thereof "SEC. 7".

On page 53, line 6, strike out "SEC. 9" and insert in lieu thereof "SEC. 8".

On page 53, line 17, strike out "SEC. 10" and insert in lieu thereof "SEC. 9".

On page 51, beginning with line 20, strike all through line 2, page 53; in line 3, strike "(h)" and insert in lieu thereof "(f)".

On page 55, line 5, strike "(q)"; strike lines 8 and 9; in line 10, strike "(e)" and insert in lieu thereof "(d)"; in line 15, strike "(f)" and insert in lieu thereof "(e)"; in line 17, strike "(g)" and insert in lieu thereof "(f)"; strike out lines 21 through 25.

Mr. DOMINICK. Mr. President, I should tell my colleagues who are present that this is really a very significant amendment. What it does is to say that we are not going to give EEOC cease and desist powers. This amendment does, say, however, that the Commission can go into court, instead. This insures we do not have an executive agency going around the country, issuing cease and desist orders which have the effect of trying to enforce their own investigations in very ticklish and very delicate

situations. Instead, the Commission will have to go to court, where there will be full proceedings of the court, rights of review, and rights of the Administrative Procedure Act.

I do not intend to be extremely long in my discussion of the amendment. I would guess that we would get a vote soon. As a result, I ask for the yeas and nays on my amendment at this point.

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I shall now go into a little lengthier explanation of my amendment.

Some 6 years ago Congress enacted legislation making it unlawful to deny employment to an individual because of race, color, religion, sex, or national origin. This legislation was predicated on a belief and conviction that we must afford equal employment opportunity to all of our citizens, and this is a thesis which I thoroughly subscribe to. However, we still have job discrimination.

As Senators know, the agency charged with enforcing the law against this kind of discrimination was not given power commensurate with its responsibility, and, if the policy declared by Congress is to be effective, the inadequacy must be remedied. The question is: How do we do it?

The bill before us would provide the Equal Employment Opportunity Commission with authority to issue a cease and desist order against an employer found to be engaging in an unlawful employment practice.

Where the Commission cannot obtain voluntary compliance, it will issue a formal complaint against the respondent. The matters at issue will thereafter be litigated at a formal hearing before a Federal trial examiner, in the same manner that NLRB complaints are litigated.

Orders of the Commission may be reviewed by the Court of Appeals upon a petition by a party aggrieved by the final order. If no such petition is filed within 60 days, the Commission may obtain a court decree upon application, without review of the proceedings by the Court of Appeals. If neither of the above occurs within 90 days, any person entitled to relief may obtain a court decree without review of the Commission's proceeding.

The committee report on the bill states that this means of enforcement was adopted because it is the type utilized by other Federal regulatory agencies and most of the States. It also states that cease and desist powers insure a quicker and more unified approach to the problem.

I do not agree with this conclusion, as stated in the report, and I so stated in my individual views. I might also add that a number of witnesses before the committee did not agree with that conclusion.

The thrust of my amendment as we have it before us now is to provide for trial in the United States District Courts wherever the EEOC has investigated a charge and found reasonable cause to believe that a violation has occurred.

Let me interject at this point, because I think it is appropriate: The EEOC, on investigatory matters, is now 18 to 24 months behind. The bill as it is presented to us now, after adoption of my last amendment, still adds about 16.5 million people to its jurisdiction. The bill as it is now presented to us also asks that the EEOC, already 18 to 24 months behind, should now set up a whole new trial examiner department, and start the actual adjudication of these complaints as well as the investigation of these complaints.

Mr. President, as compared to about 100 new trial examiners, not counting the staff which would be needed, if we go into the system I am suggesting we need about 50 trial lawyers for EEOC. But we have 93 Federal District Courts in this country, with 326 judges now active and 398 authorized already in operation—people with judicial reputations, with reputations for fairness, discretion, and impartiality—and it seems to me that it makes far more sense, that it is going to be much more rapid, and that it will be a far better system to go through the courts, as opposed to the cease and desist order procedure.

The PRESIDING OFFICER (Mr. HUGHES). The Chair inquires whether the Senator from Colorado would like his amendments considered en bloc.

Mr. DOMINICK. Yes; I ask unanimous consent that it be considered en bloc.

Mr. JAVITS. Mr. President, will the Senator withhold that? I would like to examine the amendments.

Mr. DOMINICK. Yes, no problem. The amendment is No. 978.

Mr. GRIFFIN. Mr. President, would the Senator from Colorado permit me to ask a question at this point?

Mr. DOMINICK. Yes, I should be delighted.

Mr. GRIFFIN. On August 8, 1969, the Senator from Vermont (Mr. PROUTY), the Senator from Pennsylvania (Mr. SCOTT), the Senator from Oklahoma (Mr. BELLMON), the Senator from Pennsylvania (Mr. SCHWEIKER), and I introduced a bill (S. 2806) which represented the position of the administration on the matter of how to provide further enforcement powers for the EEOC.

It is my understanding that the bill was drafted either by or in cooperation with the chairman of the EEOC, Mr. Brown.

Is the amendment which the Senator from Colorado proposes now substantially in accord with that bill, does the Senator know?

Mr. DOMINICK. The Senator is correct, and it is in accord with that bill insofar as the bill was restricted to enforcement procedures, which I believe it was.

That bill was brought up in committee, but it met the fate of many other bills in that committee, and simply did not receive majority support. I believe, as a matter of fact, that the distinguished Senator from New York—no, I guess it was introduced by the Senator from Michigan, that is correct. The Senator from New York introduced another bill along somewhat similar lines.

Mr. GRIFFIN. Senator PROUTY, I believe, as a member of the committee, introduced it, along with the junior Senator from Michigan, and others. The thrust of the amendment now offered by the Senator from Colorado is in accord with that bill, as do I understand?

Mr. DOMINICK. It is in accord with that bill, and it is in accord, I might add, with the very strong position of the administration, the position of the board of the EEOC, and the position of the Justice Department.

Mr. GRIFFIN. I thank the Senator.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. JAVITS. I did not get the list of Senators, but I note that the minority leader is a cosponsor of the bill itself, as introduced by the Senator from New Jersey (Mr. WILLIAMS), so that really covers both sides of the issue, with Senator SCOTT on both of them.

Mr. DOMINICK. Mr. President, as I have said, the main thrust of my amendment is to go back to the original idea that the EEOC, the administration, and a lot of the rest of us had, which is to go through the courts instead of setting up this hearing examiner procedure.

Under this amendment, the Commission, if unable to obtain voluntary compliance with the law, may bring its own direct action against the respondent in an appropriate Federal District Court.

In other words, the Commission can do this itself.

The Commission may also request the Federal District Court for temporary or preliminary injunctive relief pending final disposition of the charge.

Obviously, it is not very difficult, as we all know, to obtain a preliminary injunction or a temporary restraining order. You can get it, practically, in half an hour. In the case of a preliminary restraining order, you can do it ex parte; with a temporary injunction, of course, you have to go in and have some hearings. But it is not a very difficult forum for obtaining effective, prompt relief where a situation may be critical.

If the court, after hearing the case, finds a violation has occurred, it may enjoin the respondent from engaging in such unlawful acts and may order such affirmative relief as it deems appropriate, including but not limited to the reinstatement or hiring of employees with or without back pay. Promotion of an individual may also be ordered if this type of discrimination is found.

An appeal from a District Court's order would go directly to an appropriate court of appeals, and the order of the court of appeals would be reviewable only by the U.S. Supreme Court.

The Attorney General's authority to bring actions involving patterns or practices of discrimination would not be changed. The Commission would be required to notify the Attorney General of such cases and also of cases the Commission is instituting in Federal District Court. So there would be coordination between them. The Attorney General may intervene in the latter type of a case as well as in a suit filed in Federal District Court by an aggrieved person.

So we are preserving the coordination, and at the same time we are making sure that we are not disturbing the pattern of practice cases which the Attor-

ney General has been handling himself through the Justice Department. Wherever an aggrieved person comes in and files a suit, the action is retained where the Commission cannot obtain voluntary compliance but refuses to bring an act on in Federal District Court on behalf of the aggrieved person.

The Commission has complete authority to decide which cases to bring to Federal District Court, and these cases will be litigated by the Commission attorneys. Once a Federal District Court has issued a decision and order in a case, however, on litigation of an appeals nature, a U.S. Court of Appeals or the U.S. Supreme Court will be conducted by the Attorney General.

This approach preserves the expertise and independence from changing shifting political winds resulting from enforcement through administrative processes, and is capable of easy adaptability within EEOC's existing structure. In aditon, however, it contemplates vigorous enforcement in the Federal courts where speedy redress can be obtained with due process.

I believe that other reasons supporting the adoption of my amendment include the following:

Proceedings showing immediate results will be able to be commenced shortly after enactment, particularly in view of the authority to the EEOC to seek immediate temporary or preliminary injunctive relief from Federal courts which will eventually try the cases on their merits. By contrast, it will take the EEOC many months to commence administrative proceedings under decisionmaking and enforcement authority and would probably take 2 or 3 years before any meaningful number of court decisions could be obtained ruling on or enforcing the administrative decisions of the EEOC.

Mr. President, I can go farther than that. In the hearing records that we have before us, it was anticipated that it would take 18 months to 2 years to set up the necessary trial examiners in order to go into the kind of processing on cease and desist orders provided under the bill. We would not have to wait that long under my amendment. We could go directly into court and get such relief as the court may authorize.

EEOC will have complete freedom to determine which cases should be taken into Federal court after conciliation attempts failed, with an aggrieved person retaining the right to commerce his own action in Federal court if the EEOC dismisses his charge. The Civil Rights Division of the Justice Department will have no control over what cases are litigated, although it will retain the right to decide which cases should be appealed to the courts of appeals where the EEOC loses a case in whole or in part in the District Court proceedings.

A particular proceeding will probably be substantially shortened by the direct appeal route from the Federal District Court which tried the case to the court of appeals, rather than following the time-delaying route of administrative hearings before a trial examiner and additional proceedings before the Commission itself before access to the court of appeals can be obtained.

Under the traditional procedure of the so-called independent board, which is not independent in this case, what you do is have an investigation by the EEOC staff; then a complaint is filed; then that complaint is heard by an EEOC trial examiner. After that, you have a right to go to the commission for a full review of the trial examiner's report. After that, the case goes to the court of appeals. The administrative procedures alone, as we well know, in the course of the conduct of NLRB and many other regulatory agencies, are time consuming.

In addition, there is the feature which I have been fighting, as the Senator from New Jersey has said, over and over and over again, and that is that I do not think that an executive agency of Government should be the investigator, the prosecutor, the trial judge, and the judicial review board before you ever get to a court.

It seems to me that it smacks far too much of the old star chamber procedure of the English common law from which we have been trying to get away ever since—or, I should say, which the English common law got away from.

The EEOC will not lose the right to exercise its expertise in the fashioning of remedies for alleged violations, as it may urge the courts any proposed remedies which might have been ordered in its own right if it retained decisionmaking legality of such remedies would be determined when the court of appeals reviewed the EEOC's order, and it is this same forum which will pass upon the propriety of the remedy under my amendment when the action of the Federal District Court is reviewed.

It is true that there is a substantial backlog of cases awaiting trial in many Federal district courts. However, I am convinced that the backlog of EEOC cases in the courts will not approach the backlog of cases before the Commission which would be created by requiring the EEOC to review every litigated case in the country before enforcement in the courts of appeals could be sought. In addition, under the proposal which I have submitted, the EEOC would be authorized to seek temporary or preliminary relief when investigation indicates that it is necessary. These cases would be expedited and the immediate effects of the results could make an impact upon employment practices.

Further, it is my impression that companies and labor organizations and their legal counsel are much more impressed by precedents established in our Federal court system than by precedents of administrative agencies. Accordingly, as court precedents are established under my amendment, I believe the result will be a substantially higher increase in the number of respondents complying with court decisions or entering into meaningful conciliation agreements with the Commission, rather than appealing cases lost in Federal district court. In addition, I envision a much larger number of cases being settled by agreement without litigation where the alternative is a Federal court trial by respondents who would take their chances in drawn-out administrative proceedings, even where the precedents were clear.

There is also good reason to believe that the success of conciliation efforts would be enhanced by these enforcement procedures. Rather than substantially increase the number of cases which must be pursued in the courts if at all, there is a strong likelihood that the knowledge that failure to conciliate can result in direct court action by the EEOC will provide the necessary inducement to employers to settle matters rather than to litigate.

Finally, the rights of all parties—employers as well as employees—are better protected, procedural safeguards are assured, and an impartial determination of the issues can be made when differences are resolved and the record is made in a Federal court.

We have established a great number of regulatory agencies in the past. We have done this largely on the basis that very intricate situations are going to be involved and that we should have a group of experts doing this.

In this case what we are talking about is discrimination. While discrimination can happen both directly and indirectly, and that it can sometimes be difficult even to ferret out, these instances, by and large, are going to be brought to the Commission on complaint of an aggrieved party. So we do not have a comparability, so far as I can see, with the problems of the NLRB or the SEC or the Federal Trade Commission or any of the other regulatory agencies.

These cases will be coming in, and they will be coming in in numbers, substantial numbers, because we all know that discrimination is still going on.

It strikes me that where we have of necessity a complaint-oriented agency such as this, we should have a judicial review of whatever order that Commission deems it should have. We should have a judicial review through the Court of Appeals; but in order to make the decision—I will put it that way—of a Commission subject to initial review and rather prompt action, we will do better, I believe, in the Federal district courts than we will elsewhere.

Let me state again the reasoning, and I will be very brief. This Commission is now 18 to 24 months behind. By this bill, if it is passed as it is now before the Senate, we will be adding 16.5 million people to its jurisdiction.

The Commission has estimated that it would take them almost 2 years to be able to set up a trial examiner procedure, and they have estimated that substantial staffing of trial examiners as well as new lawyers would be needed in order to conduct the adjudication proceedings before the Commission itself.

We now have in existence 93 Federal district courts, with 398 authorized judges for those courts. Wherever there is an investigatory proceeding which makes the Commission believe there is a legitimate case, they can go right into one of those courts, which are already set up, already staffed, and already paid for.

It just does not seem to me to make

very much sense for us to reverse this—and, I might point out, to reverse it against the wishes of the administration, the Justice Department, and the EEOC itself—and to say that we are going to put it in the hands of an agency which really does not want this type of power.

COURT ENFORCEMENT VERSUS CEASE AND DESIST POWERS

Mr. WILLIAMS of New Jersey. Mr. President, the issue that goes to the very heart of this bill is whether unfair employment practices should be dealt with by way of administrative cease and desist proceedings, subject to appellate court review, or, whether the Commission must resolve questions of discrimination through court litigation, as proposed in this pending amendment by the Senator from Colorado.

Since the inception of title VII, there has been an almost universal recognition of the need to provide some public mechanism for adjudication of charges relating to unfair employment practices. All of the Government witnesses testified at our hearings on the need for enforcement power for the Commission. The only disagreement has been whether this enforcement power should be through administrative proceedings or litigation in the courts.

The Committee on Labor and Public Welfare was unanimous in its view that some method of enforcement was required for title VII. An amendment to provide court enforcement for title VII, instead of administrative cease-and-desist proceedings, was given full and careful consideration throughout the hearings and in discussions in the full committee. The amendment was rejected, however, and the bill with administrative cease-and-desist enforcement powers was unanimously reported.

I should stress at the outset, that the type of enforcement favored by the committee is the very same type of authority which has been given to virtually all other Federal regulatory agencies such as the Federal Trade Commission, the Interstate Commerce Commission, the Securities Exchange Commission, the National Labor Relations Board, and others; all of these administrative agencies are empowered to issue cease-and-desist orders after holding administrative hearings.

In addition, the type of enforcement authority provided for in S. 2453 is the same as that adopted by 34 of the 38 States which have equal employment opportunity laws. Thus, we are in harmony with the States and we are in harmony with the other administrative agencies.

The committee found sound reason to follow the same approach in this bill. The same considerations which have led to the adoption of administrative enforcement in other areas were found to be fully applicable here.

One of these considerations is the need for the development and application of expertise in the recognition and solution of employment discrimination problems—particularly as these problems are presented in their more complex, institutional forms.

In the past several years, the development of the law of employment discrimination has made it increasingly clear that the most significant subject of dispute is often not whether there has been discrimination but what the appropriate remedy is to correct discrimination. Further, the question of remedy is often not posed as to just one person or small group or persons who have been discriminated against, but involves discriminatory practices inherent in the employer's basic methods of recruitment, hiring, placement or promotion.

Accordingly, the district courts have increasingly found themselves grappling with complex questions of remedy involving, for example, the plantwide restructuring of pay scales, progression lines, and seniority structures.

Thus, the nature of the issues arising under title VII indicates that reliance upon the expertise developed by trial examiners and commissioners in the course of their ongoing administrative experience with such issues, is just as important for this subject matter as is true of the equally complex subjects handled by the Federal Trade Commission, the Securities Exchange Commission, and others I have mentioned.

Another consideration of utmost importance is that exclusive reliance on court litigation means throwing a new, additional burden on our already overworked Federal district courts.

The complexity of the issues in employment discrimination cases can give rise to enormous expenditures of judicial resources. For example, Judge Allgood of the Federal District Court for the Northern District of Alabama, wrote an opinion 157 pages in length in United States against H. K. Porter, a title VII suit alleging employment discrimination in a single steel plant. Judge Allgood noted in his opinion that enough use was made of pretrial discovery in that case to "fill several court files."

The concern I express here is a crucial one. In his remarks to the American Bar Association on the State of the Federal Judiciary, given on August 10, 1970, Chief Justice Burger described at length the problem of overcrowding in our courts. Such overcrowding, he warned, threatens "a grave deterioration in the work of the Federal courts." The Chief Justice attributed the situation, in large part, to the tendency of Congress to meet the problems of our society by enacting new programs requiring court enforcement, and the simultaneous failure of Congress to give adequate consideration to the impact of such programs upon the caseloads of our courts.

In this bill we have given consideration to the problems encountered by our courts and have not imposed upon them this additional burden.

I should also point out that the enforcement mechanism contained in S. 2453 will insure more quickly a unified approach to the problems of discrimination, since decisions would be rendered by one agency rather than several hundred district court judges. In this way, I believe, a greater degree of predictability regarding legal interpretations and remedial approaches will be available to those who are covered by the law.

The argument has been made that court enforcement would be faster and more efficient than administrative enforcement, and the experience of the National Labor Relations Board was cited during our hearings as proof of this argument. The committee examined this contention and concluded that it was not borne out by available figures. The statistics in our record showed that the median time for resolution of a complaint by the National Labor Relations Board, from filing to decision, is a little less than 1 year, whereas the median time for resolution of contested cases in U.S. district courts, from filing to decision, is 19 months—a considerable difference.

Another argument that has been made in favor of court enforcement is the need to have an immediately available mechanism to handle the large backlog of charges now pending before the Commission. The committee felt that a serious question of due process could be raised if the new administrative enforcement procedures were applied to this backlog, inasmuch as the Commissioners themselves to some extent have an advocate's role under existing law. Therefore, an interim method for processing pending cases was devised in order to avoid even the appearance of a lack of due process for the respondent, until such time as the Commission, through the rulemaking authority provided in this bill, has created the necessary internal separation of functions contemplated by the administrative cease-and-desist enforcement scheme. Accordingly, the bill makes provision for the Commission to seek direct court relief with respect to pending cases in which the Commission is unable to obtain voluntary compliance after finding reasonable cause. All future cases would be determined by the Commission itself under their cease-and-desist power.

In closing, I would emphasize that our committee concluded that the cease-and-desist mechanism is the best possible method for securing the equal employment opportunities provided in this bill. Court enforcement is not without its merits, nor would it be unworkable if it became the device in the bill—but cease-and-desist is the better way, and our millions of disadvantaged citizens deserve no less than the best we can provide.

Mr. JAVITS. Mr. President, it is my intention to suggest the absence of a quorum so that Members may be advised that this is the most important, in my judgment, of all the amendments that we will debate promptly and vote on promptly.

I ask unanimous consent that I may regain the floor, and I shall not be long at all.

The PRESIDING OFFICER (Mr. BOGGS). Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask

unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, we come now to the very heart of this bill. One might almost say, in the absence of a decision which would sustain the committee and reject the amendment, that as far as the world is concerned—and the world is deeply interested, especially the world of the minorities, I think it is fair to say, because one cannot use delicate parliamentary language—nothing will be accomplished. I think that something will have been accomplished anyhow by the provisions of the bill in many respects tightening up the procedures and so forth. But in the eyes of the great world of the minorities if we do not give the Commission cease-and-desist power, then the flag has been struck down and that is it.

This Commission has been weak, innocuous, and behind in its work. Its work has been very challengeable because it did not have cease and desist power. The whole point of seeking to buttress this power is to give cease and desist power.

This is the key amendment. It is true that the Commission itself does not have the power to sue now and that this would give it the power to sue.

The amendment of the Senator from Colorado thereby makes a little step forward in the situation of a weakly positioned plaintiff who might have trouble suing for himself. But the fact is that with the network of civil rights agencies which are around today, a determined plaintiff can find someone to sue for him—the legal aid society, the legal services of the OEO, or some such local connection—if he is really interested in bringing suit.

I do not think the fact the Commission will be able to litigate represents a very big step forward, although it is a power which it does not have today.

This has been especially true with respect to the pattern and practice suits in the case of the Attorney General. He has filed less than 100 such suits.

Considering the state of our Nation today, it seems to me that this should be a critically important consideration with every Senator. The demand has been so great in terms of equal employment opportunity and the hopes have been so pinned directly upon this way of resolving the difficulty that I do not think, unless we have very good reason—and I will deal with that in a moment—we should refuse to have a meaningful provision in this law insofar as the minorities are concerned.

I was very interested in listening to the Senator from Colorado. He is away from the Chamber, but will be back in a moment. I will repeat it and he can reply to it if he cares to do so. It was very interesting to me to hear the Senator from Colorado say, "We, of course, know that discrimination in employment is still going on." Of course, we all know that. We all know it is going on.

It is very interesting that he emphasized the argument that employers would be impressed with the fact that they could be brought into court.

I can assure the Senator of one thing. Employees will not be impressed. They are the ones we are seeking to impress. In the state of tension in which this country exists today, employees will be totally unimpressed, because the employees know that the high-priced lawyers for the corporations with the most money can string a case out for 10 years. There are antitrust cases in the Federal district court today which have been there for 10 years or more.

In addition, Mr. President, the Senator from New Jersey spoke very properly about Chief Justice Burger's concern with the crowded court dockets. What compounds that objection to this amendment is that the very dockets which are the most crowded are in the very districts in which this type litigation will take place: New York, Chicago, Philadelphia, Boston, San Francisco, and Los Angeles. Those are the areas where a trial cannot be had for 4 or 5 years.

It astounds me to hear a Senator rise and say that faster action can be had in Federal district courts when the whole country has been concerned for some time about overcrowding.

So I believe we have here the very heart of the controversy. What is there to be afraid of in a cease and desist order? The Senator said that in courts speedy redress can be had with due process.

Is the EEOC going to be without due process? If it is, it is going to be thrown out of court very quickly. With about 50 hearing examiners specializing in these matters, does it not lend itself to reason that the trial will come sooner and that the trier of the facts will have a far more specialized view and be able to hold much shorter hearings than U.S. District Court with the many other cases they have to deal with in the various parts of the country?

This kind of case, which depends so heavily on intent and purpose can be strung out in a very lengthy way by anyone with a real desire to do so; and it is logical to expect employers will do their utmost to run the thing in the best way to suit them.

The argument was made also that it will take 18 months to 2 years to set up a hearing examiners' panel. In the meantime, the law is as it is and the procedure goes on just the same, so the position of the employer and the employee is not worsened by the length of time it takes to set it up. But when it is set up there is redeemed the promise of the law in a far more promising way, to end discrimination on the grounds of religion, race, or sex, as far as employees seeking employment are concerned.

I hope Members will give this matter the degree of serious consideration it deserves because it has a very profound sociological impact, bearing very directly upon the condition of the country and one of the major causes for unrest and tension. To dash the hopes of the millions of the minorities by denying this kind of remedy we give in many other cases, through many other commissions, would not only be cruel but extremely unwise in a governmental sense, and it would have a cumulative and a very deleterious effect in heightening rather than lessening the tension within the country, so far as race is concerned. Everyone recognizes this is one of the most critical aspects of our situation.

We have always heard about cease and desist orders. We heard about them in 1964 and in New York we heard about them in 1945 when we first passed the Ives-Quinn law, which was the first of all the State laws against discrimination in employment. We always heard fears the law would be used as a weapon to harass business; that business would be put to an enormous expense in keeping records and answering cases; that harassment would be especially bad because it is so difficult to refute such a charge, and the most considered judgments were made by high-class lawyers, top businessmen, and academicians, to that effect.

Not dismayed, the New York State Legislature 25 years ago passed the Ives-Quinn law. I had the honor as Attorney General of New York during the period 1954 to 1957 to enforce that law. All of those fears were absolutely baseless. It was demonstrated that business was not harassed, that complaints were not all that numerous, that hearings were fair, and if not, they were turned over by the courts speedily and the situation worked out. A quarter of a century has passed and New York, up until a short time ago largest in population, is still a key State in terms of industry, finance, and power. Now, we have that experience proliferated throughout the country. Over 30 States out of the 50 States have provision for cease and desist orders to redress discrimination in employment.

It seems to me, in the face of that experience, there is every reason to honor the promise of the Civil Rights Act of 1964, and title VII of it, which for so long remained a weak and emasculated instrument and resulted in making very little use of this Commission. If we want to give it backbone and vertebrate, and moral and responsibility in doing the job, you have to give it this cease and desist power.

Mr. President, I would like to close as I began. I am glad the Senator from Colorado (Mr. DOMINICK) has returned. This is the key amendment. Without this provision in the bill we do not redeem any part of the promise for millions of minorities who are employed or seeking employment in this country, and the bill, as far as they are concerned, will be written off completely. There is no reason why in practice we should deny this opportunity to all these millions of workers, especially as this is sealed and certified by the fact that among the blacks there is double the average unemployment that there is among whites, and when you get to black teenagers, it is four and five times greater.

I hope the Senate in an act of statesmanship will recognize the key point about this bill as far as the people most affected are concerned, and reject the amendment.

Mr. DOMINICK. Mr. President, I understand the Senator's deep commitment to the bill as written and I certainly fully share with him the desire to be able to eliminate discrimination as rapidly as we can. That is not the subject before us today. The question is the methodology

involved, a word the Senator from New York uses quite regularly himself.

Because I think it is extremely pertinent to this discussion we are having, I wish to read into the RECORD the testimony of Mr. Brown who is the Chairman of the Equal Opportunity Commission. On page 41, in the middle of the page, Mr. Brown points out that although he supports the cease and desist principle as one method of enforcement procedure before the commission, he preferred the Federal court approach. This is what he said:

An alternative has been proposed by the President, however, which I now regard as preferable since it embodies a mechanism more conducive to enforcing the law rather than merely administering it. The cease-and-desist approach would inhibit such an attitude, for it carries with it a presumption of quasi-judicial neutrality toward the problem title VII seeks to correct. An active enforcement stance, which I think absolutely necessary, would thus be at odds with the Commission's own machinery.

The administration proposal, if enacted into law—

And that is what I am proposing—

would allow the Commission to go into court should conciliation fail, and seek redress of unlawful employment practices through the familiar process of litigation. The conceptual problems that I have indicated would result from the cease-and-desist approach would be avoided, while the best features of the independent agency concept would be saved.

In addition—and I think this is determinative—the administration's proposed enforcement system could be easily accommodated within the Commission's existing structure, while cease-and-desist machinery would require at least 2 years of tooling up before the first administrative hearings could be held. We would be able to enforce title VII in the courts with the comparatively less difficult adjustment of adding 50 lawyers to our General Counsel's staff during the first year, with an additional 25 during the second year.

Then, over on page 45, he had a colloquy with the Senator from New Jersey which I think is of particularly great significance. First of all, the Senator from Vermont (Mr. PROUTY) asked him what time would be involved in putting together a cease-and-desist procedure:

Mr. BROWN. I would estimate the time to put cease and desist in full order and get the first court-enforced order would be 5 or 6 years—

Not months; years—

Senator PROUTY. And under the administration's proposals?

Mr. BROWN. It would be a matter of a week. We have some lawyers on hand and we have the mechanism in the agency all ready for handling this type of proposal.

Senator PROUTY. Thank you.

Senator WILLIAMS. As I received your projection of the time it would take with cease and desist, which is the legal enforcement provision, did you say it would take 6 years to get a case—

Mr. BROWN. From the time it was originally started until the time the first order was enforced by the court, it would take between 5 and 6 years. That is my first estimate.

Senator WILLIAMS. Would you run through that again and how it would work? Why would it take that long? We are going now from the date of enactment.

Mr. BROWN. That is correct.

Senator WILLIAMS. Why would it take 5 or 6 years?

Mr. BROWN. The first step would be the actual tooling up of the agency to handle cease and desist authority. We are not presently geared for that kind of authority.

Senator WILLIAMS. You are not starting with the filing of a charge?

Mr. BROWN. No, we are not.

Senator WILLIAMS. You are starting with the period of tooling up.

Mr. BROWN. That is correct.

Senator WILLIAMS. What goes into the tooling?

Mr. BROWN. Under the National Labor Relations Board, they have about 130 hearing examiners, so it would mean we would have to get on board probably 50, 60, or 70 of these persons anyhow in order to cover the entire country.

And, incidentally, that has been raised to 100 now.

These people are hard to come by. We would have to go out and actually recruit them very actively.

Senator WILLIAMS. That would be harder than getting the lawyers that the President has promised you?

Mr. BROWN. I think it would be infinitely harder than just getting the lawyers we would need.

Second, of course, is the obtaining of physical facilities, because you would have to have hearing rooms available to you and these would be needed throughout the country.

In addition to that, the necessity of restructuring our own organization; namely, to pass new regulations which would be able to handle the cease and desist regulations which we presently do not have, of course. That is the initial period of time.

Senator WILLIAMS. That is the initial period for tooling up.

What does the Commission have now in terms of professional personnel to deal with complaints?

Mr. BROWN. Basically, our conciliators and investigators as well as our general counsel staff. Then, of course, the Commissioners themselves make the determination of reasonable cause.

I might also point out to the chairman that, under the present setup as it exists under the National Labor Relations Board, there are 23 lawyers on each Commissioner's staff. We have presently under our setup only one administrative assistant for each Commissioner.

So, of course, in addition to the hearing officers, even under the cease-and-desist proposal, we would find it necessary to obtain probably some 100 additional lawyers as well.

Senator WILLIAMS. That is the first stage, phase 1 of tooling up if it were to be cease and desist. What would be the first phase of tooling up in the event that the alternate approach were used?

Mr. BROWN. As a practical matter, there would be no first phase because we presently have within the Commission attorneys in the General Counsel's staff which could start filing suits immediately. We, of course, would be recruiting lawyers in addition to those lawyers we have.

We would be selective in the cases we would file suit on but, if the proper case came about, this could be done within a matter of weeks.

Senator WILLIAMS. This would be the instant-action approach?

Mr. BROWN. It would just about amount to that.

Senator WILLIAMS. How long will it take you to accomplish your suggestion and the present objective? How many new lawyers?

Mr. BROWN. Approximately 50 in the first year.

The point I am making in reading this testimony is that the Senator from New York, the Senator from New Jersey, and I are interested in being able to take whatever steps are reasonable and practical in order to be able to do something in connection with discrimination which still prevails in our country. As we all know, the discrimination cases that are being filed because of discrimination on account of sex have been vastly increasing over the last 2 years, and will undoubtedly increase even more if the constitutional amendment being proposed is adopted. For the life of me, I do not see how we are improving our ability to alleviate discrimination in this country by establishing a system which will take, in the words of the Commission Chairman who will be given this power, 5 or 6 years to set it up. Why not proceed with the same system that is already established, that is already staffed, and that is ready to proceed immediately, so the Commission can take these cases into court, where the procedures are known to everybody throughout this country, and where we will have the ability, by so doing, to get almost instantaneously a procedure through the established processes, if it seems to be that kind of case? For the life of me, I cannot understand why we should go the other way.

I point out that the Commission has said—and I do not think it has been refuted by anyone—that it is 18 to 24 months behind now, simply in the investigative process, and it is going to take 5 or 6 years before the first court-enforced order of the Commission can be put into effect, in the event the cease and desist provisions remain in the bill. We will eliminate the latter gap even though we are adding 16½ million, as the bill is now written, to the jurisdiction of the Equal Employment Opportunity Commission.

It just makes commonsense to me to say that we should go by the court approval route so we will be able not only to avoid the delay, but avoid the approach of the so-called star chamber. This Commission would have many of those aspects, inasmuch as it would be the investigator, the prosecutor, the trial examiner, and the judicial reviewer, all before one ever got before a court. It is extremely difficult for any executive agency to handle all these separate functions and still be fair and impartial to all the people concerned.

Mr. JAVITS. Mr. President, just to complete this discussion, I have no challenge to the Senator's personal dispositions in civil rights matters, but I think quite unwittingly he is completely overlooking the fact that the real significance of this bill, to millions of minorities, is this very cease and desist power. And I must say that, speaking of Americans of ordinary commonsense, it certainly stretches my imagination, and I think it will stretch the imaginations of the majority of Americans, that it is claimed that a court trial, and all the appeals, with what each and every American knows about that today, is going to be faster than a specialized proceeding before an agency.

Furthermore, Mr. President, everything that is said about the recourse to the courts is going to go on until the

agency is set up for the purpose of issuing cease and desist orders.

The Senator referred to the testimony. I should like to refer to the testimony of Clifford Alexander, who is a member of the Commission and was its Chairman. His view is exactly contrary to that of Chairman Brown. I had the feeling that Chairman Brown was rather overimpressed by the fact that he had to sustain the administration's position. I think he stretched things very considerably in seeking to sustain that position.

Here is what Alexander said, beginning on page 63, at the bottom of the page:

> By Chairman Brown's own testimony, only selected cases could be taken under Senator Prouty's bill which is readily apparent. If we did what the Justice Department now does perhaps one in 10,000 would have the support of the Equal Employment Opportunity Commission.
>
> If with 50 lawyers they brought cases on a selective basis at best only one in 100 could receive help. Under cease and desist individual cases will proceed far more rapidly than through the courts.
>
> I would like to disagree vehemently with the idea that tooling would take 2 years. I think it would take just 2 or 3 months to get started. Hiring some of the proper staff should take no longer than a few months. Also you don't have to wait for an employment discrimination to go through the entire pipeline before starting a hearing.

So his estimate is months, and Chairman Brown's estimate is years. And I would like to point out that even Chairman Brown admitted they would have to take selected cases, if they take them into court. He conceded that in his own testimony.

So, Mr. President, I conclude as follows: Because of the meaningfulness of this legislation, because of the fact that it strains credulity at this time to contend that you are going to get action through court litigation faster than you will through agency procedures, and because of the contradictory testimony of the former Chairman as compared with the present Chairman of the EEOC, I hope that the Senate will reject the amendment.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. COOPER. I have heard the exchange between the Senator from New York (Mr. JAVITS) and the Senator from Colorado (Mr. DOMINICK), and I would like to ask a few questions, if I may.

Is it correct to say, that under present law, section 706, only the aggrieved may enter a court, or the Attorney General, when there is a pattern or practice of discrimination?

Mr. JAVITS. A pattern or practice action, that is exactly correct.

Mr. COOPER. Under the bill as reported by the committee, the aggrieved can go into court. Is that right separate from his right to appeal from the Commission's findings, or is it only a right of appeal upon the Commission's findings?

Mr. JAVITS. It is separate if the Commission does not actually institute a proceeding, but if the Commission does institute a proceeding, then he has to proceed by the Commission route. That would be the same with Senator DOMINICK's amendment, because once they sue, they preempt his right to sue.

Mr. COOPER. Under the existing law, the Commission is required to attempt to settle issues by conference, conciliation, and persuasion. Is that duty still incumbent upon the Commission under this measure?

Mr. JAVITS. Yes; it continues exactly as before, except that it has the added powers.

Mr. COOPER. Before a proceeding is commenced, which might result in a cease and desist order, would the Commission be required manditorily to undertake means of conciliation and persuasion?

Mr. JAVITS. As I read the bill, it is mandated to do so.

Mr. COOPER. I think my question is important, because I think it would be fair to the parties and the best policy of our Government that an effort be made to settle the issues by conciliation and agreement, rather than undertake immediately the cease and desist procedure.

Mr. JAVITS. I thoroughly agree with the Senator from Kentucky; and that is the uniform practice of all the State agencies with power to issue cease and desist orders.

Mr. COOPER. But does the language of the committee bill merely permit the practice, or is there language which states that the Commission shall undertake conciliation prior to using the procedure, which may result in cease and desist orders?

Mr. JAVITS. It is absolutely mandated. I refer the Senator to section 706 (f) as the law will be if the bill is passed, which is found at page 43 of the committee report. It says:

> If the Commission determines after attempting to secure voluntary compliance under subsection (b) that it is unable to secure from the respondent a conciliation agreement acceptable to the Commission—

And so on. So it is mandated.

Mr. COOPER. In the case of a violation, am I correct that the remedy is civil only with the possible recovery of wages, or is a criminal proceeding provided as well as civil?

Mr. JAVITS. No, no. It is a cease-and-desist order, to refrain from the discriminatory practice, and the only thing it can order is affirmative action to remedy the violation. That would include, where appropriate, payment of back wages like the minimum wage law and the NLRB.

Mr. COOPER. Can the Senator provide me some examples of precedents of cease-and-desist proceeding, now embodied in the law?

Mr. JAVITS. Well, the National Labor Relations Board, the Federal Trade Commission, the SEC, are examples of agencies which may issue such orders. This is pretty general practice, and, as I say, more than 30 of the States have cease-and-desist machinery provided for commissions or boards, or individual attorneys general in similar circumstances.

Mr. COOPER. I thank the Senator.

Mr. JAVITS. I thank my colleague.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado. On this question, the yeas and nays have been ordered.

Mr. DOMINICK. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislation clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I know that arguments have been made in response to the amendment of the distinguished Senator from Colorado. I rise also to oppose the amendment.

I recall that in 1964, when the Civil Rights Act of 1964 first incorporated this legislation to provide for the EEOC, I spoke on the floor of the Senate about my very firm belief in and support of this program. Unfortunately, the great hope and expectations we felt then have not been realized.

Time and time again many people around this country comment that if only the minorities in this country had initiative, if only they had energy, all they have to do is go out and get a job and work their way up and make something of themselves.

But the sad fact is that it is much more difficult for a black person, or a Mexican American, or an American Indian, or a woman or others in the minority to do that. The case is extremely convincing and compelling that racial discrimination does exist in this country to an extraordinary degree, and racial discrimination exists in the area of employment to a very heavy degree. I think the steps and procedures which have been incorporated into this legislation are the most effective remedy in trying to really meet the brunt of the burden of discrimination which exists within our country. Virtually all major civil rights organizations feel that the power to issue cease-and-desist orders will be more effective than the court enforcement mechanisms. I agree.

So I feel that it is extremely important that the amendment of the distinguished Senator from Colorado is rejected.

Also, Mr. President, I think that if we are really serious about combatting discrimination against women in private employment, the cease-and-desist power provides a stronger tool to meet that problem. As one who has very serious reservations about the constitutional amendment for equal rights for women, I have stated time and time again in my own State of Massachusetts, when asked about this question, that I believe that by providing the cease-and-desist power we can assure much fairer and more equitable treatment for women's rights in private employment, rather than going through the very lengthy procedure in the courts.

So I think there is an additional reason, other than protection for the various minorities in this country. And that is to provide protection for the women in our society who are being dis-

criminated against, solely on the basis of sex, with respect to equality in job opportunity.

I know that my distinguished colleague has reviewed in some detail the handicap that would result in terms of time and delay if we were to go by the route of the courts, that we would have different kinds of decisions, perhaps, in different parts of our country. I know that during the course of the argument the point has been made that some 34 of 38 States with equal opportunity laws presently provide the cease-and-desist power. I know that the point has been made, which I believe in strongly, that what we really need is a unified approach to cases involving individual employees.

I feel that cease-and-desist power is the best way. The bill as it stands at present is a significant step forward. I would certainly hope that the amendment of the distinguished Senator from Colorado would be rejected.

Mr. COOPER. Mr. President, I have listened to the debate, and my mind has changed because of the debate.

I recall in past years, in connection with the Civil Rights Act and other acts, but particularly the Civil Rights Act, an evolving process in the Congress regarding the procedures by which an aggrieved person could secure relief. I recall that the first Civil Rights Act provided that only the aggrieved person could seek relief in the courts. Later Civil Rights Acts provided the Attorney General with authority to intervene on behalf of an individual. Authority was also provided to the Attorney General to sue in cases involving a pattern of discrimination.

I must say that I believe the cease-and-desist procedure provides a fair and speedier means of reaching a decision than the single court procedure.

I note that the bill provides for review of Commission findings by the circuit court of appeals and the Supreme Court. This due process provision is essential, and makes the bill appeal more strongly to me.

Just recently, concerning the Air Pollution Act, one of the serious issues in the debate, both in the committee and on the floor, was whether the bill should provide review by the circuit courts and the Supreme Court. The Senate decided for such review.

I am glad that appeal to the courts is provided in the pending bill.

I should like to speak briefly at this time with respect to a point that I have addressed to the Senator from New York (Mr. JAVITS).

I was a Member of the Senate for 2 years, in 1947 and 1948, when the Taft-Hartley Act was passed, and it was as fiercely battled and debated as any measure I can recall during my service in the Senate. I recall that Senator Taft insisted that the counsel of the National Labor Relations Board should be separate and independent of the board. He made a strong case that the accuser should not be one who would sit upon the case.

I would assume that in many decisions that will be made by this Commission, its counsel would advise the Commission as to whether or not an order should be issued. I ask the sponsors of the bill whether they have considered writing into the bill a provision that counsel for the Commission shall be independent of the Commission itself.

Mr. JAVITS. Let me say to the Senator from Kentucky that I am rather hopeful the Senate may reject this amendment, and if it does, and the commission has the powers which I feel it needs to have, I understand that an amendment will be offered with respect to the independent counsel and I would be favorable to it. I wish to give the Senator that assurance because I think, then, the case for it becomes an active one. As we stand now, we do not know yet what the Senate will decide with respect to the cease and desist powers.

Mr. COOPER. Can the Senator give me assurance, that if the pending amendment should be agreed to, that such an amendment will be offered—of course the sponsors of the bill can do so—to provide for independent counsel?

Mr. JAVITS. I can give the Senator that assurance, speaking for myself.

Mr. WILLIAMS of New Jersey. Let me say to the Senator I am sure it will be offered and it will be acceptable to us.

Mr. ERVIN. Mr. President, if I may be recognized for 1 minute on the point the Senator from Kentucky was making: the bill in its present form would permit the rankest kind of prostitution of the judicial process. Under the provisions of the bill, the Commission even has the power to file complaints in the first instance but, in any event, it says it shall investigate complaints so that it is an investigator, a prosecutor, a jury, and a judge. Mr. President, no bill should permit the uniting of these functions in one body. Under the decision in re *Murchison*, 349 U.S. 133, it is a clear violation of the due process clause of the Constitution of the United States to do so.

I just wanted to make that statement for the benefit of the distinguished Senator from Kentucky, that here is a bill which authorizes, as I say, the rankest prostitution of the judicial process of any piece of proposed legislation that has come within my view.

Mr. DOMINICK. Mr. President, let me reply briefly to some of the discussion I heard by the Senator from Massachusetts (Mr. KENNEDY). He apparently is under the impression that if my amendment is agreed to, there would be a downgrading of the Commission or of equal rights.

Nothing could be further from the truth. If he read the amendment—I am not even sure that he has—he would see that what I am providing for is the ability of the Commission to go directly into court, that it does not have to go through the trial examiner process or review by the Commission. It can decide whether reasonable cause exists in a case and take it directly to court if reasonable cause is present. This will be quicker, more effective, and cheaper. Certainly this has the wholehearted support of the Chairman of the Equal Employment Opportunity Commission himself and the administration as a whole.

Mr. President, I am ready to vote.

Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, the amendments will be considered en bloc.

The question is on agreeing en bloc to the amendments of the Senator from Colorado.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GURNEY (when his name was called). On this vote I have a pair with the Senator from Connecticut (Mr. RIBICOFF). If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

Mr. BIBLE (when his name was called). On this vote I have a pair with the Senator from Utah (Mr. Moss). If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

The rollcall was concluded.

Mr. KENNEDY. I announce that the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Wyoming (Mr. MCGEE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. Moss), the Senator from Maine (Mr. MUSKIE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Mississippi (Mr. STENNIS), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I also announce that the Senator from Alaska (Mr. GRAVEL), the Senator from North Carolina (Mr. JORDAN), the Senator from Alabama (Mr. SPARKMAN), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Ohio (Mr. YOUNG) are absent on official business.

On this vote, the Senator from Georgia (Mr. RUSSELL) is paired with the Senator from Washington (Mr. MAGNUSON). If present and voting, the Senator from Georgia would vote "yea" and the Senator from Washington would vote "nay."

I further announce that, if present and voting, the Senator from Oklahoma (Mr. HARRIS) and the Senator from Maine (Mr. MUSKIE) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Utah (Mr. BENNETT), the Senator from Arizona (Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Nebraska (Mr. HRUSKA), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Oklahoma (Mr. BELLMON) is absent on official business.

The Senator from South Dakota (Mr. MUNDT), is absent because of illness.

If present and voting, the Senator from Utah (Mr. BENNETT), the Senator from South Dakota (Mr. MUNDT), the

Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "yea."

On this vote, the Senator from California (Mr. MURPHY) is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from California would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 27, nays 41, as follows:

[No. 341 Leg.]

So Mr. DOMINICK's amendments (No. 978) were rejected.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendments were rejected.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

## LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, I rise to ask the distinguished majority leader to advise us of the schedule for the rest of the year, or at least as much of it as he can tell us.

Mr. MANSFIELD. Up to and including October 16, the schedule is as follows—and a certain degree of flexibility must be allowed.

Although the pending business in the Senate is still Senate Joint Resolution 1, the leadership hopes that negotiations will proceed on the merits of this proposal—that is, Senate Joint Resolution 1—and while these matters are being worked out, we hope to proceed with the following measures on the days indicated.

Again, the joint leadership must ask for flexibility.

Mr. SCOTT. And durability.

Mr. MANSFIELD. We have that already.

It is hoped that appropriation bills can be expedited, those in our Senate committee, as well as those yet to be received from the House. These bills will be given expedited action on the floor.

Today, EEOC amendments, hopefully we might arrive at some consent agreement with respect to debate later today. Tomorrow, the reorganization plan disapproval resolution, Senate Resolution 433; and the military procurement authorization conference report. That is the big military bill.

Friday, hopefully, military construction appropriations, H.R. 17970 if the conference can be concluded at that time, it is my intention, as chairman of the Subcommittee on Military Construction to call a meeting of the subcommittee and report out that appropriation bill, but that depends upon the two Houses getting together and agreeing to a conference report. In any case on Friday we will consider the Federal Highway Extension Act that was reported to the Senate today.

Monday, October 5, legislative reorganization, H.R. 17654. Tuesday, October 6, equal rights for women, which the joint leadership and I have discussed in detail, and which we hope to offer without change and to have the vote on the basis of its own merits.

Mr. SCOTT. Which we have faithfully promised to do for the ladies.

Mr. PASTORE. Is there any possibility of taking up that matter Wednesday rather than Tuesday?

Mr. MANSFIELD. Yes; this is all flexible. We will be on the equal rights most of next week during the first shift of the Senate.

Mr. PASTORE. We want to be here for the ladies.

Mr. MANSFIELD. We have several days set aside, including Thursday.

Then on Tuesday we hope also to do the drug bill and on Wednesday the class action bill as well. On Thursday we come to four crime bills which we hope to consider: H.R. 17825, S. 2896, S. 642, and S. 3650; all on the calendar. We have the Transportation appropriation bill in there

Also, on Friday there is equal rights for women, the Labor-HEW appropriation, which I understand, like the Transportation appropriation bill, is ready for action, or will be soon.

Around Monday, October 12, there is the foreign aid appropriation bill and the occupational safety bill.

Around Tuesday, October 13, the Consumer Protection Agency and social security and welfare reform, and, if possible we will complete the above and the remaining appropriation bills, including Defense, independent offices, and the supplemental for Wednesday, Thursday, and Friday of that week. This schedule is flexible and shifts in the days may be necessary.

So we have our work cut out if we are going to adjourn by October 16, or if we have to recess at that time and come back after the election, which I think would be a disaster.

Mr. SCOTT. Mr. President, if the Senator will yield, I wish to second the remark about a "disaster" and add the word "unmitigated." I cannot conceive of anything worse than a special session. I lived through the special session of 1948 in which 2 weeks were spent doing nothing except indulging in recrimination; and I remember also the postconvention session of 1960, marred by politics of the most undesirable kind, in which I took a full and most gleeful part, to my regret. [Laughter.]

I can be reasonably sure, having set such a bad example, there are numerous others ready to follow it, although I am ready to abstain.

I think it would be a horrible thing to do and an offense against peace and good order, a sham for the Congress, and a spectacle. I hope we adjourn sine die.

Mr. MANSFIELD. I could not agree more than I do with what the distinguished minority leader said. There is the schedule. It will take a lot of work, understanding, and cooperation; and it will take all of us together to do it. But we must complete our work before adjourning sine die.

## EQUAL OPPORTUNITIES ENFORCEMENT ACT

The Senate continued with the consideration of the bill (S. 2453) to further promote equal employment opportunities for American workers.

Mr. PASTORE. In connection with the bill now pending, how many amendments do we have, and can we have an agreement on limitation of debate?

Mr. MANSFIELD. I will turn that question over to the manager of the bill, the Senator from New Jersey.

Mr. WILLIAMS of New Jersey. I know of two amendments that will be offered by the Senator from Colorado. There are other amendments at the desk by the Senator from North Carolina.

Mr. PASTORE. Can the Senator from North Carolina give us some idea with respect to his amendments?

Mr. ERVIN. No; I cannot tell how many will be called up.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. JAVITS. There will be one amendment by the Senator from Ohio.

Mr. WILLIAMS of New Jersey. That makes three amendments certain.

Mr. PASTORE. Can we have a limitation of debate on those three amendments?

Mr. MANSFIELD. Mr. President, I wish to ask the Senator from Colorado if he would be agreeable to a time limitation.

Mr. DOMINICK. I always do better without a time limitation than with one.

Mr. MANSFIELD. Would the Senator from North Carolina consider a time limitation?

Mr. ERVIN. I believe we can get along better without a time limitation.

Mr. MANSFIELD. Would the Senator from Ohio consider a time limitation?

Mr. SAXBE. Yes.

Mr. MANSFIELD. How long?

Mr. SAXBE. The minimum.

Mr. MANSFIELD. One-half hour?

Mr. SAXBE. Yes.

Mr. ERVIN. Mr. President, I would object to a 1-hour time limitation on my amendments.

Mr. MANSFIELD. We were discussing the amendment of the Senator from Ohio. Would the Senator from North Carolina consider a time limitation of 1 hour?

Mr. ERVIN. Yes; I have one amendment I will talk about.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on the amendments to be offered by the Senator from Ohio (Mr. SAXBE), and the Senator from North Carolina (Mr. ERVIN), there be a time limitation of 1 hour.

Mr. ERVIN. That leaves one-half hour to a side. I would have to object to that.

Mr. MANSFIELD. How about an hour and a half, with 30 minutes to the manager of the bill and 1 hour to the Senator from North Carolina.

Mr. ERVIN. That is all right.

Mr. MANSFIELD. An hour and a half, with 30 minutes to the manager of the bill and 1 hour to the proponent, the Senator from North Carolina.

Mr. JAVITS. And a half hour on the Saxbe amendment?

Mr. MANSFIELD. Yes.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? Without objection, it is so ordered.

The committee amendment is open to further amendment. What is the pleasure of the Senate?

AMENDMENTS NO. 977

Mr. DOMINICK. Mr. President, I call up my amendments No. 977 and ask that they be read.

The PRESIDING OFFICER. The amendments will be read.

The legislative clerk proceeded to read the amendments (No. 977).

Mr. DOMINICK. Mr. President, I ask unanimous consent that further reading of the amendments be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments (No. 977) are as follows:

AMENDMENTS No. 977

On page 28, lines 6 through 8, strike the following: "or by an officer or employee of the Commission upon the request of any person claiming to be aggrieved."

On page 29, line 16, strike out "or (d)".

On page 30, beginning with line 16, strike out all through page 31, line 5.

On page 31, line 6, strike out "(e)" insert in lieu thereof "(d)".

On page 31, line 23, strike out "(f)" and insert in lieu thereof "(e)".

On page 32, line 9, strike out "(g)(1)" and insert in lieu thereof "(f)(1)".

On page 33, line 13, strike out "(h)" and insert in lieu thereof "(g)".

On page 33, line 25, strike out "(x)" and insert in lieu thereof "(v)".

On page 34, line 13, strike out "(i)" and insert in lieu thereof "(h)"; beginning in line 21 strike out "(l)" through "(n)" and insert in lieu thereof "(k)" through "(m)"; line 25, strike out "(j)" and insert in lieu thereof "(i)".

On page 35, line 1, strike out "(h)" or "(i)" and insert in lieu thereof "(g)" or "(h)"; line 4, strike out "(k)" and insert in lieu thereof "(j)".

On page 37, line 9, strike out "(l)" and insert in lieu thereof "(k)".

On page 39, line 9, strike out "(m)" and insert in lieu thereof "(l)"; line 10, strike out "(k)" and insert in lieu thereof "(j)"; line 14, strike out "(l)" and insert in lieu thereof "(k)"; line 20, strike out "(n)" and insert in lieu thereof "(m)"; line 22, strike out "(k)" and insert in lieu thereof "(j)"; line 23, strike out "(l)" and insert in lieu thereof "(k)".

On page 40, line 4, strike out "(m)" and insert in lieu thereof "(l)"; line 6, strike out "(o)" and insert in lieu thereof "(n)"; line 11, strike out "(p)" and insert in lieu thereof "(o)"; line 19, strike out "(k), (l), (m), or (n)" and insert in lieu thereof "(j), (k), (l), or (m)".

On page 41, line 13, strike out "(q)(1)" and insert in lieu thereof "(p)(1)"; line 17, strike out "or (d)"; line 18, strike out "(f) or (i)" and insert in lieu thereof "(e) or (h)".

On page 42, beginning in line 12, strike the following: "(f), or has entered into an agreement under subsection (f) or (i)" and insert in lieu thereof "(e), or has entered into an agreement under subsection (e) or (h)"; line 16, strike out "(i)" and insert in lieu thereof "(h)"; line 17, strike out "(h)" and insert in lieu thereof "(g)"; line 22, strike out "(h)" and insert in lieu thereof "(g)"; line 23, strike out "(i)" and insert in lieu thereof "(h)".

On page 43, line 1, strike out "(i)" and insert in lieu thereof "(h)"; line 11, strike out "(h)" and insert in lieu thereof "(g)"; line 22, strike out "(r)" through "(w)" and insert in lieu thereof "(q)" through "(v)"; line 23, strike out "(u) and (v)" and insert in lieu thereof "(t) and (u)".

On page 44, line 1, strike out "(q)" and insert in lieu thereof "(p)"; line 2, strike out "(u)" and insert in lieu thereof "(t)"; line 3, strike out "(w)" and insert in lieu thereof "(v)".

Mr. DOMINICK. Mr. President, my amendment is a very simple one. It is my hope that the manager of the bill will accept it. I do not know whether I have his attention, or where he is.

Mr. JAVITS. The Senator has my attention.

Mr. DOMINICK. I have the attention of the Senator from New York.

The PRESIDING OFFICER. Is it the desire of the Senator from Colorado that his amendments be considered en bloc?

Mr. DOMINICK. Yes; there is only one portion of it that is an amendment; the rest are technical amendments.

The PRESIDING OFFICER. Is there objection to considering the amendments en bloc? Without objection, it is so ordered.

Mr. DOMINICK. Mr. President, I shall be very brief. The amendment is very simple. The bill as it is now written gives both charging, investigating, prosecuting, judging, and enforcement procedures to the Commission. When we were considering this matter in the committee, some of us felt that a member or an employee of the Commission should not be entitled to file charges, since, after all, he might later be called on to both investigate and prosecute the charge, and then to decide it.

The bill now reads that any officer or employee of the Commission can now file a charge upon the request of any person claiming to be aggrieved. I do not know how many employees are going to be in the Equal Employment Opportunity Commission when it is finally established, but it seems safe to say that there will be a considerable number. I do not know who they are going to be, nor does anybody else.

I do not, for the life of me, see the rationale in saying that one agency or any one staff person can be the filer of a charge and then the investigator and then the prosecutor of the charge and then the decider of the charge and then the reviewer of the charge and then the enforcer of the charge. That is what the bill does now. What I am providing by my amendment is that an officer or employee of the Commission shall not be one of those who shall file charges.

Mr. WILLIAMS of New Jersey. Mr. President, I oppose the amendment offered by the Senator from Colorado. We know that there can be a fear of reprisal that would prompt someone not to make a complaint that would lead to the filing of a charge. In those cases where someone did not have the bravery, or indeed other resources, to fight the establishment, it would seem the opportunity should be there within the Commission to file a charge in a situation where it is felt that a charge should be made notwithstanding the fact that the complaint is not coming from the aggrieved person.

Unlawful employment practices do not always take place in an atmosphere free of repressive influences. In many instances, job discrimination is but a symptom of a paternalistic attitude toward minorities and women that depends on a subtle climate of fear for its survival.

Under such circumstances persons who are victims of unlawful practices are generally very reluctant to make a complaint against those who are in immediate control of their lives, and it would be rather naive of us to expect them to do otherwise. The use of privately imposed sanctions against those who question the established order is far from unknown to this country, and the uncertainty and procedural delays that inevitably accompany any kind of formal legal relief are not an encouraging prospect for even the most intrepid individual.

Title VII relief should not be made to depend on either the financial resources or unusual bravery of any person denied its protection. The agency charge is addressed to the latter problem, and to suggest that it poses a threat to the rights of respondents is to conjure up nonexistent dangers.

First, an agency charge is merely a device for setting the Commission's investigations and conciliations machinery in motion, and does not carry with it any legal conclusions. It is only an indication that a violation may exist and ought to be looked into. It precedes any determination as to whether reasonable cause to believe that a violation has occurred, which is prerequisite to the triggering of any enforcement machinery.

Second, by placing the authority to file a charge in the hands of appropriate Commission staff rather than with the members themselves, even the most remote appearance of impropriety is totally avoided. The case would proceed in the same fashion as any other grievance, with the same protections afforded to respondents at each stage of the proceedings. If the case reached the stage where an order could be issued, the order would still have to be based on the record after

strict observance of all the procedural requirements, and then would still be subject to review of a court of appeals. In this light it is extremely difficult to see how the rights of any party could be compromised by the existence of agency authority to merely initiate its own processes; and indeed, to deny the agency such authority would, with the exception of the NLRB, make it a rather unusual administrative body.

Mr. DOMINICK. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. There is not a sufficient second.

The yeas and nays were not ordered.

Mr. MANSFIELD. Mr. President, I request the yeas and nays now.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. JAVITS. Mr. President, the matter now being dealt with by the Senator from Colorado represents a compromise which was worked out in the committee, and as I suggested the compromise, I think the Senate should understand that it was a compromise. The fact is that the law today, as it stands now, section 706 of the Civil Rights Act of 1964, permits a member of the Commission, when he himself, on his own recognizance, believes a charge should be filed, to file one.

This procedure was objected to in our committee in an amendment by one of our members. So, as we were faced with the argument which is made by the Senator from New Jersey (Mr. WILLIAMS), manager of the bill, that this is the kind of field where there could be intimidation, and where an aggrieved person might not wish to complain, himself, simply because of economic fear of losing his job, which could not be traced to anyone's fault by law, this way was arrived at in which the person aggrieved could make the request.

I think the matter should be made clear for the legislative history. I ask the attention of the Senator from New Jersey, to see if he agrees with me. I think this perhaps will go a considerable way toward meeting the view of the Senator from Colorado. The request of a person in whose behalf the complaint is going to be made is the one we are talking about. It is not just any person aggrieved who can ask the Commission to go ahead, but if the Commission is going to allege that the act has been violated as to John Doe, the person that has to ask the Commission or officer or employee should be John Doe himself. That is my understanding of my own compromise. I wanted to be positive the Senator had the same feeling.

The other point which I think again would go a long way toward meeting the point made by the Senator from Colorado is that the officer or employee of the Commission shall be either a member of the Commission or a person whom the Commission has designated for that purpose, so that we will not have any kind of happenstance in the making of the charge.

Again, this is my understanding of the responsibility which is inherent in this compromise. But I wonder whether the Senator would agree with me as to the meaning of the compromise in those two respects.

Mr. WILLIAMS of New Jersey. Referring to——

Mr. JAVITS. Referring first to the fact that the request should be of the person for whose benefit the charge will be made; that is, if it is a charge made because of the wrong done to John Doe, that the officer or employee of the Commission who makes the charge should have been requested to do so by John Doe.

Mr. WILLIAMS of New Jersey. That is my understanding, and I think it reads precisely that way.

Mr. JAVITS. Good. The other thing is our understanding—or at least I know we discussed it in the committee—that the officer or employee of the Commission who is entitled to make such a complaint should be a person designated by the Commission for that purpose, so that we do not have to deal with—as Senator DOMINICK, I think properly suggested—hundreds of employees, on a happenstance basis.

Whatever we do on the amendment, however the Senator may feel about it, I think he is entitled to have those assurances locked into the situation, so that it is not an irresponsible proceeding at all.

As to the principle involved, the Senator is entitled to his own view, but I think he is entitled to those two assurances with respect to the meaning of this clause.

Mr. DOMINICK. Mr. President, I thank the Senator from New York for trying to interpret a bill in a way which would be helpful, but which certainly does not read that way.

The bill, if Senators will read the language, says, and it is very clear:

> (b) Whenever a charge is filed by or on behalf of a person claiming to be aggrieved, or by an officer or employee of the Commission upon the request of any person claiming to be aggrieved.

This could be a wife, a child, a cousin, a friend, a passing acquaintance, someone who did not like an employer—it could be absolutely anyone; and if they know of one of these officers or employees of the Commission, and make that claim, then an officer or employee could—he does not have to, but he could—file the charge.

The point I am making is that we are adding 16.5 million people to the jurisdiction of this Commission. When we say that any employee or officer can go ahead and file a charge upon the request of anyone else who feels aggrieved, I feel aggrieved over the action of the Senate a lot of times, but that does not mean I am going to bring charges against the Senate.

Mr. JAVITS. Why not?

Mr. DOMINICK. But what I am saying is that this language does not back up the interpretation that has been given to it by the distinguished Senator from New York, in my opinion.

So, in view of those facts, I think we are back to the position that I took. I am sure that no one is going to pay the slightest attention to it, but I am ready to vote.

The PRESIDING OFFICER (Mr. COOK). The question is on agreeing to the amendment (No. 977) of the Senator from Colorado (Mr. DOMINICK). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Senator from Maine (Mr. MUSKIE), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Georgia (Mr. RUSSELL), the Senator from Mississippi (Mr. STENNIS), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I also announce that the Senator from Alaska (Mr. GRAVEL), the Senator from North Carolina (Mr. JORDAN), the Senator from Alabama (Mr. SPARKMAN), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Ohio (Mr. YOUNG) are absent on official business.

On this vote, the Senator from Georgia (Mr. RUSSELL) is paired with the Senator from Washington (Mr. MAGNUSON). If present and voting, the Senator from Georgia would vote "yea" and the Senator from Washington would vote "nay."

I further announce that, if present and voting, the Senator from Utah (Mr. MOSS), the Senator from Oklahoma (Mr. HARRIS), and the Senator from Maine (Mr. MUSKIE) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Vermont (Mr. AIKEN), the Senator from Utah (Mr. BENNETT), the Senator from Arizona (Mr. GOLDWATER), the Senator from New York (Mr. GOODELL), the Senator from Nebraska (Mr. HRUSKA), the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) are necessarily absent.

The Senator from Oklahoma (Mr. BELLMON) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of Illness.

If present and voting, the Senator from Utah (Mr. BENNETT), the Senator from South Dakota (Mr. MUNDT), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "yea."

On this vote, the Senator from California (Mr. MURPHY), is paired with the Senator from New York (Mr. GOODELL). If present and voting, the Senator from California would vote "yea" and the Senator from New York would vote "nay."

The result was announced—yeas 27, nays 42, as follows:

[No. 342 Leg.]

YEAS—27

So Mr. DOMINICK's amendments (No. 977) were rejected.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. WILLIAMS of New Jersey. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ALLEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Alabama is recognized.

Mr. SAXBE. Mr. President, will the Senator from Alabama yield?

Mr. ALLEN. Mr. President, for what purpose does the Senator from Ohio wish me to yield to him?

Mr. SAXBE. To offer an amendment.

Mr. ALLEN. Mr. President, I ask unanimous consent that I may yield to the distinguished Senator from Ohio (Mr. SAXBE) for the purpose of calling up an amendment, without losing my right to the floor, as I wish to address some remarks with respect to the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair would advise the Senator from Alabama that the amendment of the Senator from Ohio has a time limit on it. Does he wish to yield for that entire period of time?

Mr. ALLEN. I am willing to yield to the Senator from Ohio, provided I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SAXBE. Mr. President, I call up my amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. SAXBE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with and I shall proceed to explain it.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment reads as follows:

Redesignate Sections 4 through 11 as Sections 5 through 12 respectively.

On page 27, following line 22, add the following:

"SEC. 4(a). Subsections (b) through (j) of section 705 of the Civil Rights Act of 1964 (78 Stat. 258, 259; 42 U.S.C. 2000e-4(a)-(i)) and references thereto are redesignated as subsections (c) through (k), respectively.

(b) Section 705 of such Act is amended by inserting the following new subsection (b):

"(b) There shall be a General Counsel of the Commission who shall be appointed by the President, by and with the advice and consent of the Senate, for a term of four years. The General Counsel of the Commission shall exercise general supervision over all attorneys employed by the Commission (other than trial examiners and legal assistants to Commission members) and over the officers and employees in the regional offices. He shall have final authority, on behalf of the Commission, in respect of the investigation of charges, conference, conciliation, and persuasion endeavors, issuance of complaints, the prosecution of such complaints before the Commission, and the conduct of litigation as provided in section 706 and 707 and shall have such other duties as the Commission may prescribe or as may be provided by law. In case of a vacancy in the Office of the General Counsel, the President is authorized to designate the officer or employee who shall act as General Counsel during such vacancy, but no person so designated shall so act (1) for more than forty days when the Congress is in session unless a nomination to fill such vacancy shall have been submitted to the Senate, or (2) after the adjournment *sine die* of the session of the Senate in which such nomination was submitted."

On page 52, line 17, strike the words "investigating, conciliating."

On page 53, line 15, redesignate subsection (c) as subsection (d).

On page 53, following line 14, insert as new subsection (c) the following:

"(c) Section 5315 of such title is amended to add, as a new clause (73), the following:

"'(73) General Counsel of the Equal Employment Opportunity Commission.'

"The remaining clauses, beginning with old clause (73), are redesignated accordingly."

Mr. SAXBE. Mr. President, the amendment provides that there be a General Counsel for the Commission, to be appointed by the President and approved by the Senate.

The reason for the amendment is backed by some experience in this field as an attorney general for the State of Ohio, and also by the fact that I believe there should be divided responsibility. In other words, without this amendment we have a court providing its own prosecutor. I cannot help feeling that it is too close together to be within the spirit of justice that we demand in our other courts.

As an attorney general for the State of Ohio, I was an attorney for the Equal Rights Commission there, and I found that without the consultation of general counsel—we were there only in an advisory capacity—we could have prevented many of the legal pitfalls that we wandered into. In this particular instance, the General Counsel would be appointed for a 4-year term by the President. This will give a continuity to a valuable body of law which will be built up, which will be of great value and protect the Commission from the kind of errors that might creep in when they are appointing their own counsel.

I believe that the amendment is acceptable. I certainly feel it will complete and round out the picture we are putting together here on an operative commission.

Mr. JAVITS. Mr. President, we gave assurance to the Senator from Kentucky (Mr. COOPER) that such an amendment, if offered, would be agreeable to me. As the ranking minority member, I think it is a necessary and desirable part of the bill, especially in view of the fact that the Senate has sustained the cease and desist power authority. Therefore, so far as I am concerned, I consider that the Senator from Ohio has rendered a fine service in offering his amendment. It is acceptable.

Mr. WILLIAMS of New Jersey. Mr. President, this approach conforms to the National Labor Relations Board——

Mr. SAXBE. That is correct.

Mr. WILLIAMS of New Jersey. And to the Office of General Counsel. The approach was discussed earlier in colloquy with the Senator from Kentucky (Mr. COOPER). It is interesting that the proponent of the amendment and the Senator from New York both come from backgrounds of being attorneys general in their States. I do not have the benefit of that background or experience but it seems eminently wise to me and I would accept the amendment from my side.

Mr. SAXBE. I thank the Senator from New Jersey. Mr. President, I yield back the remainder of my time.

Mr. WILLIAMS of New Jersey. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. COOK). The question is on agreeing to the amendment of the Senator from Ohio.

The amendment was agreed to.

Mr. ALLEN. Mr. President, I rise in opposition to S. 2453.

This bill is, in truth, one of the most dangerous and most indefensible legislative proposals presented in this Chamber in the short time I have been in the Senate. We are being asked to endorse a blank legislative check to vest in an agency of the Federal Government, the Equal Employment Opportunity Commission, totalitarian authority over employment practices of free enterprise, labor unions, and State and local governments. This bill is deliberately designed to deny basic rights of the American people and to grant special privileges to a few. If enacted, the measure would, in fact, cripple, and in some instances, destroy the very institutions which brought this Nation into being and helped to make it great.

I wish to discuss briefly a few of the ways in which this bill would do violence to our American way of life.

First, the bill brings within its scope all State and local government employees. This is not only an arrogant attempt further to dilute the rights of the States, their institutions, and their sovereignty, but the conclusion is inescap-

able that the measure is aimed at destroying our dual form of government.

The proposals to substitute federally controlled employment practices for State and local personnel systems are in direct violation of the 10th amendment of the Constitution which states:

> The powers not delegated to the United States, nor prohibited to it by the States, are reserved to the States respectively, or to the people.

The proposals are also in violation of the ninth amendment to our Constitution which states:

> The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

I, of course, realize that many of the proponents of S. 2453 regard the ninth and 10th amendments to our Constitution as obsolete, or at best, treat them as mere truisms. I also realize that the rights guaranteed to the States and their people under the Constitution have been severely abused and invaded in recent years. But there is no provision in our Constitution which, by the wildest stretch of the imagination, can provide a legal cover for the extraordinary authority sought in this bill.

If enacted, this bill would permit an agency of the Federal Government and the Federal courts to enter the political field in the appointment of State and Government employees. It is true that many State and local job requirements are, in part, unrelated to the job. But it is wholly in keeping with our political traditions to give our State and local leaders, and our national leaders for that matter, the discretion to give reasonable weight to factors other than job fitness in filling jobs.

Frankly, it is difficult to imagine a more intolerable interference by the Federal Government with the rights of the States than to dictate their employment practices. The States' power over employment practices is basic and essential to the very existence of State sovereignty and, consequently, to our federal system which was devised by our forefathers and which they intended to be held forever sacrosanct by the Bill of Rights. If we deprive the States of their basic functions, it is pointless to maintain that we have a dual form of government.

The bill contains a self-starter provision vesting the Commission with the authority to initiate investigations and inquiries, either on its own motion or whenever an anonymous person or organization merely requests the filing of a charge that an unlawful employment practice has occurred.

There is no requirement of "reasonable cause" as a condition precedent to the filing of a charge; therefore, the Commission is given carte blanche authority to conduct roving inquiries into the private books and records of a company or labor union regardless of whether there is any pre-existing cause for believing there has been a violation of the law.

Under the bill, employers, labor unions and State and local governments would be subject to the issuance of cease-and-desist orders by the Commission. The broad powers sought under the measure represent a radical departure from the concept of American jurisprudence and our cherished legal system of checks and balances. The legislation seeks to make the Commission accuser, prosecutor, judge, and jury all in one.

Mr. President, if this bill should become law, it would give license for a bureaucrat, clothed with all the power of the Federal Government, to come out of Washington and to walk into a business or labor union hiring hall and to dictate to the employer or business agent whom he could employ and whom he could not employ.

There is just one other step which could in any way be worse than the step which I have just described, and that would be to have one of those bureaucrats go into a man's home—his castle—and try to tell him whom he should have around his dining room table or in his living room.

This is not government by law. It is government by the Equal Employment Opportunity Commission, for better or worse.

But this is not all. The bill could also punish first and prove the offense subsequently. It would permit a Federal judge—a single judge acting without a hearing and without any showing by the Government of irreparable injury—to issue a temporary restraining order against the respondent for an alleged unlawful employment practice. We thus see a reversal of the age-old maxim that a man is presumed to be innocent until he is proven guilty.

The temporary restraining order could be followed by a preliminary injunction. The preliminary injunction could require affirmative action on the part of the employer, such as the reinstatement of former employees and the hiring of new employees with back pay.

Under these provisions of the bill, it would be possible, Mr. President, for an American to be imprisoned if he disagreed with the order of a Federal judge, without the benefit of trial by jury.

No wonder the minority report compared the powers sought under this bill with the English Court of the Star Chamber.

The rights which the provisions of S. 2453 seek to deny cannot be dismissed as mere legal technicalities. They are rights indispensable to freedom. They are rights which distinguish a free society from tyranny.

Mr. President, S. 2453 does not create one new job. Other than the additional army of bureaucrats that would be set up, it does not create one new job in private employment. Yet, it is presented to us when unemployment has climbed in our Nation from 3.3 to 5.1 percent in less than a year and a half. At a time when we are desperately trying to fight inflation and keep our economy strong, this bill would create fear and uncertainty, friction and division in the business houses, plants, and factories of America.

Labor organizations would be subject to interference and supervision of their internal affairs. Their cherished programs of seniority and apprenticeship would be destroyed. And the law which tells the employer who his workers shall be today can be reversed and the worker told who his employer shall be tomorrow—and where and at what wages.

Mr. President, there are other sections and purposes of S. 2453 equally obnoxious as those I have just discussed. For example, the provisions relating to the appointment of attorneys, attorneys' fees, and precomplaint expenses of the aggrieved person are shocking.

The bill also seeks to change the present law by increasing the time within which a charge can be filed from 90 days from the date of the act complained of to 180 days from that date. I would like to know the basis for this change. Surely, anyone who may have been the victim of an unlawful employment practice will know of the fact within 3 months from the date of the commission of the act. The privilege of filing a charge is free of cost and the procedure is simple. Why should a complainant be allowed and encouraged to sleep on his rights.

Take a situation whereby the Commission or the Court is allowed to award back pay. In the case of an applicant for employment, a charging party might choose to wait the extra 90 days and receive a windfall. In other words, by simply waiting until the 179th day, he could receive nearly 6 months' pay without ever having worked a single day for it.

This legislation would also create a vast new bureaucracy inasmuch as the Commission does not now have the manpower, so it says, to carry out the programs called for under the legislation. I would like to have some figures presented to the Senate as to how many lawyers, hearing examiners, investigators, and supporting staff would be added to the Commission to enable it to develop and exercise the quasi-judicial functions under the bill and how much it would cost the taxpayers of this country.

Mr. President, this is a force bill, pure and simple. Its sole purpose is to gain legislative sanction to the establishment of percentages or quotas in employment on the basis of race. Some people may think that such a requirement would never be imposed on business and labor because of the patent absurdity involved. Less than a decade ago, however, the idea of a racial balance in a public school would have seemed too ridiculous to consider. Yet, today we see schoolchildren in the South and other parts of the country being lugged all over cities and towns to achieve what is considered to be a mathematically satisfactory racial mixture in public schools. The so-called Philadelphia Plan, which the Nixon administration put into effect last year is a flagrant abuse of the provisions of the Civil Rights Act of 1964. This represents the first move toward racial balance in industry and labor.

When we weigh this bill and when we look beyond and behind it and see it in its true and unmasked form, we see that it is at variance with the fundamental concept that our Government should be a government by law and not a government by men. Even a casual reading of the bill removes all question about the thirst for unlimited and unrestrained power which motivated the writing of S.

2453. I hope that the Senate is not prepared to take this drastic step toward an arbitrary and despotic government.

Mr. President, in recent years we have already seen many of our sacred rights laid on the altar of political expediency. This bill would put us well along the way to the erosion of other freedoms we now know and enjoy and on which the American system is built.

Let us return to reason. Let us turn away from the dangers inherent in S. 2453. Let us not be counted among the communicants at the altar of expediency.

Mr. President, I hope that Senate bill 2453 will be defeated by action of the Senate.

I yield the floor.

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. Mr. President, I rise to engage in colloquy with the manager of the bill, the Senator from New Jersey. I had an amendment which, as I said initially yesterday and earlier today, was one of the items brought up rather strenuously in the committee by the junior Senator from Illinois (Mr. SMITH). He is, unfortunately, unable to be here today.

Rather than bring up the amendment which, in effect, would eliminate the jurisdiction of the EEOC over local and State employees, I think it would be better if I were to simply engage in a colloquy with the manager of the bill as to its intent.

The bill, as I read it, states on page 31 that—

> In the case of any charge filed by an officer or employee of the commission alleging an unlawful employment practice occurring in a State or political subdivision of a State which has a State or local board prohibiting the practice alleged and establishing or authorizing a State or local authority to grant or seek relief from such practice or to institute criminal proceedings with respect thereto upon receiving notice thereof the commission shall, before taking any action with respect to such charge notify the appropriate State or local officials and, upon request, afford them a reasonable time, but not less than 60 days.

Except the period shall be 120 days during the first year of the operation.

Is my understanding correct that this waiver of initial jurisdiction to the State agency would apply to any charges filed by State or local employees, as well as the charges filed against employers?

Mr. WILLIAMS of New Jersey. That is correct; the provision would apply to charges by State or local employees.

Mr. DOMINICK. I Bring it up only because there are some 39 States, including my State, which have ongoing commissions and which are undertaking very strenuous efforts to try to eliminate discrimination, not only in private employment practices, but among State and local employees.

As the Senator knows there are 10 million State and local employees involved in this, which will be added to the jurisdiction of the Commission by this bill. So it does become a matter of some concern in a great number of areas whether all the efforts the States have made are about to go down the drain.

I gather from the manager of the bill that it is not the intent to supersede those agencies but only to act in the event they are put up as a front to evade their equal employment obligations.

Mr. WILLIAMS of New Jersey. That is correct; and they will not be superseded.

Mr. DOMINICK. I appreciate this colloquy and I think this will reinforce the wording of the bill as far as the intent of the manager and others is concerned.

I thank the Senator.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ERVIN. Mr. President, I wish to speak generally in opposition to the bill. As all Senators know I have been extremely busy during this session of Congress. I did not have adequate opportunity to make a study of the bill until comparatively recently. I must confess that although it is almost impossible to shock me with legislative proposals any more, I was truly shocked when I read the contents of this bill. They are, indeed, enough to make linguistic and constitutional angels weep.

We have a federal system of government and at one time we had a Constitution which had some meaning. The 10th amendment to the Constitution, which is part of the Bill of Rights, had some relevancy to the federal system of government which the Constitution was ordained to establish.

Amendment 10 to the Constitution states:

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

This bill proposes for the first time in American history to give a Federal agency, a Federal agency which is appointed and not elected, a Federal agency which cannot be held responsible by anyone, the right to regulate, for all practical intents and purposes, State employment practices.

Frankly, there is nothing in the bill which draws any line between an officer of a State and an employee of a State. I do not know how far the commission which is to administer this bill is to go in trying to dictate to the people of the States as to how many of their appointed officers are employees. I say it is a destruction of the federal system of government for an agency of the United States to undertake to regulate, under the terms of this bill—the employment practices of a State. Such has never been the case.

Under this bill, as I interpret it, the EEOC could absolutely dictate in substance to a local sheriff whom he had to appoint as deputy sheriff. It could go into the Supreme Court of North Carolina and undertake to tell the Supreme Court of North Carolina whom it had to hire as clerk, as librarian, as marshal, or as messenger. In simple terms that is how far this bill goes.

The bill is destructive of the federal system of government because it is not compatible with the federal system to allow the Federal Government to dictate to a State who is to be hired, who is to be promoted, and who is to be fired by the State. As a matter of fact, under the vast powers given the EEOC in this bill, it can even dictate to a State what pay it must give to individual State employees. It can dictate its personal notions about discrimination. It can tell the State highway commission in the State whom they must hire, whom they must promote, and whom they must discharge. It is given absolute power and jurisdiction over all State employees.

There was a time in this Nation when it was said that our Constitution and all of its provisions looks to an indestructible union composed of industructible States. I know of no better way to destroy the States than to rob them of their powers; and I know of no more effective way to rob them of their powers than to let an agency of the Federal Government such as EEOC, be given the vast powers that this bill would give them to regulate, supervise, and control State hiring practices.

Not only does this bill give the Equal Employment Opportunity Commission control over the hiring, the promotions, the pay, the terms of employment and firing of State employees but it also goes further than that. It arrogates to this Commission the power to control all the hiring practices of every university in this land. Academic freedom will be in peril.

Under the original Civil Rights Act of 1964, there was an exemption granted to educational institutions which provided, in substance, that the Commission could not interfere with the hiring, the promotion, the firing, or compensation or terms of employment of any persons hired by an educational institution to assist it in carrying out its educational purposes.

This bill would destroy that exemption and it would give this Federal agency sitting on the banks of the Potomac River the power to tell every educational institution in the United States whom they could hire to be professor of mathematics, or whom they could promote from the lower position of instructor to that of assistant professor, or promote from assistant professor to associate professor, or promote to a full professorship.

At one time I was a trustee of a splendid liberal arts college in North Carolina known as Davidson. It was founded by Scotch-Irish Presbyterians and supported by the Presbyterian Church. It had a regulation, which I presume is still in effect, that it would not hire a professor to teach any course at that institution unless he was a member of an Evangelical Church.

Mr. JAVITS. Mr. President, will the Senator yield to me for the purpose of asking unanimous consent that we may have a quorum call and that the Senator from North Carolina may regain the floor immediately after the quorum call is concluded?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. ERVIN. Mr. President, I ask

unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ERVIN. Mr. President, I think in any free society, if the members of the Presbyterian Church, or the members of the Catholic Church, or the members of the Lutheran Church, or the members of any other religious body see fit to establish, through their own resources, an institution of learning for the instruction of youth, and they want the youth of that institution to be taught by persons they regard as Christian professors, even in nonreligious subjects such as mathematics or trigonometry or philosophy, they should have the unqualified right to do that.

Yet the bill before the Senate will take away from institutions like Davidson College the right to select professors who are members of evangelical churches because that would be discriminating against other professors on account of their religion. The Equal Opportunity Employment Commission, under this bill, could actually require the Board of Trustees of Davidson College to hire a Mohammedan, for example, to instruct the youth attending the college.

That is the extent of the tyranny which this bill would inflict upon the people of America. We might as well recognize it. This is the most tyrannical legislative proposal ever submitted to the Congress of the United States. It virtually destroys the States. It destroys the right of people to exercise their religion, because that is exactly what these denominational colleges are doing when they make a requirement that professors shall be members of a particular church, even though they are teaching nonreligious subjects.

There is another provision in this bill to which I want to call attention. Under the due process clause of the Constitution of the United States, and particularly the fifth amendment, which applies to the Federal Government, and also the 14th amendment, which applies to the States, it is a denial of due process to unite in one body the function of prosecution and the function of a judge.

The bill provides that the members of the Commission, if they desire, can file charges, but whether they file those charges of discrimination or those charges are filed by someone else, they must investigate them, then they must prefer charges of their own if the original charge is filed by some individual, then they must collect the testimony, then they must try the case, then they must hand down the decision which can take away the property of other persons. That is a uniting of the function of a judge and jury in one body. It is a denial of due process of law. It is a rank distortion, perversion, and prostitution of the due process clause.

I wish to point out that one of the recent commentaries upon the Constitution of the United States, volume 1, entitled "Rights of the Person," by Bernard Schwartz, contains a discussion of this subject on pages 91 through 94, and points out the fact that:

Basic to the exercise by our courts of the authority to impose restraints upon the person as a penalty for the commission of criminal offenses is the notion of fair trial before an impartial judicial tribunal. If the individual concerned has not been afforded such fair trial before his conviction, it is obvious that he has not been afforded due process of law.

Further reading:

The requirement of an impartial tribunal has been termed "the first and most fundamental principle of natural justice."

In the case of *Wong Yang Sung* v. *McGrath*, reported in 339 U.S. at page 33, which involved the deportation of a person of Chinese ancestry, the Supreme Court pointed out that the action taken there was unconstitutional because there was united in the same Immigration authorities the office of prosecutor and the office of judge. I ask unanimous consent that the entire opinion in this case be printed in the body of the Record.

There being no objection, the opinion was ordered to be printed in the Record, as follows:

WONG YANG SUNG AGAINST MCGRATH, ATTORNEY GENERAL, ET AL.

CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA CIRCUIT

(No. 154. Argued December 6, 1949.—Decided February 20, 1950.)

1. Administrative hearings in proceedings for the deportation of aliens must conform to the requirements of the Administrative Procedure Act, 5 U.S.C. §§ 1001 *et seq.* Pp. 35–53.

2. The history of this Act discloses that it is remedial legislation which should be construed, so far as its text permits, to give effect to its remedial purposes where the evils it was aimed at appear. Pp. 36–41.

3. One of the fundamental purposes of the Act was to ameliorate the evils resulting from the practice of commingling in one person the duties of prosecutor and judge. Pp. 41–45, 46.

4. A hearing in a proceeding for the deportation of an alien was presided over by a "presiding inspector" of the Immigration Service, who had not investigated that particular case but whose general duties included the investigation of similar cases. There being no "examining inspector" present to conduct the prosecution, it was the duty of the "presiding inspector" to conduct the interrogation of the alien and the Government's witnesses, cross-examine the alien's witnesses, and "present such evidence as is necessary to support the charges in the warrant of arrest." It might become his duty to lodge an additional charge against the alien and hear the evidence on that charge. After the hearing, he was required to prepare a summary of the evidence, proposed findings of fact, conclusions of law, and a proposed order, for the consideration of the Commissioner of Immigration. *Held:* This was contrary to the purpose of the Administrative Procedure Act to ameliorate the evils resulting from a combination of the prosecuting and adjudicating functions in administrative proceedings. Pp. 45–48.

5. Section 5 of the Administrative Procedure Act, which establishes certain formal requirements for every "adjudication required by statute to be determined on the record after opportunity for agency hearing," applies to deportation proceedings conducted by the Immigration Service, although the Immigration Act contains no express requirement for hearings in deportation proceedings. Pp. 48–51.

(a) The limitation of § 5 of the Administrative Procedure Act to hearings "required by statute" does not exempt hearings held by compusion but only those which administrative agencies may hold by regulation, rule, custom, or special dispensation. P. 50.

(b) They do not exempt hearings the requirement for which has been read into a statute by this Court in order to save the statute from constitutional invalidity. Pp. 50–51.

6. The exception in § 7(a) of the Administrative Procedure Act of proceedings before "officers specially provided for by or designated pursuant to statute" does not exempt deportation hearings held before immigrant inspectors. Pp. 51–53.

(a) Nothing in the Immigration Act specifically provides that immigrant inspectors shall conduct deportation hearings or be designated to do so. Pp. 51–52.

84 U.S. App. D.C. 419, 184 F. 2d 158, reversed.

In a habeas corpus proceeding, the District Court held that the Administrative Procedure Act of June 11, 1946, 60 Stat. 237, 5 U.S.C. §§ 1001 *et seq.*, does not apply to deportation hearings. 80 F., Supp. 235. The Court of Appeals affirmed. 84 U.S. App. D.C. 419, 174 F. 2d 158. This Court granted certiorari. 338 U.S. 812. *Reversed*, p. 53.

*Irving Jaffe* argued the cause for petitioner. With him on the brief were *Jack Wasserman, Gaspare Cusumano* and *Thomas A. Farrell.*

*Robert W. Ginnane* argued the cause for respondents. With him on the brief were *Solicitor General Perlman, Assistant Attorney General Campbell, Robert S. Erdahl, L. Paul Winings* and *Charles Gordon.*

*Wendell Berge, A. Alvis Layne, Jr.* and *John B. Gage* filed a brief for Riss & Co., Inc., as *amicus curiae*, supporting petitioner.

MR. JUSTICE JACKSON delivered the opinion of the Court.

This *habeas corpus* proceeding involves a single ultimate question—whether administrative hearings in deportation cases must conform to requirements of the Administrative Procedure Act of June 11, 1946, 60 Stat. 237, 5 U.S.C. §§ 1001 *et seq.*

Wong Yang Sung, native and citizen of China, was arrested by immigration officials on a charge of being unlawfully in the United States through having overstayed shore leave as one of a shipping crew. A hearing was held before an immigrant inspector who recommended deportation. The Acting Commissioner approved; and the Board of Immigration Appeals affirmed.

Wong Yang Sung then sought release from custody by *habeas corpus* proceedings in District Court for the District of Columbia, upon the sole ground that the administrative hearing was not conducted in conformity with §§ 5 and 11 of the Administrative Procedure Act.[1] The Government admitted noncompliance, but asserted that the Act did not apply. The court, after hearing, discharged the writ and remanded the prisoner to custody, holding the Administrative Procedure Act inapplicable to deportation hearings. 80 F. Supp. 235. The Court of Appeals affirmed. 84 U.S. App. D.C. 419, 174 F. 2d 158. Prisoner's petition for certiorari was not opposed by the Government and, because the question presented has obvious importance in the administration of the immigration laws, we granted review. 338 U.S. 812.

I

The Administrative Procedure Act of June 11, 1946, *supra*, is a new, basic and comprehensive regulation of procedures in many agencies, more than a few of which can advance arguments that its generalities should not or do not include them. Determination of questions of its coverage may well be approached through consideration of its purposes as disclosed by its background.

Multiplication of federal administrative agencies and expansion of their functions to include adjudications which have serious impact on private rights has been one of the dramatic legal developments of the past half-century.[2] Partly from restriction by

Footnotes at end of article.

statute, partly from judicial self-restraint, and partly by necessity—from the nature of their multitudinous and semilegislative or executive tasks—the decisions of administrative tribunals were accorded considerable finality, and especially with respect to fact finding.[3] The conviction developed, particularly within the legal profession, that this power was not sufficiently safeguarded and sometimes was put to arbitrary and biased use.[4]

Concern over administrative impartiality and response to growing discontent was reflected in Congress as early as 1929, when Senator Norris introduced a bill to create a separate administrative court.[5] Fears and dissatisfactions increased as tribunals grew in number and jurisdiction, and a succession of bills offering various remedies appeared in Congress.[6] Inquiries into the practices of state agencies, which tended to parallel or follow the federal pattern, were instituted in several states, and some studies noteworthy for thoroughness, impartiality and vision resulted.[7]

The Executive Branch of the Federal Government also became concerned as to whether the structure and procedure of these bodies was conducive to fairness in the administrative process. President Roosevelt's Committee on Administrative Management in 1937 recommended complete separation of adjudicating functions and personnel from those having to do with investigation or prosecution.[8] The President early in 1939 also directed the Attorney General to name "a committee of eminent lawyers, jurists, scholars, and administrators to review the entire administrative process in the various departments of the executive Government and to recommend improvements, including the suggestion of any needed legislation."[9]

So strong was the demand for reform, however, that Congress did not await the Committee's report but passed what was known as the Walter-Logan bill, a comprehensive and rigid prescription of standardized procedures for administrative agencies.[10] This bill was vetoed by President Roosevelt December 18, 1940,[11] and the veto was sustained by the House.[12] But the President's veto message made no denial of the need for reform. Rather it pointed out that the task of the Committee, whose objective was "to suggest improvements to make the process more workable and more just," had proved "unexpectedly complex." The President said, "I should desire to await their report and recommendations before approving any measure in this complicated field."[13]

The committee divided in its views and both the majority and the minority submitted bills[14] which were introduced in 1941. A subcommittee of the Senate Judiciary Committee held exhaustive hearings on three proposed measures,[15] but, before the gathering storm of national emergency and war, consideration of the problem was put aside. Though bills on the subject reappeared in 1944,[16] they did not attract much attention.

The McCarran-Sumners bill, which evolved into the present Act, was introduced in 1945.[17] Its consideration and hearing, especially of agency interests, was painstaking. All administrative agencies were invited to submit their views in writing. A tentative revised bill was then prepared and interested parties again were invited to submit criticisms.[18] The Attorney General named representatives of the Department of Justice to canvass the agencies and report their criticisms, and submitted a favorable report on the bill as finally revised.[19] It passed both Houses without opposition and was signed by President Truman June 11, 1946.[20]

The Act thus represents a long period of study and strife; it settles long-continued and hard-fought contentions, and enacts a formula upon which opposing social and political forces have come to rest. It contains many compromises and generalities and, no doubt, some ambiguities. Experience may reveal defects. But it would be a disservice to our form of government and to the administrative process itself if the courts should fail, so far as the terms of the Act warrant, to give effect to its remedial purposes where the evils it was aimed at appear.

II

Of the several administrative evils sought to be cured or minimized, only two are particularly relevant to issues before us today. One purpose was to introduce greater uniformity of procedure and standardization of administrative practice among the diverse agencies whose customs had departed widely from each other.[21] We pursue this no further than to note that any exception we may find to its applicability would tend to defeat this purpose.

More fundamental, however, was the purpose to curtail and change the practice of embodying in one person or agency the duties of prosecutor and judge. The President's Committee on Administrative Management voiced in 1937 the theme which, with variations in language, was reiterated throughout the legislative history of the Act. The Committee's report, which President Roosevelt transmitted to Congress with his approval as "a great document of permanent importance,"[22] said:

". . . the independent commission is obliged to carry on judicial functions under conditions which threaten the impartial performance of that judicial work. The discretionary work of the administrator is merged with that of the judge. Pressures and influences properly enough directed toward officers responsible for formulating and administering policy constitute an unwholesome atmosphere in which to adjudicate private rights. But the mixed duties of the commissions render escape from these subversive influences impossible.

"Furthermore, the same men are obliged to serve both as prosecutors and as judges. This not only undermines judicial fairness; it weakens public confidence in that fairness. Commission decisions affecting private rights and conduct lie under the suspicion of being rationalizations of the preliminary findings which the commission, in the role of prosecutor, presented to itself." Administrative Management in the Government of the United States, Report of the President's Committee on Administrative Management, 36–37 (1937).

The Committee therefore recommended a redistribution of functions within the regulatory agencies. "[I]t would be divided into an administrative section and a judicial section" and the administrative section "would formulate rules, initiate action, investigate complaints . . ." and the judicial section "would sit as an impartial, independent body to make decisions affecting the public interest and private rights upon the basis of the records and findings presented to it by the administrative section." Id. at 37.

Another study was made by a distinguished committee named by the Secretary of Labor, whose jurisdiction at the time included the Immigration and Naturalization Service. Some of the committee's observations have relevancy to the procedure under examination here. It said:

"The inspector who presides over the formal hearing is in many respects comparable to a trial judge. He has, at a minimum, the function of determining—subject to objection on the alien's behalf—what goes into the written record upon which decision ultimately is to be based. Under the existing practice he has also the function of counsel representing the moving party—he does not merely admit evidence against the alien; he has the responsibility of seeing that such evidence is put into the record. The precise scope of his appropriate functions is the first question to be considered." The Secretary of Labor's Committee on Administrative Procedure, The Immigration and Naturalization Service, 77 (Mimeo. 1940).

Further:

"Merely to provide that in particular cases different inspectors shall investigate and hear is an insufficient guarantee of insulation and independence of the presiding official. The present organization of the field staff not only gives work of both kinds commonly to the same inspector but tends toward an identity of viewpoint as between inspectors who are chiefly doing only one or the other kind of work. . . .

". . . We recommend that the presiding inspectors be relieved of their present duties of presenting the case against aliens and be confirmed [sic] entirely to the duties customary for a judge. This, of course, would require the assignment of another officer to perform the task of a prosecuting attorney. The appropriate officer for this purpose would would seem to be the investigating inspector who, having prepared the case against the alien, is already thoroughly familiar with it. . . .

"A genuinely impartial hearing, conducted with critical detachment, is psychologically improbable if not impossible, when the presiding officer has at once the responsibility of appraising the strength of the case and of seeking to make it as strong as possible. Nor is complete divorce between investigation and hearing possible so long as the presiding inspector has the duty himself of assembling and presenting the results of the investigation. . . ." *Id.* at 81–82.

And the Attorney General's Committee on Administrative Procedure, which divided as to the appropriate remedy,[23] was unanimous that this evil existed. Its Final Report said:

"These types of commingling of functions of investigation or advocacy with the function of deciding are thus plainly undesirable. But they are also avoidable and should be avoided by appropriate internal division of labor. For the disqualifications produced by investigation or advocacy are personal psychological ones which result from engaging in those types of activity; and the problem is simply one of isolating those who engage in the activity. Creation of independent hearing commissioners insulated from all phases of a case other than hearing and deciding will, the Committee believes, go far toward solving this problem at the level of the initial hearing provided the proper safeguards are established to assure the insulation . . ." Rep. Atty. Gen. Comm. Ad. Proc. 56 (1941), S. Doc. No. 8, 77th Cong., 1st Sess. 56 (1941).

The Act before us adopts in general this recommended form of remedial action. A minority of the Committee had, furthermore, urged an even more thoroughgoing separation and supported it with a cogent report. *Id.* at 203 *et seq.*

Such were the evils found by disinterested and competent students. Such were the facts before Congress which gave impetus to the demand for the reform which this Act was intended to accomplish. It is the plain duty of the courts, regardless of their views of the wisdom or policy of the Act, to construe this remedial legislation to eliminate, so far as its text permits, the practices it condemns.

III

Turning now to the case before us, we find the administrative hearing a perfect exemplification of the practices so unanimously condemned.

This hearing, which followed the uniform practice of the Immigration Service,[24] was before an immigrant inspector, who, for purposes of the hearing, is called the "'presiding inspector." Except with consent of the alien, the presiding inspector may not be the one who investigated the case. 8 C.F.R. 150.6 (b).[25] But the inspector's duties include investigation of like cases; and while he is to-

Footnotes at end of article.

day hearing cases investigated by a colleague, tomorrow his investigation of a case may be heard before the inspector whose case he passes on today. An "examining inspector" may be designated to conduct the prosecution, 8 C.F.R. 150.6(n), but none was in this case; and, in any event, the examining inspector also has the same mixed prosecutive and hearing functions. The presiding inspector, when no examining inspector is present, is required to "conduct the interrogation of the alien and the witnesses in behalf of the Government and shall cross-examine the alien's witnesses and present such evidence as is necessary to support the charges in the warrant of arrest." 8 C.F.R. 150.6(b). It may even become his duty to lodge an additional charge against the alien and proceed to hear his own accusation in like manner. 8 C.F.R. 150.6(l). Then, as soon as practicable, he is to prepare a summary of the evidence, proposed findings of fact, conclusions of law, and a proposed order. A copy is furnished the alien or his counsel, who may file exceptions and brief, 8 C.F.R. 150.7, whereupon the whole is forwarded to the Commissioner. 8 C.F.R. 150.9.

The Administrative Procedure Act did not go so far as to require a complete separation of investigating and prosecuting functions from adjudicating functions. But that the safeguards it did set up were intended to ameliorate the evils from the commingling of functions as exemplified here is beyond doubt. And this commingling, if objectionable anywhere, would seem to be particularly so in the deportation proceeding, where we frequently meet with a voteless class of litigants who not only lack the influence of citizens, but who are strangers to the laws and customs in which they find themselves involved and who often do not even understand the tongue in which they are accused. Nothing in the nature of the parties or proceedings suggests that we should strain to exempt deportation proceedings from reforms in administrative procedure applicable generally to federal agencies.

Nor can we accord any weight to the argument that to apply the Act to such hearings will cause inconvenience and added expense to the Immigration Service. Of course it will, as it will to nearly every agency to which it is applied. But the power of the purse belongs to Congress, and Congress has determined that the price for greater fairness is not too high. The agencies, unlike the aliens, have ready and persuasive access to the legislative ear and if error is made by including them, relief from Congress is a simple matter.

This brings us to contentions both parties have advanced based on the pendency in Congress of bills to exempt this agency from the Act. Following an adverse decision,[26] the Department asked Congress for exempting legislation,[27] which appropriate committees of both Houses reported favorably but in different form and substance.[28] Congress adjourned without further action. The Government argues that Congress knows that the Immigration Service has construed the Act as not applying to deportation proceedings, and that it "has taken no action indicating disagreement with that interpretation"; that therefore it "is at least arguable that Congress was prepared to specifically confirm the administrative construction by clarifying legislation." We do not think we can draw that inference from incompleted steps in the legislative process. *Cf. Helvering* v. *Hallock*, 309 U.S. 106, 119–120.

On the other hand, we will not draw the inference, urged by petitioner, that an agency admits that it is acting upon a wrong construction by seeking ratification from Congress. Public policy requires that agencies feel free to ask legislation which will terminate or avoid adverse contentions and litigations. We do not feel justified in holding that a request for and failure to get in a single session of Congress clarifying legislation on a genuinely debatable point of agency procedure admits weakness in the agency's contentions. We draw, therefore, no inference in favor of either construction of the Act—from the Department's request for legislative clarification, from the congressional committees' willingness to consider it, or from Congress' failure to enact it.

We come, then, to examination of the text of the Act to determine whether the Government is right in its contentions: first, that the general scope of § 5 of the Act does not cover deportation proceedings; and, second, that even if it does, the proceedings are excluded from the requirements of the Act by virtue of § 7.

IV

The Administrative Procedure Act, § 5, establishes a number of formal requirements to be applicable "In every case of adjudication required by statute to be determined on the record after opportunity for an agency hearing." The argument here depends upon the words "adjudication required by statute." The Government contends that there is no express requirement for any hearing or adjudication in the statute authorizing deportation,[29] and that this omission shields these proceedings from the impact of § 5. Petitioner, on the other hand, contends that deportation hearings, though not expressly required by statute, are required under the decisions of this Court,[30] and the proceedings, therefore, are within the scope of § 5.

Both parties invoke many citations to legislative history as to the meaning given to these key words by the framers, advocates or opponents of the Administrative Procedure Act. Because § 5 in the original bill applied to hearings required "by law,"[31] because it was suggested by the Attorney General that it should be changed to "required by statute or Constitution,"[32] and because it finally emerged "required by statute," the Government argues that the section is intended to apply only when explicit statutory words granting a right to adjudication can be pointed out. Petitioner on the other hand cites references which would indicate that the limitation to statutory hearing was merely to avoid creating by inference a new right to hearings where no right existed otherwise. We do not know. The legislative history is more conflicting than the text is ambiguous.

But the difficulty with any argument premised on the proposition that the deportation statute does not require a hearing is that, without such hearing, there would be no constitutional authority for deportation. The constitutional requirement of procedural due process of law derives from the same source as Congress' power to legislate and, where applicable, permeates every valid enactment of that body. It was under compulsion of the Constitution that this Court long ago held that an antecedent deportation statute must provide a hearing at least for aliens who had not entered clandestinely and who had been here some time even if illegally. The Court said:

"This is the reasonable construction of the acts of Congress here in question, and they need not be otherwise interpreted. In the case of all acts of Congress, such interpretation ought to be adopted as, without doing violence to the import of the words used, will bring them into harmony with the Constitution." *The Japanese Immigrant Case*, 189 U.S. 86, 101.

We think that the limitation to hearings "required by statute" in § 5 of the Administrative Procedure Act exempts from that section's application only those hearings which administrative agencies may hold by regulation, rule, custom, or special dispensation; not those held by compulsion. We do not think the limiting words render the Administrative Procedure Act inapplicable to hearings, the requirement for which has been read into a statute by the Court in order to save the statute from invalidity. They exempt hearings of less than statutory authority, not those of more than statutory authority. We would hardly attribute to Congress a purpose to be less scrupulous about the fairness of a hearing necessitated by the Constitution than one granted by it as a matter of expediency.

Indeed, to so construe the Immigration Act might again bring it into constitutional jeopardy. When the Constitution requires a hearing, it requires a fair one, one before a tribunal which meets at least currently prevailing standards of impartiality. A deportation hearing involves issues basic to human liberty and happiness and, in the present upheavals in lands to which aliens may be returned, perhaps to life itself. It might be difficult to justify as measuring up to constitutional standards of impartiality a hearing tribunal for deportation proceedings the like of which has been condemned by Congress as unfair even where less vital matters of property rights are at stake.

We hold that the Administrative Procedure Act, § 5, does cover deportation proceedings conducted by the Immigration Service.

V

The remaining question is whether the exception of § 7(a) of the Administrative Procedure Act exempts deportation hearings held before immigrant inspectors. It provides:

"SEC. 7. In hearings which section 4 or 5 requires to be conducted pursuant to this section—

"(a) PRESIDING OFFICERS.—There shall preside at the taking of evidence (1) the agency, (2) one or more members of the body which comprises the agency, or (3) one or more examiners appointed as provided in this Act; but nothing in this Act shall be deemed to supersede the conduct of specified classes of proceedings in whole or part by or before boards or other officers specially provided for by or designated pursuant to statute. . . ." 60 Stat. 237, 241, 5 U.S.C. § 1006.

The Government argues that immigrant inspectors are "specially provided for by or designated pursuant to" § 16 of the Immigration Act, which, in pertinent part, reads:

". . . The inspection . . . of aliens, including those seeking admission or readmission to or the privilege of passing through or residing in the United States, and the examination of aliens arrested within the United States under this Act,[33] shall be conducted by immigrant inspectors, except as hereinafter provided in regard to boards of special inquiry. . . . Said inspectors shall have power to administer oaths and to take and consider evidence touching the right of any alien to enter, reenter, pass through, or reside in the United States, and, where such action may be necessary, to make a written record of such evidence; . . ." 39 Stat. 874, 885, as amended, 8 U.S.C. § 152.

Certainly nothing here specifically provides that immigrant inspectors shall conduct deportation hearings or be designated to do so. This language does direct them to conduct border inspections of aliens seeking admission. They may administer oaths and take, record, and consider evidence. But these functions are indispensable to investigations which are concededly within their competence. And these functions are likewise necessary to enable the preparation of complaints for prosecutive purposes. But that Congress by grant of these powers has specially constituted them or provided for their designation as hearing officers in deportation proceedings does not appear.

Section 7(a) qualifies as presiding officers at hearings the agency and one or more of the members of the body comprising the

Footnotes at end of article.

agency, and it also leaves untouched any others whose responsibilities and duties as hearing officers are established by other statutory provision. But if hearings are to be had before employees whose responsibility and authority derives from a lesser source, they must be examiners whose independence and tenure are so guarded by the Act as to give the assurances of neutrality which Congress thought would guarantee the impartiality of the administrative process.

We find no basis in the purposes, history or text of this Act for judicially declaring an exemption in favor of deportation proceedings from the procedural safeguards enacted for general application to administrative agencies. We hold that deportation proceedings must conform to the requirements of the Administrative Procedure Act if resulting orders are to have validity. Since the proceeding in the case before us did not comply with these requirements, we sustain the writ of habeas corpus and direct release of the prisoner.[34]

[Reversed]

MR. JUSTICE DOUGLAS and MR. JUSTICE CLARK took no part in the consideration or decision of this case.

MR. JUSTICE REED, dissenting.

The Court, it seems to me, has disregarded a congressional exemption of certain agencies, including the Immigration and Naturalization Service, from some of the requirements of the Administrative Procedure Act. Such judicial intrusion into the legislative domain justifies a protest. It may be useful to call attention to the necessity of recognizing specific exceptions to general rules. This protest is rested on the ground that immigrant inspectors performing duties under § 16 of the Immigration Act are within the exception provided by § 7(a) of the Administrative Procedure Act. The Court's opinion discusses this point under subdivision V. The sections are there set out and can be examined by the reader.

In this case no one questions the constitutionality of the hearing Wong received before the immigrant inspector, with administrative review by the Commissioner and the Board of Immigration Appeals. The question on which I disagree with the Court is whether the Administrative Procedure Act permits an inspector of the Immigration and Naturalization Service to serve as a presiding officer at a deportation hearing.

Section 7(a) of the Administrative Procedure Act provides that the official presiding at the taking of evidence shall be an agency, member or an examiner appointed under that Act. There is an exception to this requirement. It reads as follows:

"BUT nothing in this Act shall be deemed to supersede the conduct of specified classes of proceedings in whole or part by or before boards or other officers specially provided for by or designated pursuant to statute." It is this exception that made it proper for an immigrant inspector to preside at this deportation hearing.

Under § 16 of the Immigration Act, 39 Stat. 874, 885, the "inspection . . . of aliens, including those seeking admission or readmission to or the privilege of passing through or residing in the United States, and the examination of aliens arrested within the United States under this Act, shall be conducted by immigrant inspectors, . . . . Said inspectors shall have power to administer oaths and to take and consider evidence touching the right of any alien to enter, reenter, pass through, or reside in the United States, and, where such action may be necessary to make a written record of such evidence; . . . ."

It seems to me obvious that the exception provided in § 7 (a) covers immigrant inspectors dealing with the arrest of an alien for violation of the Immigration Act. The examination of arrested aliens at a deportation proceeding is surely a specified class of proceedings under § 7 (a) of the Administrative Procedure Act, and it is surely conducted by an officer "specially provided for by . . . statute."

The reason for the exception in § 7 (a) was not spelled out in the legislative history or in the Act itself. The exception may have been made to retain smoothness of operation in the several agencies where there were officials specially provided for by statute or designated pursuant to a statute. When making exceptions from the requirements as to separation of the investigatory and adjudicatory functions, it was natural to include officers specially designated by statute to sit in judgment. Agency members are excluded from these requirements of the Administrative Procedure Act. They, too, have investigatory and adjudicatory duties. Since the members of the agency and the statutorily designated officers were specially selected for the functions they were to perform, Congress probably reposed confidence in their experience and expertness. It doubtless did not wish to disorganize administration until time showed whether that confidence was well placed.[35]

Since the Court does not accept my view of the reach of § 7 (a), it would be useless to undertake an analysis of the other questions presented by the petition for certiorari.

FOOTNOTES

[1] Particularly invoked are § 5(c), 60 Stat. 237, 240, 5 U. S. C. § 1004(c), which provides in part:

"The same officers who preside at the reception of evidence pursuant to section 7 shall make the recommended decision or initial decision required by section 8 except where such officers become unavailable to the agency. Save to the extent required for the disposition of ex parte matters as authorized by law, so such officer shall consult any person or party on any fact in issue unless upon notice and opportunity for all parties to participate; nor shall such officer be responsible to or subject to the supervision or direction of any officer, employee, or agent engaged in the performance of investigative or prosecuting functions for any agency. No officer, employee, or agent engaged in the performance of investigative or prosecuting functions for any agency in any case shall, in that or a factually related case, participate or advise in the decision, recommended decision, or agency review pursuant to section 8 except as witness or counsel in public proceedings. . . ."; and § 11, 60 Stat. at 244, 5 U. S. C. § 1010, which provides in part: "Subject to the civil-service and other laws to the extent not inconsistent with this Act, there shall be appointed by and for each agency as many qualified and competent examiners as may be necessary for proceedings pursuant to sections 7 and 8, who shall be assigned to cases in rotation so far as practicable and shall perform no duties inconsistent with their duties and responsibilities as examiners. Examiners shall be removable by the agency in which they are employed only for good cause established and determined by the Civil Service Commission (hereinafter called the Commission) after opportunity for hearing and upon the record thereof. Examiners shall receive compensation prescribed by the Commission independently of agency recommendations of ratings and in accordance with the Classification Act of 1923, as amended, except that the provisions of paragraphs (2) and (3) of subsection (b) of section 7 of said Act, as amended, and the provisions of section 9 of said Act, as amended shall not be applicable. . . ."

[32] Hearings before a Subcommittee of the Senate Committee on the Judiciary on S. 674, S. 675, and S. 918, 77th Cong., 1st Sess. 1456 (1941).

[33] The original Act, 39 Stat. 896, reads "under this Act," although in the codification, 8 U.S.C. § 152, it reads "under this section." The former is controlling. 1. U. S. C. (Supp. II, 1949) §§ 112, 204 (a).

[34] [For order modifying the judgment, see *post*, p. 908.]

[35] Thus the congressional committee warned that should the exception "be a loophole for avoidance of the examiner system in any real sense, corrective legislation would be necessary. That provision is not intended to permit agencies to avoid the use of examiners but to preserve special statutory types of hearing officers who contribute something more than examiners could contribute and at the same time assure the parties fair and impartial procedure." S. Doc. No. 248, 79th Cong., 2d Sess., p. 216.

Mr. ERVIN. Mr. President, I wish to call the attention of the Senate to another point. In the case of *In Re Murchison*, reported in 349 U.S. at page 133, a trial judge of Michigan, acting under Michigan statute, sat as a one-man grand jury. The two petitioners appeared before him in his capacity as a one-man grand jury. They were accused of conduct which he thought constituted contempt of his court. He proceeded to try them for contempt for their conduct before him as a one-man grand jury, under the statute of Michigan.

The petitioners objected to being tried for contempt by this particular judge for a number of reasons, including, among others, that the trial before the judge who was at the same time the complainant, indicter, and prosecutor, constituted a denial of the fair and impartial trial required by the due process clause of the 14 amendment to the Constitution of the United States.

The Justice Black, writing for a majority of the court, had this to say:

A fair trial in a fair tribunal is a basic requirement of due process. Fairness of course requires an absence of actual bias in the trial of cases. But our system of law has always endeavored to prevent even the probability of unfairness. To this end no man can be a judge in his own case and no man is permitted to try cases where he has an interest in the outcome. That interest cannot be defined with precision. Circumstances and relationships must be considered. This Court has said, however, that "every procedure which would offer a possible temptation to the average man as a judge . . . not to hold the balance nice, clear and true between the State and the accused, denies the latter due process of law." . . . Such a stringent rule may sometimes bar trial by judges who have no actual bias and who would do their very best to weigh the scales of justice equally between contending parties. But to perform its high function in the best way "justice must satisfy the appearance of justice."

Then again, farther on, on page 137 of the opinion, Justice Black says:

Fair trials are too important a part of our free society to let prosecuting judges be trial judges of the charges they prefer.

The Supreme Court set aside the trial of these two petitioners before the judge on the ground that the judge was acting as prosecutor and judge, and that this was a denial of due process as required under the 14th amendment of the Constitution of the United States.

I ask unanimous consent that the full opinion be printed in the Record at this point.

There being no objection, the opinion was ordered to be printed in the Record, as follows:

[In re Murchison. Opinion of the Court]

IN RE MURCHISON ET AL. CERTIORARI TO THE SUPREME COURT OF MICHIGAN, No. 405. ARGUED APRIL 20, 1955.—DECIDED MAY 16, 1955

A Michigan state judge served as a "one-man grand jury" under Michigan law in investigating crime. Later, the same judge, after a hearing in open court, adjudged two of the witnesses guilty of contempt and sentenced them to punishment for events which took place before him in the grand jury proceedings. *Held:* Their trial and conviction for contempt before the same judge violated the Due Process Clause of the Fourteenth Amendment. Pp. 133–139.

The power of a trial judge to punish for a contempt committed in his immediate presence in open court is not applicable to the contempt proceeding here. P. 137.

340 Mich. 140, 65 N. W. 2d 296, and 340 Mich. 151, 65 N. W. 2d 301, reversed.

*William L. Colden* argued the cause for petitioners. With him on the brief were *James A. Cobb*, *George E. C. Hayes* and *Charles W. Jones*.

*Edmund E. Shepherd*, Solicitor General, argued the cause for the State of Michigan, respondent. With him on the brief were *Thomas M. Kavanagh*, Attorney General, and *Daniel J. O'Hara*, Assistant Attorney General.

MR. JUSTICE BLACK delivered the opinion of the Court.

Michigan law authorizes any judge of its courts of record to act as a so-called "one-man grand jury." [1] He can compel witnesses to appear before him in secret to testify about suspected crimes. We have previously held that such a Michigan "judge-grand jury" cannot consistently with the Due Process Clause of the Fourteenth Amendment summarily convict a witness of contempt for conduct in the secret hearings. *In re Oliver*, 333 U.S. 257. We held that before such a conviction could stand, due process requires as a minimum that an accused be given a public trial after reasonable notice of the charges, have a right to examine witnesses against him, call witnesses on his own behalf, and be represented by counsel. The question now before us is whether a contempt proceeding conducted in accordance with these standards complies with the due process requirement of an impartial tribunal where the same judge presiding at the contempt hearing had also served as the "one-man grand jury" out of which the contempt charges arose. This does not involve, of course, the long-exercised power of courts summarily to punish certain conduct occurring in open court.[2]

The petitioners, Murchison and White, were called as witnesses before a "one-man judge-grand jury." Murchison, a Detroit policeman, was interrogated at length in the judge's secret hearings where questions were asked him about suspected gambling in Detroit and bribery of policemen. His answers left the judge persuaded that he had committed perjury, particularly in view of other evidence before the "judge-grand jury." The judge then charged Murchison with perjury and ordered him to appear and show cause why he should not be punished for criminal contempt.[3] White, the other petitioner, was also summoned to appear as a witness in the same "one-man grand jury" hearing. Asked numerous questions about gambling and bribery, he refused to answer on the ground that he was entitled under Michigan law to have counsel present with him. The "judge-grand jury" charged White with contempt and ordered him to appear and show cause. The judge who had been the "grand jury" then tried both petitioners in open court, convicted and sentenced them for contempt. Petitioners objected to being tried for contempt by this particular judge for a number of reasons including: (1) Michigan law expressly provides that a judge conducting a "one-man grand jury" inquiry will be disqualified from hearing or trying any case arising from his inquiry or from hearing any motion to dismiss or quash any complaint or indictment growing out of it, or from hearing any charge of contempt "except alleged contempt for neglect or refusal to appear in response to a summons or subpoena"; (2) trial before the judge who was at the same time the complainant, indicter and prosecutor, constituted a denial of the fair and impartial trial required by the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States. The trial judge answered the first challenge by holding that the state statute barring him from trying the contempt cases violated the Michigan Constitution on the ground that it would deprive a judge of inherent power to punish contempt. This interpretation of the Michigan Constitution

Footnotes at end of article.

is binding here. As to the second challenge the trial judge held that due process did not forbid him to try the contempt charges. He also rejected other constitutional contentions made by petitioners. The State Supreme Court sustained all the trial judge's holdings and affirmed.[4] Importance of the federal constitutional questions raised caused us to grant certiorari.[5] The view we take makes it unnecessary for us to consider or decide any of those questions except the due process challenge to trial by the judge who had conducted the secret "one-man grand jury" proceedings.[6]

A fair trial in a fair tribunal is a basic requirement of due process. Fairness of course requires an absence of actual bias in the trial of cases. But our system of law has always endeavored to prevent even the probability of unfairness. To this end no man can be a judge in his own case and no man is permitted to try cases where he has an interest in the outcome. That interest cannot be defined with precision. Circumstances and relationships must be considered. This Court has said, however, that "every procedure which would offer a possible temptation to the average man as a judge . . . not to hold the balance nice, clear and true between the State and the accused, denies the latter due process of law." *Tumey* v. *Ohio*, 273 U.S. 510, 532. Such a stringent rule may sometimes bar trial by judges who have no actual bias and who would do their very best to weigh the scales of justice equally between contending parties. But to perform its high function in the best way "justice must satisfy the appearance of justice." *Offut* v. *United States*, 348 U.S. 11, 14.

It would be very strange if our system of law permitted a judge to act as a grand jury and then try the very persons accused as a result of his investigations. Perhaps no State has ever forced a defendant to accept grand jurors as proper trial jurors to pass on charges growing out of their hearings.[7] A single "judge-grand jury" is even more a part of the accusatory process than an ordinary lay grand juror. Having been a part of that process a judge cannot be, in the very nature of things, wholly disinterested in the conviction or acquittal of those accused. While he would not likely have all the zeal of a prosecutor, it can certainly not be said that he would have none of that zeal.[8] Fair trials are too important a part of our free society to let prosecuting judges be trial judges of the charges they prefer.[9] It is true that contempt committed in a trial courtroom can under some circumstances be punished summarily by the trial judge. See *Cooke* v. *United States*, 267 U.S. 517, 539. But adjudication by a trial judge of a contempt committed in his immediate presence in open court cannot be likened to the proceedings here. For we held in the *Oliver* case that a person charged with contempt before a "one-man grand jury" could not be summarily tried.

As a practical matter it is difficult if not impossible for a judge to free himself from the influence of what took place in his "grand-jury" secret session. His recollection of that is likely to weigh far more heavily with him than any testimony given in the open hearings. That it sometimes does is illustrated by an incident which occurred in White's case. In finding White guilty of contempt the trial judge said, "there is one thing the record does not show, and that was Mr. White's attitude, and I must say that his attitude was almost insolent in the manner in which he answered questions and his attitude upon the witness stand. . . . Not only was the personal attitude insolent, but it was defiant, and I want to put that on the record." In answer to defense counsel's motion to strike these statements because they were not part of the original record the judge said, "That is something . . . that wouldn't appear on the record, but it would be very evident to the court." Thus the judge whom due process requires to be impartial in weighing the evidence presented before him, called on his own personal knowledge and impression of what had occurred in the grand jury room and his judgment was based in part on this impression, the accuracy of which could not be tested by adequate cross-examination.

This incident also shows that the judge was doubtless more familiar with the facts and circumstances in which the charges were rooted than was any other witness. There were no public witnesses upon whom petitioners could call to give disinterested testimony concerning what took place in the secret chambers of the judge. If there had been they might have been able to refute the judge's statement about White's insolence. Moreover, as shown by the judge's statement here, a "judge-grand jury" might himself many times be a very material witness in a later trial for contempt. If the charge should be heard before that judge, the result would be either that the defendant must be deprived of examining or cross-examining him or else there would be the spectacle of the trial judge presenting testimony upon which he must finally pass in determining the guilt or innocence of the defendant.[10] In either event the State would have the benefit of the judge's personal knowledge while the accused would be denied an effective opportunity to cross-examine. The right of a defendant to examine and cross-examine witnesses is too essential to a fair trial to have that right jeopardized in such way.

We hold that it was a violation of due process for the "judge-grand jury" to try these petitioners, and it was therefore error for the Supreme Court of Michigan to uphold the convictions. The judgements are reversed and the causes are remanded for proceedings not inconsistent with this opinion.

*Reversed.*

MR. JUSTICE REED and MR. JUSTICE MINTON, dissenting, with whom MR. JUSTICE BURTON joins.

The Court holds that it is unconstitutional for a state judge to punish a contempt, previously committed before him while acting as a so-called one-man grand jury, after a full hearing in open court. It holds that White, in being so punished for his blanket refusal to answer any questions before the grand jury, and Murchison, in being so punished for perjury before the same body, were deprived of their liberty without due process of law.

This conclusion is not rested on any irregularity in the proceedings before either the grand jury or the court. Under Michigan procedure a single state judge makes the grand jury investigation, not in secret, but with other public officials to aid him, and a transcript is made of the testimony. There is certainly nothing unconstitutional about this. A State may reduce the customary number of grand jurors to one, and impart the investigatory duty to a member of its judiciary if it so desires. Further, the accused is afforded a full hearing in open court, with a statement of charges, benefit of counsel, and a full opportunity to explain his conduct before the grand jury, before being held in contempt. Thus all the requirements set down in *In re Oliver*, 333 U.S. 257, are met.

The Court's determination is rested on the sole fact that the same judge first cited petitioners for contempt committed in his presence, and then presided over the proceedings leading to the final adjudication. It is neither shown nor alleged that the state judge was in any way biased. Nor is this required by the Court, for it holds, as a matter of law, that the judge's "interest" in a conviction makes the proceedings inherently prejudicial and thus constitutionally invalid. The fact that the "interest" of the state judge in this procedure is no different from that of other judges who have traditionally punished for contempt leads us to dissent.

In *Sacher* v. *United States*, 343 U.S. 1, we upheld the power of a federal district judge to summarily punish a contempt previously committed in his presence. In that case, after a trial which had extended for some nine months, the trial judge issued a certificate summarily holding defense counsel in contempt for their actions during the trial. There were no formalities, no hearings, no taking of evidence, no arguments and no briefs. We held that such a procedure was permitted by Rule 42 of the Federal Rules of Criminal Procedure which codified the "prevailing usages at law." The Court specifically rejected the contention that the judge who heard the contempt was disqualified from punishing it and should be required to assume the role of accuser or complaining witness before another judge. In *Offutt* v. *United States*, 348 U.S. 11, the Court simply stated an exception: when the trial judge becomes personally embroiled with the contemnor, he must step aside in favor of another judge. That decision was rested upon our supervisory authority over the administration of criminal justice in the federal courts. The Court now holds, even though there is no showing or contention that the state judge became embroiled or personally exercised, or was in any way biased, that as a matter of constitutional law—of procedural due process—a state judge may not punish a contempt previously committed in his presence. This seems inconsistent with all that has gone before.

The Court, presumably referring to the situation in the federal courts, states that the "adjudication by a trial judge of a contempt committed in his immediate presence in open court cannot be likened to the proceedings here." The reason that it cannot, we are told, is because "we held in the *Oliver* case that a person charged with contempt before a 'one-man grand jury' could not be summarily tried." This is hardly explanatory, for the question of whether the hearing is to be summary or plenary has no bearing on the attitude or "interest" of the judges in the two situations, which is indistinguishable. The simple fact is that in the federal courts we allow the same judge who hears the contempt and issues the certificate to punish it subsequently and summarily, but in this case we do not allow such punishment even after a full court trial. The only factual difference between *Sacher* and this case is that the contempt in *Sacher* was committed at a public trial. When the contempt is not committed in open court, we require that the criminal conviction be in public and that the individual be given a full hearing, with an opportunity to defend himself against the charges proffered and to make a record from which to appeal. *In re Oliver*, 333 U.S. 257. Petitioners had all this. They are not entitled to more.

We do not see how it can be held that it violates fundamental concepts of fair play and justice for a state judge after a full court trial to punish a contempt previously observed when acting as a grand jury, when it has been held that it is perfectly proper for a federal judge to summarily punish a contempt previously observed in open court. It seems to us that the Court has imposed a more stringent requirement on state judges as a matter of due process than we have imposed on federal judges over whom we exercise supervisory power.

The Court relies heavily on *Tumey* v. *Ohio*, 273 U.S. 510. There we held that it deprives a defendant of due process to "subject his liberty or property to the judgment of a court the judge of which has a direct, personal, substantial, pecuniary interest in reaching a conclusion against him in his case." *Id.*, at 523. It is one thing to hold that a judge has too great an interest in a case

to permit the rendition of a fair verdict when his compensation is determined by the result he reaches. It is quite another thing to disqualify a state judge as having too great an interest to render a due process judgment when his sole interest, as shown by this record, is the maintenance of order and decorum in the investigation of crime—an interest which he shares in common with all judges who punish for contempt.

The State of Michigan has decided that in the administration of its criminal law it is wise to have the investigating power in the hands of a judge. It has also decided that the judge who observes the contempt is to preside at the trial of the contemnor. It does not seem that there is here such a violation of accepted judicial standards as to justify this Court's determination of unconstitutionality.

We would affirm.

FOOTNOTES

[1] Mich. Stat. Ann., 1954 §§ 28.943, 28.944.

[2] *Sacher* v. *United States*, 343 U.S. 1; *Cooke* v. *United States*, 267 U.S. 517, 539; *Ex parte Savin*, 131 U.S. 267. See also *In re Oliver*, 333 U.S. 257, 273–278.

[3] The contempt charge signed by the judge reads in part as follows:

"It therefore appearing . . . that the said Patrolman Lee Roy Murchinson [*sic*] has been guilty of wilfull and corrupt perjury, which perjury has an obstructive effect upon the judicial inquiry being conducted by this court and the said Patrolman Lee Roy Murchinson [*sic*] obstructed the judicial function of the court by wilfully giving false answers as aforesaid, and did also tend to impair the respect for the authority of the court, all of which perjury and false answers given by the said witness aforesaid was committed during the sitting of, in the presence and view of this court and constitutes criminal contempt;

"It is therefore ordered that the said Patrolman Lee Roy Murchinson [*sic*] appear before this court on the tenth day of May, 1954, at 10:00 o'clock in the forenoon and show cause why he should not be punished for criminal contempt of this court because of his aforesaid acts."

[4] *In re White*, 340 Mich. 140, 65 N. W. 2d 296; *In re Murchison*, 340 Mich. 151, 65 N. W. 2d 301.

[5] 348 U.S. 894.

[6] That we lay aside certain other federal constitutional challenges by petitioners is not to be taken as any intimation that we have passed on them one way or another.

[7] See, *e.g.*, Note 50 L. R. A. (N. S.) 933, 953–954, 970, 971.

[8] Apparently the trial judge here did consider himself a part of the prosecution. In passing on a request by Murchison's counsel for a two-day postponement of the contempt trial the judge said, "There are two points that suggest themselves to me.

"One is that if the respondent is going to claim that he was in Shrewsberry, Ontario, Canada, on March 9, 1954, that *we* ought to be furnished with information so that *we* could between now and two days from now, which I am going to give you, *we* could do some checking and investigating *ourselves*." (Emphasis supplied.)

Because of the judge's dual position the view he took of his function is not at all surprising.

[9] See, *e.g.*, *Queen* v. *London County Council*, [1892] 1 Q. B. 190; *Wisconsin ex rel. Getchel* v. *Bradish*, 95 Wis. 205, 70 N. W. 172.

[10] See *Hale* v. *Wyatt*, 78 N. H. 214, 98 A. 379. See also, Witnesses—Competency—Competency of a Presiding Judge as Witness, 28 Harv. L. Rev. 115.

Mr. ERVIN. I have pointed out the fact that here you have a Commission, with all of the persons who work with the Commission under its authority; they are subject to its orders. It acts as an investigator, it acts as a prosecutor, it acts as a jury, it acts as a judge, and I might say it acts as an executioner also—in the year of our Lord 1970.

This bill in its operation, would virtually destroy the federal system, because it would give to a Federal agency complete authority over the hiring practices of States. It would give them the authority to determine who is to be professor of mathematics, who is to be professor of philosophy, and who is to be professor of any other course of study of any institution anywhere in our land, notwithstanding that such institution may be private, and notwithstanding the fact that such institution may be supported by a religious denomination. I submit that that is clearly a spiritual and constitutional violation of the provision of the first amendment which undertakes to give to every person the right to freedom of worship and religion.

Not only that, this bill is honeycombed with numerous bad procedural provisions. It gives the Equal Employment Opportunity Commission the right to appoint counsel for the claimants. It gives them the right to finance the cases of the claimants; but if the defendants win the case, they get nothing in return.

This bill ought to be called an answer to the ambulance-chasing lawyer's prayer. It has a provision that every time a charge is preferred by any person who has been allegedly denied employment, or been denied promotion, or been fired because of his race, his color, his national origin, his creed, or his sex, this Commission can grant as much as $1,000 out of the taxpayers' pockets to finance his litigation. The taxpayers, already overburdened, do not desire such treatment from their own Government.

I repeat again there is no human mind gifted with a better answer to the ambulance-chasing lawyer's prayer. That is exactly what this bill would be. It is honeycombed with injustices from one end to the other. It has a provision that if an individual is involved in one of these proceedings, no matter whether he is willing to abide by the decision or not, he has to go into court and contest the matter, or the Commission can go into court if the accused does not respond for 60 days, and the court is disabled—disabled, mind you—from doing anything except ratifying in full what the Commission decided, no matter how unconstitutional it is and no matter how unjust it is. That is, indeed, an act of tyranny.

That is the kind of bill we have here. We have the usual provision which is put in bills by those who do not believe in jury trials in this land any more, that the findings of fact of the Commission shall be binding on the courts if there is any substantial evidence to support them, which means that if 5 percent of the evidence tends to support one side of a case and 95 percent the other side of the case, and the Commission accepts the 5 percent, the courts are powerless to do justice in that case. They are bound by the findings of the Commission.

The tragedy about these things is—and I say this with reluctance, but with what I believe to be truth—that people who are appointed to commissions of this kind are crusaders of the highest degree; if they were summoned upon a petit jury in any court in this land, they could be stood aside for bias as being unfit to serve as jurors. Yet this is the kind of men picked to compose these commissions. This is prostitution of judicial process. There is a pretense that judicial process is being observed, but everything in the bill is calculated to prevent justice being done, and to require that the case be decided on one side to the exclusion of the other.

I have been and shall always be against a bill of this type. I do not think that the States even have knowledge of the pendency of this bill, because the report shows that virtually all the witnesses who testified before the committee were crusaders on the Federal level, who were seeking, in most cases, an aggrandizement of Federal power.

This is a bill that would permit great tyranny. It is inconsistent with the federal system of government. It is inconsistent with the right of local self-government. It is inconsistent with the right of people to maintain their own educational institutions.

Furthermore, it constitutes an assault, in substance, upon the free enterprise system, because it brings within the coverage of the bill every little businessman from the Atlantic Ocean out to Hawaii and from Canada down to the Gulf of Mexico who employs as many as eight persons. It provides for giving those who seek to prosecute him a thousand dollars, but it gives him no help. It gives him nothing if he wins his case.

I respectfully submit that this is a bill which the Senate of the United States ought not to approve. I shall try to remove some of its inequities tomorrow.

I do not think that under a bill like this, a commission should be permitted to give $1,000 of the taxpayers' money to anyone who will present a claim; it goes further than that. It says the Commission can perform these services for him. In other words, the Commission can act as his lawyer and prepare his testimony if the Commission wishes to, instead of giving him the $1,000.

I think if we are going to have a bill like this, we ought to have a general counsel who will say which complaints are justified, and permit him to prosecute the claims, instead of allowing private ambulance-chasing lawyers to do so.

If time permitted, I could point out other inequities in this bill, but I have suggested a few of them. Instead, I shall summarize, for the Senate, the inequities and shortcomings of the bill.

SUMMARY OF SHORTCOMINGS OF S. 2453

Mr. President, by way of summary, let me briefly list several shortcomings of S. 2453.

First. S. 2453 as reported initially makes no provision for separation of functions. Under the increase in power given the Equal Employment Opportunity Commission, the Commission will be judge, jury, and prosecutor of actions brought before it.

Second. Under the bill's provisions, the

rules of evidence applicable to Federal district courts will be followed at the Commission's hearings only "so far as practicable." This language provides a powerful loophole to completely disregard due process of law.

Third. The often harassing Commissioner's charge will be broadened to allow any "officer or employee" of the Commission to file a charge "upon the request of any person claiming to be aggrieved." Potential for abuse of this power is clear and dangerous, as an employer, for one, may never know the identity of his accuser. Second, the provision would permit an attack on an employer's entire employment structure by an already biased Commission investigator, regardless of the limited nature of one employee's complaint filed with the EEOC.

Fourth. It is unclear whether the formal complaint issued by the EEOC after the failure of conciliation will be limited to the charge already filed with the Commission.

Fifth. Although there are provisions for the financial assistance of charging parties for prosecution of their charges, there is no like provision for the financial assistance for the defense of the small employer. If an employer should be found blameless, there is no provision for the reimbursement of his legal costs. Inasmuch as the EEOC permits labor unions to file charges as aggrieved parties, potential for coercion of small employers is great.

Sixth. The bill is inadequate in other regards. Employers may still find themselves defending identical charges before a multitude of local, State, and Federal agencies simultaneously. At present, employees who believe that they have been discriminated against may proceed through the EEOC, through State and local fair-employment-practice commissions, and through the NLRB, among others. Federal courts have also provided employees with recourse under the Civil Rights Act of 1866 as well. Employers may further find themselves harassed when visited by officers of the OFCC and other Federal compliance offices, regarding the same problem.

Seventh. EEOC becomes the NLRB of the civil rights area. The Commission would have the authority to issue cease-and-desist orders that would become self-enforcing within 60 days if unchallenged. EEOC will further be given the broad subpena power of the NLRB.

Eighth. Coverage of the Civil Rights Act will be expanded, to cover employers of eight or more employees, as well as employees of Federal, State, and local governments. The Commission is presently ineffective in dealing with the workload before it, as shown by its adoption of backlog procedures a few months ago. As noted by Senators DOMINICK, MURPHY, and SMITH of Illinois in the report accompanying S. 2453, by the addition of just five words, "'governments, governmental agencies, political subdivisions, 10 million additional persons will be covered out of a total workforce of about 80 million in this country." It is clear that the already immense workload of the Commission will be drastically increased.

EEOC'S OWN REPORT WARNS OF S. 2453

Mr. President, a copy of an internal memorandum prepared by the Equal Employment Opportunity Commission's Office of Legislative Affairs has come into my possession. This should astound the Members of the Senate. The office has some interesting things to say about the increased workload which will be generated by lowering the number of employees required for EEOC jurisdiction from 25 to eight. I read from the memorandum:

> This would mean an additional 9½ million employees and 667 thousand employers covered. In terms of the Commission's present jurisdiction, employees covered would be increased by approximately 20 percent and employers by 200 percent. Since the most accurate measure of the Commission's workload is respondent cases, it is evident that adoption of the proposal would considerably add to the Commission's already heavy workload in a way that would not contribute to the cumulative effect of decisions involving large employers. Efficiency in gaining the greatest results from relatively few cases would thus be curtailed.

This same EEOC report went on to warn of the workload increase that will result if jurisdiction is extended over State and municipal employees, and it gives us a good estimate of how many additional employees will be covered from this source. It says:

> This would provide coverage to approximately 9,358,000 full and part-time employees of 81,303 governmental units. In terms of EEOC's present coverage, it would mean expanding employees covered by approximately 20 percent, and employers by approximately 25 percent. Thus the workload increase would be substantial, a consideration that cannot be treated lightly.

Another provision which drew a warning from the EEOC's Office of Legislative Affairs is that which would give the Commission authority to demand access at any time to records required to be kept by title VII. The report says:

> This was the power originally assigned to the Attorney General in S. 2029 in connection with the pattern or practice suit, which latter is deleted from the Title by this Bill. The Commission's investigatory power would thus be considerably increased. However, careful consideration should be given to the provision that allows disclosure of information thus gained to the Congress or to a government agency. This provision could lead to demands for information from Congressmen interested in going on fishing expeditions in other members' districts, or desirous of kibitzing the Commission in its operations.

Mr. President, I appeal to the Senate to reject this bill, which, as I have stated, constitutes a drastic assault upon our federal system of government, which constitutes a denial of the rights of educational institutions to conduct their own affairs free from Federal interference, which interferes with the freedom of contract and the rights of all the small businessmen in the United States who employ as many as eight persons, and which constitutes a drastic prostitution of the judicial process.

This is a bill that has no place in a free society, because it makes the EEOC the most powerful institution of the Federal Government, because it gives them power over the hiring practices of virtually every businessman in the United States, who is already subject to harassment from hundreds of Federal bureaucrats. Our Nation's businessmen deserve better treatment.

Mr. WILLIAMS of New Jersey. Mr. President, will the Senator yield?

Mr. ERVIN. I yield.

Mr. WILLIAMS of New Jersey. Before the Senate does have an opportunity to accept the bill before it, is it correct that the Senator from North Carolina has one amendment?

Mr. ERVIN. I have one amendment to create the Office of General Counsel for the EEOC, and then I have a series of amendments which I expect to ask the Senate to vote on en bloc.

Mr. WILLIAMS of New Jersey. An amendment has been added, offered by the distinguished Senator from Ohio, dealing with the Office of General Counsel.

Mr. ERVIN. I am not aware of the nature of that amendment.

Mr. WILLIAMS of New Jersey. It is in the bill at this point, and it does create the Office of General Counsel in the EEOC, much in analogy, to the National Labor Relations Board.

Mr. ERVIN. I thank the Senator from New Jersey for calling that to my attention, and I will see whether it covers the ground in as adequate a manner as my own amendment does.

Mr. WILLIAMS of New Jersey. The Senator from North Carolina has one other amendment, as I understand it.

Mr. ERVIN. There will be a series of amendments which I expect the Senate to vote on en bloc.

Mr. WILLIAMS of New Jersey. That means one vote, then.

Mr. ERVIN. Yes. Plus my possible amendment in the event that the amendment offered by the distinguished Senator from Ohio does not adequately do the job of providing for the position of general counsel. If it does not, I will offer that amendment.

Mr. WILLIAMS of New Jersey. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. COOK). The Senator will state it.

Mr. WILLIAMS of New Jersey. There is a time limitation, is there not, on the amendment that would be offered?

The PRESIDING OFFICER. The unanimous-consent agreement is that the amendments of the Senator from North Carolina shall be limited to 1 hour and 30 minutes, 1 hour to the Senator from North Carolina and 30 minutes to the manager of the bill.

Mr. ERVIN. I assure the Senator from New Jersey that that will be adequate time, because many of the things I intended to say in offering the amendments have been said by me in general opposition to the bill.

Mr. WILLIAMS of New Jersey. I thank the Senator.

---

## ORDER FOR ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 o'clock tomorrow morning.

The PRESIDING OFFICER. The Chair

calls the attention of the Senator from West Virginia to the fact that earlier today the majority leader asked unanimous consent, and it was granted, that the Senate come in at 12 o'clock noon tomorrow.

Mr. BYRD of West Virginia. I am aware of that.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER FOR A BILL TO BE HELD AT THE DESK

Mr. JAVITS. Mr. President, having spoken with the office of the Senator from Nebraska (Mr. HRUSKA) and just having spoken with the Senator from Mississippi (Mr. EASTLAND), chairman of the Committee on the Judiciary, I ask unanimous consent that H.R. 18126, to amend title 28 of the United States Code to provide for holding district court for the eastern district of New York at Westbury, N.Y., which has been sent to us by the House, may be held at the desk, without being referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the unfinished business, Senate Joint Resolution 1, is laid aside temporarily on tomorrow, it remain in that status until the conclusion of morning business on Friday morning next.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. FANNIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## S. 4419—INTRODUCTION OF THE VOLUNTARY HEALTH BENEFITS ACT OF 1970

Mr. FANNIN. Mr. President, I introduce a bill and ask that it be appropriately referred.

The PRESIDING OFFICER. Without objection, the bill will be received and appropriately referred.

The bill (S. 4419) to provide for medical and hospital care through a system of voluntary health insurance, to establish a national program for protection against catastrophic illness, to provide for peer review of health services provided under Federal programs, and for other purposes, introduced by Mr. FANNIN, was received, read twice by its title, and referred to the Committee on Finance.

Mr. FANNIN. Mr. President, Americans spend in excess of $60 billion a year on health care.

With today's inflation, many of our citizens are hard-pressed to find the money to pay medical bills or health insurance premiums.

Government deficit spending caused the overall inflation; poorly conceived and poorly executed Government programs in the past decade accelerated the inflation in medical costs.

Because of today's high medical costs, it is practically impossible to have peace of mind unless your family is adequately protected by health insurance. And yet, the cost of adequate insurance is such that those who need it most can afford it least.

That is why I introduced S. 2705 last year.

My bill is designed to overcome the abuses apparent in the medicaid program and to make private health insurance available to all Americans who want it.

S. 2705 would make it possible for every individual and family in the United States to purchase an adequate, approved health protection plan from a private insurer.

There are many excellent private enterprise medical and hospital insurance services available.

Federal assistance would be on a sliding scale and would be in the form of tax credits for persons with taxable income.

I am continuing to push for passage of S. 2705, and today I am offering an expanded version of the bill.

One of the provisions would provide national catastrophic illness protection.

Under this proposal, the Federal Government would act in cooperation with State insurance authorities and the private insurance industry.

State and Federal Governments together would reinsure and otherwise encourage issuance of private health insurance to make adequate health protection available to all Americans at a reasonable cost.

This program would call for State plans which would be administered by State authority. Extended health insurance would be made more readily available, especially to those who would otherwise be unable to secure adequate and complete protection at rates they could afford.

Plans could vary from State to State.

Premium rates would be set by the Secretary of Health, Education, and Welfare.

Deductibles would be based on personal income.

No deductible would be imposed for the first $1,000 of adjusted, or taxable, income. There would be a deductible of 50 percent of a year's adjusted income for an individual or family falling between $1,000 and $2,000, plus the total of such adjusted income in excess of $2,000.

If a State could not carry out an insurance program, the Federal Government could provide the service. In such case, the Government would utilize insurance companies to the maximum possible extent.

As part of the Federal program there would be a national catastrophic illness insurance fund. It would make payments required under reinsurance contracts, premium equalization payments, and administration expense payments.

It would be credited with reinsurance premiums, fees, and other charges, interest on investments, advances from appropriations and other receipts.

The second provision I am introducing to my universal health protection bill is aimed at keeping medical costs down and the quality of service up.

It would create a system for physicians to police their own ranks.

The Secretary of Health, Education, and Welfare would enter into agreements with State medical societies for establishment of peer review organizations.

Each State would have a five-member commission established by the medical society. There also would be a nine-member advisory council.

The commission would divide the State administrative areas with three-member local review panels and five-member local advisory panels for each area.

Members of the commission and panels would be doctors of medicine or osteopathy. The advisory council would have representatives of consumers, health care providers, and insurance carriers.

Each panel would consider and review information supplied by individuals, institutions, hospitals, Government agencies and carriers.

In addition, the panel could make investigations by random selection.

The panel could hold hearings on utilization, charges and quality of services provided to a patient or patients. The panel could recommend disciplinary action to be taken when a provider of medical service is found to have been in error.

The commission would then consider the recommendation and accept, reject, or modify it. If disciplinary action is warranted, the recommendation would be forwarded to the Secretary.

It would be up to the Secretary to impose, reduce, or reject the penalty.

Of course, the right of judicial review would be provided.

Mr. President, both of these provisions expand S. 2705, which I sponsored.

Today I also am introducing another health care amendment, this one to the social security bill.

It was reported recently that President Nixon is seeking the development of new approaches to make Americans the most healthy people on earth.

With the costs of medicine today, it is obvious that we need to encourage the development of new ideas in providing better health care at lower cost.

Two doctors in Phoenix have met this problem head on.

Dr. John L Ford and Dr. Wallace A. Reed became concerned about the fact that once inexpensive minor surgery is now costing patients hundreds of dollars.

They set out on their own—without Government subsidy—to cut the cost of minor operations.

The two doctors developed the concept of a privately run ambulatory surgical facility.

In Phoenix, it is known as Surgicenter.

The facility is equipped to handle 1-

day surgical cases in which a person may go home safely after an operation without overnight hospitalization.

Surgicenter is intended to offer quality medical care at the lowest possible cost.

Surgicenter escapes many costs of a regular hospital because it can eliminate services and facilities required in a 24-hour operation. It has no cafeteria, no overnight facilities. It does not require round-the-clock X-ray or laboratory services, and it can make maximum use of disposable equipment to save laundry costs.

In the past, most insurance companies required their clients to be hospitalized if they were to be covered for surgical expenses.

Private insurance companies are now changing their thinking on this matter. They are finding the requirement for hospitalization can cause unnecessary expense. In addition, it takes up hospital beds which may be needed for more serious cases.

Thus, some private insurance carriers have provided coverage for subscribers who choose to have their operations in Surgicenter.

If the private insurance industry sees this as a good way to render service and save money, I see no reason why the Federal Government should not follow the example.

The bill I am offering today would provide that medicare coverage be extended to approved ambulatory surgical centers for specified purposes.

The legislation would require that the quality of medical care at such centers be of the same high caliber as that offered at hospitals.

Surgery must be performed by a physician who is authorized to perform such procedure in an area hospital.

Anesthesia must be administered by a licensed anesthesiologist.

The center must be equipped to perform diagnostic X-ray and laboratory examinations in connection with the surgery.

Professional registered nurses must be on the job.

Emergency equipment must be available to handle any foreseeable complications.

The Phoenix Surgicenter, located near Good Samaritan Hospital, has now been in operation almost 8 months.

The founders report there has been greater utilization by medicare patients than had been anticipated.

They do not see why medicare patients should be penalized for using the money-saving service.

I urge my fellow Senators who are concerned about cutting the skyrocketing medical costs to join me in supporting this program. It is a new approach that shows great promise.

One indication of this is the brisk business the Surgicenter did in its first weeks of operation.

Surgicenter opened February 12. By March 23, the facility had carried out 196 procedures.

Drs. Reed and Ford reported:

On no occasion was there a need for a direct admission from Surgicenter to a hospital. There were 12 Medicare patients, the oldest being 88. The youngest patient was a 4-month old child who required a probing of the tear ducts. One hundred thirty-one of the procedures were done under general anesthesia; sixty-four were under local; and in one instance (where a child had eaten breakfast), a regional block was performed.

As nearly as we can ascertain, the reception on the part of patients as well as their attending surgeons has been excellent.

The facility has continued to be a success.

This is strong evidence that Surgicenter is a promising development in medicine and a concept we should take advantage of.

## ORDER FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the disposition of the reading of the Journal on tomorrow and upon the disposition of any unobjected-to items on the legislative calendar, there be a period for the transaction of routine morning business with statements limited therein to 3 minutes.

The PRESIDING OFFICER (Mr. CRANSTON). Without objection, it is so ordered.

## ORDER FOR THE PENDING BUSINESS TO BE LAID BEFORE THE SENATE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that at the conclusion of the morning business on tomorrow, the unfinished business, Senate Joint Resolution 1, be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, what is the understanding with reference to the time on the amendments to pending business, S. 2453, to be offered by the able senior Senator from North Carolina (Mr. ERVIN)?

The PRESIDING OFFICER. There will be 1 hour allotted to the Senator from North Carolina (Mr. ERVIN) and one-half hour to the Senator from New Jersey (Mr. WILLIAMS).

Mr. BYRD of West Virginia. Is that the agreement on each of the Senator's amendments?

The PRESIDING OFFICER. The Senator is correct.

## UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on all other amendments the debate on each amendment be limited to 1 hour, the time to be equally divided and controlled between the mover of the amendment and the manager of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time on the bill be limited to 1 hour, the time to be equally divided and controlled between the manager of the bill, the Senator from New Jersey (Mr. WILLIAMS), and the minority leader or his designee.

The PRESIDING OFFICER. Without objection, it is so ordered.

The unanimous consent agreement was later reduced to writing as follows:

*Ordered*, That during the further consideration of the bill (S. 2453) to promote equal employment opportunities for American workers, (except amendments by the Senator from North Carolina, Mr. ERVIN on which there will be 1½ hours each to be divided and controlled—1 hour to Mr. ERVIN and ½ hour to Mr. WILLIAMS of New Jersey) debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment or motion and the manager of the bill (Mr. WILLIAMS of New Jersey).

*Ordered further*, That on the question of the final passage of the said bill debate shall be limited to 1 hour, to be equally divided and controlled, respectively, by the manager of the bill (Mr. WILLIAMS) and minority leader or his designee: *Provided*, That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

## ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ADJOURNMENT TO 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 5 o'clock and 14 minutes p.m.) the Senate adjourned until tomorrow, Thursday, October 1, 1970, at 11 a.m.

## CONFIRMATIONS

Executive nominations confirmed by the Senate September 30, 1970:

DEPARTMENT OF LABOR

Malcolm R. Lovell, Jr., of Michigan, to be an Assistant Secretary of Labor.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Wilmot R. Hastings, of Massachusetts, to be General Counsel of the Department of Health, Education, and Welfare.

# EXTENSIONS OF REMARKS

## TRANSITION FROM A WARTIME TO A PEACETIME ECONOMY

### HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. FREY. Mr. Speaker, we are presently in a transition from an inflated, overheated, wartime economy to a more stable, balanced, peacetime economy. The success of our Vietnamization program among other things, has enabled us to reduce both the amount of our defense spending and the size of our military. This has also resulted in a reduction of the number of people employed in the defense industry. Our desire to solve the internal problems of this Nation, have resulted in a shift in our national priorities. For the first time in 20 years we will spend more—41 percent—on human resources than on defense—37 percent. While we must maintain a defense capability second to none, I believe all Americans are pleased with this shift in our priorities. No one likes the hardships caused by the shift from a wartime to peacetime economy. However, no American wants high defense spending and employment at the cost of American lives.

In yet another area, space cutbacks have been severe. In fiscal year 1966 we spent $5.9 billion on space. Since that date the budget has declined each year until fiscal year 1971, when the administration budget request was $3.33 billion. Unemployment in the space industry has fallen from 420,000 in 1965 to 200,000 by the end of the Johnson administration. Today we have approximately 150,000 space workers. This peaceful program has resulted in more technological progress and benefit to man on earth than any other like program in our Nation's history.

The fact remains, that whatever the reasons, employment and job opportunities for engineers, scientists and technicians in the research and development fields of defense and space have fallen, and these great teams we have put together are being destroyed. The destruction of our research community represents a critical loss of talent to this Nation, and if not stopped will mean the loss of economic and technological progress for this country.

Thousands of these economic casualties of our defense and space industries have given unselfishly of themselves in the past years. In my district, for example, thousands of space workers have worked around the clock, 7 days a week, at the peak of our space probram to achieve this Nation's most challenging goal—putting a man on the moon. As we all know, they were successful, and the course of history has been changed. The same can be said of many of the individuals in the Nation's defense industry. We must turn this drive, this dedication, this know-how into other areas to conquer the problems that exist. What tremendous opportunities exist in the field of health research, environmental research, and oceanography—just to name a few.

Legislation I recently introduced is directed to converting these scientists, technicians and engineers from defense and space, to such new and challenging fields. The bill, titled the "Conversion Research and Education Act of 1970," provides for retraining in preparation for these job opportunities. The bill calls for a total of $450 million to be authorized over a 3-year period, for specific programs of education research and assistance to small business firms. One hundred million dollars would be provided the first year, $150 million the second year, and $200 million the third year. The National Science Foundation is assigned the task of sponsoring research on conversion and of developing and administering retraining programs. The Department of Commerce, through the Economic Development Administration, is assigned the responsibility of sponsoring retraining programs for management personnel. The Small Business Administration has the responsibility of assisting small business firms in achieving conversion, by providing technical grants, loan guarantees and interest assistance payments. Furthermore, the Advisory Committee of Industrial Scientists and Educators is established to help shape and guide the program.

The transition from a wartime to a peacetime economy is a hard one. We have an obligation to those who have already given so much. There is no question that these engineers, scientists and technicians need our help. There is also no question that our country needs their help.

## ALLEGHENY AIRLINES' OUTSTANDING GROWTH

### HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, September 30, 1970*

Mr. SCOTT. Mr. President, it gives me great pleasure to invite the attention of Senators to the outstanding achievement of Allegheny Airlines under the guidance of its president, Mr. Leslie O. Barnes. During the month of August 1970, Allegheny Airlines exceeded 100,000 boardings at the Greater Pittsburgh Airport. This is the first time in the history of that airport that any airline has even approached this figure. The remarkable growth is due, in part, to Allegheny's continuous reequipment to jets and improved service to its market. Allegheny's fine accomplishment is, indeed, noteworthy.

## PRESIDENT'S TRIP ABROAD VERY TIMELY

### HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. GERALD R. FORD. Mr. Speaker, President Nixon's trip to Western Europe and the Mediterranean is an extra effort to strengthen the structure for peace and to give further impetus to an era of negotiations. That his trip could not have been more timely is pointed out in the following editorials from the Cincinnati Enquirer, the Miami Herald, the Portland Oregonian, and the Wichita Eagle:

[From the Cincinnati Enquirer, Sept. 19, 1970]

MR. NIXON ABROAD

There can be no doubting that President Nixon's forthcoming visit to Spain, Yugoslavia and Italy is a move calculated to demonstrate the United States' continuing concern not only for the Middle East, but also for the Mediterranean.

In more nearly orthodox days, it was sufficient for a great power to "show the flag"; that is, to dispatch a few naval vessels to an actual or potential trouble spot to demonstrate the great power's close interest and attention.

The U.S. flag, of course, is already visible in the Mediterranean in the form of the Sixth Fleet. But so, unhappily, is the Soviet flag. Indeed, the emergence of Soviet power first in the Middle East and then in the entire Mediterranean is one of the most disquieting developments of the last several years.

In pressing outward toward the Mediterranean, the Soviet Union is realizing a dream that had its origins in the days of czarist Russia. It is possible also that the Russians have been misreading aspects of the continuing domestic debate about the U.S. role in Vietnam. If the United States doesn't care about the future of Southeast Asia, as some of President Nixon's critics contend it shouldn't, perhaps it will be similarly uninterested in the future of the Mediterranean, and if Americans are unwilling to assume risks to keep Vietnam free, maybe they will be similarly unwilling to take risks in behalf of its nominal allies in Southern Europe. Or so the Russians may be imagining.

President Nixon's visit to one of the world's most powerful naval concentrations can help to right such faulty impressions.

His trip to Spain underscores the recent renewal of the agreement that permit the maintenance of U.S. bases on Spanish soil. And the visit to Italy serves as a reminder of continuing U.S. support at a time when Italian Communists have been growing in strength and influence.

Just as significant as any of the other points on the President's travel plans will be his visit to Yugoslavia. Like his earlier visit to Romania, Mr. Nixon's journey to see President Tito helps to underline the basic ideological differences that divide the Communist world. Marshal Tito's long-standing friendship with Egypt's President Gamal Abdel Nasser makes the Yugoslav stop doubly significant.

Mr. Nixon's ventures at personal diplomacy

have been strikingly successful and productive in the past. None had stakes more far-reaching than this one.

---

[From the Miami Herald, Sept. 17, 1970]

MR. NIXON'S TRIP ABROAD IS TIMELY—AND NECESSARY

President Nixon's projected second visit to Western Europe and the Mediterranean in little more than a year has been long rumored and is scheduled now for Sept. 27. The timing, the itinerary and the strategic purposes could not be better.

Mr. Nixon's ports of call include Yugoslavia, the second Communist country he will have visited; Spain, which is an anxious host desirous of membership in NATO; the Vatican, which has interceded in the Palestinian hijackings; Britain, which has a new government and, most significantly, the U.S. Sixth Fleet which has brought the American presence to the Mediterranean.

These calls are more than state visits. They are, as the White House puts it, "an effort to strengthen the structure for peace and give impetus to the President's efforts to bring about an era of negotiations."

We beg to put it in even simpler terms. In times past Presidents have gone abroad to end wars. In this instance a President will journey to try to prevent one.

The focus of that effort is the Middle East. It is drifting ominously toward war born of monstrous intrigue and headless frustration.

The Suez ceasefire, from which Egypt has taken leave, is about to come apart. Both sides now stand reliably accused of breaking the terms of agreement worked out by the United States which, willy-nilly, is in up to its hips.

In Jordan King Hussein has had to put the military in power and impose martial law to end the threat of civil war. He may not succeed against a powerful, Chinese Communist-oriented faction of the Palestine refugees which managed to seize one Jordanian town, and then other measures will be needed to preserve Jordan as a buffer state.

The Jarring mission again is aborted. One design of the terrorists who still hold 55 hostages from airplane hijackings was to frustrate the very peace negotiations which the United States had arranged, and it must be admitted they have succeeded so far.

All of his other visits aside (and each is important), the troubled waters of the Mediterranean are Mr. Nixon's greatest challenge as he must immerse his country in their problems. His presence there, and not coincidentally on the deck of a U.S. warship, should drive home the gravity with which this country regards a threat to world peace and its own security.

"Negotiations," of course, are Mr. Nixon's long suit. His country must assure him that he leads from power, morally and physically.

---

[From the Wichita Eagle, Sept. 21, 1970]

ON TO BELGRADE

There will be those Americans, no doubt, who will assail President Nixon for his decision to visit Tito in Yugoslavia during his upcoming European trip.

The scrupulous can find much to object to in Tito. What he's running in Yugoslavia is hardly a democracy, though it's far freer than most countries in the Communist world, and its independence from Moscow for many years has lent it a rather special place in the world.

The fact is that Tito is an extremely pragmatic, shrewd and skillful leader. He fancies himself to be the strongest man in the so-called "Third World," the nations that have not chosen up sides in the power struggle between the United States and Russia.

Many of the things he will have to say to Mr. Nixon probably will not be flattering to the presidential ego or sense of national pride. But they will be expressions—and probably candid ones—of a point of view that deserves to be heard.

It seems probable that Mr. Nixon may learn more from his visits with Tito than he will on most of the other stops on his trip. And since learning apparently is his purpose, it's hard to find any sound reason why he shouldn't make a stop in Belgrade.

---

[From the Portland Oregonian, Sept. 18, 1970]

STICK AND SOFT SPEECH

The pre-jet showing of the flag on battleships to demonstrate a nation's interest in and refusal to be dealt out of various parts of the world has been supplemented in recent years by globe-girdling journeys by heads of states or other high-ranking officials. Kings, queens, presidents, prime ministers, commissars and special envoys criss-cross the oceans and the continents to engage in "exchanges of views" with their counterparts, to make speeches, to be photographed and televised and to issue communiques that say little or nothing. Sometimes the visits are in the nature of admonitions not to get out of line. Sometimes they are simply the good-will missions they purport to be.

President Nixon's forthcoming trip to Italy, Spain, Britain and Yugoslavia, with possibly a stop or two elsewhere, appears to have both "big stick" and "speak softly" aspects. The challenge issued to the West by the Soviet Union's buildup of power in the Mediterranean unquestionably influenced Mr. Nixon's decision to visit that area. His review of the U.S. Sixth Fleet exercises and visit to the NATO southern headquarters at Naples will underline the powerful presence of U.S. and allied forces in that area. By visiting Francisco Franco, the President will point up this country's renewed military agreement with Spain where the Russians are attempting to gain a foothold.

But Mr. Nixon's main purpose no doubt is the one stated by a White House spokesman: "To strengthen the structure for peace and to give impetus to the President's efforts to bring about an era of negotiations." The peace structure is rapidly crumbling around the Mediterranean.

The visit with Marshal Tito of Yugoslavia could be a replay of Mr. Nixon's highly successful stop-over in Romania a year ago, where enthusiastic crowds greeted capitalism's most prestigious representative in what the Kremlin considers its special preserve. But Tito represents much more than an opportunity to needle the Soviets. He is a close friend and adviser of President Gamal Abdel Nasser of the United Arab Republic. He could play an important role in getting the Middle East peace effort back on the track. Aging Marshal Tito is pictured as eager to end his independent career as a peacemaker whose efforts will culminate in a state visit to Washington.

Commentators in Washington point out that there will be a political fallout beneficial to the President and the Republican Party in the November congressional elections from the highly publicized trip. His visits to Italy and to Pope Paul VI may draw some Italian-American and Catholic voters from the Democrats.

However, Mr. Nixon must be credited primarily with attempting by his presence and persuasion to rescue the U.S.-instigated peace effort from obvious threat of failure. All Americans should wish him well.

## CAN WE CONTINUE TO LIVE UNDER THE PRESENT TRADE AGREEMENTS?

---

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. DENT. Mr. Speaker, since the trade bill will soon be coming before the House, I thought the attached broadcast by Ed Wimmer, vice president and public relations director of NFIB—National Federation of Independent Businesses, Inc.—Covington, Ky., would be of interest to the Members of the House.

I believe it pretty well answers the question, "Can we continue to live under the present trade agreements?" It is my belief, and many others, that we cannot:

WORLD EXPORT-IMPORT CRISIS SEEN IN U.S. FOREIGN TRADE POLICY

AMERICANS SUPPORT SLAVE LABOR; DENT SEES "BLUEPRINT OF DISASTER"

Few threats to this country are more menacing than the present destruction of one industry after another by the worst foreign trade policy this country has ever had, and which no other country in the world would think of adopting.

There probably is no subject that is more steeped in blind selfishness, international humbug, public misinformation, and biased press reports than the controversy over whether or not this country ought to save itself from submergence in a sea of low wage, low taxed, subsidized imports, or assert ourselves as a leader in bringing order out of a pending world-wide trade upheaval.

Hon. John Dent (M.C., Pa), whose colleagues have tabbed him as the "most eloquent and most informed member of Congress on foreign trade policy," believes as we do, that no trade is good trade that isn't fair and free, and profitable to all parties engaged in any exchange of goods and services, whether domestic or foreign. In a recent speech on the floor of the House, during a debate on requests for more money for the International Monetary Fund, World Bank, International American Development Bank, and the Asian Development Bank, in which he was joined by H. R. Gross (M.C., Iowa), and other members of Congress, Mr. Dent declared:

"For goodness sake, is there someone in this government who has a blueprint in some dusty hall, with a little light which only shines now and then; a blueprint of the United States pinpointed for destruction? I say this because no one could make the mistakes we have been making without a blueprint."

Following his battle on the floor of the House, the Pennsylvania firebrand appeared before the hearings of the House Ways and Means Committee on tariffs and trade proposals, which were held from May 11 to June 25, 1970, under the brilliant Chairmanship of Wilbur Mills (M.C., Ark.). Under his guidance and the questioning of other members of the Committee, a story of trade policies that are carrying us toward a "Pearl Harbor" of job and industry destruction that will make the holocaust of Honolulu look like a sputtering Japanese firecracker if it is ever fully understood.

Fears of such possibility are unquestionably held by a growing number of both conservatives and liberals in the House and Senate, and there is a deep uneasiness de-

veloping in other areas of government that the gluttony of some importers, both American and foreign, who are enriching themselves on job and industry destruction in the United States, will do anything to continue our present policy.

There also are extreme pressures being put on Congress by influential people in the State Department, and the free trade or no trade editorial pressures of major newspapers are so great that many who now favor trade restrictions, could change their vote.

This would be a tragedy, for another year of what some areas of the economy are suffering, could result in a shambles of joblessness and empty factories that could haunt us to our graves.

In my own testimony, under letters to the Japanese government urging it to take steps to protect themselves by showing a concern for the unhealthy marketing conditions they are creating, I tried to point out that if they fail to cut back on their drive to absorb one American market after another, they will be committing a form of 'hari-kari'. We reminded the Japanese government that America had built up their economy after the war from which they could not have recovered by themselves, and that they are now using our know-how, our machines and aid, to bring serious trouble to both our nations.

They showed no sign of heeding our appeals or the appeals of our own government, but indicated instead that they were about to take an even bigger share of our automobile sales, television business, transistors, woolens, sewing machines, toys, shoes, tape recorders, jewelry, watches, dishes, linens, plyboard, tile, glass—you name it.

Speaking for his own state of Massachusetts, Congressman James Burke noted that "55 shoe factories had closed in 1969," and that "77,000 workers had lost their jobs in the textile industry." Mr. Burke spoke of more than 50 umbrella manufacturers who had quit business, with one of the only two that are left, tottering on the verge of bankruptcy. This Massachusetts legislator and member of the Ways and Means Committee, wanted to know what happens to these workers, especially those trained in handcraft and operation of machines who are over 50 years of age, and who will receive only 52 weeks of severance pay. Mr. Burke asked one of the witnesses appearing before the Ways and Means Committee:

"We are faced with competition from Korea where children are paid 6¢ an hour. Women 7¢, and men 10¢ an hour for a 10-hour days. We have exported our technology overseas, and American investors are sending their money overseas to produce goods to ship back here to put their own company workers out of jobs. Where do you think this kind of policy is going to end?"

Phil H. Landrum, (M.C., Georgia), another member of the Ways and Means Committee, remarked:

"The way textiles are coming in from Japan, by the end of this year we will have bought an equivalent of over 4 billion yards—against less than a billion yards in 1962. North Carolina has reported 1300 textile people out of work, and South Carolina announces another 1,000; so I am asking, what do we do with these people?"

No single voice in Congress, of course, comes up with a more amazing array of facts and figures than Congressman John Dent who has long supported a trade policy that is both free and fair, and balanced according to wages, taxes and overhead of the exporting and importing countries. I have quoted Mr. Dent many, many times, and the wrathful indignation he shows over what is happening to American workers and employers, has won him the respect and admiration of his most vigorous opponents.

During his testimony before the Ways and Means Committee, Mr. Dent piled evidence upon evidence, and listed such statistics as one button manufacturer left in the United States, and importing 90% of its buttons.

Mr. Dent pounded on the loss of 90% of transistor sales to the Japanese. He said that Japanese car sales were up 40% in sales in April of this year as against April of last year, while American car sales were down 10%. In steel, in which the Japanese are now number one in the world, he noted that our workers are paid more in fringe benefits than Japanese workmen receive in wages, and he wanted to know if anyone would be so naive as to believe that the Japanese would kill off the jobs of their people and pay indemnities to employers. He asked:

"When we get through paying for welfare and relief and compensation to jobless workers and factory owners, and when we add up all of the taxes that are lost and the purchasing power of our jobless workers which is gone, I wonder what we are really paying for foreign goods?"

Listen more to the gentleman from Pennsylvania:

"Wearever Aluminum is going overseas. They have just shut down their last plant in Chillicothe, Ohio. Westinghouse has just given up making TV sets because they cannot compete. Zenith has already laid off another 3200, and are making their sets in Tiapan with 22 cents an hour labor. At Arnold, Pa., 650 glass workers have lost their jobs since 1967, and many are of an age where retraining or finding other jobs is almost impossible. What we have done is to subsidize the foreign glass makers with our jobless Americans and empty factories, and glass people say there will be no flat glass business in the United States in another year if relief is not forthcoming."

Noting the threats of retaliation that are being voiced on all hands, if we try to protect our workers and industries, Mr. Dent denounced this as "intimidation," which he said were threats that would never be carried out.

He asked: "What can you do to harm a community in Pennsylvania like Arnold where there isn't a factory chimney sending out smoke? Oh, yes, they have pure air all right, but they have 8,000 fewer tax dollars to work with to keep up their schools and other needs. . . . Ten years ago the mink ranchers came before my committee and said what was going to happen. It has happened; even some of the biggest are killing their mink and burying them because the foreign competition has buried their chances to produce at a profit.

"Are we going to sell our high wage products to 15 cent an hour Hong Kong workers? What can we sell the Japanese in finished products when they won't let us enter their markets; where they are able to meet their own needs. So, say what you will, but when I walk into a Hong Kong factory and find 5500 workers earning $30 a month for a ten-hour day, making products for Fairchild cameras to be shipped over here in foreign-flag boats, to be sold in competition to their own $3.35 an hour labor products, made in their own plants in New Jersey, I ask you again and again, what is it leading to? Fairchild, like all the rest, say they cannot compete with Japan in any other way, and the story is the same with tractors, and we have lost our typewriter business, computers are going, furniture, pianos, and what will happen when we don't have any watchmakers, for example, to work on precision instruments—in case of another war?"

A few hours before I sat down to write this broadcast I spoke to the New York State Watchmakers convention, and they admitted the extreme difficulty in hiring trainees, and one of the officials said that in a very short time almost everything sold by jewelers and watchmakers, and used by them in their work, will be foreign produced. In my talk I challenged them to ask the president of the Bulova Watch Co. why he is having 40,000 Accutron watches per month made in Japan, and why he made the public statement that "the future belongs to big business", when all trends in Congress and in the law enforcement agencies and the trend developing in the labor unions and in public opinion, and even in the White House, are for a breakup of the giants and a return to the Jeffersonian ideal of economic and political liberty as set forth in the Declaration of Independence, the Constitution, and the Bill of Rights.

Ladies and gentlemen, every time we weaken an independent business, and it is the independents who are being knocked out by our foreign and domestic trade policies, and our lack of positive action to end all monopolistic combines and practices, we weaken the Jeffersonian ideal and take ourselves further in the direction of the destruction of all those ideals incorporated in the above three documents.

We do not dare give our markets away. We do not dare consider anyone's job or anyone's business as being expendable in the name of free trade—that isn't free at all. I say to you that we have to look directly into the eyes of youth, and we have to face up to the racial issue, the Indian problem, the monopoly problem, the threat of fiscal bankruptcy, and all threats of retaliation from other countries if we adopt a free and fair trade policy without our guts caving in or our hearts quivering. We have been treating effects instead of causes as long as we dare, and our failure now to support the drive for a free and fair trade policy, and to prove to all nations that if the American market goes down, the rest of the world goes down with it, could end us up neck deep in chaos.

There is no chance whatsoever for a free trade policy to work when some nations are as far apart in their standards of living and their wages and tax rates as the United States is with most of the countries shipping goods across our borders, and when you take into consideration the fact that no other nation considers its businesses expendable in the interest of foreign trade, you have a situation where a country like the United States dooms itself to oblivion.

When the war in Vietnam comes to an end we may even have North Vietnam on our list of relief clients, and certainly there will be demands from all Asiatic nations that have depended upon the Vietnam war for their prosperity; and I ask you, how are we going to meet any of these needs, or the needs of our own people, or proceed with our urban renewal and transit programs, and air pollution plans, and solve the racial problem and Indian problem, and at the same time prove to the world that capitalism—democracy is their last best hope if we do anything more to harm this God-blessed country?

Ladies and gentlemen, I could go on for hours quoting one startling set of figures after another, some provided by Mr. Dent, by Congressman Gross, and Mr. Burke, and scores of others, and from testimony of both big and little companies that would prove beyond any shadow of doubt that we are fast becoming a have-not nation in one industry after another, and that if we cannot find some way to protect our industries, I ask you what will we be celebrating on July 4, 1976, the 200th Birthday Anniversary of our Republic?

People must be made to see that when we lose the sale of a milion pairs of shoes, we also lose the wages, the bank deposits, the community contributions, the taxes, the machine and supply sales, the typewriters, elec-

tric light bulbs, hide business, and even a 7-to-1 dollar turnover and profits that the domestic production provides. Add to these material values the spiritual values that accompany them, and you will see that a wrong foreign trade policy won't even keep the sweat shops of Korea or the low wage factories of Italy supplying us with goods, because we will have too few workers who will be able to buy goods at Korea's prices, low as they might be.

Our National Federation of Independent Business is not just a voice of the individual enterpriser or a voice against monopoly and a voice for free and fair trade, but it is a voice that calls upon you to never lose sight of the fact that America possesses a greatness that makes her capable of not only meeting whatever domestic challenge she confronts, but the challenge of being a beacon light for the rest of the world.

As a capitalistic, free, private, competitive, independent enterprise country, and as a country also dedicated to the proposition that all men, whatever their race, color or creed, should be provided with an opportunity to find their place in a free society without the yea or nay of any other man, or WHY the need of turning to government for food, clothing and shelter.

If the cards are placed face up in this battle for an international trade policy that reasonable men can support, we can get back on the road to a genuine understanding among all the people as to what really constitutes the best possible trade relations between nations. Maybe an Assistant Secretary of the Treasury, Eugene T. Krossides, put his finger on much of what is happening in the controversy over foreign trade, when he said that the Treasury's anti-dumping investigation was taking, in some cases, as long as two years.

He said:

"If it takes that long to determine whether American industry is the victim of foreign dumping, the patient may very well die while the facts are being ascertained. When the doctor is asked to diagnose an illness, the purpose is to effect a cure—not to provide the coroner with a documented summary of the reasons for the patient's death."

My opinion is, that when Barron's Weekly, a highly respected publication, said in a recent story, that "tariffs and quotas benefit only a few;" that we ought to take a good look at the agreement of the President two years ago to maintain the then low import duty on glass, and Barron's ought to be asked if a loss of 2800 out of 8200 glass workers is just hurting "the few".

Because the health of the nation is geared to the health of agriculture, advocates of no tariffs and no quotas might check the testimony of Congressman John Zwach (Minn.) who testified that in 1969, 40% of all dairy imports came into the United States under no quota protection, and that beef imports in 1969 comprised 7.5% of total beef consumption by the American people. He came to the defense of domestic mink ranchers who, he said, had dropped in number from 7200 to 2400 in 1969, and it was the American mink rancher who originated and built up this kind of business. I wonder if anyone in this audience has even thought about mushrooms having an effect on American agriculture or the jobs of American workers; yet, millions of pounds are coming in from Tiawan where John Dent said he saw Taiwan children standing on boxes so they could perform their 6¢-an-hour labor in a Tiawan mushroom canning factory.

When Americans buy products produced under such conditions they are supporting slave labor, and what better reason for this Congress to now take steps to end the slave labor threat to American enterprise, and to do all we can to help correct such deplorable working conditions wherever they prevail.

Ladies and gentlemen, thanks for listening.

## POSSIBLE SOLUTION TO CULEBRAN ISSUE

### HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BENNETT. Mr. Speaker, on September 29, 1970, I introduced the Culebra Resettlement Act, House Joint Resolution 1387, to assist in resolving the problem of how to be entirely fair and in fact generous with the residents of Culebra, while at the same time solving the needs of the Navy for a target complex on this Puerto Rican island. The bill was discussed in detail by me in a speech recorded in the CONGRESSIONAL RECORD on page 34204. It would leave it up to the people of Culebra as to whether they would approve the plan.

Basically, it would give substantial dollar benefits to the individuals who reside there in addition to the values coming as a result of sales or condemnation of their properties; and would provide certain resettlement benefits as well.

When one looks at the prospects of the young people of that island, even if the Navy abandoned its use of the area, one cannot be encouraged for the Culebrans. The island is without reliable water supply, without adequate sewage, without substantial payroll opportunities, without adequate schooling, without a hospital, and so forth. On other islands, these and other facilities are available, not very far distant from this island. Regrettably, these benefits for the younger generation, as well as the older ones, are apparently not ever going to be available on Culebra. The island is just not large enough to support them; nor will its population apparently ever be able to support them.

If the bill yesterday submitted and today printed hereunder should be approved for the Culebrans, they would seem to have everything to gain, particularly for their youth. But it is up to the Culebrans to make their wishes known. The bill reads as follows:

H.J. RES. 1387

Joint Resolution to establish the Culebran Commission for the purpose of resettling the inhabitants of Culebra

Whereas, the Navy, for the defense of the United States, needs the entire islands of Culebra for training purposes,

Whereas, the people of Culebra, because of their long occupancy (some for generations), have special reason to appeal to the United States for sympathetic consideration and treatment, and

Whereas, there are other areas in Puerto Rico (including adjacent islands) in which the probability of lifting living standards would be enhanced: Now, therefore, be it

*Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the Culebran Resettlement Commission Act of 1970.

DECLARATION OF POLICY

SEC. 2. Congress hereby declares that the prompt and equitable relocation and reestablishment of persons, business, [and farmers] displaced as a result of the acquisition by the United States of the island of Culebra (for the purpose of training naval personnel and other related activities), is necessary to insure that a few individuals do not suffer disproportionate injuries as a result of an action necessary for purposes of national defense. Therefore, Congress determines that relocation payments and advisory assistance should be provided in accordance with the provisions of this Act to all persons so displaced, whether or not such displacement occurs after the enactment of this Act.

PLEBISCITE TO APPROVE PLAN

SEC. 3. The effectiveness of this Act shall be conditional on the approval of the resettlement plan described herein by the qualified electors of Dewey, Culebra, in a plebiscite called for the purpose of approving said resettlement plan. Approval shall be by a majority of the qualified electors voting in said plebiscite, which shall be conducted in accordance with Puerto Rican law.

ESTABLISHMENT OF COMMISSION

SEC. 4. There is established a commission to be known as the Culebran Resettlement Commission (hereafter referred to in this Act as "Commission").

DUTIES AND POWERS OF COMMISSION

SEC. 5. (a) In order to make the island of Culebra available to the United States Navy for the purpose of training personnel and other related activities and in order to provide for the fair, expeditious, and comfortable resettlement of the inhabitants of such Island, it shall be the duty of the Commission to make certain relocation payments and to provide assistance to displaced persons in accordance with the provisions of this Act.

(b) For the purpose of assisting in the [acquisition] construction of a new home, the Commission shall make available—

(1) $10,000 to each displaced person who is the head of a household and maintaining his principal place of residence on the island of Culebra on the effective date of this Act, and who was also maintaining his principal place of residence on Culebra on October 1, 1970, and

(2) $5,000 to each displaced person maintaining his principal place of residence on the island of Culebra both on the effective date of this Act and on October 1, 1970 [who is not a head of or a member of a household].

(c) Upon the filling of an application in such form and in such manner as the Commission shall require, the Commission shall pay to any displaced person who is entitled to payment pursuant to section 5(b)(2)—

(1) the fair market value of any real or personal property taken by the United States in connection with the development of the island for the use of the United States;

(2) the reasonable value of any business loss sustained by such person as a result of the development of the island for the use of the United States, and

(3) such other moving and relocation expenses incurred by such person in connection with his removal from the island, if application therefor is made within the one-year period beginning on the date he ceases to maintain a residence on the island.

(d)(1) The Commission shall provide a relocation advisory assistance program which shall include such measures, facilities, or services as may be necessary or appropriate in order—

(A) to determine the needs, if any, of displaced families, individuals, business concerns, and farm operators for relocation assistance;

(B) to assure that, within a reasonable period of time, there will be available, to the extent that this objective can reasonably be accomplished, in areas not generally less desirable in regard to public utilities and public and commercial facilities and at rents or prices within the financial means of the families and individuals displaced, housing meeting the standards established by the Com-

mission for decent, safe, and sanitary dwellings, equal in number to the number of, and available to, such displaced families and individuals and reasonably accessible to places of employment;

(C) to assist owners of displaced businesses and displaced farm operators in obtaining and becoming established in suitable locations;

(D) to supply information concerning the Federal Housing Administration Home Acquisition Program under section 221(d)(2) of the National Housing Act, the Small Business Disaster Loan Program under section 7(b)(3) of the Small Business Act, and other State or Federal programs offering assistance to displaced persons; and

(E) to inform displaced persons of appropriate [Federal] programs and services relating to job training, job placement, guidance and counseling, and any other program, project, service, or training which may be of assistance to them in relocating.

(e) Within the one-year period beginning on the effective date of this Act, the Commission shall determine how many inhabitants of the island of Culebra wish to relocate [in one or more groups] as a group in the same community. If a significant number wish to relocate as a group, the Commission is authorized to employ urban planners, architects, and other appropriate personnel for the purpose of developing [one or more] [an] attractive community[s] at [an] appropriate relocation site[s] [at such location (or locations) as those wishing to live in groups select].

(f) In accomplishing its functions under this Act, the Commission shall utilize the facilities, personnel, and services of any Federal, State, or local governmental agency having an established organization for conducting relocation assistance programs.

(g) The Commission shall confer with other agencies and departments of the United States to determine if any lands in Puerto Rico or adjacent islands [under the jurisdiction of the United States can be used for the purpose of resettling the residents of Culebra] can be declared excess [surplus] for the purpose of [(1)] resettling the residents of Culebra [or (2) selling such lands to obtain funds to defray the expenses of resettling such residents].

(h) Upon request made by the Commission, each Federal agency is authorized and directed—

(1) to make its services, personnel, and facilities available to the greatest practicable extent to the Commission in the performance of its function, and

(2) to furnish to the Commission such information, suggestions, and estimates as the Commission may determine to be necessary or desirable for the performance of the function of the Commission.

(i) The Commission may for the purpose of carrying out this Act hold such hearings, sit and act at such times and places, take such testimony, and receive such evidence as the Commission may deem advisable.

(j) When so authorized by the Commission, any member or agent of the Commission may take any action which the Commission is authorized to take by this section.

(k) To carry into effect the provisions of this Act, the Commission shall establish such policies and is authorized to make such rules and regulations as it may determine to be necessary to assure—

(1) that the payments authorized by this Act shall be fair and reasonable and as uniform as practicable; and

(2) that a displaced person who makes proper application for a payment authorized for such person by this Act shall be paid promptly after a move, or, in hardship cases, be paid in advance.

(l) The Commission may make such other rules and regulations consistent with the provisions of this Act as it deems necessary or appropriate to carry out this Act.

MEMBERSHIP

SEC. 6. (a) The Commission shall be composed of nine members:

(1) two to be appointed by the President of the United States.

(2) two Senators to be appointed by the President pro tempore of the Senate from different political parties.

(3) two Representatives in Congress to be appointed by the Speaker of the House of Representatives from different political parties.

(4) two to be appointed by the Governor of Puerto Rico.

(5) one shall be the present mayor of the island of Culebra.

A vacancy in the Commission shall be filled in the same manner as the original appointment was made. Members shall be appointed for the life of the Commission; however, a vacancy shall occur in the case of a Senator or Representative in Congress at such time as he ceases to be a Member of Congress.

(b)(1) Except as provided in paragraph (2), members of the Commission shall each be entitled to receive $100 for each day (including travel time) during which they are engaged in the actual performance of duties vested in the Commission.

(2) Members of the Commission who are full-time officers or employees of the United States shall receive no additional compensation on account of their service on the Commission.

(3) While away from their homes or regular places of business in the performance of services for the Commission, members of the Commission shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as the expenses authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

(c) Quorum.—Five members of the Commission shall constitute a quorum.

(d) Chairman—The Chairman and Vice Chairman of the Commission shall be elected by the members of the Commission.

DIRECTOR AND STAFF OF COMMISSION

SEC. 7. (a) The Commission shall have a director who shall be appointed by the Commission.

(b) The Commission may appoint and fix the compensation of such personnel as it deems advisable.

(c) The Director and staff of the Commission shall be appointed subject to the provisions of title 5, United States Code, governing appointments in the competitive service, and shall be paid in accordance with the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates.

AUTHORIZATION

SEC. 8. There is authorized to be appropriated such sums as may be necessary to carry out this Act.

REPORT

SEC. 9. Not later than December 31 of each year the Commission shall submit a report to each House of Congress and to the President describing its activities and making such recommendations with respect to legislative or other action as it deems appropriate.

DEFINITIONS

SEC. 10. As used in this Act—

(1) the term "person" means—

(A) any individual, partnership, corporation, or association which is the owner of a business;

(B) any owner, part owner, tenant, or sharecropper who operates a farm;

(C) an individual who is the head of family; or

(D) an individual not a member of a family.

(2) The term "family" means two or more individuals living together in the same dwelling unit who are related to each other by blood, marriage, adoption, or legal guardianship.

(3) The term "displaced person" means any person who moves from real property as a result of the acquisition or reasonable expectation of acquisition of such real property, which is subsequently acquired, in whole or in part, by the United States in connection with the acquisition of the island of Culebra by the United States, or as the result of such an acquisition by the United States of other real property on which such person conducts a business or farm operation.

(4) The term "business" means any lawful activity conducted primarily—

(A) for the purchase and resale, manufacture, processing, or marketing of products, commodities, or any other personal property;

(B) for the sale of services to the public; or

(C) by a nonprofit organization.

(5) The term "farm operation" means any activity conducted solely or primarily for the production of one or more agricultural products or commodities for sale and home use and customarily producing such products or commodities in sufficient quantity to be capable of contributing materially to the operator's support.

(6) The term "Federal agency" means any department, agency, or instrumentality in the executive branch of the Government and any corporation wholly owned by the Government.

(7) The term "State agency" means a State highway department or any agency designated by a State highway department to administer the relocation assistance program authorized by this chapter.

CERTAIN RIGHTS AND REMEDIES

SEC. 11. Nothing in this Act shall be construed to prohibit any person from exercising any right or remedy available to him under law with respect to any action of the Commission in carrying out this Act.

---

## THE LATE HONORABLE CLIFF DAVIS

---

### HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. McMILLAN. Mr. Speaker, I am certain every Member of this House was saddened when they learned of the passing of our good friend, Cliff Davis.

I was sworn into the 76th Congress with Congressman Davis and was sitting next to him when the Puerto Ricans shot up the Congress and Congressman Davis was one of the unfortunate Members who was severely injured during that shooting.

However, I am happy to say he was completely recovered from this injury when he recently passed away.

I always enjoyed working with Cliff Davis and he was one of the few oldtime orators left in this country.

This country is better off by Cliff Davis serving as a Member of the U.S. Congress and his service to the State of Tennessee and our country will be greatly missed.

My sympathy and best wishes go to Mrs. Davis and the entire family.

## UNVEILING OF CIVIL WAR PLAQUE IN MIDDLETOWN, MD.

### HON. J. GLENN BEALL, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BEALL of Maryland. Mr. Speaker, on September 13, 1970, in Middletown, Md., in the Sixth Maryland District, a commemorative plaque was unveiled in tribute to the hundreds of men who died or were hospitalized within the walls of the Evangelical Lutheran Church Zion which, during the Civil War was an Army hospital. At that time, the dedicatory address was given by one of Maryland's most distinguished citizens. The speaker for this occasion was new two-term Governor and two-term mayor of Baltimore, the Honorable Theodore N. McKeldin. Governor McKeldin is one of the most reknown public speakers in America and I include his dedicatory remarks in the RECORD:

I am gratified by the honor you have done me in inviting me to speak on this occasion, but I am sobered by the responsibility it imposes upon me. To speak any light and foolish word in a sacred edifice dedicated to the worship of God more than a hundred years ago would be a sacrilege at any time; but on this day, when we are gathered for the unveiling of a marker commemorating the greatest tragedy in the history of our nation, to speak without due regard to the significance of the event would be not sacrilege, only, but also an insult to the memory of men who within these walls suffered and died for the right as God gave them to see the right.

From September 14, 1862, until late in January, 1863, formal worship in Zion church was suspended and the building was used as a military hospital for the wounded at the battles of South Mountain and Antietam as well as smaller engagements between those two great collisions.

Some have held that the building was desecrated by being converted to that use, but I think they are wrong. To relieve the pain of suffering humanity is to worship God, by deed instead of by word, for has not the Son of God told us that "inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me?" No, Zion Church was not desecrated by that use. On the contrary, it was sanctified a second time, for to show mercy to man is to serve God better than by any amount of fasting and prayer.

It was the destiny of this church to stand in the midst of that part of Maryland that not once but repeatedly, was scorched by what Winston Churchill called "the red-hot rake of war." Thus it has a special significance for all the rest of the State as a land of song and story, of ancient sorrow and of solemn pride. Although my own family lived at the eastern end of the state, my father's father was killed at Monocacy and lies buried at Antietam, and there is hardly an old Maryland family that has not some ties of memory binding it to the region where—

Clear in the cool September morn,
The clustered spires of Frederick stand,
Green-walled by the hills of Maryland.

We do well to cherish the great heritage of our history. We do well to mark for posterity every spot once lighted by the splendor of some heroic deed. But if we stop with that, we do well—but not well enough. The greatest inheritance may be, and almost certainly will be misused if it falls into the hands of unworthy heirs. This is true if the heritage consists only of money, but it is doubly true when it consists of wealth of mind and spirit.

It is sad, but true that there are people who find in the annals of history nothing more than an excuse to rake up old grievances, to rekindle burnt-out hatreds, to cultivate, like careful gardeners, passions whose only product is the dead-sea fruit of agony and loss. Consider the situation of Ireland today, rent assunder by the same quarrel that, two hundred years before Antietam, made the River Boyne run red with fraternal blood.

But does it lie in our mouths to criticize Ireland? Are we not at this moment in grave danger of repeating the same folly? The shattered bodies that were borne into this building a hundred and eight years ago wore, some of them blue uniforms, the others gray uniforms, but we know now that all alike were victims of the same great error, the error of believing that violence can settle a problem with which reason alone can cope. The institution of legalized slavery was indeed an evil that the fires of war burnt out, but the abolition of slavery served only to uncover the greater problem, the one that we have not solved yet, the problem of making sure that the color of a man's skin shall not be used as an excuse for depriving him of life, liberty, or the pursuit of happiness, rights that we assert were given by the Creator, not to any ethnic stock, but to every human being.

That problem was not and never can be solved by war, or by any form of violence. I do not know that it can ever be solved completely this side of the Millennial Dawn, but I know and you know that we can go a great deal further toward solving it than we have gone as yet. I agree with those who hold that man can never be perfected in this world, but I also agree with those who hold that while man can never be made perfect, he can be made a great deal better than he is at present.

But it cannot be done by violence. I am no pacifist. I am aware that evil exists in the world and that it is characteristic of evil to resort to force, which must be crushed with counter-force. But even the archangel Michael, captain of the host of heaven, when he hurled the Great Dragon into the bottomless pit, did not solve the problem of evil on earth, although he acted at the command of God.

What arrogance it is, then, for mortal men to assume that we can do what the archangel could not, or at least did not do by the power of the sword! Under certain conditions the sword can clear the way to the establishment of a just and lasting peace, but the actual work of establishment and maintenance can be done by reason alone.

To establish and maintain the peace is the responsibility that lies upon our generation. Twenty-five years ago the last great barriers to world peace were broken down and swept aside by men who were worthy successors to those who died at Antietam to break down the barriers of disunion and slavery. We are not called on for any such sacrifice; but we are called on, in Lincoln's words, "With malice toward none, with charity for all . . . to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

I wish that I might in honesty assert that we are doing everything within our power to discharge this responsibility, but I am doubtful. This is not the time nor the place for accusations and recriminations, even if I were disposed to make them, which I am not. I believe that the heart of America is in the right place. I believe that the vast majority of our people are sincerely desirous of doing exactly what Lincoln told us is our duty. I believe that as we look upon this plaque our most profound emotion is the feeling that "it must never happen again."

But while I never doubt our will, I am apprehensive of our wisdom. This nation has laid upon it the same task that it had when Lincoln spoke, but it is in a very different position, and it is not reasonable to believe that we can accomplish our task by the same means that would have been effective in his time.

Then we were one nation among many, some of which were, or at least were believed to be, greater and more powerful nations. At that time the American uniform was never seen on foreign soil except for a handful of naval and military attachés serving in our embassies. Today we are, with one possible exception, the supreme military power in the world, and our legions are stationed around more than half the circumference of the globe. Every man and every nation has its duties; but just as the duties of Simon Peter, a fisherman of Galilee, were not the duties of Augustus Caesar in Rome, so the duties of a relatively minor republic of 1870 are not the duties of an imperial power in 1970. The goal is the same, the maintenance of a just and lasting peace, but the ways of approaching it are bound to be different.

This is confusing to learned historians and highly trained political thinkers, so it must be doubly confusing to the man on the street. If we are perplexed and uncertain, that is no disgrace—or, if it is, the disgrace is shared by the most powerful minds among us. But if we are plagued by honest doubt as to the selection of ways and means, there can be no excuse for doubt about the task. It is to establish peace, just and therefore lasting peace, first among ourselves and then with all nations.

How far we are from either goal needs no emphasis by me. You have only to look at any daily newspaper to see that there is as yet no peace among ourselves, still less with all nations. What force can accomplish has already been done. The heroes who lie at Antietam did their part. So did those who lie in American military cemeteries from Okinawa to Malta. Never mind them. The question is, what are *we* doing to finish the work to which they gave the last full measure of devotion?

I cannot answer that question by laying out a program, either foreign or domestic. We have officials, elective and appointed, to whom that task is assigned. Your task and mine is not to invent, but to judge the programs that are presented. We should approach them all with suspicion, for it is not given to the wisdom of man to devise a perfect governmental policy, foreign or domestic. The criterion is not, "Is it perfect?" but, "Does it, in spite of some imperfections, yet tend, on the whole, to achieve not merely peace, but just and lasting peace?"

If the answer to that is yes—even somewhat doubtfully yes—it is a program worthy of support. It makes not the slightest difference which party proposes it, or who thought of it first. The question is as to the policy, not as to the men behind it.

But to make a reasonable judgment we must have the facts—of, not every small detail, or even some large ones that must be affected by the rate of development of the program—but every fact that affects the program's character as an achiever of just peace. If the voter is denied the facts, or if they are falsified, and he makes a bad judgment, the fault is not his, but he must nevertheless pay his share of the penalty that is visited on all voters for making bad judgments.

It follows that it is a prime obligation of every official framer of policy, foreign or domestic, to give the voters true and complete information touching every fact necessary to the formation of a correct judgment. No consideration of national security relieves the official of this obligation, for democracy

cannot operate successfully unless the voters are truthfully informed about every project on which they must pass judgment. There simply is no national security where self-governing people are defrauded of the possibility of making correct judgments because they are denied the truth about their real situation.

The ordinary voter has neither the time nor the information necessary for the formulation of policy, and it is folly for him to attempt to work out details. But it is his duty to hold policy-makers to strict accountability for giving him the whole truth about any point on which he is required to make a decision. Otherwise self-government becomes a fraud and, if it beomes a fraud, we may rest assured, will soon become a failure. We owe it to our predecessors to see that this does not happen. We owe it to the men whose labor and genius established this republic. We owe it to those whose toil and thought have guided it safety through nearly two hundred years. Above all, we owe it to those who have laid down their lives to defend it when it was assailed by force and violence. For we should prove ourselves unworthy heirs, we should be recreant, we should be forsworn if we, in this holy place, twice dedicated, first to the glory of God and next to showing mercy to man, did not, here and now, "highly resolve that these dead shall not have died in vain; that this nation, under God, shall have a new birth of freedom; that government of the people, by the people, for the people shall not perish from the earth."

## SOVIET THREAT

### HON. FLOYD V. HICKS

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 28, 1970*

Mr. HICKS. Mr. Speaker, the chairman of the Committee on Armed Services, Mr. RIVERS, delivered in the House what is inevitably one of the year's major pronouncements on the condition of our national security.

What he said about Soviet military strength is indisputable. Day after day, month after month, we on the Armed Services Committee hear and see evidence—not hearsay, not opinion, but hard irrefutable evidence—of the scope and nature of the Soviet buildup. It exists, just as Chairman RIVERS detailed it for us Monday.

I was gratified that he went into detail especially on the comparative navies of the Soviet and the United States, for the deterioration of our Navy has long been a major concern of mine.

Less than 2 weeks ago the Secretary of the Navy announced the retirement of 58 more ships, including the attack carrier *Shangri-la.* This brings to 286 ships the number of vessels scheduled for retirement since January 1969.

These 286 ships should be retired. Many of them should have been retired years ago, for they have outlived their usefulness.

But they must be replaced, and this is simply not happening. The fault does not lie with the Congress. You will recall that last year, at the urging of Chairman RIVERS, the Armed Services Committee increased the administration's Navy shipbuilding budget request by $1 billion in the military procurement authorization bill. And the administration said that if the money were appropriated, it would not spend that money.

The Congress knows now the situation of our Navy. The Navy certainly knows. I just wish that somehow the White House would understand that we are rapidly becoming a second-rate seapower, that control of the seas is vital to our national security, and that it is absolutely essential that the Navy be rebuilt.

We need not replace those retiring vessels on a ship-for-ship basis, for modern vessels pack more wallop than the older ones and we could do with fewer ships. But we must have those modern, powerful vessels and we must begin now, since we cannot begin yesterday when we should have.

I am most desirous, as we all are, of reducing unnecessary spending on defense. But I am also desirous of maintaining our national security at levels sufficient to protect the country.

I hope every Member of this body, and of the other body, studies Chairman RIVERS' remarks. I hope every American gets his message. It is one of the most important we will hear from anyone, any time.

## NEWS ITEM SAYS WILLIAM & MARY COLLEGE TO LOWER STANDARDS

### HON. WILLIAM LLOYD SCOTT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. SCOTT. Mr. Speaker, I recently read a news item indicating that the Secretary of Health, Education, and Welfare was endeavoring to require that the College of William & Mary, one of the oldest educational institutions in the country, lower its standards if necessary to increase the number of black students and faculty.

While I would not have our colleges or universities in any way discriminate against a person because of his race, I do think it is basically wrong and without legal sanction for any Government agency to propose the lowering of academic standards in order to obtain the admission of a greater ratio of students or faculty of any racial group.

I am inserting a copy of a letter to the Secretary of Health, Education, and Welfare, Elliot L. Richardson, requesting to be advised whether or not the news account is accurate. Certainly, I hope that it is not. The letter is set forth in full for your information.

HON. ELLIOT L. RICHARDSON,
*Secretary, Department of Health, Education, and Welfare, Washington, D.C.*

DEAR MR. SECRETARY: I read a newspaper article in the Richmond Times-Dispatch to the effect that your department had demanded of the College of William and Mary that there be a substantial number of black teachers and students included in the faculty and student body, even if the college has to change its admission standards.

My three children are all graduates of the College of William and Mary, and I was born in the community of Williamsburg where the college is located. Therefore, you can understand my concern that no action be taken by the federal government which would in any way lower the standards of that college. While I am not suggesting any return to segregation, I feel that the lowering of standards is untenable at a time of maximum demands for educated citizens. I might point out that William and Mary is the second oldest college in the country and is well known for its high academic standards.

I certainly hope that this news account is erroneous; but, if not, it will prompt me to introduce legislation, which I believe the Congress will approve, prohibiting action by any federal agency to reduce the academic standards of any colleges or universities in the country.

I am sure that you can understand the basis for my concern in this matter, and I would appreciate receiving your comments at your earliest convenience.

With kind regards.

Sincerely,

WILLIAM L. SCOTT,
*Member of Congress.*

## ROSH HASHANAH

### HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. KING. Mr. Speaker, the sacred Hebrew holiday, Rosh Hashanah, denoting the Jewish New Year, commences Wednesday evening.

It is this year especially fitting that the Congress identify with Americans of the Jewish faith. A certain universality of Rosh Hashanah, a time of special prayer for spiritual renewal and rededication, is indicated.

The Jewish people are understandably concerned about the forces of totalitarianism and aggression that are arrayed against the State of Israel. We are aware of the turbulence and human tragedy in the Middle East.

It is important that the Jewish community, as it assembles in thousands of synagogues and temples to pray for the brotherhood of man under the fatherhood of God, be reassured that the Government is striving to safeguard peace in the area of the Holy Land.

Our President is now abroad in pursuit of peace. He is mindful of the current relevancy of the great spiritual values that emerged from the land of Israel. I wish to identify with the President's innovative moves to defend peace and to help the brave people of Israel provide for the perpetuation of freedom. This Congress can take pride in the timely enactment of legislation that would provide Israel with the means of defense.

Rosh Hashanah marks the year 5731's arrival as recorded by the ancient Hebrew calendar. This is an occasion for introspective review of the last year. It is also a time to seek divine guidance for spiritual renewal as people seek to grow and live more fully in the coming year. Regardless of our personal religious persuasion, we could learn much from such self-examination as a people.

## A NATIONAL LAND-USE POLICY FOR OUR ENVIRONMENT

**HON. RICHARD D. McCARTHY**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. McCARTHY. Mr. Speaker, the year 1970 marks a major transition in our history. We have plunged into a new decade and are well into the last third of this century. The first results of our national census show how our population has grown and where it is located. The early census results also suggest the limits of population growth for the remainder of this century—perhaps 100 additional Americans by the end of the century—and the areas of the country where this growth is expected to take place—in the urban corridors.

Our census does not reflect the tensions of our society, the polarization reflecting the dissatisfaction of those excluded from the American dream, the search for stability by a majority that are hard pressed to maintain a modest standard of living. Nor does our census reflect the concern of millions of Americans about the destruction of our land, our rivers and lakes, and the air that we breathe.

We live in a period of transition. In the year 1970 we face a number of problems as a nation that test our ability to survive. We must maintain a nuclear peace, end a protracted and difficult war in Indochina, manage our economy so that it is not plagued with unemployment or inflation, heal the wounds of racial discord, and preserve and enhance our environment. Each one of these problems tests our democratic form of government, taxing to the utmost both our leaders and our citizens. Each one of these problems by itself is more than enough for our society to handle in one generation. Some ask whether our society, or for that matter any society, can meet the challenges posed by a number of these problems at one time.

I, for one, believe that we can. To do so, we will have to make our National, State, and local governments more responsible and more responsive. It is not enough to drift with the tide. It is not enough to follow the time-tested paths of the past. We cannot afford the luxury of inaction, the gratifications of partisan bickering, or the indulgence of ignorance. Wornout and irrelevant gestures that do not serve our purposes must be swept aside. We must harness our energy and exercise our will as a nation if we are to survive.

It has been with this thought in mind that I have examined the many problems of our environment to see what must be done. I have singled out a number of problems that I believe deserve national support. I have already spoken on the subject of air pollution control, perhaps the single most serious environmental problem that we face right now. I would now like to single out the area of land-use planning as one of the most important environmental issues that we face today.

I believe that land-use planning is central to a host of environmental problems ranging from air pollution and water pollution to urban blight, noise pollution and the beauty of our surroundings. What was once only a problem in the crowded cities of our Nation has become a problem for vast stretches of our country. It has become commonplace to point out that more than half of our population lives in urban areas today. It is commonplace but it is also highly relevant that most of our population of 300 million in the year 2000 is expected to live in these same urban areas. Population density in certain urban corridors—Boston to Richmond, Buffalo to Chicago, San Diego to San Francisco will soar in the next 30 years. Unless we take steps now to determine how these corridors are developed, we will find that the quality of life as we know it now will decrease.

Who among us is not familiar with the destruction of property value that can take place when a community suddenly grows from a quiet residential area to a commercially urban corridor. Who among us is not familiar with the loss of a beautiful stretch of woodland or a small lake to the developer. In pointing to these changes I am not saying that existing patterns of land use will not change. Rather I am saying that this change should increase the quality of our lives, not decrease it.

Land use in America has long been a matter of unplanned action, one in which an individual, an industry, or the Government developed the land in any way it saw fit. This has caused damage to our Nation, damage that we have yet to fully appreciate. Strip mining has scarred our hills. Abandoned buildings dot the cores of our deteriorating cities. Major airports and major highways are built next to homes, destroying the quiet that originally drew homeowners. Highways slash through invaluable parkland for the lack of a better route. New manufacturing plants spring up next to residential communities without thought to their impact on the neighborhood. Prince Georges County, Md., and Rockland County, N.Y., win the title as the fastest growing areas in the United States and begin to lose their attraction as pleasant places to live. Erie County, N.Y., where my district is located will witness a major population increase during the next 30 years. The homeowner in these areas can rightly ask whether this growth will destroy the values that he sought when he moved into the area.

Each one of these counties and its towns and cities are struggling with a host of environmental problems, urban-suburban sprawl, population distribution that does not match local resources, misuse of resources and pollution in all its forms. It is increasingly evident from studies conducted by the Public Land Law Review Commission and others that these problems can only be met by initiating a comprehensive, planned program of land use for public and private, for federally and State-owned lands within the United States. The formulation of a national land-use policy is a necessary and vital step in the task of making our communities more attractive places to live.

Several bills embodying national land-use policy have been introduced in Congress. Rather than introduce a new bill, I am joining Senator HENRY JACKSON of Washington and Representative ROGERS MORTON of Maryland in introducing a land-use bill that establishes the Federal Land and Water Resources Council as the center for national land-use policy. I am not sure that a new agency may not be needed for this purpose. But in order to discuss the concept of land-use planning, I introduce a similar bill today.

I believe that there is strong support for this measure on the part of those who recognize the need. President Nixon has endorsed the concept in the first report of the Council on Environmental Quality. The National Governor's Conference has also endorsed the concept. I hope that those concerned with the environment will join in supporting this legislation.

This bill amends the Water Resources Planning Act and calls for the formulation of a national land-use policy that would incorporate all ecological, environmental, esthetic, economic, and social factors. It would serve as a guideline in making specific decisions affecting a pattern of growth and development of Federal lands and provide a framework for the development of interstate, State, and local land use. This would be carried out by an enlarged Land and Water Resources Council with responsibilities to administer Federal grant-in-aid programs, to review all statewide land-use plans for conformity to the provisions of the titles of the legislation, and to issue biennial reports on national land-use policies, trends, projections, and problems.

The bill further provides that the Council earmark land-use planning grants to an appropriate State agency designated by the Governor of each State to carry out an inventory of the State's land and related resources. It calls for the State agency to collect and analyze all information and data relating to population characteristics, migration trends, and densities. Briefly, it also calls for an analysis of problems that might arise from placing utility corridors, locating new communities, commercial development, and heavy industry for the next 50 years.

The bill makes several provisions for exchange of information between Federal, State, and local agencies; however, the real heart of the bill is the Federal guidelines and requirements with which the State agency is to conduct its inventory and organizational development. First, within a 3-fiscal-year period the State land-use plan must identify the portions of the State subject to the statewide land-use plan. Those not subject to the plan shall include: "land which is located within the boundaries of any incorporated city which has exercised land-use planning and authority." Second, identification of areas where ecological, environmental, geological, and physical conditions dictate that certain types of

land-use activities are incompatible and undesirable.

Third, identification of those areas "whose highest and best use, based upon projected State and national needs, on statewide outdoor recreation plans required under the Land and Water Conservation Fund Act and upon other studies, is recreationally oriented, best suited for natural resource, heavy industrial and commercial development, where transportation and utility corridors are or should, in the future, be located, and which areas furnish the amenities and the basic essentials to the development of new towns.

After the 3-year inventory period there is provision within the bill for planning grants for those State agencies who meet further requirements. They are:

First. The agency must have the authority necessary to implement the statewide land-use plan.

Second. The agency's authority shall include but need not be limited to authority to acquire interests in real property if deemed necessary under the statewide land-use plan; authority under the State police powers, to place restrictions on the type of land-use activities which may take place in areas designated for special use under the statewide land-use plan, and authority to call public hearings and other public participation, including granting the right of appeal to aggrieved parties in connection with an area subject to special use or restriction under the statewide land-use plan.

Along with these central requirements, the bill provides for extensive Federal and State coordination. Approval of land-use plans submitted to the Council by a State agency must include the solicitation of views from Federal agencies principally affected by such plans. The bill further stipulates that—

All federal agencies conducting or supporting public works activities in an area subject to a state land-use plan shall make such activities, unless there are over-riding considerations of national policy which require departures from the plan, consistent with the approved plan of the state for the area. State and local governments submitting applications for federal assistance for activities in areas subject to state land-use plans shall indicate the views of the state land use agency as to the relationship of such activities to the approved plan for the area. Federal agencies shall not approve proposed projects that are inconsistent with the plan.

These are the major provisions of the bill that I am introducing today.

I cannot stress to you more the urgency and need for comprehensive land-use inventories and plans. As the California Environmental Quality Study Council progress report of 1970 cites, private lands are literally being swallowed up by large corporations and land speculators in anticipation of quick price increases. Subdivisions, ill-conceived and ill-planned have blighted large areas of the most fertile agricultural land in California. Unless there is some ordered, directed land-use program with authority to implement standards of "highest priority" use of land, judiciously administered by an authority higher than the private developer, there is little hope for a naturally balanced environment such as we know it today.

The proposed legislation has some weaknesses. The essential question of a clear-cut distinction between Federal and State jurisdiction in the planning process is still unresolved. On the one hand, the Federal Government says that it is the States' job to carry out a suitable land-use plan for the State, with priorities determined by the State as to what land is to have the highest and best use as recreational, industrial, or as transportation corridors, et cetera, while, on the other hand, the Federal Government says that any incorporated city with only the most rudimentary of planning must not be included in the State plan. The wording concerning the State-city role in the planning process is simply not satisfactory. Not only would this wording rule out coordinated planning efforts with cities and States, but it would rule out the possibility of any meaningful statewide plan. How can a State make a meaningful land-use plan when the cities are excluded, yet so in need of comprehensive, coordinated planning?

Much can be said for the bill, nevertheless. Any Federal legislation that calls for 50 new State agencies to submit 50 comprehensively drawn inventories of State lands with a statement of priorities as to the land's "highest and best use" is both ambitious and innovative. By the Federal Government simply acting to demand inventories many, many more questions and answers will be discussed within the States. In addition, since land management legislation of zoning standards, subdivision standards, industrial permits, right-of-way permits, and so forth, have rested with States, it is fair to assume that reform in these practices will be proposed within State legislatures as well as proposals outlining the relationships between cities and State planning jurisdictions. This would be further encouraged by use of the sanctions in the bill. It should not be forgotten that with the State land-use agency under the designation and authority of the Governor, some Governors may find such an authority within their interests and push for much more comprehensive authority for the agency in implementing the land-use policy.

In conclusion, there are several points to bear in mind concerning this proposed legislation. First, the bill is rudimentary in terms of the whole issue of planned land use. It does not provide procedures or assurances that projected population increases will be properly distributed which is the key concern for the future. The bill does not adequately provide for correct and effective cooperation between State and city governments in land-use policy formulation. The bill, nonetheless, is timely and fundamental. It is timely because the public is just now beginning to open its eyes to the pressing question of effective land use. The information from the State inventories alone will open many new avenues for further improvement. With the information, the public too can properly focus its attention on the issue. The bill is fundamental because we are entering an era when we will have to allocate our natural resources, and preparations must be made now to insure that the land, our greatest resource, is properly used.

## REPRESENTATIVE ANNUNZIO'S EFFORTS FOR SMALL BUSINESSMEN PRAISED

### HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. KLUCZYNSKI. Mr. Speaker, the Subcommittee on Small Business Problems in Smaller Towns and Urban Areas, of which I am chairman, just returned from conducting hearings in Chicago on crime and crime insurance. It is my opinion, as well as that of my colleagues on the subcommittee, Representative WILLIAM L. HUNGATE, Representative FRANK HORTON, and Representative DANIEL E. BUTTON, that the hearings produced some very valuable testimony on this important subject.

The hearings included testimony from Ralph Metcalf, alderman from the city of Chicago; Deputy Chief of Detectives Walter Karlblom; Paul Zimmerer, director of the Mayor's Committee for Economic Involvement; Robert Dwyer, regional director for SBA; and many other fine and distinguished witnesses.

The committee heard some very frightening testimony from small businessmen who outlined the horrible system of extortion practiced by street gangs on neighborhood stores. One very courageous businessman, Wilson Alexander, told the committee of his personal experiences with robberies, burglaries, and extortion. The subcommittee was very impressed by the testimony and feels there is a great need to assist the small businessman in this area. I feel that Representative FRANK ANNUNZIO's bill now included in H.R. 19100, the Housing Act of 1970, should receive full consideration and approval by the House.

I feel that perhaps the most important testimony was that of my dear friend and colleague, Representative FRANK ANNUNZIO. He made some very impressive remarks reflecting a sincere desire to further the cause of the small businessman. It is well known that Mr. ANNUNZIO has labored long and arduously on the problem of the impact of crime on small business. He is truly a champion of the small businessman. In the interest of sharing the every enlightening statement of Mr. ANNUNZIO, I would like to insert it at this point in the RECORD:

STATEMENT OF HONORABLE FRANK ANNUNZIO

Mr. Chairman, Members of the Subcommittee, as one who is vitally concerned about the problems of small business, particularly the insurance problems, I appreciate the opportunity to testify before this distinguished subcommittee today and to give you my thoughts on crime insurance.

Let me begin, not on a pessimistic note, but rather on an optimistic note. Yesterday, the Banking and Currency Committee agreed to report H.R. 19100, the Housing Act of 1970. Title 7 of that legislation contains the Urban Property Protection and Reinsurance Amendments of 1970. This title contains all of the provisions of H.R. 13666, the so-called crime insurance bill that I introduced on September 8, 1969. Quite simply, it will enable small businessmen to purchase crime insurance directly from the Federal Government at any time the premium for such insurance through the private market exceeds 175 percent of the so-called manual or average rate.

Mr. Chairman, at first glance a 175 percent rate may seem like a great amount, but, as I am certain you have found out in your hearings, rates for crime insurance that are 500 and 600 percent above manual are not uncommon.

Within a few weeks, the House of Representatives will have an opportunity to vote on the crime insurance package while, at the same time, the Senate is considering legislation that contains many of the features of my bill with two major exceptions. My legislation would allow the Government to write not only crime insurance on a direct basis, but basic property coverage if such coverage is not available within the 175 percent range. In addtion, my bill would go into effect immediately. The Senate bill does not provide for basic property coverage and has a year delay in its effective date.

Mr. Chairman, we cannot wait another year, nor can we ask the small businessmen of America to wait for another year. Each day that we delay in granting relief to small business sees another group of small businessmen close their doors.

Quite clearly, Mr. Chairman, something must be done if small business is to survive in our major cities. I do not come here as a prophet of doom or gloom, but I do feel quite certain that unless crime insurance, at reasonable costs, is made available to small businessmen, the time is not too far off when there will be no small businesses in our inner cities. The trend has already begun and it is time now to take action.

I first began work on this problem in 1967, when I introduced the Small Business Protection Act to provide for a study to determine the best ways that small businessmen could protect themselves from criminal acts.

I do not contend that the study is the solution to the crime problem but rather that it does set out areas of investigation where a majority of efforts should be concentrated in solving the problem. I am unhappy that the study devotes too much space to the statistical side of crime against small business and not enough space in telling the small businessman how to safeguard his property from hoodlums and vandals.

I sincerely hope, Mr. Chairman, that your Committee will not fall victim to the statistical syndrome that seems to arise whenever the question of crime is raised. At this point, we do not need studies to show that crime is, indeed, a problem to small businessmen. We can learn this by picking up a newspaper from any metropolitan city. In fact, in many cities, the crime rate has risen to such an extent that the newspapers do not have enough space to devote to crime stories but, instead, must summarize the crime news on a "boxscore" basis, much the same way the statistical aspects of baseball games are reported.

Mr. Chairman, I do not want to go into psychological reasons for the crime increase nor do I wish to attempt to affix the blame for the problem. We have heard a great deal about who is responsible for controlling crime. I do know one thing though. It is not the small businessman who is responsible for the crime rise; it is not the small businessman who can crack down on the increase of crime; but it is the small businessman who is paying for the effects of criminal acts. If there were an innocent victim of crime, it is the small businessman of our country.

Mr. Chairman, when I introduced my crime study bill in 1967, I did so in hopes that it would cause the insurance industry to do something about making crime insurance available to small businessmen. When I introduced the study bill, a member of my staff received a telephone call from an insurance executive inquiring whether the bill contained any provision for a direct program of government insurance. The insurance executive was told that the bill did not contain such a provision but that if insurance was not made available that my next step would be in that area. The insurance executive assured my staff member that would not be necessary since the insurance industry was ready to come to grips with the problems and to find ways to help the small businessman.

That was more than three years ago, Mr. Chairman, and we still have not seen any progress on the part of the insurance companies.

Mr. Chairman, recently the Department of Housing and Urban Development published its long-awaited study on "The Availability of Crime Insurance and Surety Bonds in Urban Areas." The Annunzio bill provides a workable solution to the problem of crime insurance in our urban areas, while the plans put forth by the Federal Insurance Administrator represent nothing more than protracted delays in solving the problem.

For instance, the plan put forth by the Federal Insurance Administrator would require the States to make crime insurance available at reasonable rates in urban areas by August of 1971. If this was not done, the Insurance Administrator would withdraw the Federal riot reinsurance coverage in those States. I do not feel that this will solve the problem and, of course, it will not guarantee that crime insurance will be made available since States may be willing to do without riot reinsurance, particularly if we have gone through a long period without any major riots in our cities.

The Insurance Administrator suggests that following this, he could order that crime insurance be made available under the so-called FAIR plans, a suggestion that I made in 1968 as an amendment to the Urban Property Insurance Act. However, in an earlier part of his report, the Insurance Administrator suggests that the inclusion of crime insurance in FAIR plans is not the answer. If crime insurance can be offered within the FAIR plans in those States which do not comply with the 1-year edict of the Federal Insurance Administrator, why is it that such coverage cannot be made available immediately. In short, if such a method of providing coverage is a good idea at one time, it is a good idea at all times, or, if it is a bad idea at one time, it is always a bad idea.

Mr. Chairman, if I felt the suggestions made by the Federal Insurance Administrator would provide meaningful solutions to helping people obtain crime insurance. I would endorse the report wholeheartedly, but in the language of our current younger generation, the report is "a cop out." It does nothing more than buy time for the insurance industry in the hope that those of us who want to provide solutions to the problem will back off and shift our attentions to some other area.

It has been suggested that my bill will cost the Government money. I do not accept this premise, but even if Government funds are expended on the program, think of the money that is lost in tax revenues to city, county, State and Federal governments each time a small businessman goes out of business because he cannot obtain insurance.

Last week, President Nixon asked Congress for more than $20 million to provide armed guards on overseas airline flights. The supplying of armed guards has been hailed as probably the best means of protecting the lives and property of airline passengers, and I support this request for funds. But, Mr. Chairman, most of the people that we are talking about in these hearings will never have enough money to be able to afford the luxury of an airplane trip to a foreign country, and we should consider their problems with as great speed as we do the problems of hijacked airplanes.

Mr. Chairman, in April of last year, Congressman Moorhead and I conducted hearings on the insurance problem here in Chicago. We were amazed at what we uncovered. Huge areas of the city were redlined by the insurance industry and denied insurance coverage. Homeowners had their insurance policies dumped into the FAIR Plan, where their premiums were sometimes as high as five and six percent of what they formerly had been paying. In other cases, hundreds of homeowners had their insurance policies cancelled for no apparent reason. I am certain that your Subcommittee has found that many of these practices still exist.

In conclusion, Mr. Chairman, let me point out that unless a program of direct Federal insurance, such as that contained in my bill, is enacted, the insurance problems that you have uncovered here in Chicago will only worsen and that the ghost towns that are tourist attractions in the West may well have a new rival in the inner cities of America.

Mr. Chairman, once again let me thank you for the opportunity to appear here today and commend you and your Subcommittee for taking an interest in this problem.

---

## NIXON AND THE WORKINGMAN

---

### HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. CHAMBERLAIN. Mr. Speaker, beginning on Thursday, the Republican National Committee will sponsor a 3-day conference of Republican heritage groups. Nationality leaders from all over the United States have been invited to this meeting. According to Rogers C. B. Morton, chairman of the Republican National Committee:

> This is in accordance with the President's wishes that a permanent forum for the nationalities be set up within the Party—so that ethnic Americans may have the greatest possible access to the Nixon Administration, and the opportunity to involve themselves in the democratic process.

I applaud my party for this recognition it is bestowing upon our ethnic citizens. This reflects the deep commitment of the Nixon administration to giving the nationalities full access to and representation in the Nation's Government. Recently, for example, 29 Americans of nationality background were appointed to advisory councils within the Small Business Administration, and a Polish-American leader, Al Majewski, was nominated as an alternate delegate to the 25th session of the United Nations General Assembly.

But these are only symbolic gestures which stand for the far more important substantive expressions of concern the Nixon administration has for the welfare of our nationality members.

The Democrats claim that they have the support of labor and the workingman, but they campaign on issues that are contrary to the tradition and beliefs of these very people. Democrat candidates and commissions belittle the influence of pornography on our children, advocate abortion, take wishy-washy stands on campus violence, and use middle-class suburban neighborhoods for their school and housing experiments.

It is the Nixon administration which should be lauded as taking the needs of

the workingman into consideration through such measures as its stiff anti-crime bill, the formation of a special Presidential panel to study the financial crisis of the Nation's nonpublic schools, its special efforts to bring ethnic Americans into the administration, and its determined efforts to bring inflation under control.

## WHO SPEAKS FOR ETHNIC AMERICA?

### HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ZWACH. Mr. Speaker, I would like to call to the attention of my colleagues an article appearing on the editorial page of yesterday's New York Times. Entitled, "Who Speaks for Ethnic America?" it is an angry and forceful statement of the grievances felt by ethnic Americans—ridicule of their customs and heritage, near-poverty income levels, threatened neighborhoods, lack of services.

It is sad, but true, that Miss Mikulski's charges are well founded. During the last decade, during the Democratic administration, the problems of other minorities were the primary focus of the Federal Government and the ethnics were written off as "bigot," simply because they felt that they, too, needed and were rightly entitled to the benefits that America has to offer.

It is high time that this situation is changed. Fortunately, the Nixon administration shares in this concern for the problems of ethnic Americans. Ethnic Americans have been appointed to responsible positions within the Government. The Republican National Committee, this very week, is holding a conference involving delegates from 30 States, to focus on the needs of our nationality groups and ways they can use the political process to get those needs met. Finally, I must commend the Nixon administration for its administrative efforts and for the numerous legislative proposals submitted to Congress which, if implemented by the Democrat-controlled Congress, will go a long way toward meeting the needs of ethnic Americans as well as all Americans.

The article follows:

[From the New York Times, Sept. 29, 1970]

WHO SPEAKS FOR ETHNIC AMERICA?

(By Barbara Mikulski)

The Ethnic American is forgotten and forlorn. He is infuriated at being used and abused by the media, government and business. Pejorative epithets such as "pigs" and "racists" or slick, patronizing labels like the "silent majority" or "hard hats" are graphic examples of the lack of respect, understanding and appreciation of him and his way of life.

The Ethnic Americans are 40 million working class Americans who live primarily in 58 major industrial cities like Baltimore and Chicago. Our roots are in Central and Southern Europe. We have been in this country for one, two or three generations. We have made a maximum contribution to the U.S.A., yet received minimal recognition.

The ethnics came to America from the turn of the century through the twenties, until we were restricted by prejudicial immigration quotas—65,000 Anglo-Saxons to 300 Greeks. We came looking for political freedom and economic opportunity. Many fled from countries where there had been political religious and cultural oppression for 1,000 years.

It was this working class which built the Great Cities—constructed the skyscrapers, operated the railroads, worked on the docks, factories, steel mills and in the mines. Though our labor was in demand, we were not accepted. Our names, language, food and cultural customs were the subject of ridicule. We were discriminated against by banks, institutions of higher learning and other organizations controlled by the Yankee Patricians. There were no protective mechanisms for safety, wages and tenure. We called ourselves Americans. We were called "wop," "polak" and "hunky."

For our own protection, we formed our own institutions and organizations and clung together in our new neighborhoods. We created communities like "Little Italy" and "Polish Hill." The ethnic parish church and the fraternal organizations like the Polish Womens' Alliance and the Sons of Italy became the focal points of our culture.

These neighborhoods were genuine "urban villages." Warmth, charm and zesty communal spirit were their characteristics. People knew each other. This was true not only of relatives and friends but of the grocer, politician and priest. The people were proud, industrious and ambitious. All they wanted was a chance to "make it" in America.

Here we are in the 1970's, earning between $5,000–$10,000 per year. We are "near poor" economically. No one listens to our problems. The President's staff responds to our problems by patronizingly patting us on the head and putting pictures of construction workers on postage stamps. The media stereotypes us as gangsters or dumb clods in dirty sweatshirts. The status of manual labor has been denigrated to the point where men are often embarrassed to say they are plumbers or tugboat operators. This robs men of the pride in their work and themselves.

The Ethnic American is losing ground economically. He is the victim of both inflation and anti-inflation measures. Though wages have increased by 20 per cent since the mid sixties, true purchasing power has remained the same. He is hurt by layoffs due to cutbacks in production and construction. Tight money policies strangle him with high interest rates for installment buying and mortgages. He is the man who at 40 is told by the factory bosses that he is too old to be promoted. The old job is often threatened by automation. At the same time, his expenses are at their peak. He is paying on his home and car, probably trying to put at least one child through college.

In pursuing his dream of home ownership, he finds that it becomes a millstone rather than a milestone in his life. Since FHA loans are primarily restricted to "new" housing, he cannot buy a house in the old neighborhood. He has no silk stocking lawyers or fancy lobbyists getting him tax breaks.

He believes in the espoused norms of American manhood like "a son should take care of his mother" and "a father should give his children every opportunity." Yet he is torn between putting out $60 a month for his mother's arthritis medication or paying for his daughter's college tuition.

When the ethnic worker looks for some modest help, he is told that his income is too high. He's "too rich" to get help when his dad goes into a nursing home. Colleges make practically no effort to provide scholarships to kids named Colstiani, Slukowski or Klima.

The one place where he felt the master of his fate and had status was in his own neighborhood. Now even that security is being threatened. He wants new schools for his children and recreation facilities for the entire family—not just the token wading pool for pre-schoolers or the occasional dance for teen-agers. He wants his street fixed and his garbage collected. He finds that the only thing being planned for his area are housing projects, expressways and fertilizer factories. When he goes to City Hall to make his problems known, he is either put off, put down or put out.

Liberals scapegoat us as racists. Yet there was no racial prejudice in our hearts when we came. There were very few black people in Poland or Lithuania. The elitists who now smuggly call us racists are the ones who taught us the meaning of the word: their bigotry extended to those of a different class or national origin.

Government is further polarizing people by the creation of myths that black needs are being met. Thus the ethnic worker is fooled into thinking that the blacks are getting everything.

Old prejudices and new fears are ignited. The two groups end up fighting each other for the same jobs and competing so that the new schools and recreation centers will be built in their respective communities. What results is angry confrontation for tokens, when there should be an alliance for a whole new Agenda for America. This Agenda would be created if black and white organized separately in their own communities for their own needs and came together to form an alliance based on mutual issues, interdependence and respect. This alliance would develop new strategies for community organization and political restructuring. From this, the new Agenda for America would be generated. It could include such items as "new towns in town," innovative concepts of work and creative structures for community control.

What is necessary is to get rid of the guilt or phony liberals, control by economic elitists and manipulation by selfish politicians. Then, let us get on with creating the democratic and pluralistic society that we say we are.

## NIXON CHANGING POLITICAL CLIMATE OF THE NATION AND THE WORLD

### HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ADAIR. Mr. Speaker, despite occasional criticism from scattered sources, it is growing more and more obvious that the moral stature of President Nixon is growing both at home and overseas.

Less than 2 years ago, the President hardly dared leave the White House—except to fly to Texas.

Today President Nixon appears in public in our great cities and on our campuses.

Today he dares mingle with the crowds of Rome.

And today he dares show American naval power as a peacekeeper in the Middle East.

Mr. Speaker, through his courageous and imaginative leadership, President Nixon is changing the political climate of the Nation and the world.

He is taking us surely down the road toward peace in Vietnam and the Middle East and, just as important, toward peace in our cities and on our campuses.

## KENT STATE—ANOTHER VIEW

### HON. CHALMERS P. WYLIE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. WYLIE. Mr. Speaker, sometime ago I received a letter from Miss Nancy Bonifield, a student at Kent State University, who resides in the congressional district I represent. The letter, which was sincerely written by a thoughtful young lady, impressed me. Miss Bonifield suggests that I have received many letters such as hers, which I have, but none which expressed another view so poignantly.

She suggests that her views be made known to the public, and I include them herein to that end:

DEAR REPRESENTATIVE WYLIE: I, as a member of the silent majority, am writing this letter to express my views, because I am tired of remaining silent and letting a minority rule. I am asking you, in turn, to let these views be known to the public and the outspoken minority.

I am a freshman at Kent State University, completing my third quarter through correspondence work with my professors. I don't like this type of education at all. I don't feel I can properly learn the course material this way. But, I am forced to either finish my courses in this manner or drop them, all because of the violent actions of a few militants.

The reason many people resort to violence for action is because they cannot accomplish anything with letters or peaceful assembly. Nobody listens to them then. If letters and other peaceful actions were given more attention, I don't feel we would be experiencing the violent revolutions on our college campuses today.

Although the initial shock is over, I am still very upset and disgusted with the events at Kent State in early May. It is so tragic that just a few radicals can close down not just one university, but dozens of them. What bothers me even more are the reasons that these radicals give for their actions. They say they want to end the war in Vietnam. They think by rioting and demonstrating that they will show the men overseas that they care and think about them. But, according to many servicemen, this is not so. My brother is currently serving his second year in Vietnam. In his last letter he told us what he thinks of the campus demonstrations.

"I will say that I am very much in agreement with what President Nixon is doing and I am very displeased with the reaction it is getting in the states. Those students may not realize it, but they are doing as much harm to the American effort over here as the VC or the NVA troops we are fighting. The Communists now make very little propaganda of the war itself. They concentrate on anti-war movements in the States and they are very good at it. I heard about the riots at Kent on a Communist radio broadcast from Radio Hanoi before it even got on the news over here. If you had no other source of information, you would think the United States was in a state of turmoil and civil war itself. And this is the picture of America that the rest of the world gets all because of a bunch of ignorant kids. I have no higher opinion of them than the people we are fighting over here. If a few of them get killed that's too bad. But maybe the rest of them will open their eyes and see what they are doing. If they could see only a fraction of what some of the guys over here have seen, I don't think they would be rioting against what we are doing here. We can hardly turn on a TV or radio or even pick up a newspaper without hearing of major riots and it is really beginning to be a drag on the morale of the guys over here. Some of them have even resorted to just not listening to the radio or TV and not reading newspapers."

Two other GI's reported similar stories in the *Columbus Citizen-Journal* on Monday, May 13, 1970. Cpl. Vancil Johnston and Cpl. Kris were both agreed that "It is demoralizing to read about our underprivileged counterparts vandalizing campus buildings, manhandling institution leaders, and generally making fools of themselves." They both reported that nearly all of the men in Vietnam or destined for Vietnam after training are angry or disgusted with the campus riots and demonstrations.

What I feel needs to be done, is for the silent majority to organize against this minority and try to make them see that they are hindering, not helping, the men overseas. All they have managed to do by rioting is deprive thousands of fellow students of an education and deprive four others of life.

I feel the main problem to deal with is a communication gap between the government and the students. With more communication between the two, the youth will place more confidence in the actions of the government, and this is very necessary for a cooperative society.

Well, I am sure you have received many letters similar to this one. Now, just tell the world about them so they will know that the silent majority wishes to remain silent no longer.

Thank you.

Sincerely yours,

NANCY BONIFIELD.

## THE PRESIDENT'S TRIP ABROAD

### HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. RHODES. Mr. Speaker, President Nixon's trip abroad, like his others, is proving to be not only a personal success but also a success for American diplomacy and foreign policy.

The importance of his trip is clearly seen in the decision by President Tito to remain home in order to meet with President Nixon, rather than go to the funeral of President Nasser.

I think it is safe to predict that the outcome of that meeting will be a further strengthening of the feeling of friendship the peoples of Eastern Europe feel for the United States.

I think it is safe to predict also that out of it will come agreement that most of the people of the world will continue to work diligently for peace in the Middle East.

Mr. Speaker, President Nixon is a man who does not hesitate to take the bold steps necessary to move the world and our Nation away from the brink of war and to do it in such a way that America's prestige in the world is enhanced in the process.

We are indeed fortunate to have such a leader in these times of peril.

## AGNEW SPEAKS FOR ROUDEBUSH

### HON. DURWALD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. HALL. Mr. Speaker, Vice President SPIRO T. AGNEW, recently journeyed to the State of Indiana to speak on behalf of the Honorable RICHARD L. ROUDEBUSH, a candidate for the office of U.S. Senator from that State.

As usual, the Vice President had much to say, and said it candidly and forthrightly. I offer the text of his remarks and commend them to your attention.

The speech follows:

[From the Indianapolis Star, Sept. 24, 1970]

AGNEW EXPLAINS WHY VOTERS SHOULD BACK ROUDEBUSH

Following is the text of the speech made last night in Indianapolis by Vice-President Spiro T. Agnew.

From a national standpoint, a paramount issue of this election is whether President Nixon will be given a Congress that he can work with, a Congress that will move vital legislation now stalled in committee.

From Indiana's viewpoint the paramount issue is whether Hoosiers will be represented in the United States Senate by a man who reflects the thinking of the majority of the people of this state.

I submit that Dick Roudebush passes this test with flying colors—and that his opponent flunks it in every respect.

In his 10 years in the House of Representatives Roudebush has established a solid reputation for fiscal responsibility and once earned a "Watchdog of the Treasury" award for his interest in seeing that taxpayers got a dollar's worth of value for every dollar spent.

His opponent, the present senior senator from Indiana, has established a notorious reputation as one of the biggest spenders in Congress. In the 91st Congress alone, he has sponsored or co-sponsored legislation which would ultimately cost taxpayers over $22 billion a year. In short, if he could get all this legislation through it would be a bigger drain on the United States Treasury than the annual interest on the national debt.

And these are just bills on which the cost can be tabulated. He has sponsored or cosponsored 26 other bills in the last two years with open-ended spending authorizations. In other words, there is no way of determining what they ultimately would cost.

VOTES FOR DEFENSE

Congressman Roudebush has been one of the Presidents' strongest supporters in his efforts to end America's involvement in the war in Southeast Asia while supporting and training the South Vietnamese to fight for themselves. He has been equally stalwart in voting for the defense of this country.

His opponent not only voted against the administration's efforts to establish an anti-ballistic missile defense but also has proudly voted with the radical-liberals of the Senate in their unsuccessful attempts to cut off funds for the war in Vietnam and pull out American troops in a way that would surely sow the seeds of future wars. Surely, this is not the thinking of the great majority of the people of Indiana.

The views of this little band of obstructionists and isolationists also stand in marked contrast on a subject troubling all residents of this state and all of America—campus violence and irresponsibility.

Congressman Roudebush has stated that if a person burns down a building or otherwise destroys property—whether on a campus or elsewhere—he is no longer a demonstrator, he is a lawbreaker, and ought to be treated as such. And he did not arrive at this opinion today.

Let's contrast this with the views of his opponent, who has taken a stand with the radical-liberals on the side of permissiveness.

On March 6, 1968, the senior senator from Indiana voted against a bill which would make it a Federal crime to incite riot or civil disorder when it obstructs interstate commerce.

Two years later—in the Congressional Record of March 17, 1970—two years after campuses throughout America had been rocked by violence and destruction—the senior senator from Indiana said:

"At times, when reading of the reaction to student dissent, I have the impression that the members of the over-30 generation have declared war on youth."

NO WAR ON YOUTH

My Indiana friends, the President and I are members of the over-30 generation. We have not declared war on youth. On the contrary:

1. At Kansas State University last week, you saw how thousands of fine young people showed the whole nation that they stood united behind the President of the United States. You saw on television how these students felt about the minority who shouted epithets at their President.

2. At Saginaw, Mich. last week, I saw a group of young prima donnas yell the filthiest obscenities imaginable at a gracious lady who was running for the Senate—and then I saw the overwhelming support of the young people there make itself felt, drowning out the shouts of the minority.

It would not be fitting for anyone outside Indiana to tell you how to vote. But my friends, your choice in November boils down to this:

Through your senior senator, the people of Indiana are now telling the nation: "We want more and more Federal spending, and we do not care if it means higher prices and higher taxes."

Is that what the people of Indiana really want?

Through your senior senator, the people of Indiana are now telling the nation: "We do not want a missile defense that the President considers necessary for American defense, and we are willing to take our chances with national security."

Is that what the people of Indiana really want?

Through your senior senator, the people of Indiana are now telling the nation: "We want a man like William O. Douglas on the Supreme Court, not strict constructionists like Haynsworth or Carswell."

Is that what the people of Indiana really want?

VIETNAM PULLOUT

Through your senior senator, the people of Indiana are now telling the nation: "We support the moratorium of last year that called for the immediate pullout of all American troops, and we oppose the President's program of orderly withdrawal that will prevent a future war."

Is that what the people of Indiana really want?

Through your senior senator, the people of Indiana are now telling the nation: "When campus radicals and student militants present their list of nonnegotiable demands, we should placate them and plead with them and blame ourselves for their unrest."

Is that what the people of Indiana really want?

My friends, I believe that the people of Indiana reject that permissive, weak-kneed, short-sighted, free-spending approach of your senior senator 100 per cent.

I believe he represents some people in Berkeley, Calif., some people in Madison, Wis., and some people at Columbia University in New York—and he does not represent the views of the people of Indiana.

You are entitled to a new senator who will really represent you in the United States Senate—and Dick Roudebush is that man.

Just the other day, a man who represents a different philosophy came here to Indiana to speak for Dick Roudebush's opponent, the present senior senator from Indiana.

He spoke at a dinner firmly closed to the press and public, so nobody can be sure exactly what he said. But he handed out a statement that said this: "Surely with our military involvement in Vietnam ended, our voice for peace in the Middle East would be stronger and more influential."

Can you follow that kind of reasoning? This man would have you believe that if we cut and run in Asia, if we break our commitment there and sell out our allies, if we say loud and clear that America's word is no good—that, by some magic, we will stand tall and firm elsewhere in the world?

In my view, and in the view of the great majority of Americans, that sort of topsy-turvy reasoning is absolute poppycock. But your present senior senator has not repudiated it in any way, and we must assume he agrees with it.

SET VIETNAM ON FIRE

But that is not the half of it. This foreign policy adviser to the Indiana senator went on to condemn the American effort in Vietnam in these words: "We helped to set this country on fire, and we must help to put it out."

Do you, my friends in Indiana, believe that the United States invested the lives of more than 40,000 men in South Vietnam to "set that country on fire?" Do you believe that we went in there for some imperialist reason—or for any reason other than to help stop communist invasion?

I don't believe you do—and yet, until he repudiates the view of his far-out foreign policy adviser, the picture of the United States as the spreader of fire and destruction in the world is the image of your country held by the senior senator from Indiana.

Let me take note of a final, almost ludicrous, charge that was made by your senator's New York adviser.

Everyone in this room, everyone watching on television tonight, know how the President has been fighting to get stronger anti-crime and anti-drug legislation out of a reluctant Congress. He has sent 14 important crime bills to Congress, and 13 of them are still languishing in committee, effectively blocked by a minority of radical-liberals.

Does the senator's adviser and fund-raiser apologize for this? Does he urge Congress to get moving on the President's anti-crime program? Hardly. In a flip-flop that would do credit to a circus aerialist, he says this: "The President—the President, mind you—has failed to provide adequate Federal aid to local anti-crime and anti-drug activities."

Now, this total turn-about of the truth is revealing. You know and I know, that for the past six years, your senior senator has done everything in his power to stop the bills that would help the peace forces against the criminal element.

You know and I know he has voted against the kind of judges who would correct the imbalance that has tipped the scales of justice against the victim of crime.

"HARTKE THE COP"

But now, here it is election time, and he realized he has been terribly out of step with the needs and desires of the people of Indiana. And so now, like a phoenix rising from the ashes, you can expect to see a refurbished image of your senior senator. The man who makes his television commercials will try to sell you "Hartke the cop."

He won't be alone in this little charade. All across the country you can see senators facing election joining the Come-Lately Club on crime and disorder. Senator Kennedy is reversing his field, and instead of calling for commissions to study the chances for amnesty for draft-dodgers, he is ringingly denouncing what he calls, "campus commandos." Senator McGovern, just the other day, stopped cooing like a dove and started roaring like a lion: he condemned—quote, "foolish and destructive tactics" and "obnoxious patterns of conduct," which, he said, "threaten all that is decent in our society." Welcome aboard, George. It is about time.

It is a little like the story that was told during the French revolution, of the man racing to catch up with a parade. When someone asked him where he was going, he replied, "I must get to the front, for I am their leader."

With the breath of the voters hot on their necks at election time, it is understandable that some senators adopt a wholly new attitude toward disruptive tactics by some student radicals.

These politicians seem to think that by adding a soupcon of finger-wagging to their mixture as before, they can thoroughly dissociate themselves from the consequences of their previous tolerance.

Where were the voices of Muskie and McGovern, of Stevenson and Humphrey, of Hart and Hartke, when the radical leaders were making their threats of violence only a year or two ago?

Their voices were hushed, at best; now, hardly a day goes by that one or the other of these men is not out on the stump denouncing violence and condemning the bomb-throwers and book-burners.

Certainly they are sincere in this. Each one of these men is genuinely appalled at what he sees in our streets and on our campuses. But no purpose is served by politicians trying to outdo each other in their public abhorrence of violence; the come-latelies do not make up for lost time by the extent of the vituperation they now heap on campus terrorists.

CAUSE OF VIOLENCE

The important thing is not how loudly they denounce violence today, but how deeply they understand the cause of possible violence tomorrow.

If the cause of violence were the war or the draft, then all those who dissent on the war or the draft would be violent. Of course, the vast majority are not disorderly at all; therefore, we cannot permit a few to claim the war as a moral base for their violence.

The cause of violence is partly in the mental makeup of a relatively few misfits and partly in the way society reacts to their threats.

Unfortunately, in the recent past, many politicians, many college administrators and many sincerely non-violent dissenters reacted wrongly. They caved in to threats; they let themselves be coerced; they tried to appease the most militant.

But they never really understood—and many do not yet understand—the nature of the threat. Many of these militants do not want accommodation; they do not want progress within the system; they do not want compromise. They want confrontation, anarchy, hatred, overthrow.

That is why I have been saying, for some time now, that a person who commits a criminal act should be dealt with as a criminal, and not as an idealist listening to some higher moral law all his own. Until recently, this position was labeled as "repression" by the people who now cannot wait to throw

the book at those who carry out their threats.

To those previously indulgent politicians who are now on election eve, swelling the ranks of the hardliners on violence and crime, let me interject this note of caution: You are not signing up on a voyage that lasts only until Election Day. The American people will hold you to your new commitment against the indulgence that leads to violence for the duration of this period of disorder—and beyond.

ZEAL NEW-FOUND

And do not believe, concerned now as rightly you are in this political season, that the American people will regard your newfound zeal as anything more than newfound.

My friends, the people who have proven themselves to be consistently wrong do not deserve to be your leaders.

When a man has proven himself to be wrong about national defense; wrong about orderly withdrawal from Vietnam; wrong about crime, and wrong about the mood of the American people—he deserves to be given the time in retirement to think about his mistakes.

We live in a marvelous country. We live in a country that truly reflects the consent of the great majority governed. In Dick Roudebush, my friends, you have a man who will truly represent the views of the great State of Indiana. You have a man who will help the President curb inflation, who will help the President end a war with honor, who will help the President turn back the wave of crime, who will help the President overcome the tide of permissiveness that has afflicted all our lives.

You have a President who comes from Middle America and is proud of his roots. I hope you will send a senator to Washington who will help him carry out the mandate Indiana gave him just two years ago.

Let us turn away from the nay-sayers and the obstructionists, and turn toward those affirmative men who have a greater vision of America. Let us take pride in the values that build this nation, and show respect for the working men and women who are building it today.

A man from Indiana, who bore his party's standard in a national election, gave the reasons why he believed in this country:

"Because we hate no people and covet no peoples' lands;

Because we are blessed with a natural and varied abundance;

Because we have great dreams, and

Because we have the opportunity to make those dreams come true."

## MISSILES IN CUBA AGAIN

### HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. LUJAN. Mr. Speaker, just 9 short years ago the Soviets made their first thrust of raw military power into our hemisphere by building and equipping missile bases in Communist Cuba. To the everlasting credit of President Kennedy, the United States was swift and firm in its insistence that the missiles be removed.

We all recall the later statement of Secretary of State Dean Rusk that America and Russia stood "eyeball to eyeball" in that confrontation, and we remember the relief and pride felt by the American people when the Russians backed down and the missiles were removed.

Today, according to intelligence reports, the will and determination of the United States is again being tested, and again we have Russian missiles being moved into Cuba. The only possible targets for these missiles are the cities of the United States.

I suggest, Mr. Speaker, that this unwarranted, unprovoked, and reckless military gesture by the Soviets is just as unacceptable to America today as it was 9 years ago. Yet there are those in Congress who would have us stand idly by while this threat to the peace of our hemisphere goes unchallenged.

I suggest, sir, that the responsibility to respond to this challenge lies with the Congress, and I hereby go on record as one who has no intention of permitting this aggressive intrusion to continue. America cannot live with this new Soviet threat at our doorstep. Let us serve immediate notice on the Russian leaders that we will take whatever action is necessary to effect the removal of these threatening instruments of war from our hemisphere.

## MEETING THE NURSE SHORTAGE

### HON. JAMES R. GROVER, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. GROVER. Mr. Speaker, in recent months we have heard a great deal about the health crisis in America and the shortage of health manpower. A most interesting and constructive approach for meeting the shortage of nurses has been developed and implemented by a proprietary hospital located in the Second Congressional District of New York—Brunswick Hospital Center, Amityville, N.Y.

The job training program for licensed practical nurses was developed by Dr. Banjamin M. Stein, the owner of Brunswick Hospital Center, one of the largest proprietary hospitals in the United States. Dr. Stein deserves special recognition for his efforts to meet the critical shortage of nurses in Suffolk County, N.Y. and I would like to bring to the attention of my colleagues the following article about the Brunswick Nurse Training program which appeared in the September 20 edition of the New York Times:

NURSING PROGRAM SOUGHT IN SUFFOLK—HOSPITAL FIGHTING OBSTACLES TO REGISTERED AIDES

(By Dudley Dalton)

AMITYVILLE, L.I.—A few years ago, Mrs. Mildred Williams was scrubbing floors in a hospital here. Today, she is in the same hospital, but she has exchanged her housekeepers' uniform for that of a licensed practical nurse.

Mrs. Williams says she might still be performing housekeeping duties in the hospital had it not been for Dr. Benjamin M. Stein, the owner of the Brunswick Hospital Center, one of the largest proprietary hospitals in the country. The hospital employs Mrs. Williams and 1,000 other people, many of them from the local black community, who care for the patients in the 570-bed facility.

Like most hospitals, Brunswick has been faced with a shortage of nurses, but Dr. Stein was unwilling to wait until the state could establish a training program that would meet the needs of his and other hospitals.

He believed that there was a wealth of talent within the local community, women who were performing menial tasks in the hospital and others who could not afford to go to regular nursing schools.

PROGRAM INITIATED

The answer, he thought, was to set up a nursing program that would permit the women to work in the hospital during the day and go to school at night, with the hospital covering most of the tuition costs.

That was more than seven years ago and at least four of those years were spent in trying to overcome obstacles and resistance on the part of Federal, state and local officials.

First, Dr. Stein, tried to set up a program through the public schools, but the schools said that they were not equipped to participate in such a program.

Finally, with the help of John J. Grimes, director of occupational education of the Board of Cooperative Educational Services, and Dr. Gordon A. Wheaton, superintendent of the Third Supervisory District of Suffolk County, Dr. Stein was able to set up a night nursing program at the Lewis A. Wilson School of Nursing in Huntington.

The program was drawn up by Dr. Stein with the assistance of Miss Louise Kreppein, supervisor of health occupations of the Board of Cooperative Educational Services.

DAY AND NIGHT CHORE

Women participate in the program work at Brunswick during the day in a variety of jobs and then go to the Wilson nursing school at night. The student nurses, both from Brunswick and elsewhere, spend part of the program getting practical nursing experience at the hospital under the supervision of school personnel.

After completing the two-year program, the students take the state license examination to qualify as licensed practical nurses.

Licensed practical nurses work as team members with physicians, registered nurses and other health personnel in caring for the sick and in promoting community health.

The pay differential between a housekeeper at Brunswick and a licensed practical nurse is less than $1,000 a year—the housekeepers' annual salary is more than $5,000 and the licensed practical nurse makes about $6,000. However, a registered nurse makes about $9,000 a year.

There is very little that practical nurses cannot do in the hospital, but supervisory positions, which are required by the state, are reserved for registered nurses, who have more training.

TEST PROGRAM CHARTED

It is in this area that Dr. Stein, and his chief assistant Jules L. Stein, his nephew, have been devoting their attention since the practical nurse program got under way and he is running into the same roadblocks.

After many months of work, Dr. Stein, again working with Mr. Grimes and Miss Kreppein, drew up a proposal for an experimental program in nursing education that would lead to a degree in registered nursing.

The report argued that the traditional three-year program for such nurses was neither necessary nor desirable, noting that schools of practical nursing had successfully implemented registered nursing programs as adjuncts to the practical nursing courses.

It was also noted that the cost of traditional nursing programs was often prohibitive, an argument that Dr. Stein emphasizes repeatedly when discussing the proposal.

ALTERNATIVE IS OFFERED

In the licensed nursing program that is being operated through Brunswick, the hospital pays 50 per cent of the tuition cost the first year and 75 per cent the second. The percentage was set up in this manner to insure that the women involved cared enough to invest in their own education.

In Dr. Stein's opinion, many of the women in the poorer communities surrounding Brunswick would be attracted to such a shared tuition nursing program if they could be assured of making a decent living while going to school.

The only alternative, Dr. Stein said, is quitting work entirely and going on welfare. The women would then go to school through manpower programs.

But he argues that to force a person to better himself through welfare robs that person of his dignity and does not provide a sufficient income.

When the proposal was submitted to the State Department of Education last year it was rejected with the comment that the educational services board could best make a contribution by "working jointly with community colleges offering associate degree nursing programs."

Dr. Stein argues that the hospitals do not need nurses with associate degrees; they need registered nurses who can care for the sick in the operating rooms, intensive care units and elsewhere."

"We don't need registered nurses three or four years from now," Dr. Stein asserted. "We need them today. We don't need nurses who are highly trained medical specialists; we need nurses who can care for the sick."

## INDUSTRIES IN ANGUSTA, GA., WORK TO END POLLUTION

## HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. STEPHENS. Mr. Speaker, the Augusta Chronicle-Herald is currently publishing a series on the methods being used by industries in the Augusta area to combat pollution. The following article describes how the Babcock & Wilcox Co., has successfuly dealt with air pollution created by its Albion Kaolin Department in Hephzibah, Ga. They use a vacuum system to collect the fine, white kaolin dust. This keeps it from escaping into the atmosphere. Although the procedure is costly, some of the kaolin dust can be reused.

We are all concerned with reducing air pollution, and what is being done at the Hephzibah plant is a fine example of how one industry has virtually eliminated pollution and also protected the health of its employees. Therefore, I have asked that the article from the Augusta Chronicle-Herald be inserted in the CONGRESSIONAL RECORD:

B&W TAKES A GIANT STEP IN AIR POLLUTION CONTROL

(EDITOR'S NOTE.—This is the Environmental Decade. The next 10 years could be the most important that this nation—and the world—ever faced. The No. 1 problem facing us is pollution of our two main life sources—air and water—without either of which we wouldn't be here. Much of the hue and cry today concerns industrial pollution, although there are other areas causing pollution. Many industries are trying to clean up their mess, but even with the Space Age technologies man has developed, it still takes time and money. This article is the first of a series designed to inform Sunday Chronicle-Herald readers just what Augusta area industries intend to do, and are doing, in the battle against pollution)

(By Bill Baab)

HEPHZIBAH, GA.—It used to be that much of the Hephzibah area faced a "White Christmas" every day, no thanks to a layer of fine, whitish particles spewed forth from the nearby stacks of the Babcock and Wilcox Company's Albion Kaolin Dept., or "mine," as local residents know it.

Workers around the plant, many of them from Hephzibah, could hardly tell if the sky was blue, or if it was cloudy, because the dust obliterated those details. Also, they were breathing more than their fair share of the dust—inhaling it deep into their lungs.

"We were certainly messing up our neighborhood by blowing this dust out our stacks," says Fran Lide, manager of the Albion Department. "You can call what we've now accomplished a community project."

By simply throwing a switch, Babcock and Wilcox has demonstrated its concern about air pollution and for the environment. When that switch finally clicks into place, 99 per cent of those dust particles will be sucked into a huge vacuum cleaner-like facility and not emptied into the atmosphere to settle where the winds might blow them.

The new system, known simply as a dust collector, recovers about $20,000 worth of products that can be re-used. Maintenance costs run almost that much, however, so the company really is getting little financial return for its quarter of a million dollar outlay.

But it should receive an "A-Plus" in human relations for ridding the Richmond County air of at least one more pollutant.

The Albion Department is located in the heart of the Kaolin belt which stretches from Aiken, S.C., to Macon, Ga. While other areas are producing the product. Lide says 90 percent of the kaolin used in the United States comes from this belt. The Albion plant processes about 200,000 tons of kaolin annually and its "mine" produces about 20,000 tons per acre.

An impromptu tour of the plant last week by John Anderson, director of public relations; John Mayer, production manager at the Albion Dept., and Lide for the writer and Mike Kelley, administrative assistant to the vice president in B & W's Washington office, was very impressive to say the least.

It was Mayer who demonstrated the effectiveness of the new air pollution control system. One moment the stacks were belching thick clouds of whitish dust; in a matter of seconds after his command to throw the switch, little was visible except the fleecy white clouds suspended in the bright, blue sky.

Mayer also conducted us to the site of the latest kaolin mining operations. Huge, earth-moving equipment and draglines stood like toys in Albion's version of the Grand Canyon. "One problem we face is the fact that the kaolin is sometimes located 80 to 100 feet below layers of sand and red clay and we must dig through all of that before we can begin mining it," Mayer says.

As he spoke, massive dump trucks loaded with this "overburden" were roaring up and down the steep grades, while in a comparatively smaller area, a power shovel was loading a grayish-white clay—the kaolin—into other waiting trucks.

Naturally, all of this work is leaving huge, gaping holes in the earth's surface and many times, springs are struck and small ponds are formed.

But Babcock and Wilcox is not letting this land go to pot.

"A recent state law ruled that anyone has to have a license to mine," says Lide. "There's a Georgia requirement that you must submit a plan to reclaim the land—to put it back into some good, productive use after you're done with it.

"Our company is in complete agreement with this law—as a matter of fact, we have submitted our plans to put this particular land back into use for wildlife," Lide says.

This land reclamation isn't going to be the work of a few months, or even a few years. More likely, it will be a perpetual job, but even Rome wasn't built in a day.

## FEDERAL CIVILIAN EMPLOYMENT, AUGUST 1970

## HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. MAHON. Mr. Speaker, I include a release highlighting the August 1970 civilian personnel report of the Joint Committee on Reduction of Federal Expenditures:

FEDERAL CIVILIAN EMPLOYMENT, AUGUST 1970

Total civilian employment in the Executive, Legislative and Judicial Branches of the Federal Government in the month of August was 2,939,645 as compared with 2,980,351 in the preceding month of July. This was a net decrease of 40,706, due primarily to seasonal employment and summer employment of the "disadvantaged" under youth opportunity programs.

These figures are from reports certified by the agencies as compiled by the Joint Committee on Reduction of Federal Expenditures.

EXECUTIVE BRANCH

Civilian employment in the Executive Branch in the month of August totaled 2,901,850. This was a net decrease of 40,667 as compared with employment reported in the preceding month of July. Employment by months in fiscal 1971, which began July 1, 1970, follows:

| Employment, July 1970: | *Decrease* |
|---|---|
| 2,942,517 | −1,595 |
| Employment, August: | |
| 2,901,850 | −40,667 |

Total employment in civilian agencies of the Executive Branch for the month of August was 1,710,559, a decrease of 18,856 as compared with the July total of 1,729,415. Total civilian employment in the military agencies in August was 1,191,291, a decrease of 21,811 as compared with 1,213,102 in July.

The civilian agencies of the Executive Branch reporting the largest net decreases were Commerce Department with 4,546 (reflecting a decrease of 4,934 in temporary employees involved in taking the Nineteenth Decennial Census), Post Office Department with 3,936, Veterans' Administration with 2,983, Treasury Department with 2,031 and Interior Department with 1,156.

In the Department of Defense the largest decreases in civilian employment were reported by the Navy with 8,993, the Air Force with 6,138, the Army with 3,851 and Defense Supply Agency with 2,573.

Total Executive Branch employment inside the United States in August was 2,684,700, a decrease of 45,249 as compared with July. Total employment outside the United States in August was 217,150, an increase of 4,582 as compared with July.

The total of 2,901,850 civilian employees of the Executive Branch reported for the month of August 1970 includes 2,532,709 full time employees in permanent positions. This rep-

resents a decrease of 12,576 in such employment from the preceding month of July. (See Table 2 of accompanying report.)

The Executive Branch employment total of 2,901,850 includes some foreign nationals employed abroad, but in addition there were 102,673 foreign nationals working for U.S. agencies overseas during August who were not counted in the usual personnel reports. The number in July was 102,991.

LEGISLATIVE AND JUDICIAL BRANCHES

Employment in the Legislative Branch in the month of August totaled 30,958, an increase of 41 as compared with the preceding month of July. Employment in the Judicial Branch in the month of August totaled 6,837, a decrease of 80 as compared with July.

DISADVANTAGED PERSONS

The total of 2,939,645 reported by the Committee for August includes 47,282 disadvantaged persons employed under federal opportunity programs, a decrease of 19,829 over the preceding month of July. (See Table 4 of the accompanying report.)

In addition, Mr. Speaker, I would like to include a tabulation, excerpted from the Joint Committee report, on personnel employed full-time in permanent positions by executive branch agencies during August 1970, showing comparisons with June 1969 and the budget estimates for June 1971:

FULL-TIME PERMANENT EMPLOYMENT

| Major agencies | June 1969 | August 1970 | Estimated June 30, 1971 [1] |
|---|---|---|---|
| Agriculture | 83,425 | 82,513 | 85,300 |
| Commerce | 25,364 | 25,341 | 26,700 |
| Defense: | | | |
| Civil functions | 31,214 | 29,865 | 31,000 |
| Military functions | 1,225,877 | 1,110,102 | 1,110,010 |
| Health, Education, and Welfare | 102,941 | 103,305 | 105,100 |
| Housing and Urban Development | 14,307 | 14,554 | 16,000 |
| Interior | 58,156 | 59,097 | 61,100 |
| Justice | 35,106 | 38,599 | 39,100 |
| Labor | 9,723 | 10,221 | 10,800 |
| Post Office | 562,381 | 566,301 | 585,000 |
| State | 24,658 | 23,471 | 23,400 |
| Agency for International Development | 15,753 | 14,202 | 14,400 |
| Transportation | 60,386 | 64,729 | 70,300 |
| Treasury | 79,982 | 85,878 | 93,500 |
| Atomic Energy Commission | 7,047 | 6,906 | 6,900 |
| Civil Service Commission | 4,970 | 5,192 | 5,500 |
| General Services Administration | 36,176 | 35,895 | 36,800 |
| National Aeronautics and Space Administration | 31,733 | 30,226 | 30,600 |
| Office of Economic Opportunity | 2,856 | 2,348 | 2,500 |
| Panama Canal | 14,731 | 14,476 | 14,900 |
| Selective Service System | 6,584 | 6,609 | 6,500 |
| Small Business Administration | 4,099 | 3,928 | 4,100 |
| Tennessee Valley Authority | 11,987 | 12,787 | 13,300 |
| U.S. Information Agency | 10,500 | 9,931 | 10,100 |
| Veterans' Administration | 147,606 | 148,837 | 150,200 |
| All other agencies | 26,200 | 27,396 | 28,900 |
| Contingencies | | | 15,000 |
| Total | 2,633,762 | 2,532,709 | 2,597,200 |

[1] Source: As projected in 1971 Budget Document; figures rounded to nearest hundred.

## MODEL CITIES PROGRAM

### HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. SCHMITZ. Mr. Speaker, an article in today's Wall Street Journal concerning the model cities program is highly disturbing in light of certain information which has recently been brought to my attention. This article states that, "The Secretary, Mr. Romney, will eliminate, in a group of selected cities, all Federal review of the local use of model cities money except those reviews required by law." This is to do away with what is termed overregulation.

Besides the obvious and often noted defects of this type of welfare program several incidents which have recently occurred suggest that this program is not overcontrolled but, in fact, not controlled tightly enough. The aspect of control to which I refer is that which sets and administers guidelines for the type of personnel to be employed by the agency and subsidiary organizations. The process and criteria of selection utilized in hiring people to work in this effort will determine whether the program is just generally detrimental to the economy and counterproductive in the long run or whether it is actively revolutionary.

Over the weekend of September 5, the Black Panther Party had a plenary session in the city of Philadelphia to prepare for a full "Revolutionary Peoples Constitutional Convention" which they are planning to hold here in Washington on November 4. They have decided to go into direct competition, it seems, with the Center for the Study of Democratic Institutions to see which group can come up with the most absurd revision of our Constitution. Although they will have to go a long way to top the paucity of thought and absence of any recognizable mental grasp of reality embodied in the center's effort, if anyone can come forth with a greater collection of gibberish it will be the Panthers.

Twenty-two persons on their way to attend the Panther gala from East St. Louis, Ill., were arrested on the outskirts of Philadelphia on assorted charges having to do with possession of firearms. These people all claimed to be members of something called Model Homes, Inc., which is part of the East St. Louis model cities program.

In Denver, one Lauren B. Watson, formerly an organizer and leader of the Black Panther Party from 1967 to 1969, has been named interim administrator of a part of that city's model city program, which goes under the name of Resident Participation of Denver, Inc. Resident Participation, Inc., helps to spend around $30 million in Federal and local funds.

These are but two examples of what is most probably a much wider trend. The people bent on overthrowing the legally constituted Government are making use of money extracted from the taxpayer by the legally constituted Government to do it. This must be corrected. Not only are subversives not being dealt with by the courts, but they are being further encouraged by the Federal Government providing them with a financial base of support for their operations.

A Federal grand jury in Chicago is currently investigating a $927,000 grant to several Chicago street gangs made by the OEO. Unless the model cities program is more tightly controlled than the OEO in terms of grants and employment practices, the same thing is going to happen. Many of my constituents are highly incensed that their taxes are going to support criminally subversive elements in our society.

The article from the Wall Street Journal follows:

MODEL CITIES PROGRAM TO BE A KEY ELEMENT IN ADMINISTRATION'S NATIONAL URBAN POLICY

(By Monroe W. Karmin)

WASHINGTON.—After more than a year of intensive review, the Nixon Administration has decided to adopt the Model Cities program as a major element of the national urban policy it is developing.

Formal blessing of the Model Cities concept—a plan inherited from the Johnson Administration to eliminate urban blight—will come at a press conference scheduled for today by Secretary Romney of the Department of Housing and Urban Development and Secretary Richardson of the Department of Health, Education and Welfare.

In embracing Model Cities as a "key component" of urban strategy, however, Mr. Romney will announce a series of experiments in selected cities designed to gradually reshape the program to the Nixon Administration's liking—a process that isn't without its political implications.

Among other things, the experiments will permit some cities to begin planning citywide rehabilitation that goes beyond previously chosen model neighborhoods. As many of the original model neighborhoods were black slums, the citywide planning concept will enable the Nixon team to extend the hope of future benefits to other minority groups, such as Puerto Rican, Mexican-American and white poor. The Administration, as a political strategy, wants to show a concerned for all underprivileged groups, not just black.

Another group of cities will be allowed to test a merger of the antipoverty program's community-action agencies with the Model Cities program's city demonstration agencies. This could be the forerunner of a more extensive incorporation of the antipoverty community organizations under the HUD umbrella.

The Nixon team is changing the character of the Office of Economic Opportunity, the agency created by former President Johnson to conduct the "war on poverty," from an operating agency to an experimental laboratory. Gradually, it may be phased out, as those of its programs that are deemed meritorious are spun off to other Federal departments.

Tough performance standards will be set in some "weak sister" cities to see whether this approach stimulates the laggards to measure up. The standards also would permit the Nixonites to drop those cities that didn't measure up, even with special technical help from Washington.

There are currently 147 cities in the program, all of which were chosen by the previous Democratic Administration. Politics being what it is, the Republicans would like the opportunity to select future participants, and dropping "weak sisters" on the basis of prescribed performance standards is one way of creating room. So far, three of the original 150 selected cities—North Little Rock, Ark.; Danville, Ky., and Bradford, Pa.—have been knocked out of the program.

In all, some 12 to 18 Model Cities will be selected for Nixonian experimentation at an estimated additional program cost of $45 million. The program, however, won't receive added funding above its current $575 million annual level; instead, the $45 million will be picked up from funds reserved for, but not used by, the "weak sister" cities that either are knocked out of the program or are lagging behind.

Mr. Romney isn't expected to stress, at his press conference, the political aspects of the

Model Cities experimentations. Rather, he'll emphasize that the program, now that it is an accepted method of dispensing aid to the cities, needs to improve its delivery of Federal funds by cutting bureaucratic red tape.

For support, the Secretary can draw upon the recent report of President Nixon's Task Force on Model Cities. The task force said the program, though conceived as a device to provide local communities with more freedom to decide how Federal funds should be used in their poor neighborhoods, has failed to "fully live up to its promises" because it "has been both over-regulated and under-supported."

Though Mr. Romney, for budgetary reasons, isn't prepared to do anything about the under-support, he will announce a major procedural change to remedy the over-regulation. The Secretary will eliminate, in a group of selected cities, all Federal review of the local use of Model Cities money except those reviews required by law. Now, some six to 10 separate review procedures are required before a city can qualify for money to carry out projects included in its Model Cities plan. It's hoped the change will reduce this to one review.

The Model Cities program gives a bonus to cities that plan comprehensively to eradicate blight in a chosen target neighborhood by using Federal aid programs as well as state and local funds and programs. For the bonus money, the effect of the Romney change will be to test the bloc grant approach that the Administration favors; that is, once a locality's plan is approved by HUD, it will receive the bonus money with the Federal review coming after, not before, the money is spent to insure that the plan submitted was followed.

As for regular (or "categorical") Federal grant-in-aid programs, Mr. Romney will announce that Mr. Nixon will use the power of the White House—in this case, the Domestic Affairs Council headed by Presidential adviser John Ehrlichman—to enforce his mandate that various Federal departments and agencies cooperate with the Model Cities program by giving priority to money requests for projects included in Model Cities plans.

The Federal bureaucracy being what it is, this may be difficult to carry out. Under President Johnson, an interagency task force was created to perform a similar function, without notable success except for the performance of the Department of Health, Education and Welfare. However, those close to the Model Cities program consider the Domestic Affairs Council a more effective mechanism.

## SHORT, LONG-TERM SOLUTIONS TO FUEL CRISIS ARE AVAILABLE NOW

### HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. HATHAWAY. Mr. Speaker, a short article entitled "Scarcity of Energy" appears in this month's issue of Science magazine, a publication of the American Association for the Advancement of Science. It was written by Philip H. Abelson, the periodical's editor, and argues to the conclusion that chief among other possible answers to the Nation's long-term problems in satisfying its needs for energy is the necessity for our becoming more prudent in the use of energy. I ask that Mr. Abelson's contribution appear at the conclusion of my remarks.

Again relative to a long-term solution to our energy problems is an editorial presented September 15 on New York City's WCBS–TV, calling for congressional approval of Senator RANDOLPH'S proposal to create a National Commission on Fuels and Energy. Such a commission, argues the editorial, could "help provide the over-all fuel planning we need, to make sure that when the Nation enters the next century, all systems are go." I request that this material, too, be permitted to appear in the CONGRESSIONAL RECORD at the conclusion of my remarks.

Mr. Speaker, long-term approaches to preserving and expanding our Nation's sources of energy are laudatory and, if we are to effectively supply the amounts of energy our people and their businesses and institutions will require 5 or 10 years from now and beyond, most necessary. But an energy crisis is already here. We are already experiencing its brutal effects.

And so today, Mr. Speaker, I would like to concern myself not so much with the long-term plans we will require tomorrow as with the answers we need today for a present, very real problem. The scope of the problem is represented by the Massachusetts school districts of Dover-Sherborn, Sharon, and Wrentham, and by school districts throughout the Northeast, which may have to send their students home several months or, perhaps, weeks from now because they can get no bids to supply heating oil for their school buildings. The scope of today's problem is also represented by New England hospitals and municipalities, which are presently without assurance of the availability, at any price, of enough residual oil to see them through the winter. And it is represented by the many hundreds of northeastern U.S. factories, which, in order to conserve power for residential use, may be forced to shut down for certain periods, thus causing unemployment for many thousands of New England workers.

On top of all this, fuel industry officials are saying they might not be able to supply adequate amounts of fuel to keep New Englanders warm in the months ahead unless sharp hikes are permitted in oil, gas, and coal prices. Without the price increases, we are instructed, there just would not be enough "incentive" in the industry to prevent fuel shortages.

A public which has already been paying artificially inflated prices for more than a decade under a system ostensibly aimed at protecting the security of our fuel supply from external forces now faces twin internal threats of another 10-percent jump in the price of fuels and serious fuel shortages.

An editorial appearing in the September 24 edition of the Boston Globe asserts that the fault lies in "the spuriousness of the national security argument and the bankruptcy of the oil-import system." And I agree. The editorial goes on to say this:

> Of course, the situation is not entirely the government's fault. The petroleum industry apparently underestimated potential demand for its product, natural gas is in short supply, the Middle East war has produced a worldwide shortage of tanker capacity, nuclear power generation has not increased as fast as had been expected, and the pollution issue has complicated the entire situation, both at sea and in the air.
>
> Yet charges of misfeasance, malfeasance, and nonfeasance seem fairly to lie against the government in this situation, and, in particular, against the Nixon Administration.
>
> The misfeasance was in buying the phony oil industry argument on national defense in the first place. The current crisis proves that the quota system failed to guarantee a domestic emergency supply. What it did was and is to protect the price of petroleum products against competition.
>
> Malfeasance is an adequate description of the President's shelving of his cabinet task force report and the inclusion of a freeze-in of the oil quota system in the trade bill now before Congress. The report recommended phasing out of the quotas.
>
> And nonfeasance is about the kindest thing one can say about the unresponsiveness of the Federal authority in a situation which threatens inconvenience, hardship and even, perhaps, health hazard to this region of the country.

Mr. Speaker, there are two relatively simple steps which can provide great assistance in solving New England's energy crisis, on both short- and long-term bases.

First, the President can, and I fervently urge that he does, unilaterally lift the quota on No. 2 home heating oil, which is currently required not only for residential heating, but also for industrial use, as a low-polluting additive and as an alternative to less expensive but extremely scarce residual oil.

It has been illustrated clearly and frequently in the past several years, most recently by the President's own task force, that the existing mandatory import controls on home heating oil are arbitrary and artificial, and that their inflexible administration, instead of serving a real or in any way legitimate national purpose, unreasonably, unjustly, the people, businesses, and industries of New England.

This year, with the shortage and price pressures greater than ever before, continued avoidance of Presidential prerogative could mean winter price controls and fuel rationing for the people of the Northeast.

Permit me to add with regard to this first suggested solution, that a number of us in the New England delegation have joined in a letter to the White House requesting that the President personally meet and discuss with us what we have chosen to call "the unresolved New England fuel oil crisis." I ask that the text of this letter, sent today to the conclusion of my remarks.

Second, Mr. Speaker, the House of Representatives can, and I recommend that it does, remove from the pending Trade Act of 1970 the freeze on oil-import quotas, a provision which would make it more difficult than ever for American consumers to rid themselves of a system which now, even in its "unfrozen" state, costs between $5 and $7 billion annually.

In Maine, as in other New England States, fuel costs are especially high. The average Maine family of 4, because

of its heavy reliance on home-heating fuels and the existence of oil-import quotas, must pay $104 a year more than the national average to keep warm. That puts the average cost per Maine citizen $17 over the national average.

I think the Representatives of the unfairly burdened American consumer should have a separate opportunity to this extremely costly provision.

I also believe it is both relevant and important to urge that the President's refusal to follow the recommendation of his task force on oil imports, should not be permitted to offer a basis for denying him or some future Chief Executive the option of canceling the quotas and possibly instituting in their place a tariff system on foreign oil. Any system that allows, indeed fosters, such obviously detrimental effects as the ones I have briefly outlined should not be frozen into law.

Therefore, I call upon my colleagues to move for a full and open discussion of the oil-import question when the trade act comes to the floor of this House in November. An immediate and a long-term solution to our growing fuel crisis are contingent on our doing so.

SCARCITY OF ENERGY

(By Philip H. Abelson)

The United States is now faced with serious short-term and long-term problems in satisfying its needs for energy. In the short-term, there is a scarcity of fuels that meet antipollution regulations; in the long-term, we are faced with depletion of our petroleum and natural gas reserves.

The major air pollutant from stationary sources, $SO_2$, comes largely from the thermal electric power plants. About 57 percent of the fuel for such plants is coal that typically contains 2 to 3 percent sulfur. To diminish air pollution, a number of cities, including New York, have adopted regulations that require in effect that fuels have no more than 1 percent sulfur. The result has been a curtailment of the use of coal in such cities, for only limited amounts of coal with 1 percent sulfur or less are available.

In an effort to comply with the regulations, many utilities have switched to fuel oil. This year the demand for residual fuel oil has already risen sharply but supplies have not increased correspondingly. The United States makes little residual fuel oil. More than 90 percent of the needs of northeastern United States are derived from foreign sources. Most comes from Venezuela, which produces high-sulfur oils that must be specially treated. Although new refining units have recently been installed, their capacity is not sufficient to meet demands. Another source is the low-sulfur oils of Africa, but their availability is limited by production cutbacks in Libya and by a worldwide shortage of tankers created partly by these cutbacks and partly by Syria's refusal to permit reopening of the Trans-Arabian pipeline. As a consequence of these developments, the cost of residual fuel oil in New York has already increased by more than 50 percent.

Faced with a shortage of oil, some utilities have attempted to turn to natural gas as an alternative. They have found that large supplies of this fuel are not available. Many gas companies are fearful about their ability to supply all the needs of their present customers this winter.

Somehow we will muddle through this present shortage—if necessary, by relaxing somewhat the antipollution regulations. However, the long-term energy problem will require more substantive actions. Not only is the United States depleting its reserves of petroleum and natural gas, but it is not moving decisively to fill the gap. About 74 percent of our total energy requirements are met by oil and natural gas. Importing our total supply of these products would at present cost us about $20 billion a year. We cannot afford such an adverse contribution to the balance of payments. Nor can we permit ourselves to become subject to economic or political blackmail.

Some intermediate-term relief could be obtained by granting higher prices to gas producers and by opening additional areas of the continental shelf. However, there is little visible evidence that higher prices could bring out substantial amounts of either oil or gas, and additional drilling of the continental shelves would increase our environmental problems.

The longer-term solutions to our energy problems involve becoming more prudent in the use of energy. The solutions also demand the skillful employment of coal and atomic energy. In principle, all our energy needs could be met for a long time with coal. This raw material could be processed to yield sulfur-free fuel, liquid hydrocarbons, and methane. In practice, however, the development of the use of coal is limping along and is underfinanced. A few hundred million dollars a year devoted to research, development, and demonstration plants could be the most valuable expenditure the government could make.

WCBS–TV EDITORIAL: FUELS POLICY

The survival of the crew of the crippled Apollo 13 spaceship last April taught us a lesson in courage. But it also taught us a lesson in planning, particularly in the planning of scarce fuels.

For the success of that space rescue was largely due to the precise management of dangerously low reserves of fuel—rocket propellants, food, oxygen and other consumables. We all remember the breathless calculations of just how much fuel was left in the service module, just when to switch to battery power, just when to burn the precious supply of lunar-module propellant for the homeward thrust.

There is a lesson in all this, because the problem of conserving fuel now faces another kind of spaceship—the planet Earth. And it particularly faces the planet's largest consumer of fuels, the United States. By the end of the century, the average American is expected to be consuming four times as much energy as he is consuming now. The resultant drain on our fuel resources will be enormous. More petroleum will be needed in the next 15 years than has been consumed in all the years since oil was discovered. Our uranium reserves may be used up in another two decades under present methods of generating nuclear power.

And coal, while still plentiful in the ground, has become scarce because mining facilities are inadequate to meet the demand, pushing coal prices up 50 percent this year.

Now, our situation is not so desperate as that of the Apollo 13, but the nation still can learn from the astronauts a secret for wise fuels management. For our problem is that America's different fuels are looked after by many different agencies all chasing after different aspects of the fuels problem. What the astronauts had, and what we don't have, is Mission Control—that is a single central authority for planning the optimum use of fuel resources. We need such central planning for production, research, development, consumption and environmental impact.

That is why this station supports a bill recently introduced by Senator Jennings Randolph, Democrat of West Virginia, to create a National Commission on Fuels and Energy. Such a commission, we believe, could help provide the over-all fuel planning we need, to make sure that when the Nation enters the next century, all systems are go.

---

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 30, 1970.*

Hon. RICHARD M. NIXON,
*President of the United States,*
*The White House,*

DEAR MR. PRESIDENT: We, the undersigned members of the New England Delegation, respectfully request the opportunity to personally meet with you at your earliest convenience to discuss the unresolved New England fuel oil crisis.

It is our firm conviction that the presently proposed governmental efforts to relieve our grave fuel oil shortages are still insufficient to avert what we see as an impending crisis of major proportions, threatening the health and safety of our New England constituents.

We do not believe that, at this late stage, the oil industry alone can solve our problems. The government must act. The frost is on the pumpkin in New England, with a long and arduous winter soon to follow. Continued fuel oil shortages will result in unheated homes, in school closures, in factory lay-offs, and even partial paralysis of the New England economy—none of which is tolerable to us. We encounter new emergency situations day by day.

Your report from the Chairman of the Council of Economic Advisers and the Director of the Office of Emergency Preparedness states that, "if the measures taken today together with the initiatives of industry fail to avert a crisis, we shall not hesitate to resort to any additional actions necessary." We assert that we cannot wait for critical conditions to intensify and emergencies to appear before taking action.

The justifiable anxiety of New Englanders due to the existing inadequate supplies requires redress. Consequently, we wish to convey to you our sense of urgency and concern. We ask for an immediate meeting to discuss these critical matters.

---

## TESTIMONY OF ARTHUR GOLDBERG IN SUPPORT OF HOUSE CONCURRENT RESOLUTION 262

---

## HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BRASCO. Mr. Speaker, on September 21, the Communications and Power Subcommittee of the Committee on Interstate and Foreign Commerce held hearings on House Concurrent Resolution 262, legislation which I had introduced protesting the treatment of ethnic, racial and religious groups by the television and motion picture industries. At this time, I would like to include in the RECORD the testimony by Arthur Goldberg in support of this legislation:

We are a nation of immigrants. Ever since Christopher Columbus left Genoa in the 15th Century, on the voyages that would eventually bring him to the shores of the New World, men and women from every part of the world have been drawn to this continent in search of freedom, and liberty, and peace.

There are no citizens of this land whose roots are not deeply imbedded in the soil of a foreign land. And no citizen of this country may rightfully claim to be more of an American than any other simply because his immigrant ancesters arrived in this country from one particular part of the world, or

were members of any particular faith, or came to this country at some early stage of its development.

And because we are all equally American, our common immigrant background has created in this country history's most successful pluralistic society—an amalgum of cultures and creeds the likes of which the world has never seen.

It is, therefore, a matter of great seriousness that Italo-Americans, who are among our country's most valued and loyal citizens, have been unfairly and inaccurately portrayed in all its many television and motion picture presentations.

Italo-Americans are honored members of the American community. They have made significant contributions to the American culture—in politics and government, in the arts, in commerce, and sports, and in the fullest range of American life.

But more important, even than any of the vast contributions made by Italo-Americans to the public life in this country, is the influence of Italo-American family life upon our culture. The warmth and loyalty of Italo-American families is a matter of great pride—justifiable pride—to Italo-Americans. The values instilled in the children of Italo-American families—honesty, loyalty, and above all faith, have served generations of Italo-Americans and all Americans well. And I think these values ought to be taken to heart by all of us.

What our country needs in these difficult times is not television and the movies portraying any ethnic group in such a way as to draw aspersions to it. We need to recognize and emphasize the positive values of all our citizens. Italo-Americans have a lot to be proud of. And I think America has a lot to be proud of in its Italo-American citizens.

## EXPLAINS VOTE ON MILITARY PROCUREMENT

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. EDWARDS of California. Mr. Speaker, for the record I would like to explain my vote on the military procurement conference report passed by the House yesterday. While the bill has much merit in that it gives the President a free hand in supporting Israel, I cannot, in good conscience, vote for $20 billion for military procurement knowing that the disproportionate share of Federal revenue going into the Indochina war and building American armed might is the principal cause of our current inflation and economic stagnation. Nor can I vote for these funds knowing that our national priorities have led President Nixon to veto the education bill and appropriations for housing, urban renewal, veterans' medical needs, and other independent agencies.

My vote is primarily a protest for a reordering of those priorities so that our domestic social and economic problems can receive a reasonable share of the Federal tax dollar. It makes no sense for the President to ask for these kinds of funds for defense and at the same time veto the housing bill because it contains $1 billion or one-twentieth of the military appropriations which would be used for housing and other domestic needs.

While the bill contains some improvements in that it restricts the provision which enables the President to support mercenaries in Indochina, I find that the improvements are not enough to make it palatable. If one believes that the ABM is a mistake, then it makes no difference if the number of sites has been cut back to four sites instead of eight. And the gift of $435 million to special interests to build ships which the President did not even request is difficult to understand.

In closing, let me quote from "The Report on Military Spending" prepared by the Military Spending Committee of "Members of Congress for Peace Through Law" dated July 9, 1970:

Of major significance . . . is the fact that military spending is not only the major cause of inflation but is itself a major victim in terms of increasing the cost of its own operations. The Indochina War and our continued role in it is a major contributor to the inflationary problems in particular sectors of our economy.

## THE CORPS OF ENGINEERS AFTER 195 YEARS

### HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ROBISON. Mr. Speaker, one of our key governmental bodies recently celebrated its 195th birthday, and yet that anniversary brought with it perhaps the lowest degree of public affection this particular organization has before enjoyed. The Corps of Engineers has recently become a villain to most conservationists and, given the nature of the Corps' past contributions, such a role is a most uncomfortable one for it. I would note that the Corps now recognizes the need to respond more vigorously to public concern over the environment, and perhaps much of the criticism leveled against it is currently unfounded.

I would submit that past sins in the environmental area are not good indicators of the current sensitivity of any agency toward such matters, for whatever period of accounting there is to be can only begin—fairly—with our recent awakening.

I submit, for the RECORD, excerpts of remarks made by Stanley R. Resor, Secretary of the Army, which explore the past environmental record of the Corps and put it in proper perspective:

THE CORPS OF ENGINEERS

On the occasion of the U.S. Army Corps of Engineers' 195th Anniversary celebration in Washington, D.C., Secretary Resor discussed the Corps' sensitivity to environmental questions. Following are extracts from his comments:

"Throughout its history the Corps has reacted to the water-related needs of the country. At first these needs were basically to provide water transportation and to protect people from national disasters. Over the years the Congress has expanded the Corps' program by adding, one by one, to the purposes to be served by water resource programs. The latest addition was the current concern for the quality of the environment.

"But long before this the Corps was brought squarely into the business of environmental preservation through protecting against natural losses. Examples are the works to preserve fish and wildlife, the release of stored water for natural parks, beach erosion control, and the Corps' aesthetic design program.

"You are showing the way toward a balanced development of our resources in harmony with preservation of outstanding natural values. In this light the new criteria for issuance of permits for construction and for refuse disposal affecting the navigable waters of the United States reflect the broad public interest as defined by recent legislation.

"During the past year we have seen more and more grassroots political activity supporting preservation of our natural environment and opposing pollution. In this connection, the Corps, along with other governmental agencies, has sometimes come under attack. Many of the critics are public-minded citizens who have developed an honest concern for the degradation of the living area. Not all of them have a complete understanding of the role of the Corps, or of the issues at stake.

"Your chief and your districts have made commendable efforts to answer criticism with reason, make corrections as required, and proceed wherever possible to conserve and develop our valuable natural resources.

"To a considerable extent, many of the criticisms being leveled at the Corps, to the degree they were ever valid, related to an organization which no longer exists. If in the past the Corps ever was insensitive to certain environmental questions, that insensitivity reflected, in large measure, the views of political leaders and much of the American population. It took us many years as a Nation to realize that our natural resources are not unlimited. It has taken time to adjust our public policy accordingly. The Corps always recognized to some degree that environmental issues must be fully developed as part of the total assessment of the pros and cons of a particular project. Under General Clarke and his predecessor, General Cassidy, the Corps has begun to demonstrate even greater sensitivity in environmental matters.

"I believe that meeting the challenge of the environment is by far the greatest task in the years ahead. It will not be easy. There is no simple way to quantify the value of a river in its natural state, or to calculate the point at which the present demands of commerce put too heavy a tax on the future, or recreational development becomes despoliation.

"Striking a balance will require complex analysis and sensitive judgment. We cannot assume that any use or alteration of natural resources is necessarily a change for the worse. For it may actually enhance quality of life. But we also cannot respond blindly to pressures to construct, dredge, and fill, or we will not serve the public interest and will be swept away in a flood of public resentment.

"Where many claims compete for our limited natural resources, we must move cautiously and use every analytical tool we have in recommending when to act, how to act, and when we should stay our hand. We must give much more emphasis to social and aesthetic values. We must obtain much more public involvement in the decision-making process, for shortrun efficiency is not the primary objective.

"What is needed now is a technology which systematically minimizes environmental disruption. You have demonstrated the ability to adopt to new circumstances. The twentieth century environmental challenge presents you with your stiffest test yet in applying that ability to the current needs of society.

"The most encouraging fact is that the Corps is willing and able to do a better job,

and is constantly being encouraged to do so. General Clarke, Mr. Jordan, Under Secretary Beal, and I all have a strong personal interest in, and commitment to, sensible environmental policies. We have unlimited confidence in your ability and dedication.

"The happiest aspect of this Anniversary celebration lies not in past accomplishments, distinguished as they may be. Rather, it is in the fact that the future holds the most difficult challenges yet, and that we know that the Corps of Engineers will rise to whatever is required of it. For that, the Nation is grateful; and the beneficiaries will be not just the citizens of today, but generations of Americans yet to come."

## AMBASSADOR PHILIP M. KLUTZNICK ON THE VALUES OF MAN

### HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. PUCINSKI. Mr. Speaker, recently I paid tribute to Mr. and Mrs. Louis Perlman, of Chicago, who have been awarded the B'nai Brith Annual International President's Medals for their outstanding contribution to mankind.

Mr. and Mrs. Perlman were honored at a banquet in Chicago recently and I would like today to place in the RECORD the remarks of Ambassador Philip Klutznick who was the principal speaker.

Mr. Klutznick was introduced by Mr. Ray Kroc, founder and chairman of the board of McDonald's Corp. Mr. Kroc made an inspiring introduction of Ambassador Klutznick and I shall put both Mr. Kroc's introductory remarks and Ambassador Klutznick's address of that evening into the RECORD.

Mr. Klutznick's speech was one of the most timely pronouncements of our time and I believe those of us so deeply concerned with the behavior of man would do well to read his address.

I call particular attention to the philosophical statement of Mr. Klutznick in which he said:

Those of us who have a history cannot leave destiny to chance.

Mr. Klutznick has hurled the challenge at all of us as Americans and I believe this speech belongs among the most inspiring documents of our time.

Mr. Ray Kroc's introduction follows and after that the speech by Philip M. Klutznick, honorary president of B'nai Brith and former Ambassador of the United States to the U.N. After the speech Ambassador Klutznick presented the President's medal to both Mr. and Mrs. Perlman. This is the first time that two people—a husband and wife—received two President's medals at one time.

Mr. Klutznick's remarks follow immediately after Mr. Kroc's introduction:

REMARKS OF MR. RAY KROC

The B'nai B'rith is the world's oldest and largest Jewish Service Organization. It is now completing its 126th year of service to humanity. B'nai B'rith has established an enviable record of service, not only for its own people, but for people of all races, creeds and color. Many of our nations and yes, world leaders have come from the ranks of this great organization. The Youth Programs have graduated men and women who are currently leaders in communities across the free world. We are extremely proud to have in our community a young man who has been acclaimed one of the world's great leaders—his talents have been sought and utilized by President Roosevelt, President Truman, President Kennedy, President Eisenhower and President Johnson. He has served his nation and his people with great, great distinction. It is a personal pleasure and a privilege to present the Honorable President of B'nai B'rith and the former Ambassador of the United States to the United Nations economic and social council—the Honorable Philip M. Klutznick.

REMARKS BY PHILIP M. KLUTZNICK

We have two splendid people to whom we pay honor. But, I don't think you honor people by continuing to repeat the things that each of them did. You pay the greatest honor to them by drawing experiences out of their lives and their living wisdom to illustrate a purpose to the life that they live and perhaps thereby give meaning even to your own life.

As I thought about Anita and Lou and today's occasion and last night when we met with the B'nai B'rith Youth Commission, I kept thinking of an experience that I alluded to on one or two prior occasions. Shortly after the six-day war, Ethel and I found ourselves in Israel. We were in Jerusalem in July and one of my dear friends and a friend of quite a few people who are here—Dr. Moshe Davis of Hebrew University came over to have breakfast with me at an entirely unacademic hour of 7:00 A.M. We were staying at the King David. It was a beautiful day—one of those gorgeous days that you get in the Holy City and Moshe came in on time. Together we went out to the patio—a little balcony at the King David Hotel that faced the Old City. Breakfast came in and Moshe put on his yarmulke to make his prayer. After he finished praying, and we sat there together in complete awe looking out over that magnificent scene, he turned to me and he said, "Phil, how wonderful it is to look out at this city and to find yourself between history and destiny."

And indeed, as we looked out at the old city with everything it stood for, and then looked to the right and to the left and saw the new city and everything it promised, we were having breakfast as he said—between history and destiny. And, I kept thinking of it tonight. I started in the B'nai B'rith Junior Organization when it was the A.Z.A. of the B'nai B'rith, when eight other boys and I, forty-six years ago, organized the second chapter in the place called the Heart of America—Kansas City, Missouri. It is history I remember tonight. It was the second chapter—I later became the second Aleph Godol, which means President—I later became the second Grand Aleph Godol which means the Grand President of the AZA as Sam Beber remembers, I later succeeded him and became the Second President of the Supreme Advisory Council. This is my history. Since I was second all the way through so I had to try harder. And tonight—I have to try harder to prove to you that those of us who have this history have a responsibility for destiny. We cannot leave it to chance. And I regret to observe from what I hear and what I see suggests that in our scales of priorities we may be leaving that destiny to chance.

It has been a pleasant evening but now I want to get serious—I want to get terribly serious! At one time in my life when I was reasonably young I served in the government in Washington for the first time. I met a man by the name of Luther Gulick, alive to this day and probably one of the outstanding authorities on public administration then and now in our country. I remember him now because I saw him only ten days ago. As we were nearing the end of World War II this man of profound perception wrote an article that I remember as I stand here tonight. Among the things he said was that as he looked upon the post-war America, a nation of people hungry for things not for values, but for things. And he was right The thing that I never knew was—how right Luther Gulick was and for how long he was going to continue to be right. From the time we were saved by the strength and courage of our young people, our wealth and our capacity to survive the early tragedies of World War II, we have indeed been a nation whose distinguishing characteristic has been an extraordinary hunger for things.

The other day I picked up the Saturday Review. My friend Norman Cousins who, when he has the time, writes an editorial which bites and bites deep, wrote one a couple of weeks ago on this same subject. He entitled it the Intermediate Battlefield and if you will indulge me, I will read and paraphrase it.

He described the world that a mature person should see as he looks at it today. He sees energies and resources of nations being diverted into ever larger ways of expunging or cheapening human life—he sees people preoccupied and swollen with meaningless satisfactions—he sees concepts of brotherhood and social justice held up by society as its guiding ideal, but he finds that his own efforts to act on behalf of these concepts will put him in conflict with that same society. This man feels that people react to youth—in terms of superficialities—hair or beard or clothes—or in the case of girls, absence of facial paint, or fancy hairdress and not in terms of the things that scar youth's vision—and tear at their very gizzards.

This very perceptive able reviewer of our days concludes with these words: "the overriding questions put to us by youth have to do with basic values—whether we are concerned about conditions that make life on earth possible—whether we recognize the need to make people more important than things. Whether we are intelligent enough—we who rule this world, to make the world whole." And he says, the easiest way to close the generation gap is to address ourselves to these questions and to put our dominant energies into developing a sane design for living. That's what we are here for tonight. We are really here to decide whether as mature people we are ready to give up this fight for things and whether we are prepared to join the young people who are teaching us the way to search for a sane design for living.

Two days ago I was in Washington attending a meeting on the governance of Universities. It was a closed session, brought together by the rather prestigious organization known as the Committee for Economic Development, made up of leading businessmen, and outstanding academic figures. It was an extraordinary meeting exploring what was to happen to the university of tomorrow in light of the attitude of the youth of today. I listened to one of the brilliant new type Presidents of the university make what he considered to be an earthshaking observation. He said, in the 1970's more than 50% of all U.S. youngsters eligible for college will be enrolled in colleges. The sophisticated audience was obviously impressed with the sheer enormity of the conclusion. At no time in the history of the world has a country ever had 50% of its youngsters eligible for college able and enabled to attend college. Even though they were impressed with it, I couldn't help but lean back and say to myself, my goodness, the Jewish community of the United States has closer to 80% of the youngsters that were eligible to attend college, going to college. America is changing rapidly before our eyes. It is not a generation gap which I deplore. A generation gap is a very normal thing. Why should my children think like I think?

But there is a generation revolution, not a gap. What was once a gap has become so great it is now a chasm. The chasm is created by a number of conditions which have been taking place before our very eyes which I think we fail to understand or recognize. The importance of the C.E.D. conference was that it was trying to put its finger on these conditions.

One of the speakers enumerated six conditions which he felt made the difference. First, there is a continuing increase in population accompanied by increased wealth. Secondly, there is a demand that we must reorient our priorities of national living. Third, there is an increasing dependence upon knowledge as a gateway to life. There was a time when you could get a good job without having gone to school. There is a time coming when you won't be able to get a job unless you have gone to college. Fourth, there is an increasing specialization. Everybody seeks a specialty. But, there is beginning to develop a demand that the specialist be something more than a specialist—that he be able to relate his specialty to the world of which he is a part. Fifth, there is a loss of anonymity for the colleges and universities. They are now serving so many, they are beginning to be a public utility. Everybody is looking at them. They can no longer hide under the guise that there is a special mystery to knowledge, because nearly everybody is seeking knowledge. And finally, there is an erosion of authority throughout our society. As knowledge increases, there is an obsolescence of the past. A different set of values emerge. And as the revolution in communications continue to erode authority will continue to erode.

Whether you believe all six of these propositions, or you believe only some, you must conclude we are living in a very dangerous and challenging world. We must begin to take a different look at our young people or what we think we built for tomorrow will disappear before tomorrow comes. Eleanor Roosevelt said in her last book, "Tomorrow is now." Now is when the decisions are being made that will either confirm the possibility of a future of glorious consequence or the tragedy that comes when the gap between generations becomes a chasm of disappointment.

I have talked in general terms. Let me be more particular. When in the State of Illinois we witness a debate between the Governor and the Mayor of Chicago as to who has the responsibility to see our young children get what they need in education, it is a tragedy of supreme importance. I do not take sides in this argument for it is not a debatable question. Our children must have the educational opportunities that the day demands whether the state provides them or the city provides them. When I view the Federal scene and find a long period of time elapsed during which scholarships for college youngsters are deferred; when there is a cutback in these days in the monies we spend for social and economic development of our own country; where I see an absence of priority for the things that build the educational and intellectual strength of the nation, while we literally kill ourselves as we face the tragedy of getting out of an expensive war and continue to justify 80 billion dollar defense budgets; then, I say, we are in danger of destroying our culture and our society.

And, I don't like the percentages that I read of those who like what we are doing. The youngsters of today will not take a world where we play the game with the risk of war instead of devising a new game where we take risks for peace.

But we are here under the auspices of B'nai B'rith and what I have said in shorthand about our nation, I must repeat with even greater regret about my people. There is no people who have a greater commitment to cultural and educational values then our own. And yet when I look about me and I recognize the priorities we ourselves have placed on the training of our young people, on making it possible for them to live the kind of life that they must live tomorrow, I am saddened by what I see. Nearly five years ago I spoke on the subject of priorities in the American-Jewish community of tomorrow. I suggested that there were only two major priorities; one, was the inescapable priority of making certain that the people of Israel are secure and can progress. This is an inescapable priority not only for Zionists but for all Jews wherever they were. We cannot rest until this is assured. In this presence I am delighted to say that I read what Congressman Pucinski wrote on that subject recently when he returned from Israel. He pointed out the fact (going beyond what I had suggested a few years ago) that there is, as I believe, a major and continuing responsibility on the United States of America as the leading Western power to see that a country dedicated to freedom and to liberty continues to live and prosper. I want to compliment Roman for having said it and having said it so well.

But Israel itself is but a myth if the Jewish people of the world themselves don't continue to live as Jews and as responsible citizens.

The reports from the Council of Jewish Federations and Welfare meetings just a few days ago in Boston was both an elevating and depressing report. It announced that the Jews of America for all of the various causes and purposes in the last thirty or more years raised three billion, nine hundred million dollars. The largest part of these funds went to meet overseas need in Israel and throughout the world. Let me now quote from the release: "About one billion, three hundred million in these thirty years was allocated to local Jewish services (I want you to hear the order) such as hospitals, health, family, child care, aged, education, culture, youth services and Jewish National service agencies and overseas agencies received about 27 million dollars.

The time has come when this kind of priority has to change. It is important to take care of sick people—but how much more important is it to take care of well people so that they don't become sick. There has been a complete overturn on the American medical scene. What is happening in the field of helping our youth and what is happening to our educational causes that in a report of this character, they are at the bottom of the totem pole? Permit me to cite two examples out of real life to illustrate what is happening.

A few years ago (there are a few ladies here who I think were present) I was invited to speak to a teach-in about the outlook of the Jewish community of the future. In the question period a lady stood up and told us about her daughter and son who were at a certain university where they will not go to the Hildel foundation because the Rabbi was not very good. She then asked why we do not spend more money and get a good Rabbi. She felt we get some assistance because there were 3,000 Jewish youngsters at the school but all that the Rabbi takes care of is those few who want to study and not those who want to play.

She was probably completely correct. The Rabbi was probably not the most distinguished Rabbi in America. A distinguished Rabbi would never have gone to work for what we were able to pay him, unless he had an extraordinary dedication to young people, which I think this Rabbi had—he couldn't take care of 3,000. I don't know of a Rabbi who all alone takes good care of a congregation of 500, let alone 3,000 youngsters. I told her the only reason her youngsters don't get what they need is because her community and others did not give one cent to any of this activity. This was a fact. We do a little better in Chicago these days. We have had a minor revolution. Today we are the second most important community in America in terms of what we give to Jewish education. Yet, what we give to Jewish education is 50% less than what we give as a community to two hospitals. We are just not looking at the priorities of today's living. We are living in the past. We of the establishment deserve the challenges that we are getting from young people because we are responding very badly to their needs and the needs of today and tomorrow.

I give you one more incident and then we go to the occasion which brings us together. Many people who are worried about young people who are in what is called the New Left. A Zionist oriented organization also was very much worried about the attitude of the New Left. A very bright young man made a terrible charge that the Israelis were like the Nazis. So this Zionist organization sent him to Israel to see for himself. When he came back he affirmed his prior views. They made a miserable mistake in sending him in the first place. This was probably a young man who never had an understanding of the history of his people. Murder in the pogroms at the turn of the century in Russia meant nothing to him, he had never lived through the holocaust. How could he possibly appreciate that, of the Israelis who were fighting to stay alive, half had been virtually dead once before. How does one relate a conclusion in modern days to a history that is unknown.

We who are the establishment still wonder why our children become New Left. In most cases we do not give them the opportunity to have intelligent opinions of their own. We don't expose them to these things early in life. We don't expose them to all of the rich background of their own law and their own people and their own history. We just do not give them a chance for intelligent options. Then when they disappoint us we really have no one to blame but ourselves. If we don't quickly reorient our sense of values in the things that we do—whether in the nation or in the community—we are destined for even greater disappointment.

That is why we are here, because some of us believe that these are not idle words. We live in the freest opportunity to be a whole person that is afforded to anyone in the world, and we believe that we, who are the establishment have an obligation not to tell youth the kind of life youth lives tomorrow, but to at least give youth the chance to be exposed to reasonable options so the decision is an intelligent one.

And that is why you people have come here. But I must give you a note of warning, I want to hang a little crepe because crepe hanging might be the best thing one can do on occasions such as this. We who are in business and who meet payrolls which is a traditional way of saying you are in business, know that inflation is something that has eaten away the very heart of our capacity to either meet our payrolls or maintain our profits at the same level.

Yet, when we look at public life, we expect some miracle to take place there. We expect our Rabbis to work for less because they are Rabbis, even though their families starve. We expect our Jewish youth workers, our social service workers, not to expect as much of an increase as the construction workers, which is my business, but, at least a 6% or 7% that overcomes the eating away of the value of their dollar. How can they teach and how can they preach when they have families in need?

So with all your efforts, the best we will do in 1969 and 1970 is to stand still. With 300 universities asking for more service; with hundreds of localities wanting more youth service (I shall not take the time to discuss the condition of the high schools) we will stand still in 1969 and, if we are lucky, in 1970. The time has come—when

those of us who believe in the future—have to corral and put together a union of forces in a national determined effort—combine the youth services with the seminaries, which teach those who teach our children, with the Jewish Centers, combine the American Association of Jewish Education with the Foundation for Jewish Culture and mount a campaign in the Jewish community for education and for our young of at least 35 or 40 million a year—such a major effort will at least counterbalance the weight of completing campaigns for funds and adjust the differential which is now working so adversely to the interest of our youth. This I suggest is No. 1 in the things we must do if we intend to listen to the young people who are so ably represented here tonight. Unless we do, as a nation, and as a people, the tragedy that will follow will not be the fault of the young people but the fault of those of us who hold the power.

My friends, I turn now to the pleasurable part of this engagement. I had arranged with President Wexler unknown to our guests of honor to drop in here tonight and to present the President's medals to our guests of honor. At that time his wife was desperately ill and we hoped and prayed that her recovery would permit his presence. As many of you know she has since passed away and Bill can't be here, so it has fallen to me to finish the third of my functions as a substitute.

A word about the President's Medal. It was conceived in 1953. Its purpose, extremely limited, to pay tribute to people who, in or out of B'nai B'rith, Jewish or not Jewish, who by a significant contribution to the welfare of our nation or our people justified this singular recognition. As the then President of B'nai B'rith, I requested the creation of that medal. It was authorized. The first man to receive it was Bernard Baruch, whose father was a member of the B'nai B'rith and he as well a member of the B'nai B'rith his whole life. Some of us who are here tonight who were there that night, had the feeling that we were putting the medal around the shoulders of a nobleman as he stood erect and as Eleanore Roosevelt, his lifetime friend, stood next to him.

I recall the occasion two years later when one of the great figures of our history, now retired, Chief Justice Earl Warren, honored us by receiving this medal. I met Earl Warren first when he was County Attorney of Alameda County, and when his closest advisor and closest friend was the advisor of our AZA Chapter in Oakland, California. And that night, as on other occasions since, whenever I have met him, we have talked about it—Nathan Harry Miller, who, until his death, kept in good order the accounts and the records of the Chief Justice. Other people of that quality have received this medal. But there have been those within the organization, few in number, who, because of a singular devotion to a cause, or because of years of service or a combination of both have been selected from among their peers to be honored. I shall not name them.

Everybody has told you about Anita and Lou—I can only say one thing about Anita. She is a Susan B. Anthony of the B'nai B'rith. She believes in the status of women. I met her when she believed only in the status of girls and when she solicited me to join her in committing an historic act, something that never happens in social life, the elimination of an organization by its own act. When the Supreme Advisory Council, which only took care of the boys, voluntarily agreed to go out of business so the B'nai B'rith Youth Commission could be born, this was an act of self destruction that few, if any, Jewish organizations have commited since time began. It would not have happened except that this advocate of women's rights, superior in her advocacy, destroyed the defenses of the then President of the Supreme Advisory Council. If Sam Beber had been President, I am sure he could have resisted her, I couldn't, so together we joined in burying an organization and in creating a greater one. She has been consistent, persistent in her belief that first a woman was created and then a man.

I honor her even though she caused me to lose an office. I walked away from my responsibility when I recognized that because of her advocacy we had done an injustice, in the B'nai B'rith—at least woman came second if not first. Throughout all of Anita's work, when Lou was building this business—including the franchises that he hasn't given to us yet—Lou and her family have been her sturdiest supporters. When Lou made his fortune and before that, he started distributing it in little pieces and in bigger pieces of himself and of his where-with-all. No two people have ever been more like a mortise and tenon. They have fitted together singularly well so that it would have been impossible—absolutely impossible—to give a medal to one without giving a medal to the other. So on the genius of President Wexler, he decided we will give them two. The two really should have been one, but he feared that if it were one, we would not know who to hang it on. So it is a tribute to the B'nai B'rith; it is a tribute to the cause for which they both work; it is a tribute to the concept of oneness, without which the world cannot progress; and above all, it is living testimony to the sense of priority that I have labored to suggest here tonight. Therefore, on behalf of the President of B'nai B'rith, I am about to commit an act which is unprecedented—I don't know who should come first—so I give these priceless medals to both at the same time.

## OUTSTANDING CENSUS OF MONTANA

### HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. OLSEN. Mr. Speaker, I would like to acknowledge receipt of the 1970 census report for the State of Montana—the first 1970 census report to provide the official count of the population for my State. The population count for Montana was 694,409, a gain over 1960.

The report also contains the official population counts for each county, each county subdivision, each incorporated place, and each unincorporated place of 1,000 or more persons. A further classification by urban and rural residence is also provided.

I commend the Bureau of the Census for making this valuable information available promptly.

Taking the census is an enormous task, requiring the most careful planning and coordination to complete. The results are of vital importance to all persons. Much planning, many decisions, and a clear vision of the path into the future depend upon accurate census statistics. I know that the census information for Montana is accurate and will be widely useful for Montana residents.

I am certain of its accuracy and completeness because the census in Montana was enumerated by Montanans employed by and working directly with the Census Bureau. My sincere congratulations go to those census takers. They worked with quiet steadfastness and loyalty despite all obstacles—including unusually heavy, spring snowstorms.

Their efforts provided Montana with an outstanding census.

## THE PRESIDENT'S COMMISSION ON OBSCENITY AND PORNOGRAPHY SERVES NO USEFUL PURPOSE

### HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. NIX. Mr. Speaker, the President's Commission on Obscenity and Pornography will finally issue its report today with all the fanfare that can be given to a fraudulent product produced by a Commission armed with 2 million tax dollars.

It is a biased report. It is a report based on faulty human sex experimentation. It is faulty experimentation because the individuals who would submit to this kind of thing for money are not typical Americans. Therefore judgments cannot be made as to the normal American based on experimentation with exhibitionists.

Today, Chairman DULSKI of the House Post Office and Civil Service Committee will introduce bills which will deal with the problem of obscenity.

Senator MANSFIELD has introduced a bill that has been enacted by the Senate.

These bills deserve our immediate attention.

With the need to adjourn in mind it will be necessary for me to reschedule our hearings for mid-November 17, 18, and 19. At that time we will consider not only appropriate legislation but what bearing the studies of the President's Commission on Obscenity have on the subject.

The methods and motives of the Commission are important to our considerations. Their recommendations that our laws be repealed and Supreme Court cases upholding those laws be in effect reversed are a direct attack on the public's right to protect itself from obscenity.

This Commission's work is so bad that both of our political parties are agreed on its worthlessness.

There have been White House comments to the effect that the work of the Commission is the sole responsibility of President Johnson. In order to clarify the record, I will submit certain letters from the only Nixon appointee to the Commission, Mr. Keating, to various White House staffers warning the White House of the mess in the Commission. These letters were ignored.

I think we have to get to work and avoid recriminations which will only benefit the smut peddlers and their advocates. I hope that these letters will clear the air.

The letters follow:

CITIZENS FOR DECENT LITERATURE,
*Los Angeles, Calif., September 17, 1969.*
The Honorable RICHARD M. NIXON,
*President of the United States,*
*The White House,*
*Washington, D.C.*

SIR: June 13, 1969, you honored the undersigned by naming him as your first appointment to the Presidential Commission on Obscenity and Pornography. I attended the first meeting of the eighteen-member Commission on August 14. My seventeen fellow Commissioners were appointed by President Johnson.

I understand your Administration, of which I am an ardent supporter, to take the position that pornography and the pornographers must be stopped. The value and need for such a position requires no explanation, as the deluge of pornography has sickened and saddened every decent American. Mr. President, it is my duty to report to you that while the Presidential Commission is an instrument which could very well effect your desires for a decent America, it is not, and with its present constituency, it cannot be. With the exception of Otto N. Larsen, Irving Lehrman, Morton A. Hill, Thomas C. Lynch, Catherine A. Spelts, and Winfrey C. Link, the Johnson appointments, who were appointed to serve "at the pleasure of the President," should be immediately terminated and replaced. A new Commission should promptly install a new Staff.

I must advise you that unless these recommendations are followed forthwith, your Administration will be tarred with the failure of a Presidential Commission which you did not appoint and over which you have absolutely no control.

There are many, many excellent, experienced persons in this country who could be placed on this Commission to cause it to serve effectively and expeditiously. Men such as Melvin Anchell, M.D., experienced author and psychiatrist; Rabbi Robert I. Kahn; Don Cortum, M.D.; Alan Ameche; Archbishop Paul F. Leibold; Hobart Lewis; and Jenkin Lloyd Jones, to name a few.

Respectfully,
CITIZENS FOR DECENT LITERATURE, INC.
CHARLES H. KEATING, Jr.

---

THE WHITE HOUSE,
*Washington, September 26, 1969.*
Mr. CHARLES H. KEATING, Jr.,
*Citizens for Decent Literature, Inc.,*
*Los Angeles, California.*

DEAR MR. KEATING: The President has asked me to reply to your letter of September 17. He very much appreciates your having accepted the task of serving on the Commission on Obscenity and Pornography. You may be assured the staffing of this Commission is receiving our continuing close attention.

Many thanks for taking the time to write us.

Sincerely yours,
PETER M. FLANIGAN,
*Assistant to the President.*

---

CINCINNATI, OHIO, *October 13, 1969.*
Mr. PETER M. FLANIGAN,
*Assistant to the President,*
*The White House,*
*Washington, D.C.*

DEAR MR. FLANIGAN: If it is in order, I would very much like to come to Washington to discuss with you the membership and chairmanship of the Presidential Commission on Obscenity and Pornography.

Perhaps the enclosed letter from the Executive Director of the Commission will interest you.

I shall be pleased to meet at your convenience.

Cordially,
CITIZENS FOR DECENT LITERATURE, INC.
CHARLES H. KEATING, Jr.

---

COMMISSION ON OBSCENITY AND PORNOGRAPHY,
*Washington, D.C., September 29, 1969.*
Mr. CHARLES H. KEATING, Jr.,
*1811 Provident Tower,*
*Cincinnati, Ohio.*

DEAR MR. KEATING: Your assumption, communicated in your letter dated September 17, that I am advocating a position regarding the control of obscenity and pornography is not correct.

I came to the Commission with no experience in the realm of obscenity and pornography and with neither preconceived ideas about the extent of the problem nor opinions concerning appropriate and desirable solutions to the problem. These facts were made clear to the Commission members when I was being interviewed prior to accepting appointment as Executive Director of the Commission; they apparently deemed this objectivity to be desirable.

Since joining the Commission, I have taken especial care to heed the Congressional injunction to make recommendations only "after a thorough study," and have deliberately refrained from drawing even tentative conclusions about desirable action before the Commission's studies are completed. I am genuinely sorry if my attempts to maintain objectivity are misinterpreted by proponents of either greater or lesser control over erotic materials as "advocating a position"—other than a position of suspended judgment.

The materials which I distribute to the members of the Commission for their information are of three types: One, those items which the staff discovers that seem to present new empirical information relating to the Commission's interest; two, items which various members of the Commission send to the staff with an indication that other members of the Commission would be interested; and three, items which the Commission, including its staff and contractors generates.

The principal item which I recall sending to the members of the Commission, that advocates a position, was the Report by the Working Party set up by a Conference on the Obscenity Laws convened by the Chairman of The Arts Council of Great Britain. This item was explicitly requested for informational purposes by several members of the Commission.

It has been the practice for Commissioners to send items which they would like to have distributed to the other members of the Commission to the staff with a request that they be distributed. We shall be happy to perform this service for you as we do for all members of the Commission.

Sincerely yours,
W. CODY WILSON,
*Executive Director.*

---

CINCINNATI, OHIO, *January 10, 1970.*
The Honorable RICHARD M. NIXON,
*President of the United States, The White House, Washington, D.C.*

SIR: You were kind enough to appoint me as your sole representative to date to the Presidential Commission on Obscenity and Pornography.

As witnessed in the platform of the Republican Party in the 1968 Election, from your own statements on the subject, from recent pronouncements of the Federal Bureau of Investigation, and from the all-too-visible facts and circumstances of our magazine racks and motion picture screens, obscenity and pornography are wreaking havoc in our society.

The only solution to the problem is in the courtrooms of the United States. A very important background to the future action of the courts is the work and the conclusions of the Presidential Commission.

I am confident that your appointment of the undersigned to the Presidential Commission was instituted by overtures of many of your friends and many substantial Republicans throughout the United States and was based on my deep concern and years of experience in the field of combatting the pornographers. A quick look at your records in the investigations which led to my appointment will re-enforce the validity of your Administration's concern with the problem.

I must insist to you, Mr. President, that unless immediate action is taken to terminate the current leadership by Dean William B. Lockhart, Chairman of the Presidential Commission, to change substantially the membership of the eighteen-member Commission (seventeen of whom were appointed by President Lyndon Johnson), and to replace entirely the Commission staff, that the current activities and the ultimate report of the Commission will do much more harm than good in the fight against the pornographers. Inasmuch as it is a Presidential Commission, I am concerned not only that the pornographers will have taken a giant step toward winning the war but that your Administration will receive the blame.

This is a matter which deserves your urgent attention.

Yours truly,
CITIZENS FOR DECENT LITERATURE, INC.
CHARLES H. KEATING, Jr.

---

THE WHITE HOUSE,
*Washington, February 7, 1970.*
Mr. CHARLES H. KEATING, Jr.,
*1811 Provident Tower,*
*Cincinnati, Ohio.*

DEAR MR. KEATING: The President has asked me to thank you for your letter. He appreciates your interest in making your views known to him and your comments have been noted concerning Dean William B. Lockhart.

Your comments and suggestions will be carefully reviewed, and your interest in this matter is certainly appreciated.

With best wishes,
Sincerely,
HARRY S. FLEMMING,
*Special Assistant to the President.*

---

CITIZENS FOR DECENT LITERATURE,
*Los Angeles, Calif., April 16, 1970.*
The Honorable RICHARD M. NIXON,
*The White House,*
*Washington, D.C.*

SIR: As your only appointee to the Commission on Obscenity and Pornography, I must beg you to give a moment's attention to the direction of the Commission which, with its final Report now being processed for presentation in July or August, is going to be a source of real embarrassment.

I believe that you as well as I are aware of the deep grassroots sentiment against the deluge of obscenity and pornography. There is no question in my mind but that at best, the Commission's Report will be meaningless and at worst, it will further open the floodgates.

I note that of the 12 members of the National Advisory Council on the Education of Disadvantaged Children which had a budget of $1.25 billion, you replaced eleven of the panel members. I suggest to you that similar action is necessary at once respecting the Presidential Commission on Obscenity and Pornography. The only recourse you have for obtaining a sensible, effective Report is to replace President Johnson's appointees to the Commission.

Please do not be mistaken in thinking that the Report of the Commission will have little impact. I am keenly aware, both in the United States and abroad, of the anticipation with which the Report of this Commission is awaited. It will do either great good or great evil.

Sincerely,
CITIZENS FOR DECENT LITERATURE, INC.,
CHARLES H. KEATING, Jr.

THE WHITE HOUSE,
*Washington, May 8, 1970.*

Mr. CHARLES H. KEATING, Jr.,
*Citizens for Decent Literature Inc.,*
*Los Angeles, Calif.*

DEAR MR. KEATING: Thank you on behalf of the President for writing him as you did on April 16 with regard to the Commission on Obscenity and Pornography.

Your thoughts and ideas have been referred to Mr. Egil Krogh, Deputy Assistant to the President, who is handling matters in connection with this Commission. I am sure you will hear from him in the near future.

Sincerely yours,

HARRY S. FLEMMING,
*Special Assistant to the President.*

---

CITIZENS FOR DECENT LITERATURE,
*Los Angeles, Calif., June 5, 1970.*

Mr. EGIL KROGH,
*Deputy Assistant to the President,*
*The White House,*
*Washington, D.C.*

DEAR MR. KROGH: Mr. Harry S. Flemming advised me you are Mr. Nixon's Assistant handling matters in connection with the Presidential Commission on Obscenity and Pornography. I am Mr. Nixon's only appointee to that eighteen-member Commission. I write you at a very late date in the life of the Commission urgently warning you that unless my prior correspondence—copies of which are enclosed—is heeded, President Nixon is going to be extremely embarrassed and politically hurt when the Commission issues its Final Report. The Report, incidentally, will be issued in the height of the 1970 election campaign.

As I said in my September 17, 1969, letter to Mr. Nixon: ". . . Your Administration will be tarred with the failure of a Presidential Commission which you did not appoint and over which you have absolutely no control."

Make no mistake about it. Mr. Krogh, the overwhelming majority of the American people is revolted by the pornography in the bookstores, on the street corners, and on the motion picture screens throughout the United States today. The enclosed book *A Report on Denmark's Legalized Pornography* is the latest in a series of documents, articles, etc. that I have received as a member of the Presidential Commission on Obscenity and Pornography from the Executive Director of that Commission, Cody Wilson. The book speaks for itself and is highly representative of the continuing effort of those who control the Commission to achieve their principal objective of having complete freedom for the pornographers or, at worst, to neutralize any possible curbing effect the Commission might have had on the pornographers.

I might suggest that unless the President acts to stop the present Commission, reconstitute and reorient it, the type of pornography depicted in the back of the enclosed book will be commonplace in America—in which event, God help us!

Your truly,

CITIZENS FOR DECENT LITERATURE, INC.
CHARLES H. KEATING, Jr.

---

CITIZENS FOR DECENT LITERATURE,
*Los Angeles, Calif., July 14, 1970.*

Hon. RICHARD M. NIXON,
*The White House,*
*Washington, D.C.*

SIR: On July 8, 1970, I received in the mails from Mr. William B. Lockhart, Chairman of the Presidential Commission on Obscenity and Pornography, three "Staff-drafted" Committee Panel Reports, totaling 459 pages with instructions that more were to follow. Copies are enclosed with this correspondence.

At the same time I was informed that the contents must be read prior to a general meeting of the Commission on July 13, 14, and 15, 1970, at which time *tentative decisions* would be reached on findings and recommendations of the Commission.

A quick perusal of these documents will demonstrate conclusively the disastrous consequences flowing from the failure of responsible policymakers in this Administration to heed my earlier warnings that an American Civil Liberties Union Staff controlled the workings of the Presidential Commission and that the same must be deterred from conducting this multi-million-dollar operation in a runaway fashion and in defiance of the will of Congress and the American people. Particularly is this apparent in the Legal Panel document.

No longer can my warnings be turned aside for lack of time, more serious matters to attend to, or on the ground that the same are only personal opinions of a partisan—Charles H. Keating, Jr. In repeating my prior advice and warnings, I now call upon and underscore that well-understood legal evidentiary principle *res ipsa loquitor*—the thing speaks for itself. These so-called "Panel Reports" speak for themselves and identify the subject matter as the work product of a runaway Staff. No reasonable person—judge or otherwise—would say that these Reports accurately reflect either the current law on obscenity, the will of the State Legislatures, or the directives of Congress. What they do document is the unacceptable position of a small American Civil Liberties Union minority, operating under a cloak of secrecy as a "Commission Staff" and under the shelter of an ACLU Commission Chairman. That such persons stand on the threshold of being permitted to espouse their abortive doctrines from the high platform of a Presidential Commission is a tragedy.

The result reached thus far points up the tremendous evil flowing from a "secret" Commission Staff which refuses to accord First Amendment rights to the people as a whole. The situation is critical, and there is scant time to apply the necessary correction to get the Commission back on its proper course.

Let me restate my own personal involvement so this letter may have the clear meaning intended. Upon being appointed to the Commission as your one and only appointee, I made known to you and responsible members of Congress the following observations, which have subsequently been confirmed by these "Panel Reports."

(1) The Commission was not functioning as a whole but was under the control and domination of ACLU-member William Lockhart who administered the same through his hand-picked ACLU-oriented Staff and scientific teams, the legal end of which was headed by Paul Bender, an ACLU Director.

(2) That the ACLU aim and objective was and is to abrogate the nation's obscenity laws and that this position was clearly documented and recorded in the hundreds of ACLU *amicus curiae* briefs filed on behalf of smut peddlers in the past fifteen years.

(3) That the manner in which the Commission was being "led" was contrary to the will of Congress, in violation of law (Public Law 90–100), and at odds with the overwhelming desires of the people of this nation.

I attempted to correct the failure of the Commission to function as a working Commission by calling for more meetings of the Commission as a whole and less "Staff leadership." In response, fewer Commission meetings as a whole were called. I asked for the right as a Commission member to *participate* in all Panel meetings. The same was refused. The right to record and study transcripts of Panel meetings was also refused. I was informed that secrecy (confidentiality) was the rule of the Commission. I have asked for copies of all contracts of hire, information on how funds were expended and monies handled, what research teams were hired, and how their services were bid. As of this date, I have not received one copy of such a contract of hire, even though Public Law 90–100 reads as to the "Powers of the Commission"—(d)—Obtaining Scientific Data—"For the purpose of securing the necessary scientific data and information, the *Commission* may make contracts with universities, research institutes, foundations, etc."

Finding it hopeless to participate meaningfully under this "stacked deck" regime, I also asked for a Congressional investigation. Unfortunately, the inner workings of the Staff were not well documented or understood as they now are—after publication of the enclosed Reports. Time has bridged the gap and proved the ancient adage: "Give them enough rope, and they will hang themselves." It is my sincere hope that now that the "cat is out of the bag," this nation's responsible leaders will now move swiftly to bring the weight of their offices to bear against this national hoax.

Certainly your record on obscenity control demonstrates clearly that your Administration is dramatically opposed to the legal position adopted by ACLU Chairman Lockhart and his handpicked Staff. Your excellent appointees, Chief Justice Burger and Associate Justice Blackmun, have both handed down unanimous opinions in obscenity cases during the past term of Court which are dramatically opposed to the distorted notions which appear in this Legal Panel Report.

The immediate question is whether the policymakers on your Staff are willing to saddle your Administration with the tremendous handicap of this "stacked deck." Whereas there may have been some reluctance to take my previous warnings at their face value and take action thereon, these Reports inject a new dimension. There is now available to your advisers a "Staff" record which documents the accuracy of my previous evaluations that the Commission is *not* functioning as a Commission and that personal, rather than public interests are being subserved.

For example, it does not take a lawyer, experienced in obscenity matters, to recognize that the Legal Panel Report is—

(1) A partial, rather than impartial, Report;

(2) Espouses publicly recorded ACLU advocacy; and

(3) Presents distorted treatment of existing case law.

The same can be said of other documents submitted by the Staff pertaining to non-legal matters.

That this Commission Staff is dealing the nation a "stacked deck" is abundantly clear in the aforementioned Reports, as to which I will now allude to but one typical example—that from the Legal Panel Report. Within the next two weeks, I plan to reply point-by-point to the distortions woven into that amazing document.

To support the ACLU position that the *Roth* rule has now been altered to suggest that commercial exhibition to consenting adults has been elevated to a constitutional right, ACLU counsel Bender repeatedly cites *Stanley v. Georgia* and suggests that the six-to-three vote in that case will lead to that result. Nothing could be further from the truth. It is well understood and documented that Justices Harlan and Warren, who were numbered among the majority of six in that opinion, have repeatedly disavowed anything which resembles that philosophy. Justice Fortas, also of the majority, is no longer on the bench. Further, of the remaining three, the author of the opinion, Thurgood Marshall, gave indications during oral argument before the United States Supreme Court in *Byrne v. Karalexis* on April 13, 1970, that he also entertains no such intendments. Mr. Bender or his representatives must have or should have been in attendance and heard the following colloquy between Justice Marshall, the author of the *Stanley* opinion, and Attorney General Quinn of Massachusetts on this issue. See transcript at page 3, line 17, to page 4, line 18, reading:

Attorney General QUINN: "That is cor-

rect, your Honor. In our view this appeal presents two equally important issues which ought to be finally resolved by this court. The first is whether the court below abused its discretion in enjoining the District Attorney from prosecuting in the future on account of the showing of the film, "I Am Curious Yellow," which the court below assumed to be obscene. The second is whether under this court's holding in *Stanley* v. *Georgia* any state can constitutionally prohibit public, commercial dissemination of pornographic matter, absent distribution to minors, to nonconsenting adults or by pandering."

Justice MARSHALL: "What is there in *Stanley* that protects commercial distribution?"

Attorney General QUINN. "That is not the way we read it, your Honor, and I do not think that is the way the author of the opinion wrote it."

Justice MARSHALL: "Thank you."

It was noted by three attorneys present during the above colloquy that when Attorney General Quinn answered Justice Marshall in such a forthright fashion that Justice Marshall was visibly shaken and evidenced the same in the manner in which he said "Thank you," which was said with sarcasm. One minute later he left the bench.

Further, in regard to the Staff position regarding *Stanley* v. *Georgia*, Bender fails to indicate any significance in *Gable* v. *Jenkins*, decided by the court during the latter part of the current term. Attorney General Quinn in his arguments saw otherwise. See transcript, pages 15–16, where he said:

Attorney General QUINN: "That success depends on the answer to the question 'Can public commercial dissemination of pornography be proscribed by any state.' Before *Stanley* v. *Georgia*, we submit there was no doubt at all about the principle. *Roth* v. *United States*, the leading case on this subject, based that answer on the fact that obscenity is not protected speech within the First Amendment. We agree with Mr. Justice Marshall that the holding in *Stanley* in no way impairs the principle so well enunciated in *Roth*. In fact, only last week this court summarily affirmed in *Gable* v. *Jenkins*, No. 1049 on the docket of the court, a case involving action under the distinguishable statute in the same jurisdiction as *Stanley*, distinguishable from the statute in the *Stanley* case, but a statute very much like that upheld in the *Roth* case and very much like the statute under consideration in the case at bar. The statute upheld *Roth* prohibited a commercial distribution of pornography. The Massachusetts statute, Chapter 272, Section 28A, is of like tenure. It strikes at public dissemination. This, we submit, does not affect the situation like that present in *Stanley* v. *Georgia*."

ASSOCIATE JUSTICE: "Was that case you referred to last week a denial of 'cert' or an affirmance?"

Attorney General QUINN: "It was a summary affirmance, your Honor."

ASSOCIATE JUSTICE: "What is the name of the case?"

Attorney General QUINN: "*Gable* v. *Jenkins*, No. 1049. As I recall, I think there were two Justices either abstaining or dissenting, your Honor."

That ACLU counsel Bender failed to record these and other observations is easily understood, for to do so would undermine the entire ACLU objective—open dissemination to consenting adults—which is the common thread of all the Reports.

Although Lockhart and Bender admit to their long-standing ACLU membership but publicly deny their agreement with the ACLU advocacies of abrogation of the nation's obscenity laws, the work product of their Staff shows such position taken by them to be a fraud and a hoax on the public. Both men are intentionally attempting to project a distorted view as to the nature of obscenity and the historical necessity for its control. By controlling the Commission Staff and its research teams and funds, Lockhart is intent upon blocking a projection of contrary views. This situation cannot go uncorrected. I plan to submit a point-by-point response to the Legal Report within the next two weeks and to ask Chairman Lockhart for funds to be set aside to prepare opposition reports to these misstatements of law and fact. Denied this, I am ready to go to court on that issue—the right to have monies allocated for this purpose.

This matter is being brought to your attention at this early date to permit your advisers to evaluate my warnings and recommendations—not on the basis of what I have said would be the result, but rather upon the record of what this ACLU-oriented Staff has done—which has proven my evaluations to be one hundred per cent correct.

It would be my recommendation that you throw the weight of your office against the abortive attempts to be made here and that one of two things be done immediately:

(1) Appoint new members in place of certain of the current members.

(2) Seek out an extension of time to complete the study and ask for additional members to be appointed to the Commission to restore the proper balance.

Respectfully,

CITIZENS FOR DECENT LITERATURE, INC.
CHARLES H. KEATING.

---

COMMISSION ON OBSCENITY AND PORNOGRAPHY,
*Washington, D.C., November 14, 1969.*

CHARLES H. KEATING, Jr., Esq.,
*1811 Provident Tower,*
*Cincinnati, Ohio.*

DEAR CHARLES: After much thought about our last Commission meeting on October 29, I am writing to request you to reconsider your decision not to observe the confidentiality policy approved unanimously by all other members of the Commission.

Because of your late appointment in June 1969 to succeed Judge Keating, you did not participate in our original organizational meeting in July 1968. In that meeting, the Commission decided unanimously to keep its deliberations confidential except for reports or statements issued by the Commission itself and any dissent thereto. Implicit in that decision was the confidentiality of research reports and drafts of proposed reports until released by the Commission. All Commission members have faithfully followed this confidentiality policy, viewing it as essential to effective fulfillment of the Commission's task.

This explains the surprise and dismay among the Commission members when, as we discussed means of insuring confidentiality of tentative drafts of Panel and Commission reports, you informed the Commission that you would not respect the confidentiality of any Commission document or of any discussions in Commission meetings. I appreciated your frankness in making explicit your disagreement with the confidentiality policy.

Since you did not participate in the original decision establishing this policy, you were entitled to have the issue reconsidered in the light of your expressed conviction that Commission discussion and documents should be as much in the public domain as debates on the floor of Congress. I therefore appointed a committee chaired by the Attorney General of California to consider the confidentiality policy. As you know, that Committee recommended and the Commission approved the following policy:

In line with the common practice of commissions, it is the policy of this Commission to keep confidential the deliberations of the Commission and the various panels. There shall be no dissemination or publication of any papers, discussions, or reports without the express authorization of a majority of the Commission.

The vote was unanimous, save for your one dissent.

Despite your statement immediately after the vote that you did not consider yourself bound by the Commission's action, I hope that on reconsideration you will decide to accept and observe the procedure adopted by the Commission to govern its operations in a 15 to 1 vote (really 17 to 1; both absent Commissioners concur in the decision). The reasons for the policy are most persuasive. Indeed, the policy is essential to effective functioning of the Commission in this sensitive area. Let me outline some of the reasons for your thoughtful consideration.

Please keep in mind that the confidentiality policy refers to *premature* disclosure of discussions, data, tentative reports, proposals and the like before they have been analyzed and approved by the Commission, and incorporated in a balanced report that reflects the Commission's judgment on these sensitive issues. The Commission encourages vigorous advocacy of conflicting views and interpretations of data within the Commission as a means of formulating a balanced judgment. And as the Progress Report released last summer shows, the Commission recognizes the right to dissent publicly when the views of the majority have been formulated. It is only premature public disclosure and discussion that the confidentiality policy forecloses and that for the following reasons.

1. The threat of premature disclosure of Commission discussions will inhibit the free and open exchange and discussion of ideas, viewpoints, and proposals that are so essential to arriving at a soundly based, balanced judgment on the critical and sensitive issues before the Commission. Members of the Commission must feel free to advance for consideration views or proposals tentatively held, or suggested to them as worthy of discussion, without fear that they or the Commission will be charged publicly and premature with holding views that do not in fact represent their considered and mature judgment. We have on the Commission members in sensitive public positions, as well as members from various mass media whose freedom to enter into discussion will be seriously inhibited if they are under the threat of a public disclosure of statements made or positions taken in discussion prior to the authorized release of the Commission's considered conclusions.

2. The threat of premature disclosure will inhibit the development and discussion within the Commission as a whole of proposals for control of obscenity. These proposals are efforts to see what can be done by way of developing workable definitions and methods of control, but their unauthorized public release would give the impression that they represent the conclusions and recommendations of the Commission.

3. The threat of premature disclosure would dry up sources of information about the pornography industry. You will recall that two members of the Commission stated that information in their possession concerning those involved in pornography and its distribution could not be disclosed if the information is not to be kept confidential. Further, disclosure of any part of the considerable volume of data we are presently obtaining from those in the pornography industry would immediately dry up all such sources of information. Without the confidentiality policy the information thus obtained could not be laid before the Commission for discussion until all our investigatory work is completed.

4. Premature disclosure of details concerning ongoing research, or of tentative findings based upon partially completed research, would jeopardize the successful and accurate completion of our difficult research program. Social science research is peculiarly sensitive to publicity; the results can be warped by advance publicity concerning the study being

made. For example, one research study of importance had to be cut short because publicity about it reached the local papers. For dependable results in the Commission-sponsored research we simply must preserve confidentiality.

5. Premature public disclosure of discussions and tentative draft of reports and proposals in this emotion-charged area would create false hopes for some and false fears for others and place the Commission in the middle of a public debate and controversy inconsistent with its obligation to make a dispassionate study. Such intermittent public disclosure by its very nature cannot encompass the range of the Commission's interests or keep them in reasonably accurate focus. There will be ample opportunity for public debate when the Commission completes its study and releases its data, its conclusions and recommendations, along with such dissents as may develop within the Commission. At that point the Commission's recommendations will doubtless be the subject of extensive legislative hearings in Congress and the state legislatures.

I am sure you are aware that considerations such as these have caused the development of the common practice among study Commissions such as ours to adopt similar confidentiality policies. Since our October 29 meeting, I have checked on the practice and have found no Commission that did not observe such a policy. For example, this was true, as you know, in the recent Presidential Commissions on Crime and on Violence.

Charles, you can be a very real asset to the Commission. You can bring to our deliberations a background and knowledge about our problem that many Commission members lack. I urge you to reconsider your point of view to avoid circumscribing your useful relationship with the Commission and the consequent effectiveness of your contribution to its work during the all-important months ahead.

After you have given this a few days' thought, please let me know your decision concerning adherence to the confidentiality policy.

Sincerely,

WILLIAM B. LOCKHART.

---

CINCINNATI, OHIO, *November 22, 1969.*

Dean WILLIAM B. LOCKHART,
*Chairman, Commission on Obscenity and Pornography, Washington, D.C.*

DEAR DEAN LOCKHART: I appreciate your taking the time, thought, and evident effort to write me your November 14 letter.

We are in basic conflict. I consider the floodtide of filth in magazines, paperbacks, and on the motion picture screens of America to be an imminent danger to our nation. I am quite sure that when Congress passed legislation and the President signed it, thus creating the Presidential Commission on Obscenity and Pornography, that the underlying rationale was that there was a serious problem, about which something must be done—positive control of the pornographers.

I observe the Commission engaged in debate as to whether there is a problem and even as to whether or not there should be any controls. Recourse for factual information, legal advice, and philosophical theory from the academic community never appealed to me as a method of learning about the obscenity problem or controlling the pornographers. Indeed, the fruits of the Commission's expenditures of time and money in this area confirm my observations.

I think our society, which groans under the burden of obscenity, is entitled to know what is being done. The immediacy of the problem will not tolerate a "wait and see what's done" attitude on my part.

I, evidently opposite to all other members of the Commission, believe that the Commission should immediately undertake a factual investigation and revelation to the public of the facts and figures and persons in the pornography industry in the United States. Cocurrently, I believe that the Presidential Commission should have studied and should now be recommending to judge, prosecutor, and law enforcement officer how (basically under existing laws) to arrest, prosecute, and convict and thus stop the pornographers.

You referred at one point in your letter to Attorney General Lynch of California who stated that information in his possession concerning those involved in pornography and its distribution could not be disclosed to the Commission if the information is not to be kept confidential. My reply is that Mr. Lynch has been Attorney General of the State of California during a period wherein that state has become perhaps the world's leading source for the most vile and depraved and perverted printed and pictured material that was ever released in the history of man. I would observe that perhaps the information he is keeping confidential should have been disclosed a long time ago.

My conclusion is that I trust the intelligence and the ability of the American people to absorb and properly act upon a variety of information as well as I trust any member of the Commission to do the same thing. I cannot agree with the policy of a Commission dealing with a problem so intimately associated with the moral welfare of the people of the United States, funded by those same people and staffed by the President of the United States, which keeps secret its information and its deliberations. Accordingly, I continue to decline adherence to the confidentiality policy.

I note that under the terms of my appointment I serve "during the pleasure of the President of the United States for the time being." I suggest that if you feel the Commission cannot fulfill its role in view of my position that you write the President suggesting he withdraw my appointment. Otherwise, I have no intention of resigning, and I know of nothing which prohibits me from attending Commission sessions.

Yours truly,

CITIZENS FOR DECENT LITERATURE, INC.,
CHARLES H. KEATING, Jr.

---

CINCINNATI, OHIO, *November 24, 1969.*

Dean WILLIAM B. LOCKHART,
*Chairman, Commission on Obscenity and Pornography, Washington, D.C.*

DEAR DEAN LOCKHART: Because of our deadlock on the "secrecy" problem and the probability you will not have a fair chance to solve it prior to the December 2 meeting of the Legal Panel, I will not attend the meeting.

A further reason is that I consider it futile to try to take any meaningful action to combat the pornographers when much of the work of the Panel centers on our Chief Counsel who is a member of the American Civil Liberties Union.

You will be interested in the enclosed opinion of Judge Simon Leis regarding *Vixen*.

Yours truly,

CITIZENS FOR DECENT LITERATURE, INC.,
CHARLES H. KEATING, Jr.

---

CINCINNATI, OHIO, *December 20, 1969.*

DEAN WILLIAM B. LOCKHART,
*Chairman, Commission on Obscenity and Pornography, Washington, D.C.*

DEAR DEAN LOCKHART: Please advise me of the time and place of all Panel meetings. I assume I am welcome to attend any or all Panel meetings at my discretion. Please advise in this regard.

Yours truly,

CITIZENS FOR DECENT LITERATURE, INC.,
CHARLES H. KEATING, Jr.

COMMISSION ON OBSCENITY AND PORNOGRAPHY,
*Washington, D.C., January 2, 1969.*

CHARLES H. KEATING, ESQ.,
*1811 Provident Tower,*
*Cincinnati, Ohio.*

DEAR CHARLES: I regret that my absence for a week at the annual meeting of the Association of American Law Schools, where I shed my responsibilities as President, prevented my seeing until today your letter concerning panel meetings, forwarded to me by Cody Wilson.

As I indicated in my letter of September 19, it is my view that members of the Commission may attend, as observors, meetings of panels to which they are not assigned. In attending the meeting of a panel of which he is not a member, a commissioner is there to observe—not to participate as a member of the panel. If we are to get on and complete our work, it is simply not possible to take the time to give to those from other panels the necessary background to enable him to meaningfully participate in the discussions. But each panel's findings, reports, and recommendations will be subject to clarification and full discussion at meetings of the whole Commission that will be scheduled as the research results unfold.

You should be aware, of course, that the reports, evidence and discussion at the panel meetings are subject to the confidentiality policy established by the Commission. There is no intention to stifle criticism of the "direction" of the Commission's work—though you are badly mistaken in your interpretation of our direction—but it is essential that there be no release of reports, research, data, evidence, or internal discussions until authorized by the Commission.

The Traffic and Distribution Panel is scheduled to meet in Los Angeles on January 6 and 7, and the Effects Panel in New York on January 14. I will ask the staff to send you details concerning these meetings. Ordinarily we cannot pay travel expenses for one who is not a panel member to go to a panel meeting so far away as the Traffic Panel meeting on this occasion. But because of your strong interest in the work of that panel, I will authorize your expenses on this one occasion if you wish to attend. I think we can ordinarily meet your expenses to attend panel meetings other than your own when they are held in the East, but we may have to reconsider this practice if many Commission members desire to attend panels not their own because of our limited budget that must cover all of our future expenses until we wind up the work of the Commission.

I should add, so that there will be no misunderstanding, that in my opinion the Commission will not be justified in compensating with a salary per diem voluntary attendance at the meeting of another panel as an observor. That is outside a Commissioner's assignment; the evidence and findings of each panel will be available for discussion and consideration by all Commissioners at the appropriate time at the Commission meetings, for which there will be compensation.

Sincerely,

WILLIAM B. LOCKHART,
*Dean.*

---

CITIZENS FOR DECENT LITERATURE, INC.,
*Cincinnati, Ohio, January 10, 1970.*

Dean WILLIAM B. LOCKHART,
*University of Minnesota Law School,*
*University of Minnesota,*
*Minneapolis, Minn.*

DEAR DEAN LOCKHART: Thank you for your letter of January 2.

I will appreciate your having the Commission advise me of the time and place of the meetings of the various panels. There is no need for the Commission to concern itself with the question of my expenses, travel or otherwise, in attending such meetings as

I choose. I will cover my own expenses in this regard. I understand that attendance does not carry with it the prerogative of participation. May I send personal representatives to sit in on these sessions?

I must reiterate for the reasons mentioned in my letter of November 22, 1969, that I do not consider myself bound in any way to the Commission or the Panel's policy of "confidentiality."

Yours truly,

CHARLES H. KEATING, Jr.

---

COMMISSION ON OBSCENITY AND PORNOGRAPHY,
*Washington, D.C., January 19, 1970.*

CHARLES H. KEATING, Jr., Esq.
*Citizens for Decent Literature, Inc.,*
*Los Angeles, Calif.*

DEAR CHARLES: I have your letter of January 10.

I will arrange for the staff to inform you of the time and place of meetings of the various panels.

For the reason stated in my letter to you of September 23, 1969, it is the Commissioners themselves who are permitted to attend panel meetings, not personal representatives. I am sure the Commission would not authorize representatives of Commissioners to attend panel meetings and I cannot do so.

You realize, of course, that I cannot waive the Commission's ruling on confidentiality. It is my obligation as chairman to make clear to all Commission members their obligation in this regard. I have already explained the reason for this policy.

Sincerely,

WILLIAM B. LOCKHART, *Dean.*

---

## NEAR-DICTATORIAL DRIVE BY HUD FOR PLASTIC PLUMBING MATERIAL

---

### HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. NICHOLS. Mr. Speaker, the Department of Housing and Urban Development has started a program aimed at getting plastic approved as a plumbing material in various municipal codes. Most of the affected municipalities previously listed iron soil pipes the preferred material. HUD has been successful in many of these cities because the municipalities are threatened with the refusal of Federal funds if they do not comply.

This near-dictatorial drive by HUD is causing great concern among my constituents in Anniston, a city generally referred to as the Soil Pipe Capital of the World.

The soil pipe industry has always conducted numerous tests on their products before they have been put on the market. On the other hand, I recently observed tests here in Washington which showed that in many cases, plastic pipe does not stand up under stress.

Mr. Speaker, my constituents who are concerned, either directly or indirectly by this action, are not the only losers. The consumer often is a loser. I feel that either a contractor or some "middle man" will realize a gain from the cheaper material and the ultimate consumer will realize a loss in future failures or repairs that will inevitably have to be made.

I respectfully ask that the Department of Housing and Urban Development withdraw this requirement which seems to be just another power-grabbing action which our Government is, unfortunately, becoming famous for.

---

## THE WAR ON POLLUTION HAS NOT YET STARTED

---

### HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. COLLIER. Mr. Speaker, the serious problems of environmental health control have belatedly drawn the stern attention of the American people as the ugly consequences of air and water pollution are felt more with each passing day.

While all programs of this magnitude are costly, we must not fall into the trap of trying to measure the effectiveness of these programs merely in dollar signs. Primarily, stricter enforcement of existing laws is as vital as the new laws that must be enacted.

Presently antipollution operations and activities are spread through 95 agencies of the Federal Government. Consolidation must take place. Existing laws must be used. Changing the inefficient buckshot system of sporadic enforcement that we have now must be the first priority in the war against pollution.

At this point in the RECORD, I would like to offer an excellent article that appeared in the Des Plaines Herald Day, a fine daily newspaper in my district. It is entitled "Needed: A Basic Decency" and is written by Ken Knox:

NEEDED: A BASIC DECENCY

(By Ken Knox)

It's been said more times now than can be counted: all the laws in the world aren't worth a bit if they aren't used.

That applies to new laws as well as old ones, and it's especially pertinent now in the wake of the wave of hand-wringing about pollution.

The cry is for new laws, and tough laws, and vigorous enforcement—action to crack down on the polluters, and get our water and air cleaned up.

But slowly, it's coming clear that a lot of that is just so much forensics and gymnastics—that what's really needed is some basic decency from the polluters, which is unattainable; some honest commitment from political leaders, which can't permit any compromise; and someone to scour through the old laws, which is the rub.

Things need never have gotten as bad as they are; we know that. But we haven't received much decency or commitment, and we certainly haven't used the laws we've had.

We've had one, in fact, for 71 years, and its near total disuse provides a pungent indictment of our own commitment, and of where our leaders have put their concern while the environment eroded and deteriorated.

The law is a clear and direct one, and the next time you hear one of your legislators railing on the need for new and tough antipollution legislation, ask him if he ever heard of it.

It's the Federal Refuse Act of 1899, designed specifically to combat water pollution. Its scope is vast, prohibiting anyone, including any individual, corporation, municipality or group, from throwing, discharging, or depositing any refuse matter of any kind or any type from a vessel or from a shore-based building, structure or facility into either (a) the nation's navigable lakes, streams, or other navigable bodies of water, or (b) any tributary to such waters, unless he has first obtained a permit to do so.

"Navigable" means water sufficient to float a log at high water. "Refuse" has been broadly defined to include all foreign substances and pollutants. Permits would have to be obtained from the Secretary of the Army through the Corps of Engineers.

The scope of the law is decidedly broad enough to touch on most basic forms of water pollution, and it encompasses routine littering as well, prohibiting the placing on the bank of any waterway any material that could be washed into the waterway.

Penalties are strong, too, with fines of $500 to $2,500 per day or instance of violation, and prison terms of 30 days to a year.

And yet the polluting goes on, and has gone on since 1899 and before.

We must either assume the Corps of Engineers has given permits for all of it, or the law—curiously—was overlooked. We know the Corps of Engineers isn't THAT bad.

Some insight into all this was shed at a recent Senate subcommittee hearing on pollution. Assistant Interior Secretary Carl Klein revealed that industries are dumping 4,800 pounds of lead pollutants into the Mississippi River between Baton Rouge and New Orleans every day. And some are pumping in arsenic as well.

Reminded of the 1899 Federal Refuse Act, Klein shrugged it off and said what's really needed are tough new laws. Until then, the lead and arsenic will continue to flow.

Can it be that the 1899 law doesn't get any attention because it doesn't have enough loopholes?

I don't know. But what does make sense is Sen. Philip Hart's retort to Klein: "If there is a danger, go after it. Don't tell Congress to pass a new law when you don't use the one you've got."

---

## AFTER NASSER—WHAT?

---

### HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. SIKES. Mr. Speaker, the unexpected death of President Nasser of Egypt has created consternation among free-world leaders and deep and earnest grief among Arabs. He was the only Arab leader who enjoyed world stature. He has been the dominant figure among Arabs in the Middle East for nearly two decades and his leadership there was unquestioned. He was hailed for his efforts to improve the lot of the little man in a poor country—always a commendable trait—and his personal popularity was such that he could survive two disastrous wars with Israel and still retain his position of strong leadership in his own country and in other Arab nations.

It was Nasser's acceptance of the American cease-fire proposal which set the stage for peace talks between Israel and the Arab nations and it was Nasser more than anyone else who worked out a compromise which ended the civil war in Jordan. Consequently, there are many who take the position that Nasser was the only Arab with sufficient stature to bring stability to the Middle East. They

feel that the preservation of peace will not be possible without Nasser's strong hand. Admittedly, hatred, revolution, and war have long beset that part of the world. Arab factions are warring against each other and against the Jews.

The Palestinian refugees have too long been ignored. They have legitimate grievances and their leaders are now becoming dominant in many parts of the Arab world. It is obvious that the area faces a period of great danger; that conflict can break out at any moment. Uncertainty is aggravated by the fact there is no one of stature to whom the Arabs can now turn. Even so, the death of Nasser may not be as great a catastrophe as many have feared. Without a strong leader to hold them together and to shape their destiny, the nations of the Arab world are less likely to mount a coordinated and effective attack against Israel. The prospects of peace may have dimmed and real peace may be a long time coming. But there is opportunity for the Western Powers to seek new coalitions which can be useful to the cause of peace. There is also opportunity for the Western Powers to seek the offset the Russian influence which so rapidly is becoming predominant throughout the area. All is not lost. The hand-wringing which we see on every side seems a little premature.

## A THANK-YOU LETTER TO CONGRESS FROM A VETERAN

### HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. GARMATZ. Mr. Speaker, we all know that our constituents and the public in general are quick to let us know when our actions do not meet with their approval. A note of thanks is quite unusual.

Therefore, it was a special pleasure to receive a letter from Mr. James Thompson of 1021 South Sharp Street, Baltimore, one of my constituents, expressing his gratitude to the Congress for the disability compensation he receives. He is totally disabled and the compensation enables him to live with dignity and self-respect, certainly something to which our disabled veterans are entitled. His letter follows:

BALTIMORE, MD.,
*September 25, 1970.*

Subject: A Letter of Thanks.
To: The Congress of the United States of America.
*Washington, D.C.*

DEAR SIRS: I am a disable veteran, one-hundred per-cent disable. I get four hundred dollars a month compensation.

I wish to thank The Congress of The United States of America for this award given to disabled veterans.

You can not imagine how much I appreciate this money. I would not know what I would do if it was not for the generosity of the Congress of the United States of America.

Not only have you made me to live with dignity by giving us veterans compensation for our service connected disabilities in the first place, but from time to time given us an increase with other military and civilian personnel on active duty.

Today I am independent of my family. I have a house, rented though it may be, I have sufficient clothing and food.

Thus you, the Congress of the United States of America, have made it possible for us disable veterans to have the three necessities of life, raiment, shelter and food at a cost to the American people. And by spending our compensation wisely, we also have money for entertainment. For this I am thankful.

Again, sirs, the Congress of the United States of America, I wish to give you an exclamation of applause and a vote of confidence.

Again thanks.

Sincerely yours,

JAMES THOMPSON.

## SALUTE TO FARM COOPERATIVES

### HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. FINDLEY. Mr. Speaker, the contribution of agricultural cooperatives to farmers and the Nation's economy will be recognized during the month of October which is Cooperative Month. Cooperatives serving the interests of the people that own them have an annual business volume of $17.4 billion. Some 6½ million people in the great rural areas of our country are members of cooperatives. Nearly $13.5 billion worth of farm products were marketed cooperatively during the past year with dairy, grain and livestock products leading in sales volume.

Farmers are big customers also and during 1969 purchased more than $3.5 billion of their production supplies from cooperatives. This should be ample evidence that farmers have been doing an excellent job of serving themselves through the farm cooperative movement. With continuation of the farm cost-price squeeze, farmers and their cooperatives must continue to expand their services and their efficiency of operation.

I am proud to report that my home State of Illinois ranked fourth in the Nation in the business volume of farmer cooperatives with more than $1 billion of business during the fiscal year 1968–69. This represented an 11 percent increase over the previous year. Some 360 farmer cooperatives have their headquarters in Illinois and these have more than 400,000 members.

Cooperatives in Illinois and the Nation as a whole are an important segment of the agricultural industry. Through cooperatives our Nation's rural citizens work effectively to improve their economic conditions providing benefits for both producers and consumers.

The cooperatives in Illinois, on October 1, will be launching their cooperative month's activities by holding a banquet in Springfield. I am particularly proud that Mr. Melvin E. Sims, president of the National Council of Farmer Cooperatives, is a good friend and constituent of mine. I know first hand of the outstanding work of Mr. Sims to improve agriculture and the lot of the farmer. Today, on the eve of Cooperative Month, I would like to call the attention of my colleagues in the House to the great contribution being made by men throughout the Nation like Mr. Sims—men dedicated to the improvement of conditions on the farm and in their communities through cooperation.

By this means I ask that all join me in saluting the men and women working in our great cooperative movement for the contributions they have made.

## ADMINISTRATION'S FUEL OIL PLAN DOES NOTHING FOR CHICAGO

### HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ROSTENKOWSKI. Mr. Speaker, yesterday the administration announced its plan for meeting the fuel oil emergency which threatens our Nation. They should not have wasted the taxpayers' money on printing the material and on staging an elaborate press conference.

For they labored and came forth with nothing. Even worse, the administration has perpetrated a cruel hoax on the American consumer: The new plan is being claimed as an answer to the high prices and short supplies which threaten the people of the Middle West and other areas of the Nation. But, in actual fact, it will mean higher prices and no additional supplies.

I am deeply disappointed and shocked that nothing was done about the critical problems facing the Middle West in general and the Chicago area in particular.

For nearly 5 months, I have been warning of high prices and short supplies of No. 6 fuel oil in the Chicago area. I have had meetings, sent letters to the President, and done everything possible to alert the people here in Washington who control our oil-import policy that a serious crisis threatened. Joined by many others, I have pointed out that universities, hospitals, apartments, and industries in the Chicago area are not able to secure firm contracts for fuel oil. We have supplied data indicating that Chicago is 25 percent short of its needs for the coming winter, and a No. 6 fuel oil supply gap of 50,000 barrels a day is threatened.

I and many others have presented concrete proposals for relief. And what has been the response? Nothing; a few soothing words yesterday, a little gimmickry, and a new study committee, but, in essence, what the Middle West has been offered is, to repeat, a cruel hoax.

We have gotten nothing but the prospect of continuing escalation of prices and cold factories, schools, and hospitals.

The failure of the administration to act has strengthened the resolve, I am sure, of all of us in the Middle West, and particularly Chicago, to get prompt, effective action. I pledge our continuing efforts until a real solution has been announced and I restate my urgent request

that the administration take the following steps:

First. Order immediate decontrol of all imports of crude oil from Canada into the Middle West. There is no justification in law for maintenance of these controls in normal times; there is no justification in law or morality for the controls in a time of emergency. These increased imports would enable our refiners in the Middle West to turn out additional quantities of badly needed heating oils.

Second. Adopt immediately a residual fuel oil incentive program for refiners in districts I–IV. Under such a plan, domestic refineries would be encouraged to produce residual fuel oil by awarding them an import license for 1 barrel of crude oil for every barrel of low-sulfur fuel oil they produce. And instead of a price increase for residual oil, which the administration favors, we could have a reduction in price to consumers of this vital product.

Third. Consider, as a long-range solution to the problems of the Midwest, giving that area access, beginning on July 1, 1971, to overseas supplies of residual fuel oil on the same basis as district I.

Mr. Speaker, oil import policy—and therefore oil prices and supplies—are controlled here in Washington. One man, the President has control over the level of imports coming into the United States.

I therefore call upon him, and the other oil policy leaders here in Washington, to lay thoughts of politics and elections aside, and hear our plea. We in the Middle West and Chicago, are in trouble; we need help; we have a plan for relief; it must be adopted.

## A TRIBUTE TO DICK POWERS ON RETIREMENT FROM THE ASSOCIATED PRESS

### HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BLATNIK. Mr. Speaker, Dick Powers retires as regional correspondent for the Associated Press today, after 28 years on Capitol Hill. He has my highest esteem as a genuine, conscientious reporter, dedicated, impartial, and above all modest, who leaves behind him a long record of high-level reportage, and the high regard and warm affection in which he will always be held by so many who have come to know him well.

I consider Dick a close personal friend, and respect him as an able and completely impartial reporter.

He numbers among his personal, as well as professional friends, high officials on both sides of the aisle; Governors and past Governors of the States he covered for the AP—Minnesota, Michigan, and Wisconsin—and the Representatives and Senators about whom he wrote so fairly over his 28-year career.

I met Dick when I first came to Washington in 1947. He struck me then as a quiet, friendly man—a shrewd judge of character, a newsman who would skillfully weigh the event or situation, and put it in its proper perspective.

He is the kind of skillful reporter who takes any assignment in stride, no matter how technical, fully understands it, and explains it concisely to his readers.

Dick is extremely modest about himself and his family, but the glowing pride he feels for them showed up on rare but justifiable occasions. His eldest son, John, is a former marine and now a Reserve Marine pilot. He is ordained by Princeton Theological Seminary, earning him the affectionate nickname "flying parson." He is now working for his doctorate in physics at the University of Pennsylvania.

Dick's second son, Richard, served in the Army, graduated from Union Theological Seminary, and is working for his masters and then his doctorate degrees from Temple University.

Jane, their daughter, is a University of Maryland graduate working for the Department of Labor.

Throughout his 28 years in Washington, Dick Powers has steadfastly pursued the story behind the story, and shunned the glitter and splash of sensational journalism. The glow of the true reporter has grown of its own accord into a solid long-term record of performance, and will last long after he retires.

His friends on the Hill wish him and his lovely and gracious wife many, many years of continued good health and truly earned pleasures of retirement.

## QUESTIONNAIRE

### HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. MESKILL. Mr. Speaker, I am pleased by the response of the residents of the Sixth Congressional District of Connecticut to my most recent congressional questionnaire.

The interest and concern of my constituency is evidenced by the fact that over 18,000 questionnaires were returned, which is an extremely high rate. This means that the views of more than 34,000 residents in my district were sampled since the questionnaire was designed to permit both husband and wife to respond individually.

I believe such questionnaires are an effective means of gathering the views of the people I represent in the Congress. Knowing their opinions helps me to formulate my position on legislative issues and better perform my duties as the Representative of Connecticut's Sixth Congressional District.

Mr. Speaker, the results of the congressional questionnaire follow:

QUESTIONNAIRE FROM CONNECTICUT'S SIXTH CONGRESSIONAL DISTRICT

1. Do you agree with Vice President Agnew's charge that news media are often biased? Yes, 79%; no, 20%.

2. Should wage and price controls be imposed to stop inflation? Yes, 60%; no, 32%.

3. Do you think the President has been candid with the American public about this Nation's involvement in Laos and Cambodia? Yes, 40%; no, 54%.

4. Should the United States provide Laos and Cambodia with:

(a) Military equipment? Yes, 18%.

(b) Advice? Yes, 16%.

(c) Military support (bombing and reconnaissance)? Yes, 10%.

(d) Ground troops? Yes, 1%.

(e) Leave them on their own? Yes, 30%.

5. Do you feel our children are receiving:

(a) An excellent education? Yes, 8%.

(b) A good education? Yes, 36%.

(c) An adequate education? Yes, 35%.

(d) A poor education? Yes, 15%.

6. Do you favor:

(a) Increasing Federal aid to education under existing programs? Yes, 13%.

(b) Reducing allocations to existing programs? Yes, 4%.

(c) Maintaining aid at present levels for existing programs? Yes, 15%.

(d) Restructuring and reforming our entire Federal aid to education program? Yes, 56%.

7. Do you favor bussing school children to achieve a better racial balance? Yes, 13%; no, 85%.

8. Has the Supreme Court been too lenient in its decisions on pornography and obscenity? Yes, 64%; no 31%.

9. So that industry will install pollution abatement devices, would you favor:

(a) Granting tax credits for such installations. Yes, 29%.

(b) Issuing a deadline for abatement with a fine for failure to comply? Yes, 58%.

10. Do you favor a Federal gun registration law? Yes, 65%; no, 30%.

11. Do you approve of the way President Nixon has handled the war in Vietnam? Yes, 55%; no, 39%.

12. Do you favor a four-year term for Congressmen? Yes, 68%; no, 29%.

13. Do you think local, State, or Federal employees should have the right to strike? Yes, 34%; no 64%.

14. Do you favor increasing postal rates to pay the cost of pay raises for Federal employees? Yes, 49%; no, 42%.

15. Do you favor continuing our spending to explore space? Yes, 47%; no 48%.

16. What do you think are our most important domestic problems today?

The respondents to my questionnaire ranked the domestic problems in the order of importance as follows:

1. Crime.
2. Pollution.
3. Communism and Drug problems tied.
4. Racial hostility and Poverty tied.
5. Education, Campus rebellions, More emphasis on health needs and health research, and Others all tied.
6. Pornography through mail.

My response is as follows:

1. Education.
2. Other (Inflation).
3. Pollution.
4. Drug problems.
5. Racial hostility.
6. Poverty.
7. Crime.
8. More emphasis on health needs and health research.
9. Campus rebellions.
10. Communism.
11. Pornography through mail.

17. On student disorders in universities and colleges, are you in favor of:

(a) stopping Federal aid to students convicted by a civil court or disciplined by school authorities for disorder. Yes, 84%; no, 12%.

(b) stopping Federal aid to schools where the administration fails to curb disorder. Yes, 65%; no, 29%.

(c) use of Federal troops to quell violence. Yes, 65%; no, 26%.

(d) giving schools complete control over their campuses? Yes, 38%; no, 53%.

18. On the Selective Service System, do you favor:

(a) Retaining selective service boards. Yes, 14%.

(b) A lottery. Yes, 17%.

(c) An all-volunteer armed force. Yes, 24%.

(d) Use of draft only in time of declared war. Yes, 25%.

(e) Other. Yes, 3%.

## REPORT FROM WASHINGTON

## HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. MINISH. Mr. Speaker, as the 91st Congress begins to wind up its legislative business it is possible to gain some perspective about its activities. The Federal Government affects every American in numerous ways, and it is important, therefore, to keep abreast of congressional actions.

TAX REFORM AND RELIEF

A tax reform bill was enacted during this Congress, the largest tax measure in our country's history. Principal relief was provided through an increased personal exemption and a rise in the standard deduction allowance. Although the changes in the tax structure will not be fully realized until 1973, the personal exemption rate began to rise on July 1 and the surtax ended June 30. However, the bill did not go far enough to balance the tax structure, and I intend to continue to press for more equitable tax collection and a realistic exemption rate.

SOCIAL SECURITY

Legislation was enacted to provide a 15-percent increase in social security as of January 1, and blind persons were granted liberalized benefits. A new social security measure already passed by the House would increase benefits by another 5 percent, while also providing equalized computation for both sexes, increased earnings exemptions and a cost-of-living mechanism.

EDUCATION FUNDS

For 2 consecutive years the administration has vetoed appropriations measures containing education funds. The fiscal 1970 measure running from June 1969 to June 1970 also contained funds for medical research, the U.S. Cancer Institute, and hospital construction funds. The fiscal 1971 veto, which Congress overturned, was designed to provide remedial education, funds for educationally deprived children, vocational and adult job training, and school library resources. Surprisingly, economics was given as the reason for the vetoes, notwithstanding the fact that last fiscal year the Congress reduced the budget request by $5.6 billion, and tentative estimates for 1971 fiscal appropriations suggest another significant cut by Congress.

INFLATION

Statistical gameplaying aside, although our increased costs are said to be decreasing, hard pressed citizens are struggling to maintain their standard of living in the face of burgeoning prices. The Congress in response has given the President standby authority over credit, wages, prices and rents; it has enacted legislation to provide low and middle income buyers with homes, and has set up uniform cost accounting guides to prevent defense contractors from unnecessarily dipping into the public till.

ENVIRONMENTAL POLICY

This Congress enacted the Water Quality Improvement Act providing for marine sanitation, removal of oil from navigable waters, and waste treatment works. The Clean Air Act amendments, also enacted, will extend research on fuels and vehicles. A timber bill that purported to conserve forests while permitting increased cutting was kept back by a concerted House effort. Incidentally, the 91st Congress quadrupled the administration's request for water pollution funds for fiscal 1970.

DRUGS

A comprehensive drug abuse bill, providing more treatment for addicts and broader enforcement powers against illegal traffickers passed the House with a lopsided margin of 341 to 6. Congress has also increased funds for narcotics and customs officers. Other legislative actions include hearings on a proposal I cosponsored to cut off the narcotics supply at the source by refusing foreign aid to nations failing to take preventive steps against illegal drug trafficking, production, and processing. Meanwhile, a recent Narcotics Bureau recommendation that the U.N. establish a special fund to restrain international drug production was included in legislation I introduced some time ago; possibly the proposal will be accepted at a presently ongoing international drug seminar.

SAFE STREETS AND CRIME

Under omnibus crime control legislation, New Jersey received $6½ million in Federal funds for crime prevention, juvenile delinquency, criminal detection and apprehension, prosecution, and court research. Funds were also provided to reduce narcotics sale and usage. The House voted to increase funds for the omnibus crime control program, in addition to insuring that the moneys reach high-crime areas. Another pending crime bill specifically attacks organized crime, and legislative action is expected on it shortly.

CONGRESSIONAL REFORM

The first major congressional reform bill debated by Congress in 25 years has passed the House. It would liberalize committee procedures and open congressional activities to public scrutiny. Indications are that many of these reforms will be passed if the Senate has time to consider the measure.

CONSUMER LEGISLATION

Auto safety, food safety, product performance and safety, all are prime considerations of the Congress. The National Committee on Product Safety was extended by Congress, and improved toy safety legislation was enacted. Much consumer legislation is still pending, however, such as improved food dating and labeling, establishment of a Federal Department of Consumer Affairs, a bill permitting class action consumer suits, and measures improving warranties.

SOUTHEAST ASIA

It is listed last, but certainly not the least of congressional concerns is Southeast Asia, our involvement there and our hopes for future peace there. The struggle has cost over 40,000 American lives, while 30 billion of our tax dollars are spent there annually. The present Congress has reasserted its prerogatives with respect to involvements abroad. Hopefully, our withdrawal from Vietnam will be speeded up while a peaceful conclusion for the embattled Vietnamese is sought.

## CREATIVE BUSINESS AT WORK

## HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. EILBERG. Mr. Speaker, one of the questions which legislators must always ask themselves is this: How well is private business serving the public?

The Congress and various State and local governments have set up many agencies to protect the public interest, and their findings are reported in the press. But bad news always gets bigger headlines than good news; scandal is more interesting than virtue. For this reason, many exciting and rewarding case histories of real and valuable public service being performed by business—at lower cost and with greater efficiency than ever before—are not given the attention they deserve.

A most interesting case in point is the National Liberty Corp. This company was founded 10 years ago by a young man who was motivated by the kind of personal dedication which many people wrongly think is passing from the American scene. The actuarial knowledge available to this young man convinced him that people who do not drink alcoholic beverages are better insurance risks than those who do. Abstainers stay healthier and live longer. Abstainers suffer fewer accidents on the road and in the home. For example, we are all concerned about the casualties on the Vietnam battlefronts, but the U.S. Department of Transportation's latest study shows alcohol leads to some 25,000 highway deaths and 800,000 crashes in the United States each year. Moreover, 16.1 percent of all accidental deaths in the home can be directly linked to some degree of alcoholic intake. Since it has been proven beyond the shadow of a doubt that nondrinkers lead safer lives, why should they be forced to pay the same insurance rates as those who shorten their lives by drinking excessively? They are, in effect, being "taxed" for the intemperate habits of others.

And so, the young man decided to do something for a too long overlooked minority—the 38 million nondrinking Americans in the country. His idea: To provide health and accident insurance exclusively to abstainers—give them more health protection at lower rates—by direct marketing methods.

This new idea—insurance offered by mail only to abstainers—had immediate,

widespread appeal. Ten years of growth show that the idea continues to appeal strongly to this once neglected minority group—nondrinkers. In just a decade, more than 800,000 policy owners have enrolled in the gold star plan for total abstainers.

The National Liberty Corp. was formed as a publicly owned company in 1968 to consolidate the varied operations that have grown up around the business. In 1969, it acquired the National Home Life Assurance Co., a 50-year-old insurance company headquartered in St. Louis, Mo., and operating in 47 States and the District of Columbia. This soon led to the development of a new service called the national health plan. Its purpose: To provide low-cost insurance to the general public by employing the same mass marketing economies that had worked so successfully with nondrinkers. Here, too, coverage of those 65 and over is offered in conjunction with medicare benefits, and thousands of policy owners are now availing themselves of this protection against today's skyrocketing medical costs.

By enrolling thousands of people within specified "limited time" enrollment periods, the companies within the National Liberty group are able to eliminate the cost of investigating policy owners individually. These additional savings are then passed along to policy owners in the form of lower premiums and increased benefits. Customers realize they can make important savings by purchasing their insurance by mail. They buy in private, voluntarily and confidentially, without having an individual and costly sales presentation.

A number of other factors help to explain the continuing success of this organization. For one, large segments of the population have not been reached by insurance agents. Even though millions of families enjoy the security of insurance protection, there simply have not been enough agents to reach everyone, particularly those living in rural areas and small towns. The remarkable response to the direct marketing of health and accident insurance protection proves that thousands of people are ready and willing to obtain insurance protection by mail. Also, in an era of sharply rising hospital and medical costs, many people, including those either self-employed or retired, are not completely covered by the group insurance plans being offered by many employers. To these people, the National Liberty group offers essential protection against the danger of financial disaster in case of prolonged hospitalization.

The National Liberty Corp. and its affiliated group of companies are now paying benefits to policy owners at the rate of over $1 million per month.

Moderation and self-control are commendable traits and should be encouraged. It is difficult in a restless, swift-moving society, to avoid being drawn into the whirlpool of overindulgence so prevalent today. That is why I believe we should commend those who—by example or by direction—help others practice moderation and good health habits. An organization like the National Liberty Corp. group of companies deserves special recognition for encouraging Americans to live more temperate lives through its gold star plan and—at the same time—rewarding them with health and accident protection at lower rates.

Recently, the National Liberty group put its creative marketing resources behind another idea—that smoking is a health hazard and that those who do not smoke should not have to pay for the increased mortality among smokers. Thus another "neglected minority" is now offered hospital and life insurance at reduced costs.

Nonsmokers are better insurance risks. We all remember the Surgeon General's famous report on the correlation between cigarette smoking and lung cancer. And the famed Hammond-Horn study found that smokers are more likely to develop liver cirrhosis, ulcers, throat ailments, stomach trouble, migraine headaches, asthma and insomnia. Those who do not smoke cigarettes can expect to live 7 to 10 years longer than inveterate smokers.

Even though nonsmokers live longer and have fewer illnesses than people who smoke, few insurance companies have recognized this fact in their premium rates. However, this organization reasons that if safe drivers pay less for auto insurance because they have fewer accidents, should not nonsmokers pay less for health insurance because they are "better risks"? The National Liberty group is now reaching nonsmokers with the same direct "mass enrollment" methods they have been using to reach nondrinkers for more than a decade. Such methods have enabled a growing number of nonsmoking policy owners to obtain sound health and life insurance protection at exclusive nonsmokers' rates.

One other important innovation from this direct marketing organization is its cancer expense protection. Even though new drugs and new forms of treatment are being developed, cancer remains the No. 2 killer of Americans after heart disease. Sooner or later, two out of every three families will be hit by this dread scourge of men, women, and children alike. This is a disease which must be fought on two fronts—prompt diagnosis and treatment on the one side and constant, diligent research on the other. Almost 1 million Americans are alive today because of early diagnosis and treatment. Fifty percent of all cancer victims can be saved if the disease is discovered and treated in time.

But this kind of treatment is expensive—almost ruinous for some. When cancer strikes, the medical, surgical, and hospital expenses can be devastating. But the National Liberty group—by utilizing the economies of mass merchandising—makes possible low-cost protection against the financial catastrophe that so often results when cancer strikes. The savings the company achieves by its direct marketing methods are passed on to policy owners in the form of increased benefits in the event this dreaded disease does strike and at rates substantially lower than they could have otherwise obtained.

National Liberty deserves recognition for providing service beyond the expected, service willingly offered to those who are not being cared for in other ways. This is the secret of success for its low-cost insurance plans. With the highest public interest at heart, the National Liberty Corp. group of companies combines reliability and quality of service with noteworthy price advantages. It is to be commended on its leadership and vision in this field of human welfare.

---

## WHAT I BELIEVE

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. CELLER. Mr. Speaker, the cardinal sin of politics is to underrate the intelligence of the voter. But intelligence cannot be exercised without facts. My experience as a Member of the House of Representatives for 48 years has taught me that, if nothing else. The voters of my district have proven to me over and over again that they look to performance, to effectiveness, to legislative accomplishments. It is for this reason I set forth for the careful scrutiny of the voters of the 10th Congressional District my concrete record so that they may have before them an account of how I have carried out my trusteeship as their Representative.

First, a record of the most significant bills introduced by me during the 91st Congress as your Representative:

H.R. 3783: To amend the Public Health Service Act to provide for the making of guaranteed loans for modernization of hospitals and other health facilities and otherwise to facilitate the modernization and improvement of hospitals and other health facilities, which was incorporated in Public Law 91-296.

H.R. 4801: To assure to every American full opportunity to have adequate employment, housing, and education, free from any discrimination on account of race, color, religion, or national origin, and for other purposes.

H.R. 6612: To amend the public assistance provisions of the Social Security Act to require the establishment of nationally uniform minimum standards and eligibility requirements for aid or assistance thereunder.

H.R. 11183: To amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder.

H.R. 11848: To provide a deduction for income tax purposes, in the case of a disabled individual, for expenses for transportation to and from work; and to provide additional exemption for income tax purposes for a taxpayer or spouse who is disabled.

H.R. 15652: To eliminate racketeering in the sale and distribution of cigarettes and to assist State and local governments in the enforcement of cigarette taxes.

H.R. 17697: To amend the act authorizing Federal participation in the cost of protecting certain shore areas in order to authorize increased Federal participa-

tion in the cost of projects providing hurricane protection.

H.R. 18400: To amend section 620 of the Foreign Assistance Act of 1961 to suspend, in whole or in part, economic and military assistance and certain sales to any country which fails to take appropriate steps to prevent narcotic drugs produced or processed, in whole or in part, in such country from entering the United States unlawfully, and for other purposes.

H.R. 19118: To amend the act of March 3, 1931, relating to the furnishing of books and other materials to the blind and to other handicapped persons to authorize the furnishing of musical recordings and tapes to such persons.

H.R. 19158: To create a health security program.

House Resolution 395: Requesting the President to urge the Soviet Union to process the requests of 50,000 Soviet citizens for reunion with their families who are outside the Union of Soviet Socialist Republics.

House Resolution 1020: Supporting the Cooper-Church and McGovern-Hatfield amendments to cease hostilities in Vietnam and withdraw from Cambodia.

House Concurrent Resolution 320: Expressing the sense of Congress relating to films and broadcasts which defame, stereotype, demean, or degrade ethnic, racial, and religious groups.

House Concurrent Resolution 533: Airlines—To stop armed attacks in international travel.

Second, a record of the most significant bills I introduced as chairman of the Committee on the Judiciary during the 91st Congress:

H.R. 2165: To empower postal inspectors to serve warrants and subpenas and to make arrests without warrant for certain offenses against the United States.

H.R. 2166: To amend title 18, United States Code, to protect the people of the United States against the lawless and irresponsible use of firearms, and to assist in the prevention and solution of crime by requiring a national registration of firearms, establishing minimum licensing standards for the possession of firearms, and encouraging the enactment of effective State and local firearms laws, and for other purposes.

H.R. 2167: To correct deficiencies in the law relating to the theft and passing of postal money orders.

H.R. 2168: To amend sections 501 and 504 of title 18, United States Code, so as to strengthen the law relating to the counterfeiting of postage meter stamps or other improper uses of the metered mail system.

H.R. 2169: To assist in combating crime by creating the U.S. Corrections Service, and for other purposes.

H.R. 2175: To amend title 18 of the United States Code to authorize the Attorney General to admit to residential community treatment centers persons who are placed on probation, released on parole, or mandatorily released.

H.R. 2179: To regulate and foster commerce among the States by providing a system for the taxation of interstate commerce.

House Joint Resolution 180: To amend the Constitution to provide for representation of the District of Columbia in Congress.

H.R. 2346: To amend section 8 of the Clayton Act to prohibit certain corporate management interlocking relationships, and for other purposes.

H.R. 4243: To authorize appropriations for the Civil Rights Commission.

H.R. 4249: To extend the Voting Rights Act of 1965 with respect to the discriminatory use of tests and devices.

H.R. 9112: To amend the Immigration and Nationality Act, and for other purposes.

House Joint Resolution 482: To consent to and enter into the Mid-Atlantic States air pollution control compact, creating the Mid-Atlantic States Air Pollution Control Commission as an intergovernmental, Federal-State agency.

H.R. 9010: To incorporate the college benefit system of America.

H.R. 10067: To provide for the appointment of additional district judges, and for other purposes.

H.R. 10683: To permit the Federal Government to further assist the States in the control of illegal gambling, and for other purposes.

House Joint Resolution 681: Proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President.

H.R. 11009: To prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors.

H.R. 14116: To increase criminal penalties under the Sherman Antitrust Act.

H.R. 17154: To amend title 18 of the United States Code to provide for better control of interstate traffic in explosives.

H.R. 17825: To amend the Omnibus Crime Control and Safe Streets Act of 1968, and for other purposes.

H.R. 17901: To improve judicial machinery by providing for the appointment of a circuit executive for each judicial circuit.

H.R. 18550: To amend the act of June 10, 1938, relating to the participation of the United States in the International Criminal Police Organization.

When viewed together, they set forth my basic philosophy: First, to do what I can to preserve and enhance the right of every citizen to be secure in his person, in his home, in his opportunities for a decent job, decent living conditions, decent health facilities, decent schooling; second, to preserve and enhance the individual civil liberties and civil rights of every person; and, third, to bring about a world of peace within a democratic framework.

Time does not permit my detailing the provisions of every one of these bills, but all of those I have selected for inclusion in this RECORD relate to all my efforts to give every person *protection* and *opportunity*. I mean by protection, protection against fraud, deception, and neglect, protection against erosion of democracies in every part of the world, protection against inflation, protection against pollution of the air and water, protection against noise pollution, protection against the devastation of our lands and forests, protection against erosion of civil liberties and civil rights, protection against drug abuse, and protection against crime. I mean, too, protection against the inherent inequities of the draft, and to that end, I favor strongly a volunteer army. I mean, also, the protection of persons against the international crime of hijacking. I advocate international treaties guaranteeing the extradition of hijackers and the safe conduct and return of hostages. Such treaties must be put into effect with strong sanctions against countries which violate the terms of the agreement, denying to the airlines of the offending country or countries landing rights they seek.

I want to emphasize here that the protection against inflation is one of immediate and urgent need. The Congress has given the President standby powers to control prices and wages, but the President has not responded. Inflation is ruinous to everyone. The purchasing power of the dollar decreases as inflation increases. Houses are not built, jobs evaporate. People living on social security and pensions suffer most. I also wish to emphasize what I have called the erosion of democracies. We are at a point of crisis in the Middle East, and the one democracy in the Middle East; namely Israel, must be given the wherewithal to self-defense, the sophisticated weapons to enable her to deter aggression. The fall of Israel is unthinkable, monstrous to contemplate, and such a catastrophe would spell out Soviet domination of that gateway to three continents to the peril of the interests of the United States.

By opportunities, I mean the support and introduction of legislation to enable each citizen to obtain a good education, the opportunity to obtain the best of medical care, the best use of health facilities, the opportunity to obtain low-cost housing. Under the heading of opportunity, I would place first and foremost the opportunity for every person to develop his highest potential without fear of unnecessary wars. Knowing, as I do, that we must get out of Vietnam, I have introduced a resolution, House Resolution 1020, and I set it forth here because it explains most clearly the objective I seek:

*Resolved*, That in the absence of a declaration of war, it is the policy of the House of Representatives that fiscal year 1971 Defense expenditures in South Vietnam should be limited to only that amount required to carry out the safe and orderly withdrawal of all American combat and support troops from South Vietnam by the end of fiscal year 1971 (June 30, 1971).

*Be it further resolved*, That no funds in the fiscal year 1971 Defense budget are to be used to finance the operation of any American combat or support troops in Cambodia or Laos.

Under opportunities, I would certainly include changes in our immigration law to make it more flexible, to ease the process of reuniting families, to make provision for the entry of refugees, and to bring new seed to this land. Certainly, I must include under opportunities the enactment of a constitutional amendment to enable every vote to count. This can only be done by abolishing the

electoral college and instituting instead the direct election of the President and Vice President.

You can easily match every piece of legislation I note herein with every statement of political philosophy.

Over my years of activity in the House of Representatives, I have had enacted over 300 bills and three constitutional amendments which bear my name. This is a record that cannot be matched by any other Representative in the history of the Congress of the United States. I point to this only to emphasize that my introduction of a bill is not an idle gesture. This kind of record demands the unflagging attention to detail, the ability to negotiate, and the skill to earn the confidence of other Members of the House of Representatives. It means doing one's homework, it means developing skills in the use of parliamentary rules which can only come of long, hard years of learning and experience. To be successful in a forum of 435 Members of the House of Representatives and 100 Senators, with men and ideas competing for attention, your legislative proposals jostling against 20,000 others, and your political philosophy matched against a dozen different kinds, takes the hardihood, the conviction that this exists only in men and women who care. I care.

Already enacted into law in this Congress or pending in the Senate for its action are:

First. Public Law 91–271: To improve the judicial machinery in customs courts by amending the statutory provisions relating to judicial actions and administrative proceedings in customs matters, and for other purposes.

This measure will go a long way to unclog the courts and to prevent delay in the administration of law and justice.

Second. Public Law 91–272: To provide for the appointment of additional district judges, and for other purposes.

Third. Public Law 91–285: To extend the Voting Rights Act of 1965 with respect to the discriminatory use of tests, and for other purposes.

This protection of the rights of voters is basic to our law, and no voter can be denied his fundamental right to give his consent to acts of government, which is what the use of the ballot means.

Fourth. Public Law 91–339: To amend the Federal Youth Corrections Act—18 United States Code 5005 et seq.—to permit examiners to conduct interviews with youth offenders.

This law will, I hope, be of help to the youth criminal offenders so that we can cut down on the number of repeaters in our society.

Fifth. House Joint Resolution 681: Proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President.

House Joint Resolution 681 passed the House of Representatives after the most thoroughgoing review given any constitutional amendment calling for the direct election of the President and Vice President of the United States. This proposal does away with the electoral college and assures the principle of "one man, one vote."

Sixth. H.R. 14116: To increase criminal penalties under the Sherman Antitrust Act.

My drive against monopoly power is by this time well known to you. Unless there is economic freedom of opportunity for all, we cannot maintain the free enterprise system. The penalties called for are not less than $500,000 for corporate violation of our antitrust laws.

Seventh. H.R. 17825: To amend the Omnibus Crime Control and Safe Streets Act of 1968, and for other purposes.

Of all the crime proposals proposed, this is the only bill that addresses itself directly to our dreaded crime in the streets. This legislation enables the Federal Government to come to the assistance of the States and the cities in fighting crime. The original bill, the Omnibus Crime Control and Safe Streets Act of 1968, was my proposal and it became law. These amendments to that act increase to $650 million the money to be sent currently to the States and the cities to curb and control the street crime. It authorizes for the following year $1 billion and for the year thereafter $1.5 billion. It calls for better training of the police, more protective and innovative programs, better riot control, better rehabilitation services, and workable correctional services. This means that the youthful offender will not be put into jails with the hardened criminal and learn all the tricks he never knew before, returning to society to repeat his crimes with greater skill. It calls for new programs to deal with this scourge.

The Judiciary Committee has, as well, processed S. 30, a bill designed to control organized crime, which it is hoped will prove an effective weapon against the criminal syndicates. The Committee on the Judiciary has, as well, processed through the House of Representatives a bill to prohibit salacious advertising.

My record in the previous Congresses is known to you. Therefore, I have only put forth a portion of the work to which I have devoted myself in this Congress. This accounting of what I believe and how I have performed on these beliefs is a matter of record.

## MAN'S INHUMANITY TO MAN—HOW LONG?

### HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

## HIGH HOLIDAYS 5731

### HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ANNUNZIO. Mr. Speaker, the Jewish High Holidays begin this year on October 1 and 2 with Rosh Hashanah and conclude on October 10 with Yom Kippur. This is a period of piety, holiness, and spirituality for Jewish people all over the world, and I am happy to join my colleagues in the Congress and my constituents and friends of the Jewish faith in observing the advent of this significant holiday period.

Rosh Hashanah marks the beginning of the Jewish New Year, and traditionally, is a happy and pleasant holiday. On Rosh Hashanah, religious services are conducted in synagogues throughout the world where Jews pray for forgiveness and a year of peace and happiness for themselves and the world. It is also a time spent with family and friends discussing the events of the past year. The high point of Rosh Hashanah is the blowing of the shofar, or ram's horn, which symbolizes the beginning of the High Holidays, and its shattering sound is meant to awaken man's conscience to renew his faith and to return to his God.

October 10, the Day of Atonement, or Yom Kippur, is the climax of 10 days of pentience and is the holiest of all of the Jewish holidays. The entire day is spent in prayer, fasting, and worship. On the Day of Atonement, the Jewish people seek to be in harmony with the world by expressing a true feeling of repentance through prayer. It is a holiday during which years gone by are recalled and loved ones who have passed away are remembered in prayer.

Rosh Hashanah and Yom Kippur evoke in the Jewish people a sense of awe, high seriousness, and especially obedience to God's law. The meaningful practice of the Jewish faith, I believe, has influenced Jewish moral law far beyond the confines of practicing Judaism. The historic Jewish concepts of social justice and individual human dignity have done much to guide the course of western democracy and, in particular, to shape the philosophical system of government created by the American Founding Fathers.

Especially during the high holidays, the Jewish people look to the universal establishment of the principles of compassion and tolerance for which Judaism has so long and painfully fought. Unfortunately, the Jews have not received this same compassion and tolerance, but instead, under Nazi persecution, have suffered incomprehensible brutality and have been the subject of mass murders.

In Russia today, there is mounting evidence that the Government is persecuting Jewish citizens by curtailing religious observances and discriminating against the Jews in their traditional cultural and educational activities. Consequently, I have introduced legislation in the Congress urging that our country

make it clear to the Soviet Union that we condemn the persecution of the Jews and indicating that we expect Russia to live up to its own constitutional guarantees of religious freedom.

I feel it is our responsibility, as the world's greatest democracy, to make every possible effort to focus international attention and opinion on the problem of Soviet anti-Semitism. By so doing, the Soviet Union may at least understand and receive the full force of our official position in the interest of human justice and decency.

I should like, on this occasion, as the Congressman for the Seventh District of Illinois, to extend my greetings and best wishes for the holiday season to my constituents and my many friends of the Jewish faith. In the coming year, may the Jewish people know freedom from persecution, from which they have particularly suffered, and may they experience peace, well-being, prosperity, and spiritual enlightenment.

## FORGOTTEN MEN OF VIETNAM

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. TEAGUE of Texas. The Veterans of Foreign Wars of the United States have been a forerunner in the concerted activities of many in this country to bring about the release of our prisoners of war in Vietnam. Under leave to extend my remarks in the RECORD, I include a copy of a departmental distribution on this subject:

THE FORGOTTEN MEN OF VIETNAM

In his acceptance speech at the National Convention in Miami Beach, Commander-in-Chief Ray Rainwater listed some high priorities for the coming year. He saved for his concluding remarks the tragedy of our forgotten men in North Vietnam prisons—the American prisoners of war. He called this the "most urgent problem we face today."

The Commander-in-Chief announced that petitions would be circulated throughout the United States by every Post in the Veterans of Foreign Wars immediately upon the termination of the Convention. Those petitions call upon the Communist enemy leaders to abide by the provisions of the Geneva Convention of 1949 in their treatment of American prisoners of war—and for their early release.

Commander-in-Chief Rainwater declared that he would personally deliver those signed petitions to the delegates at the Paris Peace Talks—and if they are not accepted there he will take them directly to the Secretary General of the United Nations—with a demand on behalf of our two million members of the V.F.W. and its Ladies Auxiliary that official action be taken by that international body to bring about an immediate change in the barbarous policy of the North Vietnamese toward our men who are prisoners of war.

The Commander-in-Chief stated also that he would stand ready to go anywhere in the world—at any time—including Hanoi, to effect the release of our fighting men who are imprisoned there.

I am happy to advise you that this comprehensive program on the part of the Veterans of Foreign Wars is in full swing. And I urge each of you to give it your highest priority until our mission is accomplished—and these brave men are at home with their families once again. I can think of no more urgent and important effort for our great organization of American veterans to engage in. I can think of nothing which should be so important to every American.

Unsuccessful attempts to gain humane treatment for our men in the prisons of Southeast Asia have been made by our government through diplomatic channels for several years. Each of those efforts has been completely ignored by the enemy. The North Vietnamese continue, year after year, to disregard the Geneva Convention rules for the treatment of prisoners of war.

Every branch of the military service has endeavored to enlist the support of world opinion in bringing pressure on the communist leaders—to induce them to live up to the provisions of the Geneva Convention.

The next kin of American servicemen listed as or presumed to be prisoners of war have organized groups which are working in every conceivable manner to focus both national and world attention on the prisoner of war issue.

Private individuals and organizations have joined this crusade. Literature, advertisements, television programs, and personal pilgrimages have been tried—and each in turn has failed.

It is long past time for every American to concern himself with this grave problem—and to acquaint himself with the facts:

On March 6, of this year, the Honorable Richard G. Capen, Jr., Assistant Secretary of Defense for Legislative Affairs, presented a summary of those facts to the House Armed Services Committee. I wish to pass them on to you:

Approximately 1,450 U.S. Servicemen in Southeast Asia are currently listed as prisoners of war or missing in action. At least 430 of those men are believed to be prisoners of war with some degree of certainty. There is, however, no official confirmation of this figure by the enemy.

Thus, more than 1,000 are simply listed as missing in action. This state of affairs has existed in some cases for more than five years, and there has been no way for our government or their families to determine whether they are alive or dead.

Of the total involved, approximately 800 were shot down over North Vietnam; 450 were lost in South Vietnam; and nearly 200 in Laos.

150 have been missing or captives for four or more years. Over 300 have been missing for three and one-half years—longer than any U.S. serviceman was held prisoner during World War II.

Not until last year did the President launch a concerted effort to ascertain the status of these men. As a result, in the spring of 1969 a segment of the American public began to participate in a concerted effort to make certain that they were provided with humane treatment. But to both campaigns, the monsters of Southeast Asia have turned a deaf ear.

Recently the Congress of the United States adopted a resolution calling for the proper treatment of these forgotten men.

Last fall the International Red Cross passed, without a single dissenting vote, a similar resolution.

Editorial support in newspapers and magazines around the globe is evidence of the growing concern which those who still value human decency are beginning to feel.

Yet to date, there has been no pertinent response from the enemy.

Apart from the encouragement these efforts have given to the waiting wives and children of these men, every effort has been futile.

Throughout our fifty states, there are 2,600 primary and secondary next of kin—together with thousands of other close relatives, living from day to day in frustrated hope—enduring this tragedy of waiting and uncertainty.

At least four of the wives have died from accidents—with no way to notify their husbands. Many others are seriously ill—some terminally—and still no word to or from their husbands.

Many of the children are now three and four years old. They have never seen their fathers—or their fathers them.

What of the Geneva Convention provisions? The provisions for the treatment of prisoners of war are spelled out in clear and unmistakable terms. That agreement was signed by more than 120 nations throughout the world—including the United States, South Vietnam, and North Vietnam.

And those provisions are these: Immediate release of sick and injured prisoners; impartial inspections of prison facilities; the complete identification of all men held; and the right of all prisoners to correspond freely with their families.

Neither the North Vietnamese, or the Viet Cong, or the Pathet Lao, have lived up to a single one of those standards.

Most of the prisoners have never been allowed to write to anyone—particularly those who are believed to be held by the Viet Cong and the Pathet Lao.

Many of them are sick or injured, but in all these years only nine have been released—and those apparently for ulterior motives in conjunction with the activities of traitors here at home.

There have been no impartial inspections—in spite of repeated regular requests by the International Red Cross to conduct such inspections.

Both the North Vietnamese and the Viet Cong claim to be providing humane treatment. But our government has received reliable information that this is not true. Men have been held in isolation for long periods of time. There have been instances where broken bones have been rebroken; fingernails removed; medical attention denied; and proper diets ignored.

In addition, our government has learned that at least 19 American prisoners of war have been murdered by the enemy, or allowed to die from malnutrition and disease without proper care.

What little mail that has been received has not been in letter form. It has been in brief six-line messages—obviously on a censored form. Yet the Geneva Convention clearly specifies that a prisoner of war shall be allowed to write not less than six letters and cards per month.

In the five years our men have been captives of the Communists in Southeast Asia, only about 175 individuals have been allowed to write at all. Their families have received a total of 1,100 of these brief form letters—usually not more than one or two a year.

If all of the men reliably believed to be prisoners had been allowed to write as dictated by the Geneva Convention, their families should have received between 6,000 and 8,000 letters per month.

You all know, I am sure, that the only gesture that has been made by the North Vietnamese and their associates in this devil's conspiracy, with regard to prisoners of war, has been through the traitors here at home—for propaganda purposes.

To date, these anti-Americans have released four lists which purported to contain new information identifying Americans who are prisoners of war in Southeast Asia. The information funneled to these dissident groups and individuals has been both meager and of little consequence, however. Of 275 names listed, all but 12 were already presumed to be prisoners. This was clearly a propaganda effort, designed to give status to the North Vietnamese sympathizers here in our own country.

These, in brief, are the cold hard facts about our brave men who are being held in the prisons of North Vietnam and Laos. These are the cold hard facts about their wives and children who face the lonely years without a word from their loved ones who served this great nation in its most recent foreign war.

We in the Veterans of Foreign Wars pride ourselves on our unselfish service to America and her servicemen—to every American veteran. We pride ourselves on our devotion to the welfare of their women and children—who also serve through the long and lonely, heart-rending medium of waiting. We must find a way to solve this tragic problem. We must break this inhuman stalemate.

These American men have served their country, and ours, above and beyond the call of normal duty. We honor them for that service. But honor is not enough.

Have we as a nation grown so feeble—so faint of heart—that we cannot and will not use our vaunted might to protect our own?

Have we as a people become so depraved—so cowardly—that we dare not fight to rescue our own? What has happened to the spirit of Teddy Roosevelt?

Are we so insecure in our beliefs and our commitment to right that we are afraid to use the might which we claim, and of which our elected leaders boast—to rescue our own fighting men from the conditions I have described?

How much longer will we Americans permit the "doves" and dissenters, and draft dodgers, and traitors to set the course for our once proud Ship of State?

I urge each of you to get behind the Commander-in-Chief, and support his program. If that program fails, let's hear some suggestions for another—and still another—until we get these American veterans home with their families.

Write to your Congressmen and Senators—every day if need be—and demand that they take whatever action is necessary to affect the release and safe return of every American prisoner of war.

Our elected leaders in Washington have been bold enough in insisting upon the return of our troops from Vietnam. Let's take the position that no more troops should come home until these forgotten men come with them—or we will send those troops into Hanoi to set them free. This business of no-victory wars is getting more sickening every day.

Thank you very much.

## MILITARY PROCUREMENT

## HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. KASTENMEIER. Mr. Speaker, I recognize that the fiscal year 1971 military procurement authorization, agreed to in conference, is a slight improvement over the House-passed bill. Nevertheless, I cannot vote for this authorization of $20 billion for procurement of extravagant weapons systems at a time when relatively modest amounts for housing, education, health care, and other domestic needs are rejected as being inflationary. Furthermore, I firmly believe that continued development and deployment of sophisticated military hardware will ultimately create a climate of irreversible confrontation in which global warfare will be inevitable.

To vote for this bill because it includes a few salutory provisions is to allow the tail to wag the dog.

## CAMPAIGN CHICANERY

## HON. LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. VAN DEERLIN. Mr. Speaker, in the heat of a closely contested campaign, some candidates, or their managers, are going to play fast and easy with the truth. And as pressures mount, even the most honorable men are occasionally prone to a bit of exaggeration in listing their accomplishments.

But once in awhile, a claim is made on behalf of an officeseeker that is so blatantly misleading it cries out for rebuttal.

As is well known, the senior Senator from California is struggling to hold his seat in the November elections. Last week, in political ads placed in major California newspapers, his reelection campaign organization touted him as the sponsor or cosponsor of five important bills enacted during the 89th Congress—in short, a hard-driving, effective legislator.

Now in many areas these claims might have been gone unchallenged. But fortunately California has a newspaper, the Los Angeles Times, which likes to get to the bottom of things. The Times did a little probing and found that on four of the bills our senior Senator "was merely one of many Senators signed on as cosponsors," while on the fifth, "the CONGRESSIONAL RECORD did not even show him as a cosponsor."

Democrats were the principal authors of all five bills, the newspaper said, in a report which must have been a trifle embarrassing to the stalwart Republican trying to take credit.

So that the record may be complete, I include at this point the Los Angeles Times account, published September 23, of how a Senator's bluff was called:

MURPHY EXPLAINS ROLE IN FIVE MAJOR CONGRESSIONAL BILLS

(By Tom Goff)

SACRAMENTO.—Republican U.S. Sen. George Murphy conceded Tuesday that "maybe" he was not the principal sponsor of any of the five major bills enacted into law in 1965–66 for which his backers have given him credit.

Congressional records confirm that he was not. The bills in each case had Democrats as principal authors.

Murphy, on four of the bills, was merely one of many senators signed on as co-sponsors. On the fifth, the Congressional Record did not even show him as a co-sponsor.

The senator, seeking election to a second six-year term, told a State Capitol news conference in response to a question, the Democratic authorship of the bills merely indicated the "nonpartisan way" in which he runs his office.

FIVE BILLS LISTED

The five pieces of legislation were listed in political ads placed in major California newspapers Monday by Californians for Murphy, his reelection campaign organization.

The list purported to be a "partial" one of bills "sponsored or co-sponsored" by Murphy during the 89th Congress, the first two years he served in the Senate.

Alongside the list in the ad was a blank box purporting to be the "complete" file of legislation "sponsored or co-sponsored" by Rep. John V. Tunney, the Democrat who opposes Murphy in November, who also was a freshman congressman during the 1965–66 session.

The bills listed by the Murphy campaign organization were:

S. 306, the Motor Vehicle Air Pollution Control Act (Public Law 98–272). The bill's principal sponsor was Sen. Edmund Muskie (D-Maine); Murphy was one of 30 co-sponsors.

S. 1564, Voting Rights Act (PL 89–110). Senate Majority Leader Mike Mansfield (D-Montana) was the principal author; Murphy was one of 65 co-sponsors.

S. 2947, Clean Water Restoration Act 1966 (PL 89–753). The principal author was Muskie; Murphy was one of 47 co-sponsors.

S. 1483, Arts and Humanities Act (PL 89–209). Sen. Claiborne Pell (D-Rhode Island) was the principal; author Murphy was one of 37 co-signers.

S. 1861, Disaster Relief Act (PL 89–769). The principal author was Sen. Birch Bayh (D-Indiana). The Congressional Record did not show Murphy as one of the co-sponsors.

In Los Angeles, Devan L. Shumway, Murphy campaign communications director, said, "The ad speaks for itself. Our research people researched it very carefully."

The major point of the advertisement, Shumway said, was to show that "Tunney did not sponsor any bill that passed and became public law during that time. And it is true that Sen. Murphy sponsored or co-sponsored those and other bills which did become public law."

## SALE OF MAILING LISTS

## HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. McDONALD of Michigan. Mr. Speaker, last December, I had the privilege to introduce in this body H.R. 15283, which seeks to end the practice of selling federally compiled mailing lists to the public. I say privilege, Mr. Speaker, because I consider this practice intolerable for a variety of reasons, and am proud to have my name on a bill which would put an end to it.

My main reason for objecting is, of course, the basic invasion of privacy against the individual citizen. In order to get permission to pilot an airplane, sail a boat, or to even pay taxes a form must be filled out. On this form, in addition to the name and address normally required, are many questions which have little or nothing to do with the operation of the licensing agency. This information is coded, put on magnetic tapes, and when a commercial enterprise wants a list of airplane pilots, gun collectors, boat operators, the Federal Government sells it to him.

I object to this, and so have several of my colleagues. But the invasion of privacy does not stop there, Mr. Speaker.

An article in yesterday's Wall Street Journal, which I am submitting at the conclusion of my remarks for insertion in the RECORD, brings out this second invasion quite clearly. Because the article brings the point home, I choose not to belabor the point at this time, and instead will let my colleagues who yet may not have read the article do so. My feelings in favor of this type legislation are well known. I stand ready to testify in favor of my bill, or any other bill which will end this insidious practice, and would hope that the House leadership

brings this legislation forward soon for discussion and action.

The article follows:

SALE OF MAILING LISTS BY FEDERAL AGENCIES IRKS SOME IN CONGRESS

(By Fred L. Zimmerman)

WASHINGTON.—The Federal Government collects names. But should it sell them to businessmen eager for mailing lists?

Some agencies say yes. The Federal Aviation Administration sells names and addresses of 651,086 pilots and other airmen for $200, for example. The Federal Communications Commission sells names of amateur radio operators. The Coast Guard sells lists of boat owners.

But Wendell R. Ames, a Honeoye Falls, N.Y., physician, strongly opposes the practice. He recently discovered that the Internal Revenue Service had sold his name to an Ohio sporting goods store wanting a list of licensed gun dealers and collectors. (Dr. Ames, a collector, may not know it, but the IRS also sold his name to the Firearms Lobby of America.)

The Ohio store sent Dr. Ames an ad for shotgun shells. Dr. Ames sent his Congressman an angry letter. And the Congressman, New York Republican Frank Horton, got busy.

Rep. Horton persuaded the IRS to stop selling the names of gun collectors (although the agency still sells the names of gun dealers). He sent a questionnaire to 50 Federal agencies, asking their policies on selling mailing lists. (The finding: Some do and some don't.) And he introduced a bill that would ban the use of such lists for "commercial or other solicitation."

"The Federal Government has no place in the business of preparing and selling mailing lists," he declares.

A growing number of lawmakers apparently agree. They would like a firm policy established: No more mailing-list sales to business. It invades privacy, they say, and breaches the confidential relationship between citizen and Government. Many Congressmen also complain it adds to the so-called junk mail clogging the nation's mailboxes.

A LETTER TO NIXON

Eighty-one Congressmen have signed up in support of Mr. Horton's bill, and several related bills are pending. In the Senate New York Republican Jacob Javits has written President Nixon asking that he order a stop to mailing-list sales.

But for many businessmen, Government mailing lists have a powerful appeal. They typically contain a specialized set of names, making them useful for advertising purposes. They generally cost only as much as the agency's expense in reproducing them. And they usually come in a form that's easily converted into address labels.

If the gun licensee list hadn't been so simple to convert, in fact, Dr. Ames might not have realized his name had been sold. At first glance, the shotgun shell ad looked like an ordinary piece of direct-mail advertising. But a closer examination showed the doctor that the address label was identical—in typeface as well as wording—to one on a bulletin the IRS recently had sent him.

For $140, the sporting goods store had bought Dr. Ames' name and about 143,000 others as recorded on seven computer tape rolls. The store presumably scissored off the labels—already addressed and organized by zip codes—and pasted them on the advertising flyers.

The IRS recently identified for Rep. Horton the other purchasers of the rolls. They were mostly sporting goods stores and gun manufacturers, but there were two nonbusiness buyers: The Firearms Lobby of America and a group called Citizens Against Tydings. The gun lobby hopes to unseat Maryland Democratic Sen. Tydings this year.

MAKING THEFT EASY

Dr. Ames was more concerned about theft than politics, however. "In my book," he wrote Rep. Horton, "this is a beautiful way of advertising locations from which firearms can be stolen. It seems to be a pretty poor way to administer what is thought to be a firearms control law." Then he installed a burglar alarm system in his home.

But Federal agencies selling names argue that the 1967 Freedom of Information Act requires such sales. That law's purpose was to curb secrecy by opening some Federal records to the public, and these agencies say they can't refuse when someone asks to buy their lists.

But agencies that don't sell names think they have an equally sound reason. The 1967 law exempts material whose disclosure would cause "a clearly unwarranted invasion of personal privacy." That phrase hasn't been defined, however, and therein lies the confusion.

Thus, Rep. Horton's agency survey found legal justifications both for selling and not selling. FCC Chairman Dean Burch wrote that "in our judgment" the privacy exemption doesn't cover amateur radio operators. So that list is for sale. The Defense Department explained why it doesn't sell military men's names. "We concluded (it) would constitute a clearly unwarranted invasion of personal privacy . . .," an official wrote.

Rep. Horton's bill would amend the Freedom of Information Act, originally drafted by a subcommittee he sits on. It likely faces close scrutiny; some members fear any erosion of the antisecrecy provisions of the 1967 law.

---

## WHY SCHOOL PRAYERS: AN ANSWER TO A LETTER

### HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. COLLINS. Mr. Speaker, in this morning mail, I received a challenging and stimulating letter. The writer questioned why I was such a strong advocate of prayer.

Today as we look around our mixed up Nation we see the need for more prayer. Youngsters have not learned to respect the rights and property of others. Folks are afraid to be out after dark even in their own neighborhoods. Teenagers in overwhelming numbers are turning to drink and drugs to escape the realism of life.

We seek daily in Congress through our committees to find solutions for crime, drug, and student unrest. But the best answer is to have stronger religious principles instilled in our youngsters.

When you hear my letter—give me your reaction. Why do you think we need prayer in the classroom. Here is my letter to a constituent in Texas:

You write asking why I advocate daily prayer for our school children in their classrooms from coast to coast.

By religion I am a Baptist. As you probably know, that is about as Independent as you can be. Every Baptist Church is completely autonomous, runs its own business, chooses its own preacher, and determines its own doctrine. And two members sitting beside each other on a Pew probably differ on doctrine interpretation. So you can see I believe strongly in individual rights and personal beliefs.

Freedom begins when children learn to respect the religion of others. Many schools had the practice of beginning the day by having a prayer from a different student. It is surprising how similar are the basic beliefs of a Methodist, a Jew, a Unitarian, a Catholic and a Baptist. As the youngsters listen it teaches them to realize the strength of others, and with understanding comes tolerance. Too many youngsters are self-centered and have inherited the prejudice of their parents.

The question arises as to the athiest. He can have a minute of silent prayer. As a young man, my deepest religious experiences were in meditation by myself on occasions when I was all alone in the solitude of the forests.

There are those who ask for separation of Church and State. Should we take God out of our government. On the Speaker's platform inscribed in marble is the sentence "In God We Trust."

Our National Motto that leads us is "In God We Trust." We all have the same God, and we humbly recognize the need for his guidance. Many times I wonder whether our national problems arise because today we are trying to keep God out of Government and our lives.

Today more than anytime in history we need compassion and understanding. Whether you read the words of Moses or Jesus, the inspiration builds towards a better society in which to live.

When my children were growing up, my wife and I always encouraged our children to have at least one good Jewish friend. It helped our youngsters, because the Jewish child was intellectually curious, he was ambitious, energetic, and was family oriented. Our children learned the Jewish religious holidays, and the customs. Lets encourage this next generation to respect the religion of their contemporaries.

We will admire the Catholic system of Confessions. Many of us who have served in War found the predestiny spirit of "what will be—will be" of the Presbyterian to be a great source of strength.

I read too often in our newspapers where the rioters want special benefits for themselves. If they could only understand that we are all neighbors and should live by the Law with consideration for the rights of others. Let us give our chidren the opportunity to pray and through prayer, their heart and soul can receive understanding and the blessing of God.

There is a beautiful song that goes, "It is no secret what the Lord can do. He has done it for others, and he can do it for you.

Your letter was in a kindly spirit and I hope you will accept my answer in the same manner.

---

## TESTIMONY ON ANTIHIJACKING PROPOSAL

### HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. TIERNAN. Mr. Speaker, I would like to call the attention of my colleagues to testimony concerning the revenue aspects of the administration's antihijacking proposal that was given on September 21, 1970, before the House Committee on Ways and Means. The statement was delivered by Thomas M. Keesling on behalf of the American Society of Travel Agents, Inc.

I believe that Mr. Keesling makes some very persuasive arguments showing why it is not necessary to increase the excise tax on domestic air tickets or to increase the head tax on overseas air travels.

The complete text of Mr. Keesling's statement follows:

REGARDING THE REVERSE ASPECTS OF THE ADMINISTRATION ANTIHIJACKING PROPOSAL

(By Thomas M. Keesling)

Chairman Mills and Members of the Committee: I am Thomas M. Keesling, a travel agent from Englewood, Colorado. I am President of Travel Associates, Inc., a travel agency with offices at 701 West Hampden Avenue in Englewood. Today, I appear before the Committee as a travel agent as well as the Vice President of the American Society of Travel Agents, Inc. (ASTA), a nationwide trade association with more than 3,200 travel agent members located throughout the United States.

Accompanying me this morning is Paul S. Quinn, partner in the Washington law firm of Wilkinson, Cragun & Barker, ASTA's general counsel.

It is my understanding that the issue before the Committee this morning is the revenue aspect of H.R. 19225, a bill to provide for the protection of persons and property aboard United States air carrier aircraft.

Executive Communication 2379 from Secretary of Transportation Volpe to John W. McCormack, Speaker of the House of Representatives, dated September 14, 1970, referred to a broad plan designed to implement a series of antihighjacking measures announced by President Nixon on September 11, 1970. Among those proposals was one providing for the establishment within the Department of Transportation of a guard service which would be available for use aboard aircraft operated by U.S. airlines. H.R. 19225 would establish specific statutory authority to provide this service. In addition, according to Secretary Volpe:

"The bill also amends the Internal Revenue Code to increase by one-half percent the present eight percent excise tax on domestic air tickets and to increase by $2 the present $3 head tax on overseas air travelers. It is anticipated that the revenues obtained from these increases, which would be added to the Airport and Airway Trust Fund, would be sufficient to finance the guard program established by the bill."

This morning, Mr. Chairman, I would like to make the following points on behalf of the United States travel agents:

The threat of bodily harm and property damage to United States citizens and other citizens of the free world as a result of airline highjacking has grown to outrageous proportions and all responsible governments—working with private organizations and individuals—must find an immedate solution to this problem.

President Nixon's proposals, which include the placing of armed guards aboard aircraft as a deterrent to future highjackings, could be effective and should be implemented without delay.

Whatever costs are incurred to provide guard service or other security steps designed to thwart highjacking should not be borne solely by air travelers but should be paid for out of the general Treasury as a general obligation of the United States Government. Consequently, it is not necessary to increase the excise tax on domestic air tickets or to increase the head tax on overseas air travelers at this time.

Mr. Chairman, no one in the United States today, least of all members of Congress, need be reminded that the use of airline highjacking as a political device has gotten completely out of hand. Rarely has a series of international developments attracted more public attention throughout the world than the almost simultaneous highjacking and destruction of four aircraft valued at $50 million and the holding of some 300 passengers as hostage by Arab guerrillas.

It is perfectly clear that not enough has been done, either by the world's governments or private industry, to deal with the highjacking problem. It would not be appropriate to take the Committee's time to review the various proposals which have been advanced by our government, the United States travel industry and others, to deal with the problem. However, we would like to submit for the record a resolution recently adopted by ASTA, along with a report from the Washington Post on ASTA's decision to urge a boycott by United States and Canadian travel agents of all travel and tourism to any country which fails to take appropriate action to punish highjackers. ASTA is pledged to this course of action as well as to any other reasonable proposals designed to protect innocent air travelers from these insane acts of air piracy.

The specific concern of this Committee relates to the revenue aspects of providing armed guards for United States aircraft. It is with a great deal of reluctance that ASTA endorses the use of armed guards on aircraft. In these times when tradition and international law had presumably assured the safe passage of all persons among free countries throughout the world, it is indeed sad that we must resort to forms of frontier justice in order to guarantee the safety of airline passengers.

Furthermore, the use of armed guards on aircraft does, in itself, inject a new element of potential harm to persons and property traveling by air. ASTA strongly urges that all precautionary steps be taken regarding the procedures to be followed by armed guards to minimize any threat to the lives and wellbeing of air travelers who might be involved in a highjacking incident.

The precise issue before this Committee is whether to approve or disapprove that aspect of the Administration's proposals which calls for an increase in the domestic excise tax and the international head tax to generate additional revenues to be paid into the Airport and Airways Trust Fund to finance the guard program. ASTA strongly objects to this method of financing the guard program for the following reasons:

Since the establishment of our country, United States citizens have been protected in our sea lanes and sea commerce from piracy. This protection has come from the United States Navy and the Coast Guard and through other means provided by the federal government. It is ASTA's view that air passengers traveling on U.S. flag carriers deserve the same high degree of protection and our government has an obligation to provide that protection. The cost of that protection should be borne by all citizens in the same manner that all citizens must share the financial burden of providing for our national defense and the exercise of other police powers of the government. ASTA, therefore, strongly endorses the position adopted by the Civil Aeronautics Board as announced by Chairman Secor D. Browne on September 17, 1970:

"My colleagues on the Board and I believe that in dealing with acts of piracy . . . whether on the high seas or in the sky, . . . the cost of protection should be borne by the entire public and not the traveller alone."

An increase in airline taxes to pay for the guard program would set a dangerous and highly undesirable precedent not consistent with the philosophy behind the establishment of the trust fund.

It is to be hoped that the use of armed guards on aircraft would be a temporary measure which could be abandoned as quickly as possible following the implementation by all world governments of a comprehensive program designed to prevent future highjackings. If this is true, it would be unwise and unnecessary to burden U.S. citizens with additional airline taxes to pay for an interim and hopefully short-run program.

The air traveler and airline companies already shoulder substantial financial burdens—the airlines through the payment of corporate taxes to the general Treasury of the United States, and the air traveler through domestic excise taxes and international head taxes which, effective July 1, 1970, were increased to 8% and $3, respectively.

A country which has budgeted $73.9 billion for national defense next year certainly should be able to provide the funds necessary to supply a few hundred guards to protect the very life and safety of our citizens traveling by air.

In conclusion, Mr. Chairman, the travel agency industry urges this Committee to take prompt action to enact whatever legislation may be necessary to authorize the Secretary of Transportation to provide guards to accompany aircraft operated by U.S. air carriers for the purpose of protecting the aircraft and persons and property aboard. Since the cost of providing this service should be borne by the government out of the general Treasury of the United States and not from funds generated through the Airport and Airway Revenue Act of 1970, it is not necessary to increase the domestic excise tax from 8% to 8½% or the head tax on international travel from $3 to $5, and this proposal should be rejected.

In addition, with the Committee's permission, I would like to submit for the record a separate statement on behalf of ASTA dealing with a very troublesome part of the 1970 Airport and Airways Development Act which prevents travel agents and airlines from showing separately on tickets the amount of excise tax in connection with domestic air transportation.

We appreciate the opportunity to appear before your Committee this morning, and you can be assured that ASTA will continue to support all reasonable efforts by our government and others to find a solution to the outrageous international crime of air piracy.

---

A RESOLUTION ON AIR PIRACY FROM THE AMERICAN SOCIETY OF TRAVEL AGENTS

OTTAWA, CANADA, Sept. 11.—At its Board of Directors meeting in Ottawa, Canada, today, the American Society of Travel Agents took the following action against international air piracy.

Recognizing that the entire system of world tourism is in serious jeopardy as a result of the cruel and unconscionable hijacking of passengers on commercial aircraft, the Board of Directors of the American Society of Travel Agents, Inc., adopts the following resolution:

As the largest travel association in the world comprising members in the United States, Canada and other countries in every hemisphere, ASTA advises its member agents to cease arranging for travel to any Arab country that harbors or clearly sympathizes with hijackers.

To apply this point to the current problem, ASTA will formerly ask the ambassadors of those Arab bloc countries to assure ASTA and its 9,700 members worldwide, on behalf of all international travelers and the whole travel industry, the terrorism and kidnapping will be halted and innocent victims held hostage will be permitted to continue to their original destination.

Should the representatives of the countries involved refuse to provide the necessary assurances immediately, ASTA will further recommend without delay the following additional steps to its members.

All ticket stock of national carriers for the Arab country will be returned.

Tariffs and schedules covering destinations in Arab countries will be removed by ASTA agents from reference files.

Clients will be advised that travel to Arab countries is unsafe—and under no circumstances should they attempt to arrange such travel themselves.

Travel literature from hotels, airlines, tour operators and national tourist offices will not be accepted by agents and material on hand will be returned.

This anti-hijacking program can effectively divert international tourism from Arab countries with consequent economic hardship and cultural losses to that part of the world.

ASTA recognizes the severity of this move but the rights in safety of the traveling public must be foremost in the mind of every person involved in world tourism. The travel industry must support steps to cut off the flow of travel to any country protecting persons who would risk the lives of innocent travelers to foster political objectives.

[From the Washington Post, Sept. 18, 1970]

ASTA THREATENS TO BOYCOTT ARABS

(By Morris D. Rosenberg)

Urgin its 3,000 active members in the United States and Canada to discourage travel "to any Arab country that harbors or clearly sympathizes with hijackers," the American Society of Travel Agents has warned seven Arab countries they could face a fullscale boycott by agents.

ASTA's board of directors, seeking guarantees for the future safety of tourists, disclosed telegrams were sent Saturday to diplomatic representatives of Lebanon, Egypt, Algiers, Tunisia, Jordan, Iraq, and Syria, stating:

"If necessary assurances are not received from your government this week, on behalf of our 9,700 worldwide members, international travelers and the entire travel industry, additional severe steps will be recommended to ASTA member agents that can effectively divert international tourism from Arab countries, with consequent economic hardships and cultural losses to that part of the world."

No official replies had been received as of yesterday, according to ASTA, though a representative of one Arab country had telephoned and pledged that his government would answer.

Samir Khalil, director of the UAR Tourist Office in New York, yesterday termed the ASTA move "another irrational reaction. It is unfair because the Arab world is against hijacking, and we voted against it in the U.N. last week. The passengers in the Cairo hijackings were released without regard to race, color or creed."

ASTA outlined four steps that U.S. and Canadian members could be told to take:

Return all ticket stock (blank air line tickets) of national carriers for any Arab country cited by ASTA.

Remove tariff and schedules covering destinations in such Arab countries from reference files.

Advise clients that travel to specific Arab countries is unsafe and that under no circumstances should they attempt to arrange such travel themselves.

Refuse to accept travel literature from Arab hotels, airlines, tour operators and national tourist offices and return any such material on hand.

If such a boycott were instituted, an ASTA official noted, "It might take weeks for tourism to return to normalcy" after it was rescinded.

The ASTA statement made no recommendation involving travel to Israel.

[From Travel Weekly, Sept. 18, 1970]

CANCELLATIONS MOUNTING AMID TRADE APPEALS FOR MIDDLE EAST BOYCOTTS

(By Joel A. Glass)

NEW YORK.—Cancellations by hijack-wary clients continued pouring into the offices of agents, wholesalers, airline and hotel reps late last week and early this week.

And, as cancellations from both FIT and group clients mounted by the hundreds, individual agents and retail associations began to take direct action aimed at boycotting travel to Middle Eastern areas.

Over the weekend, ASTA directors in Ottawa noted that "the entire system of world tourism is in serious jeopardy as a result of the cruel and unconscionable hijacking of passengers on commercial aircraft," and called on its 3,000-members in the U.S. and Canada, "to cease arranging for travel to any Arab country that harbors or sympathizes with hijackers."

WARNS ARAB STATES

In telegrams to representatives of Lebanon, Egypt, Algeria, Tunisia, Jordan, Iraq and Syria, the Board warned: "If necessary assurances are not received from your government this week, on behalf of our 9,700 worldwide members, international travelers and the entire travel industry, additional severe steps will be recommended to ASTA member agents that can effectively divert international tourism from Arab countries with consequent economic hardships and cultural losses to that part of the world."

Among steps that will be recommended, ASTA noted, are return of stock of national carriers for Arab countries not providing such assurances; removal from files of ASTA agents of the tariffs and schedules covering destinations in Arab countries; advice to clients not to visit Arab areas; and refusal by agents to accept literature from hotels, airlines, tour operators and national tourist offices in Arab countries.

The ASTA move followed similar actions by two New York-area retail groups—the 50-member Long Island Travel Agents Association and the 40-member Brooklyn Association of Authorized Travel Agents. Both barred members from booking Arab Middle East countries.

Typifying the kind of cancellation problems facing retailers booking not only Mid-East, but also European destinations, were those revealed by Larry Austin, Austin Travel, president of LITAA. He noted that each of his association members averaged 50 cancellations last week. Austin lost 40 of 170 clients booked on a Pan Am flight to London last week. J. P. Verdi, Buddys Holiday Travel, BAATA president, said his members were averaging more than a dozen cancellations each.

At the airlines, meanwhile, there were more reports of cancellations. TWA received some 300 individual cancellations and Alitalia lost one group of more than 30 from the Chicago area. Pan Am, which earlier insisted it had no cancellation problem, conceded at the end of last week that "the cancellation rate does seem to be rising somewhat above normal, though it's not alarming."

One of the new trends that appeared early this week was transfer of bookings from carriers affected by the hijackings. While no airline in New York had records of that happening from U.S. gateways, there were reports of changed bookings at European points. One transatlantic carrier, for example, noted that close to 100 persons in two group movements who had ongoing reservations abroad three of the hijacked airlines demanded switches for the second- and third-leg of their trips to other lines.

Other new trends were emerging. Several Miami agents reported sizeable numbers of airline-booked clients switching to ship travel. Other agents in the Midwest and South said some clients were cancelling connecting flights within Europe and switching to rail and coach transportation instead.

An interesting breakdown on which European areas are most heavily affected by cancelling, travel-wary Americans came from George Suhr, president of Hotel Representative, Inc., which numbers some of the most deluxe hotels of Europe among its clients. Of the more than 250 cancellations received last week, Suhr noted, highly disproportionate numbers came in for Italy, France and Greece. He counted 47 in Rome, 28 in Florence, 21 in Venice, 15 in Milan, 10 in Naples, 15 in Athens and 25 in Paris.

Another significant trend, pointed out by numerous agents around the country, was that while many of them had not yet had cancellations, new business last week and this was way below normal.

Wholesalers noted increasing problems, as Foreign Tours topped 30 cancellations, Thos. Cook & Son exceeded 20, Olson Tours topped 20, and Maupintour recorded six.

FLIGHTS RESUMED

Meanwhile, BOAC and BEA resumed service to Beirut which each had halted last week. A new threat emerged, however, as reports emanated from London that BEA pilots might refuse to fly to Israel. BOAC instituted a rule requiring passengers traveling from England, Europe, North Africa, the Middle East, Pakistan or India to book at least 72 hours in advance.

At the IATA passenger traffic conference in Honolulu, meanwhile, delegates were voicing fears that aircraft insurance premiums would rise in the wake of the bombing by Palestinian commandos of the four planes. Several indicated such a rise would be passed on to passengers.

---

## COMMISSION ON OBSCENITY AND PORNOGRAPHY SHOULD RETURN WHATEVER FUNDS IT SPENT

---

**HON. ROMAN C. PUCINSKI**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. PUCINSKI. Mr. Speaker, when Public Law 90–100 was created to establish the Commission on Obscenity and Pornography, the express purpose of the act was "to establish an advisory commission whose purpose shall be after a thorough study, to recommend effective, advisable, and appropriate constitutional means to deal effectively with the growing traffic in obscenity and pornography."

I submit that the report sent to Congress contains a majority-view recommendation to do just the opposite, thus abrogating the purpose for which the Commission was originally set up.

The only vigorous voice in opposition to the passage of Public Law 90–100 was the American Civil Liberties Union. And yet, the chairman of the commission and the majority members, as well as most of the research staff, are ACLU'ers. They are libertines who believe that the United States should become another Denmark and repeal obscenity and pornography laws at every level of Government.

This Commission is not only stacked with those whose views constitute the outlook of a minute portion of our population, but so is their research distorted to fit their libertine views. They have discarded overwhelming evidence to the contrary.

Study after study has shown that there exists a distinct correlation between increasing sexual freedom and social decline. The renowned University of Chicago psychoanalyst, Bruno Bettelheim, has observed:

If a society does not taboo sex, children will grow up in relative sex freedom. But so far, history has shown that such a society cannot create culture or civilization; it remains primitive.

We should take note that the Scandinavian countries have a high suicide rate. One of the reasons is that because of their totally permissive societies, the people are not equipped morally, spiritually, and physically in their cradle-to-grave socialism to cope with the problems of modern society. The family unit is losing its meaning, and women are nothing but sex objects.

The National Catholic Register recently observed in an editorial:

But what they cannot measure is the effect such pornography has on the quality of human life. That human beings exposed to pornography do not become rapists or fornicators proves nothing. What pornography does is take one of the most beautiful and most meaningful acts of human life and turn it into an animalistic action. What the pornographers do is to reduce it to the physical, stripping it totally of what lifts the act above the animals. It celebrates lovelessness in what can have meaning for humans only in love. It makes of it an act separated from the total commitment that transforms it. It is the quality of life that is threatened and all the statistics cannot change this. It is in defense of the quality of life that pornography is opposed.

Pope Paul VI recently stated that the pornography "phenomenon is like a perverting drug that infiltrates subtly, unconsciously, deadening, and ruining the conscience, particularly of young people and of persons lacking will power." He added that it is a "most dangerous development, being used by people without scruples and basely enslaved to money, which threatens to deprive society of its natural defenses, of its pure ideals and of its spiritual resources."

There has been a monstrous increase in venereal disease in this country, notably among young people. We can expect a greater increase of VD in this country if we look to our Danish counterparts. In a UPI dispatch out of Copenhagen, it was noted that VD has become an overwhelming problem, particularly among 12- and 13-year-old school girls. The dispatch states:

The pill, a general relaxation moral of moral standards and sexual freedom among the young are responsible for a 40 percent increase in VD cases over the past year, in the opinion of District Doctor Bent Maegaard Nielsen. "I'm not preaching morals," said Nielsen, a leading authority in the field, "but some of the youngsters these days get venereal diseases the way the older generation got a hangover." Girls of 12 and 13 have to be called in for treatment and we must explain to them the consequences if they fail to name their partners. "In fact up to the age of 20 a majority of VD carriers are female. After that males outnumber them two to one." "Tracing their partners is the hardest and most delicate part of the job," Nielsen said. "Especially if three or more are involved. A few reel off names as though they were reading a telephone book." Nielsen said it was not true that prostitutes were largely responsible for the spread of the disease. "That may have been the case 20 or 50 years ago," he said, "but not today." He said there are now so many caes of VD, doctors have given up the hope they once had that antibiotics would eliminate the disease."

Postmaster General Winton M. Blount observed in a recent speech the increasing flood of mail-order obscenity as "commercial degradation of the human spirit." He noted that cases in the files of the Postal Inspection Service indicate a relationship between exposure to pornography and antisocial behavior.

The Postmaster General declared:

The claim that the incidence of sex crimes decreases in direct relation to the liberalization of pornography laws is disproved by the experience of Denmark, where most anti-obscenity laws have been repealed.

Mr. Blount said:

Pornography used to be a crime there, and now it isn't. Therefore, the crime rate dropped. Statutory rape used to be a crime, now it isn't. So this contributed to the drop in the crime rate. If they legalize burglary, it will drop some more. They'll have the same number of burglaries, but they won't be crimes anymore.

He contended:

Pornography is not simply a threat to the best interests of our children. It is an act of violence against the human spirit. As a people, we believe that each man has a spark of divinity within him; we accept the sanctity of the human spirit and of the human body. And as we preserve these, we preserve and sustain human dignity. As we violate these for sensation or for profit, we act against the dignity of man, and we act against all that we have suffered and struggled to build for more than two centuries on this continent. If the people decide against pornography.

The Postmaster General continued:

We can do away with it. If we endorse stringent laws; if we elect and appoint discerning judges; and if, above all, we refuse to patronize the pornographer, then we can put him out of business.

Hearings were started in both the House and the Senate on the upcoming report to Congress because of leaked reports to the press. It has only been because of the courage of a few of the dissenting members that the views of the Commission have become known.

The Commission, instead of advising Congress of constitutional ways to deal with the filth in our midst, will instead recommend ways to increase it geometrically.

The Commission has systematically blocked the dissenting members from access to their reports and findings, and from filing a minority opinion, as well as staff and money. It has only been because of Commissioners such as Keating, Hill, Link, and a few others that the real facts are becoming known. Keating successfully sued the Commission from filing its report until he was given the opportunity to file a dissenting view.

The Congress awaits this report with interest. Let it not be understated that this report will have an impact on the Congress, State legislatures, and the courts.

The Commission's report does not live up to the mandate of Public Law 90–100. The Congress should conduct a thorough investigation and call for a GAO report on how much money was spent by those libertine Commission members to advise us to repeal all pornography laws, and demand a refund to the Treasury. The Commission was set up to advise us how to deal with the traffic in pornography, not how to expand it.

To remind the House of the purpose and intent for which Public Law 90–100 was set up, I shall include in the RECORD a copy of the law as well as the House report that accompanied the legislation.

I should also recall here that I warned 2 weeks before the Commission issued the report that its report would be a whitewash of pornography in the country. At that time I said I would demand vigorous action against the Commission for failure to carry out its mandate. I am today demanding such action.

Public Law 90–100 and the House report follow:

An act creating a commission to be known as the Commission on Obscenity and Pornography

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

FINDING OF FACT AND DECLARATION OF POLICY

SECTION 1. The Congress finds that the traffic is obscenity and pornography is a matter of national concern. The problem, however, is not one which can be solved at any one level of government. The Federal Government has a responsibility to investigate the gravity of this situation and to determine whether such materials are harmful to the public, and particularly to minors, and whether more effective methods should be devised to control the transmission of such materials. The State and local governments have an equal responsibility in the exercise of their regulatory powers and any attempts to control this transmission should be a coordinated effort at the various governmental levels. It is the purpose of this Act to establish an advisory commission whose purpose shall be, after a thorough study which shall include a study of the causal relationship of such materials to antisocial behavior, to recommend advisable, appropriate, effective, and constitutional means to deal effectively with such traffic in obscenity and pornography.

COMMISSION ON OBSCENITY AND PORNOGRAPHY

SEC. 2. (a) ESTABLISHMENT.—For the purpose of carrying out the provisions of this Act, there is hereby created a commission to be known as the Commission on Obscenity and Pornography (hereinafter referred to as the "Commission"), whose members shall include persons having expert knowledge in the fields of obscenity and antisocial behavior, including but not limited to psychiatrists, sociologists, psychologists, criminologists, jurists, lawyers, and others from organizations and professions who have special and practical competence or experience with respect to obscenity laws and their application to juveniles.

(b) MEMBERSHIP OF THE COMMISSION.—

The Commission shall be composed of eighteen members appointed by the President.

(c) VACANCIES.—Any vacancy in the Commission shall be filled by appointment by the President.

(d) ORGANIZATION OF COMMISSION.—The Commission shall elect a Chairman and a Vice Chairman from among its members.

(e) QUORUM.—Ten members of the Commission shall constitute a quorum, but five members shall be sufficient for the purpose of taking testimony or interrogating witnesses.

COMPENSATION OF MEMBERS OF THE COMMISSION

SEC. 3 (a) MEMBERS EMPLOYED BY UNITED STATES.—Members of the Commission who are officers or full-time employees of the United States shall serve without compensation in addition to that received for their services as officers or employees of the United States; but they shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

(b) OTHER MEMBERS.—Members of the Commission who are not officers or full-time employees of the United States shall each receive $75 per diem when engaged in the actual performance of duties vested in the Commission. In addition, they shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.

STAFF OF THE COMMISSION

SEC. 4. Such personnel as the Commission deems necessary may be appointed by the Commission without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and may be paid without regard to the provisions of chapter 51 and subtitle III of chapter 53 of such title relating to classification and General Schedule pay rates.

DUTIES OF THE COMMISSION

SEC. 5. (a) INVESTIGATION AND RECOMMENDATIONS.—It shall be the duty of the Commission—

(1) with the aid of leading constitutional law authorities, to analyze the laws pertaining to the control of obscenity and pornography; and to evaluate and recommend definitions of obscenity and pornography;

(2) to ascertain the methods employed in the distribution of obscene and pornographic materials and to explore the nature and volume of traffic in such materials;

(3) to study the effect of obscenity and pornography upon the public, and particularly minors, and its relationship to crime and other antisocial behavior; and

(4) to recommend such legislative, administrative, or other advisable and appropriate action as the Commission deems necessary to regulate effectively the flow of such traffic, without in any way interfering with constitutional rights.

(b) REPORT.—The Commission shall report to the President and the Congress its findings and recommendations as soon as practicable and in no event later than January 31, 1970. The Commission shall cease to exist ten days following the submission of its final report.

POWERS OF THE COMMISSION

SEC. 6. (a) HEARINGS AND SESSIONS.—The Commission or, on the authorization of the Commission, any committee thereof, may, for the purpose of carrying out the provisions of the Act, hold such hearings and sit and act at such times and such places within the United States as the Commission or such committee may deem advisable.

(b) CONSULTATION.—In carrying out its duties under the Act, the Commission shall consult with other Federal agencies, Governors, attorneys general, and other representatives of State and local government and private organizations to the extent feasible.

(c) OBTAINING OFFICIAL DATA.—The Commission is authorized to secure directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality, information, suggestions, estimates, and statistics for the purpose of this Act, and each such department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized and directed, to the extent permitted by law, to furnish such information, suggestions, estimates, and statistics directly to the Commission, upon request made by the Chairman or Vice Chairman.

(d) OBTAINING SCIENTIFIC DATA.—For the purpose of securing the necessary scientific data and information the Commission may make contracts with universities, research institutions, foundations, laboratories, hospitals, and other competent public or private agencies to conduct research on the causal relationship of obscene material and antisocial behavior. For such purpose, the Commission is authorized to obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code.

---

COMMISSION ON OBSCENITY AND PORNOGRAPHY

The Committee on Education and Labor, to whom was referred the bill (H.R. 10347) creating a commission to be known as the Commission on Obscenity and Pornography, having considered the same, report favorably thereon with an amendment and recommend that the bill as amended do pass.

The amendment is as follows:

Strike out all after the enacting clause and insert the matter shown in the reported bill in italic type.

PURPOSE

H.R. 10347 provides that an advisory study commission be established whose purpose shall be after a thorough study, to recommend effective, advisable, and appropriate constitutional means to deal effectively with the growing traffic in obscenity and pornography.

BACKGROUND INFORMATION

This bill has been introduced in an attempt to establish a blue ribbon panel to consider the complex problem which obscenity regulation raises. Part of this problem emanates from the inability of our States and the Federal Government to stem the tide of an estimated billion-dollar business in obscenity.

Last year the Post Office Department received close to 200,000 complaints, most of them from parents who objected to unsolicited, obscene commercial material which had been sent to their children.

In the 10 years that have intervened since the *Roth*[1] decision, postal inspectors have made over 100,000 investigations into the use of the mails in an obscenity context. During this period, convictions by due process of law have been obtained in over 4,000 instances. The bulk of all postal complaints develop from the indiscriminate and unsolicited direct mail advertising which tries to titillate the interests of those susceptible. It is estimated that there are some 20 million pieces of smut mailed annually within the United States.

Dealers in pornography are spurred by a desire for huge profits. These smut peddlers are aware that their profits increase in direct proportion to the degree of prurient interest appeal that can be injected into their material.

The operation of one dealer alone has resulted in over 100,000 complaints to the Post Office Department during the past 4 years. Some persons have individually received as many as 30 sordid, unsolicited advertisements from an individual dealer. These unsolicited mailings have no bounds.

Repeated mailings have been made to persons of both sexes and all ages, to prison addressees, to churches and seminaries, to students and instructors at elementary and high schools, to military personnel at bases here and abroad, to physicians and staffs at hospitals, to business offices, and to Government personnel at their employment.

According to Henry P. Montague, the Chief Postal Inspector for the U.S. Post Office Department, the trend in commercialized pornography is toward books and magazines and away from photographs and films.

The principal reason is that pornography in photo form is more easily distinguishable by the courts than printed material. Also, the invention of the instant, self-developing camera has made pornographic photography more readily available to those who care to possess it.

In the period from 1962 to 1966, complaints from the mail-receiving public rose 300 percent. During the same period, obscenity convictions rose only 26.8 percent. In 1966, the U.S. Customs Department confiscated 77,741 pieces of merchandise at our ports of entry which were adjudged obscene by our Federal courts.

It would appear that the major distributors of obscenity can best be dealt with through the exercise of Federal power; but coequally, attention must be given to the important role of State and local governments, as well as private organizations.

At present, there is no effective method for shielding addressees from unsolicited and unwanted advertisements.

The committee has taken specific cognizance that the Justice Department endorses its bill to create a study commission on pornography and obscenity, and was impressed with the statement of Assistant Attorney General Fred M. Vinson, Jr., that—

"If Congress decides that a commission in this area is a desirable supplement to the efforts of the Federal Government and the States in dealing with obscenity, we would welcome the opportunity to work with the commission toward our common goal—the control of offensive material and obscenity."

Statistics issued by the U.S. Children's Bureau indicate that in 1965 nearly 700,000 delinquency cases were handled by the juvenile and family courts in the United States. This was a 2-percent increase from the previous year and a continuation of an upward trend that began in 1949. In the past 10 years, delinquency cases have increased from the previous year, in a continuation of an upward trend. In the past 10 years, delinquency cases have increased by 58 percent. By 1970, it is estimated that 1 out of 9 children will come into contact with the juvenile courts or law enforcement agencies.

Dr. Nicholas G. Frignito, the medical director of the county court of Philadelphia, Pa., wrote the committee:

"There are records in the county court of Philadelphia, to demonstrate that indiscriminate use of smut leads to sexually aggressive acts, and in some incidents, to homicide. Aggressive delinquents band in small groups and devote considerable time to pursuing and reading smut devoted to sadistic and masochistic practices. They frequently indulge as a group in these chaotically perverse activities. During psychiatric treatment of institutionalized adolescent delinquent girls, a significant number of incidents of incestuous assaults are reported. The sexually aggressive fathers, brothers, or other relatives, are devotees of smut."

---

[1] For summary of legal developments in the field of obscenity and pornography, see the Appendix. 85-006

SUMMARY OF MAJOR PROVISIONS IN THE BILL

MEMBERSHIP OF THE COMMISSION

The committee, in its deliberations, gave substantial consideration to the composition and method of selection of the proposed Commission. A key to a successful study of the complexities of obscenity and pornography lies in the prudent selection of the Commission's members and other personnel.

It is hoped that the Commission would institute its study with minimal presuppositions. To facilitate this aim, the Education and Labor Committee rejects the idea that the appointing authority necessarily should be limited by statute to designated categories or fields of interest. At the same time, H.R. 10347 places special emphasis on the growing influence of pornography upon our youth. The text of the bill reflects this problem when it states:

"The Commission shall include but not be limited to psychiatrists, sociologists, psychologists, criminologists, jurists, lawyers and others who have special competence with respect to obscenity laws and their applications to juveniles."

The committee believes that its selection mechanism will bring together people who do not necessarily have prefrozen ideas, with little chance that those ideas will thaw in the course of their studies.

To facilitate a fair, objective, and impartial study, the appointive authority has been vested in the President of the United States; however, H.R. 10347 provides that the Speaker of the House and the President of the Senate, shall each submit a panel of 16 names to the President for his consideration. These 32 nominations are only advisory in nature, and thus the Chief Executive still maintains the needed latitude to appoint a representative and balanced Commission.

DUTIES OF THE COMMISSION

*With the aid of leading constitutional law authorities to analyze the laws pertaining to the control of obscenity and pornography; and to evaluate and recommend definitions of obscenity and pornography.*

Since the *Roth* decision, a vast quantity of law has been developing at the Supreme Court level and an even greater amount of law has emerged on the State and lower Federal court levels.

The Supreme Court set off in a new direction in the *Ginzburg* case, with an approach that has been both widely praised and criticized; however, the present confusion concerning the definition of obscenity appears to have a direct relationship to the growth of the commercial distribution of pornographic materials.

A fresh analysis of these conflicting and confusing decisions and a careful appraisal of the variety of new State laws would not only be useful but seem to be extremely urgent.

*To ascertain the methods employed in the distribution of obscene and pornographic materials and to explore the nature and volume of traffic in such materials.*

All evidence seems to indicate that commercial pandering of pornographic material is on the increase. While the Justice Department has not ventured to measure the total problem, Assistant Attorney General Fred M. Vinson, Jr., on behalf of the Department, has expressed the opinion that a quantitative analysis of the traffic in pornography could be one of the helpful duties that this Commission could perform.

In uncontroverted testimony, the committee has been informed that pornographic material has been flowing into the Nation in great quantities from a number of foreign countries, including Great Britain, Germany, Sweden, and Spain. Since the *Ginzburg* decision, there has been an increase of hard-core materials entering this country—a fact which is proving exceedingly troublesome for the U.S. Treasury Department, which has jurisdiction over such matters.

*To study the effect of obscenity and pornography upon the public, and particularly minors, and its relationship to crime and other antisocial behavior.*

Any study concerning the relationship between the effects of pornography upon the public, minors in particular, and obscenity's relationship to antisocial behavior, must be conducted by professionals in the behavioral sciences. Although such a study will be difficult to conduct on a "crash basis," the Commission members could call upon a substantial bibliography in this field.

Dr. Lawrence Kubie, a noted psychiatrist, indicated in his testimony that there should be an attempt "to study the effects on people at different age periods, on sick children and sick adults, as well as healthy adults and children, on people from different nationalities, colors, races, and educational and economic groups from different parts of the country. This is a large order, but the problem has importance for our whole culture."

*To recommend such legislative, administrative, or other advisable and appropriate action as the Commission deems necessary to regulate effectively the flow of such traffic, without in any way interfering with constitutional rights.*

The power to legislate does not necessarily mean that the power ought always be exercised. Thus, it may be that after the final report of the Commission, Congress may determine that the illicit traffic in pornography is not an evil of sufficient magnitude to require legislative action. In that event, then Congress would serve the country well by not enacating any further legislation in this area.

On the other hand, if the Commission determines there is a causal relation between pornography and antisocial behavior, then this Nation would welcome the valuable guidance this Commission could provide. From the work of this Commission could come exemplary Federal laws and, hopefully, model State laws, consistent with constitutional safeguards.

POWERS OF THE COMMISSION

The Commission on Obscenity and Pornography is authorized to hold hearings (at least five members must be present for the purpose of taking testimony) and to consult with State and local governments and private groups to the extent feasible.

In order to facilitate the scholarly intent of this study, the Commission is permitted to contract with universities, research institutions, hospitals, and other competent agencies, to conduct research on the causal relationship of obscene material and antisocial behavior.

The subpena power has been specifically omitted from the powers of the Commission. This action has been the direct result of the committee's intent that the proposed Commission will closely adhere to its four clearly defined statutory purposes. It is to be expressly understood that this Commission is not intended in any way to serve as a board of censorship. There should also be no doubt that the purposes and duties as set forth in H.R. 10347, are to be carried on without interference with constitutional freedoms of speech and press guaranteed by our first amendment.

COMMITTEE ACTION

As a result of the favorable findings by the Select Subcommittee on Education, both the subcommittee and the full Committee on Education and Labor, unanimously approved and reported this legislation with bipartisan approval.

SECTION-BY-SECTION ANALYSIS

*Section 1. Finding of fact and declaration of policy*

This section states that traffic in pornography is a matter of national concern and the Federal Government has a responsibility to investigate the gravity of the situation and determine whether such materials are harmful, particularly to minors, and whether more effective methods ought to be devised to control the transmission of such materials.

It is stated to be the purpose of the act to establish an advisory commission which after a thorough study, including a study of the causal relationship of such materials to antisocial behavior, shall recommend appropriate and constitutional means to deal effectively with such traffic of pornography.

*Section 2. Commission on Obscenity and Pornography*

This section creates a commission to be known as the Commission on Obscenity and Pornography, to be composed of 16 members chosen by the President of the United States after consideration of a panel of 16 names submitted by the Speaker of the House, and 16 names submitted by the President of the Senate. The membership of the Commission will include specialists in the fields of obscenity and antisocial behavior. The President, however, is not limited in his selection to the 32 names submitted. Any vacancies will be filled by the President.

The Commission will elect a Chairman and a Vice Chairman from among its membership.

Nine members of the Commission will constitute a quorum, and five members will be necessary for taking testimony.

*Section 3. Compensation of members of the Commission*

Members of the Commission who are officers or full-time employees of the United States will serve without compensation except for travel expenses including per diem expenses in lieu of subsistence. The members of the Commission who are not officers or full-time employees of the United States will receive $75 per diem when actually engaged in the work of the Commission, and traveling expenses including per diem in lieu of subsistence.

*Section 4. Staff of the Commission*

This section permits the staff of the Commission to be appointed by the Commission without regard to certain civil service provisions.

*Section 5. Duties of the Commission*

Subsection (a) of this section provides that the fundamental duties of the Commission shall be that of investigations and recommendations. More specifically, the Commission is directed—

(1) With the assistance of leading constitutional law authorities, to analyze the laws pertaining to control of pornography and evaluate and recommend definitions;

(2) To study the methods, nature, and volume of pornographic distribution;

(3) To study pornography's antisocial and criminal effect upon the public and particularly minors; and

(4) To recommend any appropriate legislative or administrative action without interfering with constitutional rights.

Subsection (b) of this section provides that the Commission will make its final report no later than January 31, 1970, and will cease to exist 10 days thereafter.

*Section 6. Powers of the Commission*

Subsection (a) of this section permits the Commission, or any committee thereof, to hold hearings and sessions within the United States for the purpose of carrying out the provisions of the act.

Subsections (b) of this section provides that the Commission shall consult with other Federal agencies, officers, and representatives of State and local governments and private organizations to the extent feasible.

Subsection (c) of this section authorizes the Commission, upon request of its Chairman or Vice Chairman, to obtain directly from any governmental department or agency any desired information that is permitted by law.

Subsection (d) of this section permits the Commission to secure necessary scientific data and information by contracting with universities, research institutions, foundations, laboratories, hospitals, and other competent public and private agencies concerning the casual relationship of obscene material and antisocial behavior.

APPENDIX

SUMMARY OF THE LAW ON OBSCENITY AND PORNOGRAPHY

In 1957, the U.S. Supreme Court, for the first time in its history, squarely faced the problem of obscenity. In the case of *Roth* v. *United States*, 354 U.S. 476, the Supreme Court rejected its former *Hicklin* rule, 354 U.S. at 489, as too restrictive under the first amendment because it judged obscenity "by the effect of isolated passages upon the most susceptible persons." The High Court defined obscenity in *Roth* as: "Whether to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to prurient interest."

Under this definition as elaborated in subsequent cases, three elements must coalesce: It must be established that (*a*) the dominant theme of the material taken as a whole appeals to a prurient interest in sex; (*b*) the material is patently offensive because it affronts contemporary community standards relating to the description or representation of sexual matters; and (*c*) the material is utterly without redeeming social value.

Later, in another decision, the Court explained that what it meant by "contemporary community standards" in the foregoing test was contemporary "national standards," and not local standards, *Jacobellis* v. *Ohio*, 378 U.S. 184, 192–195 (1965).

In 1966, the *Ginzburg* decision embellished *Roth* by declaring "Questionable publications are obscene in a context which brands them as obscene as that term is defined in *Roth* * * *."

The basis upon which the material is traded in the marketplace is relevant to determining whether social importance claimed for the material in the courtroom was, in the circumstances, pretense, or reality. The fact that they originate or are used as a subject of pandering is relevant to the application of *Roth*. In close cases, evidence of pandering may be probative in determining obscenity.

*Ginzburg* v. *United States*, 378 U.S. 463; *Mishkin* v. *New York*, 383 U.S. 502, and a book *"John Cleland's Memoirs"* v. *Attorney General*, 383 U.S. 413. (There were 14 separate opinions in these three cases.)

On May 8, 1967, in three cases involving the sale of girlie magazines and paperback books, the Court ruled in a 7–2 decision that the material in question was protected by the first amendment.

The majority noted that there was no claim that the statutes involved reflected specific and limited State concern for juveniles. There was no suggestion of an assault upon individual privacy by publication in a manner so obstrusive as to make it impossible for an unwilling individual to avoid exposure to it, and in no case was there evidence of the sort of pandering which the Court found significant in *Ginzburg* v. *United States*.

*Robert Redrup, Petitioner* v. *State of New York; William L. Austin, Petitioner*, v. *State of Kentucky; Gent, et al., Appelants* v. *State of Arkansas*, Nos. 3, 16, 50, October Term 1966, Supreme Court of the United States.

## SUPPORT FOR THE ADMINISTRATION'S MARITIME PROGRAM

### HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. KEITH. Mr. Speaker, one of the landmark pieces of legislation that will come out of the 91st Congress is the 1970 Maritime Act. For too many years this Nation has seen its leadership role among the maritime nations eroded to the point where we are now a second-rate power. U.S. goods in recent years have sailed on foreign flag vessels rather than in the holds of ships manned by American crews, flying the American flag, and built in American shipyards.

But the tide will be reversed by the passage of the maritime bill. This bold shipbuilding program proposed by President Nixon calls for the construction of 300 ships in the next 10 years and will provide a major boost to our economy.

The Quincy Patriot-Ledger, in a September 21, 1970, editorial examines the merits of this maritime program. I commend it to every Member of the House, and particularly to the conferees whom I urge to expedite the report on the legislation in order that the measure can be signed into law before the October recess. Under unanimous consent I include the editorial in the RECORD:

MARITIME REVIVAL

At last the United States seems ready to do something about the dwindling and aging merchant marine fleet, if House and Senate conferees can reconcile differences in legislation both branches have passed.

The Senate late last week approved a bill similar to an earlier House-passed version that would authorize the construction of 300 merchant vessels in the next 10 years. The legislation contains a package of measures to encourage merchant ship building and operation in this country, as well as to improve efficiency.

Included are requirements for competitive bids for each ship to be built under subsidy and for the secretary of commerce to contract with the low bidder; for the secretary to give preference to applicants seeking construction subsidies that offer promise of standardization and cost reduction; extending subsidized construction, previously limited to scheduled carriers, to bulk cargo carriers; and extending to most shipping companies the authority previously granted to subsidized carriers to defer taxes on income paid into a capital fund to replace old or add new ships to their fleets.

The major impact of these provisions, however, lies in the increased merchant vessel construction that would raise the rate of shipbuilding to 30 vessels a year—triple the existing pace. This is good news, of course, to this shipbuilding area and we hope Quincy's Fore River Yard can take advantage of this program.

In the long run, this program also should be good news for the nation. Following World War II, American flag ships carried 57.6 per cent of U.S. foreign trade. By 1968, the total had dwindled to 6.4 per cent.

Moreover, the merchant fleet is old and is not being replaced rapidly enough to offset the pace of decline. Seventy per cent of the freighters, 90 per cent of the bulk carriers and 50 per cent of the tankers are more than 20 years old, adding to the high costs of the U.S. merchant marine by being expensive to operate and maintain.

Under the new program, based on recommendations submitted last year by President Nixon, the hope is to increase the portion of the nation's foreign commerce being carried in American-flag vessels from the current 6 per cent to a stable level of about 30 per cent. Not only will this stabilize the shipping industry and employment picture, but it should also add dividends by improving the nation's balance of payments position. The program, it is hoped, would improve the balance by $2.9 billion during the vessel construction program and by $600 million annually thereafter.

If the nation is to take complete advantage of a modernized merchant fleet, however, there must be cooperation from seafaring unions and acceptance of automation. If a new vessel can be operated with a reduced crew because of automation, the unions must realize that this is an opportunity for stable employment with higher pay for such crews. And government, shippers and maritime labor should cooperate in efforts to make the merchant marine fully competitive so that operating subsidies can be reduced or eliminated.

## DONALD McKAY

### HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. O'NEILL of Massachusetts. Mr. Speaker, I would like to bring to the attention of my colleagues a statement sent to me by the special committee on behalf of the election of Donald McKay to the Hall of Fame for Great Americans. The statement I wish to submit was written by Mr. Waldo C. M. Johnson, a renowned authority on maritime history. Mr. Johnson is presently the director of the Maritime Historical Association located in Mystic, Conn.

Donald McKay truly played an integral role in the development of this Nation. Our country's history shows that our emergence as a world leader depended to a great extent on trade. America's earliest settlers were seafaring people who came to the New World determined to continue as seafarers. Among their primary concerns upon reaching our waters was the selection of good harbors from which they could continue their chosen occupation. From this genesis Donald McKay contributed immeasurably to the Nation's trade efforts.

The history of Donald McKay's famous clipper ships is intertwined inseparably with the history of our Nation and the burgeoning of American trade and industry. His ships became the pride of the Nation and the champions of the seas. They enable our struggling Nation to stand proudly beside established trading powers of Europe. Ships such as the *Flying Cloud*, the *Great Republic*, and the *Empress of the Seas* from the shipyards of Donald McKay, opened the

world's markets to the rich resources of the United States.

Donald McKay, by virtue of his tremendous contribution to America, richly deserves to take a place in the Hall of Fame for Great Americans. I take pride in endorsing him for this election and submit now for the benefit of my colleagues the nominating statement by Mr. Johnson:

NOMINATING STATEMENT FOR THE ELECTION OF DONALD MCKAY TO THE HALL OF FAME FOR GREAT AMERICANS

Few Americans have matched the creative genius of our greatest ship designer and shipbuilder, Donald McKay, and very few, if any, put his talents to greater service to the young Republic. Born in Nova Scotia, McKay came to New York at 17 as an apprentice ships' carpenter. His extraordinary talents were quickly recognized, and he moved rapidly through the demanding stages of Journeyman to Master Shipwright. In 1844, and barely in his thirties, young McKay established his East Boston yard that was quickly to become known and respected throughout the seven seas. "Greyhounds of the seas," the extreme clipper ships designed and built by this remarkable man, brought fame and respect to young America in the eyes of the world. Such glorious ships as *Champion of the Seas, James Baines, Empress of the Seas, Flying Cloud, Great Republic* and *Glory of the Seas,* out-sailed every ship ever built, proved to the world that a youthful country had become of age, and quickly became legends that have remained bright down the decades of history. One can but surmise the hundreds of thousands of pictures of McKay clippers hanging today in American homes, offices and stores.

America was born of the sea, nourished by the sea, grew to nationhood by virtue of the sea. Yet even though McKay's greatest contribution to America's maritime heritage is the clipper ship and the Golden Age of Sail, this quiet gifted man advocated iron and steam as heralds of a new age, designed and built some iron clad naval vessels for the United States Navy.

At his death in 1880 Donald McKay held an honored niche in the hearts of his countrymen, a niche still revered today by all who hold dear America's maritime heritage.

## LET US BANKRUPT SMUT PROFITEERS

### HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BURTON of Utah. Mr. Speaker, I would like to add my voice in congratulating Postmaster General Winton M. Blount's efforts to quell arguments made by proponents of more liberalized anti-obscenity laws.

Time and time again, we see these advocates of smut accusing any censorship as violating the first amendment to the Constitution.

Evidence points to the fact that pornography does have an effect on both child and adult behavior. Postmaster Blount reveals that, "There are cases in the files of the Postal Inspection Service indicating a relationship between exposure to pornography and antisocial behavior."

I submit to the RECORD Mr. Blount's rebuttal to smut proponents and heartily endorse his efforts:

Postmaster General Winton M. Blount tonight forcefully refuted arguments made "with disturbing frequency" by proponents of more liberalized anti-obscenity laws.

Describing the increasing flood of mail-order obscenity as "commercial degradation of the human spirit," Mr. Blount told the Nashville, Tennessee, Area Chamber of Commerce, "The argument that pornography cannot be censored without destroying our civil liberties is, it seems to me, fundamentally wrong."

These arguments are based on the assumption that such censorship violates the First Amendment to the Constitution, which prohibits restrictions on speech or press, he said.

"If this prohibition were absolute," he said, "the argument would be sound. But it is not absolute."

He noted that it was Justice Holmes who pointed out that the First Amendment did not permit a man to shout "fire!" in a crowded theater.

He flatly rejected the argument "that we cannot be sure pornography has an effect on children."

"If we are to take this seriously, then we must ask if any book—if any picture—has an effect on children. Indeed, such a position questions the effect of education itself, for education asks that a child respond to what he is exposed to."

He repudiated the contention that pornography has no adverse effect on adults. Cases in the files of the Postal Inspection Service indicate a relationship between exposure to pornography and anti-social behavior, Mr. Blount said.

"The evidence suggests that people can become addicted to pornography just as others become addicted to alcohol or drugs. And just as the alcoholic and the junkie are capable of anti-social behavior beyond their own will, so is the person hooked on pornography," Mr. Blount said.

The claim that the incidence of sex crimes decreases in direct relation to the liberalization of pornography laws is disproved by the experience of Denmark, where most anti-obscenity laws have been repealed, the Postmaster General declared.

"Pornography used to be a crime there, and now it isn't. Therefore, the crime rate dropped. Statutory rape used to be a crime, now it isn't. So this contributed to the drop in the crime rate. If they legalize burglary, it will drop some more. They'll have the same number of burglaries, but they won't be crimes anymore.

"We have gone to Denmark and talked to the authorities there and the real sex crime rate has not dropped," Mr. Blount averred.

"Pornography is not simply a threat to the best interests of our children," Mr. Blount contended. "It is an act of violence against the human spirit. As a people, we believe that each man has a spark of divinity within him; we accept the sanctity of the human spirit and of the human body. And as we preserve these, we preserve and sustain human dignity.

"As we violate these for sensation or for profit, we act against the dignity of man, and we act against all that we have suffered and struggled to build for more than two centuries on this continent."

"There is no room in America for the commercial degradation of the human spirit," Mr. Blount said. "There is no room in America for those who use our freedoms to destroy the very habits of mind and spirit that give meaning to these freedoms."

In the final analysis, he said, the key to bankruptcy for dealers in pornography is the attitude of the American citizen.

"If the people decide against pornography," he said, "we can do away with it. If we endorse stringent laws; if we elect and appoint discerning judges; and if, above all, we refuse to patronize the pornographer then we can put him out of business."

## PULASKI DAY

### HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. STOKES. Mr. Speaker, through the years, countless immigrant Americans have shared in the building of our Nation. The contributions of these transplanted citizens cannot go unnoticed. Of particular significance, for instance, are the achievements of Count Casimir Pulaski.

Count Pulaski served as a general in the American Army during the Revolutionary War. While still a young man, his outstanding valor and dedication won the respect of Gen. George Washington. His fine leadership throughout the war and until his death can never be minimized in the annals of American history.

October 11 will be celebrated by thousands of proud Polish Americans throughout our country as Pulaski Day. The memory of Count Pulaski is both an inspiration and motivation for a great many Poles in this country.

The city of Cleveland, Mr. Speaker, is holding its 26th annual Pulaski Day dinner on October 3. During this celebration, we shall honor two of the city's most outstanding Polish American citizens, Judge Felix Matia and Mr. Stanley Klonowski. I would like to congratulate these two fine gentlemen upon receiving this worthy distinction.

Judge Matia has displayed remarkable leadership and civic-mindedness in his years of service to the Cleveland community. He has served as assistant county prosecutor, president of the Cleveland Society, chairman of the Cuyahoga County Board of Elections, and he is presently judge of the Court of Common Pleas of Cuyahoga County.

Judge Matia has also been elected to the electoral college and now serves on the board of directors of the U.S. Savings Association. Judge Matia is one of the most respected and, obviously, one of the most active members of our community.

Mr. Klonowski has been a resident of Cleveland since 1905. Since that time, he has been a guiding light for the financial interests of our community and the economic well-being of the Nation. Early in his career, he established Klonowski Real Estate, Insurance, and Travel Agency which enabled him to perform a variety of services for his newly immigrated countrymen and, thereby, assist their adjustment to American society.

In 1913, Mr. Klonowski founded what later became The Bank of Cleveland. He is presently serving as the bank's chief executive officer and chairman of the board of directors. This particular bank was among the select few that managed to keep its doors open during the depression.

During the 1930's, he wrote and published a booklet entitled "Missing Links" which offered a financial analysis of the then slumping American economy. This publication was later applauded by President Herbert Hoover. Over the years,

Mr. Klonowski has written a number of similar articles concerning the changing disposition of the American economy.

Both of these gentlemen are active members of the Union of Poles, the Polish Roman Catholic Union, and the Alliance of Poles in America. They are diligent, dedicated men who have made a vital contribution to the Polish community and the city of Cleveland. They richly deserve the outstanding honor that is being bestowed upon them at our coming Pulaski Day memorial dinner. I must, again, congratulate Judge Felix Matia and Mr. Stanley Klonowski for their remarkable accomplishments which are truly reminiscent of the qualities that characterized Count Casimir Pulaski.

Mr. Speaker, I hope that all of my colleagues will join me in saying gratuluje Wam Panowie.

## FAVORS ARMED GUARDS ON U.S. AIRLINES

### HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. PEPPER. Mr. Speaker, I am sorry that the necessity of my meeting with the Interama Authority, the Greater Miami Chamber of Commerce, and the representatives of the Bicentennial Commission in my district prevents my being on the floor today to join in support of this measure offered by the distinguished gentleman from Arkansas (Mr. MILLS) to provide the revenue to pay the cost of the armed guards which our Government is putting upon commercial planes operated by citizens or companies of the United States in domestic or foreign air commerce to prevent or curb the nefarious practice of hijacking which has come to be such a menace to air travel in the United States and abroad.

I support this measure, and made the motion to report it out, which was favorably adopted, from the Rules Committee yesterday. I have long been deeply concerned about this terrible menace of hijacking which has endangered the lives of so many of our citizens and has already cost large sums of money to the operators of American airlines as well as much inconvenience to them, and has resulted in one of our American airlines losing a plane worth many millions of dollars.

I share the hope of the supporters of this resolution and the Members of the House that these armed guards which our Government is going to put upon our planes will to a large extent deter attempts at hijacking by pirates in the air.

I think, however, that we must continue our efforts to prevent the hijacking of our planes in every other way which people knowledgeable in the subject find feasible.

I believe one additional thing we can and should do promptly is to see to it that the latest detection devices are installed at the entrance to all of our planes in this country or abroad, which will disclose any weapons which a passenger about to enter such planes may be carrying.

I have seen some detection devices operate, and some of them will detect a gun or knife, and I assume a hand grenade or any other type of weapon encased in or made of metal, and distinguish such weapons from ordinary objects such as keys and the like.

I introduced some time ago a bill in the House (H.R. 18293) under which the Federal Government would pay half the cost of installing such devices, the airlines respectively would pay the other half, and the Government would provide the deputy marshals necessary for manning of those devices.

I know of only one instance where a weapon was carried on a plane where these devices were in operation, and that was reportedly a Pan American flight which was hijacked. But I learned that the plane was late, and either that Pan American officials did not operate the detection device, or it was operated hurriedly and was not properly checked. In addition to disclosing most types of weapons that a would-be hijacker might carry aboard a plane, I believe the chrome rods constituting a sort of gate through which the would-be hijacker must walk to get to the plane would operate as a psychological deterrent to him against carrying weapons aboard a plane, particularly if it were advertised that these devices were in operation. The would-be hijacker would probably reveal his uneasiness about being detected.

Our Government, I think, should share with our American airlines some of the cost, at least, of installing such devices at air terminals serving such airlines abroad, although obviously the country where the air terminal is located should bear a large part of such cost.

We should also press, through the United Nations or otherwise, for international action against countries refusing promptly to return to the country of the hijacker any hijacker for punishment. Any country giving sanctuary to a hijacker and refusing to extradite him to the appropriate jurisdiction for criminal prosecution should be subjected to some sort of sanctions by the nations which are party to such an agreement; especially a nation which allows upon its own territory, or particularly at one of its airports, injury to hijacked persons or to the hijacked plane should be held liable to those whose person or property was injured or damaged.

This bill, together with the announcement of the President that armed guards would be carried on American planes and that other steps would be taken, reveals the important aspect of this whole matter—that we have come to a determination that we are going to do something effective about hijacking in the air.

All of us in the Congress commend the President for the action he has taken, as we commend this distinguished committee and other committees of the Congress concerning themselves with this important matter, and we are determined to stop this practice which so endangers the lives of our citizens and the property of our American airline operators.

## THE PLOT TO OUST FRANCES KNIGHT

### HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ASHBROOK. Mr. Speaker, in the September 17 issue of the CONGRESSIONAL RECORD, on page 32565, there appears a review of the book, "The Ordeal of Otto Otepka." by the widely read Pulitzer Prize winning author, Allen Drury. In summing up, Mr. Drury referred to the vindictive and vicious treatment meted out to the former State Department security officer by other officials in that Department in these words:

Read it and weep for patriotism, which sometimes has tough going along the banks of the Potomac.

Now, another Pulitzer Prize winner, Clark Mollenhoff, Washington bureau chief of the Des Moines Register and until recently a White House adviser to President Nixon, calls attention to another case which could well demonstrate further the treatment accorded those who incur the disfavor of the State Department hierarchy. The target this time is Miss Frances Knight, head of the Passport Office, whose efficient operation of that Office coupled with her forthright conservative views have apparently rubbed Foggy Bottom's leaders the wrong way.

I insert at this point the article, "The Plot To Oust Frances Knight," from the Chicago Sun-Times of September 27 by Clark Mollenhoff:

THE PLOT TO OUST FRANCES KNIGHT

(By Clark Mollenhoff)

WASHINGTON.—President Nixon does not have control of personnel policies at the State Department, and he knows it. But it is doubtful if the President knows the full story of how his will has been frustrated and disregarded by William B. Macomber, the deputy undersecretary of state for administration.

The President's lack of control of State Department personnel policies is nowhere more vividly demonstrated than in the case of Frances Knight, director of the passport office. In no case is the failure to carry the President's orders likely to have more destructive results on the efficiency of government operations, and on the morale of conservatives in his administration.

It also could make the Nixon administration highly vulnerable to a charge of discrimination against women—against the woman who has been a symbol of female efficiency in high government office.

The President has known Miss Knight for more than 20 years. He has admired her for her level-headed conservative policies, he has appreciated political support from her husband (millionaire publisher Wayne Parrish), and he has admired her effective and skillful administration of the passport office. She handled a man's job in a manner that proved valid points the Women's Lib has been trying to make about the ability of women.

This record assured Miss Knight a place in the plans of Richard Nixon. But somehow the plans have misfired, even as the President has told her friends in Congress—Democrats and Republicans—of his high regard for her work at the passport office.

Months ago, the President directed that Miss Knight be boosted from a GS–17 to a GS–18 level, but the State Department has not carried out the order. Macomber has

stalled and delayed, apparently with the backing of Sec. of State William P. Rogers. Rogers and Macomber have bowed to a House subcommittee that handles the appropriations for State, Justice and Commerce.

Even as the President directed that Miss Knight be promoted, Rogers has joined with Macomber to try to drive her out of the State Department. Rogers has authorized a study of the passport department that Miss Knight feels is an effort to build a case for her dismissal. She feels her past performance is enough of a record of her efficiency.

She has overhauled the passport office from top to bottom. An office that processed only 350,000 passports in 1955, when she became director, issued 2,110,000 passports in fiscal 1970, collected $21,101,957 in fees and deposited a profit of more than $13,000,000 in the Treasury. She has cut the time for obtaining a passport from six weeks to three days or less.

Frustrated in her encounters with Rogers, Macomber and former Undersecretary of State Elliot Richardson, Miss Knight is taking her fight to the Civil Service Commission. In letters to Civil Service Commission Chairman Robert E. Hampton she described her "fruitless attempts" to get Richardson's attention on problems dealing with the present and future of the passport office. She said Macomber asked her to stop writing memorandums because they "were embarrassing" to the State Department.

In a Sept. 15, 1970, letter to Hampton, Miss Knight again complained about the matter "languishing" in Macomber's office, and she noted: "At this writing I have no reason to believe that the Department of State is concerned with rectifying this situation even if you and Mr. (Presidential Counselor Bryce) Harlow intervene," Miss Knight stated.

Miss Knight says the delays appear to be "clearly a matter of discrimination against the director of the passport office because of sex."

"Another conclusion of equal weight is that I am known throughout government as a conservative and deeply concerned with the security of our country," Miss Knight wrote. "I have been critical of and concerned with the cavalier manner in which my recommendations for increasing the security of the United States passport and maintaining its integrity have been rejected by the Department of State. I have been critical of the obvious erosion of support for the passport office as a public service."

At the White House, there has been some criticism of Rogers for being unwilling to carry out even a small part of Mr. Nixon's campaign pledge to "clean house" at the State Department. But the fact that President Nixon and Dr. Henry Kissinger are running foreign affairs from the White House makes it easier for the White House to accept Rogers' failure.

However, unless President Nixon is able to demonstrate that he can force the State Department to carry out his will in the Frances Knight case, it is unlikely that he will be able to force action on other personnel problems at State that have caused White House concern.

Frances Knight has been a symbol for conservatives who are skeptical over the pattern of appointments at the State Department where Sec. Rogers has demonstrated a tendency to promote men with anti-Nixon backgrounds and a coolness to promoting Nixon supporters.

All of this fails to take into account problems that could arise if the Women's Liberation movement decides to make an issue of "discrimination" against Miss Knight in a case documented as only Frances Knight can document such a case. The details of the deceptions and mismanagement will shock even some of those involved.

## QUICK ACTION NEEDED ON CRIME-DRUG ABUSE LAWS

### HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. COUGHLIN. Mr. Speaker, last week two very significant events occurred. Both involved long-delayed aspects of President Nixon's anticrime program. The House passed the Drug Abuse Prevention and Control Act and the House Judiciary Committee reported the organized Crime Control Act.

The Drug Abuse Prevention and Control Act of 1970, passed by a vote of 341 to 6, is a milestone that provides more realistic and enforceable penalities for simple possession of controlled but nonnarcotic drugs. At the same time, the new law provides more stringent penalties against "pushers" for profit.

The measure establishes five categories into which controlled drugs are ranked according to their potential for abuse and known medical use. Distributors of drugs in any of the categories would require a license from the U.S. Attorney General and would be subject to strict control.

Unlicensed distribution would carry maximum penalties—depending on the specific category—15 years' imprisonment and $25,000 fine to 1 year's imprisonment and $5,000 fine. Penalties are doubled for persons over 18 years of age who distribute drugs to minors under 21. There is a mandatory 10 years' minimum sentence and up to life imprisonment for those who engage in a criminal enterprise distributing drugs for a profit.

Counterbalancing these stern measures against "pushers" of drugs, the bill makes simple possession of controlled drugs a misdemeanor with a penalty of up to 1 year imprisonment. Alternatively, a person may be placed on probation for 1 year and all records expunged so that a young person who runs afoul of the law in an isolated instance does not end up with a lifetime criminal record.

The bill permits law enforcement agents, in seeking illicit drugs, a warrant for entry without notice. This is so-called no-knock entry which can be obtained only upon showing to the proper court probably cause that the giving of notice will allow disposal of evidence or immediately endanger the life of the enforcing officer. This provision is, in fact, a clarification of this type of entry which already is permitted by law in 29 States including Pennsylvania.

Of special importance, the bill recognizes that drug addiction is a medical problem and authorizes $75 million to be spent over the next 3 years by community mental health centers and public hospitals for treatment, rehabilitation, and prevention. An additional $29 million would be authorized for drug abuse education and $60 million for treatment facilities in communities with a large number of addicts.

Finally, the law would authorize $1 million to fund my proposal for a Commission on Marihuana and Drug Abuse to do a thorough study of the effects of the use of marihuana.

The Organized Crime Control Act of 1970, reported from the House Judiciary Committee by a vote of 29 to 3, contains a number of tough crime-fighting provisions. Grand juries could investigate noncriminal misconduct by public officials. Witnesses against organized crime could be granted immunity from prosecution as a result of their testimony, and recalcitrant witnesses could be confined until they agree to testify.

Special provisions of the measure are aimed at syndicated gambling and racketeering.

Dangerous repeat offenders could be sentenced to extended jail terms, and light sentences could be appealed under the measure.

The House added a special section to combat bombings which is similar to a bill I sponsored. Except for small arms ammunition and limited amounts of black powder and other items used by sportsmen, the bill would set stiff penalties for making bombs or explosives without a license.

False information on bomb threats would be outlawed and tough penalties would be imposed where bombings injure persons or property. Persons convicted under three specific sections relating to deaths resulting from interstate transportation of explosives or attacks on federally owned or aided buildings could receive the death penalty.

As with many proposals, the drug abuse and organized crime bills have elicited criticism that they are "repressive" and "fail to cure underlying causes."

I think we must pursue a two-pronged course and this criticism fails to distinguish between crime and law enforcement.

Of course, we must attempt to cure the underlying causes of crime and drug addiction. The provisions of the drug abuse bill relating to prevention, rehabilitation and treatment are good examples.

At the same time, we must have strong laws and law enforcement against antisocial behavior. Many proposals that produced wails of "repression" in the past have, in fact, shown very little abuse since being enacted.

The law is supposed to protect both the law-abiding citizen and the accused criminal defendant. I think we have somehow become so involved in the procedural aspects of justice that we have neglected the substance of justice which is swift and impartial punishment of antisocial acts.

The history of our judicial process has shown the strongest protection for the rights of defendants. Let us not commit the serious error of failing to realize that we must provide laws and law enforcement to protect the rights of society.

Mr. Speaker, it is high time that Congress move on these as well as other measures to protect the public from the criminal.

HORTON SPOTLIGHTS ROCHESTER'S PUBLIC MARKET AS GATHERING PLACE FOR PUBLIC OFFICIALS AS WELL AS SHOPPERS

## HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. HORTON. Mr. Speaker, many of the larger cities of the world have well-known marketplaces which attract the buyers whose livelihood depends on their acumen and knowledge. The beehive activities of these almost legendary spots give them an aura of charm which also attracts sightseers and tourists who enjoy, even briefly, being a part of this bustling excitement.

My home city of Rochester, N.Y., while not one of the world's largest cities, has a marketplace which, in my opinion, holds its own with all the others.

It is known as the public market and it dates back to 1905. Several times its future seemed bleak when the city fathers and others thought of razing it to make way for new projects. Each time those who use it let their love and need of the place be known in such convincing terms that today the Union Street Public Market still stands as a mecca for thrifty shoppers and farmers, buyers and sellers of produce and fruit, and many others.

Somewhere down through the years the public market also became a gathering place for public officials and office seekers who found the market a cross section of people of almost every walk of life from whom could be gotten a good indication of the pulse of western New York.

The focal point of activity is Jimmie's Restaurant which opens in the wee hours of the morning and closes in early afternoon. It is there you will find the regulars who use the market as their place of business, as well as the public officials, at mealtimes or at coffee breaks.

To get an opinion on almost any subject, all you have to do is ask. You may get as many different views of any subject as there are people, but by listening and sifting, by asking and questioning and prodding, you can really find valuable answers to many important problems.

I do not know of any candidate for public office in the greater Rochester area, for many years now, who has not spent untold hours at Jimmie's, seeing and being seen, listening and talking, and gathering valuable opinions from the good people who congregate there.

First as a city councilman and now as the Congressman from the district in which the public market is situated, I readily admit to spending many delightful hours there at Jimmie's Restaurant visiting with old friends and making new ones. It is indeed a pleasure I rarely miss when I am in Rochester.

So it was with much personal satisfaction that I recently read a splendid account of the marketing activities which go on daily at the public market.

Authored by Joyce Goldman, the article appeared in the Brighton-Pittsford Post. It delightfully captures the flavor of this "Bustling Marketplace That Has a Touch of Europe," as its headline states.

I would like to share it now with my colleagues in the House of Representatives and at the same time, to extend a cordial invitation to one and all to visit the public market when you are in Rochester. I think you, too, will find it a thoroughly delightful and charming place.

The article follows:

BUSTLING MARKET PLACE HAS 'TOUCH OF EUROPE'

(By Joyce Goldman)

Rushing, bustling, throbbing, thriving, flourishing—the Public Market is probably the busiest place around on a Saturday morning.

Busy, but also charming.

Many people go to the 65-year-old market place nestled among the warehouses at the end of Union St. N. in the city's Central Park area, for fresh, homegrown produce and good bargains.

Others go to be part of the cosmopolitan atmosphere of the market place, a miniature mirror of the city-suburban population.

"It puts me in a great mood for the next week," says Mrs. Bryan Fullforth of 1401 Scribner Rd., Penfield, who shops at the market every Saturday.

Mrs. Melvin W. Buetens of 30 Wilshire Dr., Brighton, calls the market place "a touch of Europe."

One merchant looking at the fruit stand which was almost empty shortly after sunrise, tells a buyer, "I sell out of goods every day I'm here. Almost everyone does."

Under the cover of two long blue and yellow sheds, farmers and merchants from nearby farms set up shop. Dealers who import from outside the state display their fruits and vegetables in a third shed. There is space for 350 merchants.

They are lured to the market by the high volume of traffic which flows past their stalls for seven hours three days a week and by the low rents of the city-owned market—one farmer pays $6 a week to use the space.

In the farmers' section, a stall is stacked with wooden baskets filled with the first cauliflower of the season, carrots with bushy green tops and yellow squash so big that only six will fit in the basket. Even larger ones are on the table.

Piled in crates are pounds of cherries, more than a dozen kinds of salad greens and radishes the size of beets.

One merchant sells just fresh garlic in bunches, another only flats of flowers.

At an egg stand, workers put fresh eggs—white and dark, extra-large and jumbo, single yolk and double—into cartons.

From a nearby cheese stand comes the aroma of fresh ricotta cheese. The table is filled with huge wedges of swiss and cheddar.

Crates of oranges, bananas, watermelons and pineapples line the importers' shed.

The aisles echo with merchants' pleas:

"Hey mister, nice lettuce, two for a quarter."

"Take a big bag lady, you may change your mind."

"Twelve pounds of cherries here, let's go, twelve pounds."

Open Tuesdays and Thursdays as well as Saturdays, the market bulges with traffic as early as 4 a.m. The farmers back their station wagons and flat-back trucks into the stalls and set up for the 5 a.m. opening. Large vans carrying California or Florida produce arrive about the same time.

The wholesale buyers arrive when the market opens and finish their buying by 7 or 8 a.m. Then the steady stream of cars—and walkers—begins.

The shoppers keep coming even until the noon closing time. On a nice day during peak season, they often number 40,000.

People are part of the market's mystique. A lady with plastic boots over orange stockings, her grey hair wrapped in a silk bandana, pushes a baby stroller circa 1910. On the worn cloth seat is a brown grocery bag stuffed with romaine.

A girl in a trench coat carries strands and strands of vines with green beans hanging from the stems.

A mustachioed young man in white bermudas and sandals with a towheaded child in a back knapsnack barters with a merchant about the price of a melon.

A college coed in a white peasant blouse and floor-length skirt patterned after the American flag samples yellow cherries from her see-through shopping bag.

A housewife pulls a red wagon filled with a bushel basket of pea pods. Her 3-year-old son follows behind.

By mid-morning the aisles are crowded with people exchanging greetings, carrying overstuffed shopping bags to their cars and then returning to visit more merchants, pushing makeshift carts and going from merchant to merchant comparing prices.

Shoppers often need to turn sideways to make their way through the crowd.

Samuel A. Paine of Rochester has been market manager for over 10 years. He works in the market office at 230 N. Union St. but likes to wander through the sheds on market days.

He credits the tenacious devotion of the merchants and the shoppers to each other and to the market for saving the landmark center when the city tried to close it down.

"That was in the early 60's when the Regional Market on Jefferson Road in Henrietta opened," he says.

"The city said the Union Street market built in 1905 for horses and buggy trade was outdated—it couldn't handle the large traffic and none of the sheds were closed or heated for winter," Paine says. "But the farmers who have been coming here for generations said they couldn't afford such a move and, besides, they liked it here.

"A lot of neighborhood people accustomed to having the market nearby and other faithful shoppers complained too. So the city left this market here."

"Once again the market's future is up for discussion," he says. "A housing project is planned for the area where the market is now, so a new market is supposed to be built where the New York Central depot is, not far from the present site. This probably won't happen for another five years."

One of the market's first merchants was Antoni Finocchario of 4524 Five Mile Line Rd., Penfield. He came to the United States in 1913 from Sicily and to the market in 1920.

He stands behind "delicious" apples and brilliant red cherries dressed in a blue work suit with a pink and white checked shirt, silk tie and straw hat. Before he will help you, Finocchiaro insists that you sample the fruit he stuffs into your hand.

"I have a good time working here," he says in broken English. "I have steady customers who come here all the time. But most of all, I like to sell to the young girls."

Bern Cator and his wife of Cator Farms, East Palmyra, raise chickens on a 400-acre farm. They have sold eggs at the market for 27 years. "We were supposed to retire last year," Mrs. Cator says, "but we just can't give up coming here, we would miss it too much."

"On Saturdays, it's usually so crowded you can't move. Some people have started to shop on Thursdays because of that."

She says many suburban housewives buy from them because their eggs are fresh—two or three days old—when they bring them to market.

"Of course, there are also many Italian families who buy in big quantities from us

because of their custom of "bringing in the family." The parents buy a lot of eggs and then the married children come to the parents' home for eggs for their families," she explains.

Customers were once mostly people in the Union St.-Bay St. neighborhood. "Now people from all over upstate drive here for the market," she continues. "A man from Brockport just told me he heard about the market from his boss and drove in to see what it's all about."

Larry Beeker of Honeoye Lake has been selling chickens and hams in his family's stall at the market for 10 years. He's the third generation.

Standing behind the table piled with chickens and hams, he is one of the market's most colorful merchants: brown shirt with big black polka dots under a cut-away sweatshirt, plaid hat and tinted glasses.

"We used to bring the chickens up here alive and chop off their heads when customers bought them, but that's illegal now," Beeker says. "We still do quite a business here. The chickens are as fresh as possible. Today we sold all the chickens we brought—18 crates. That was a small order because of the weather."

Chester K. Williams of Webster, a dealer at the market for a decade, watched as a lady with a flowered shopping bag walked away from his stand after trying to persuade him to sell a dozen jumbo eggs for 10 cents less than he was asking.

She thought since he only had two dozen left, he would be willing to "let them go."

"It's a great life here at the market—if you don't weaken," Williams says.

Mrs. Buetens of Brighton brings a red fish net bag to market. She fills it with cucumbers, squash and salad greens. "I come here because it's fun, colorful and exciting. Very often I bring a friend and we make a morning of it," she says.

Mrs. Fullforth of Penfield, owner of Ryva-London boutique on Park Ave., stops at the stall of the Regional Poultry Egg Service to talk to the workers there and pick up her weekly order.

"I try to get here at 8 a.m. when the best selection is available," she says. "I shop here because everything is so fresh. It is the kind of people who shop here and the friendly merchants that make the public market a great place to shop."

"My husband and I come here almost every Saturday," says Mrs. L. F. Piazza of 4 Brook Hollow, Perinton. "I think the vegetables are unbeatable and my husband enjoys the challenge of dealing with the merchants."

Miss Paula Gordon of 149 Barrington St., the Chanel 21 worker who directed the station's television auction, carried a striped Mexican straw satchel which she was filling with salad greens, scallions, and leeks.

"I usually shop here once a month," she says. "You spend $4 here for what might cost $15 elsewhere. Mainly though, I come here for the greens, the flowers and the charm."

Mr. and Mrs. Harold Sigall of 292 Quinby Rd., Brighton, bring their pre-school age daughter to the market with them. "We give her a shopping bag, too, and make it a real family expedition," Mrs. Sigall says.

"We like to get here around 8:30 a.m.," says Mrs. Elliot Bell of 85 Fair Oaks Ave., Brighton, who was shopping with her husband. "The earlier you get here the better the selection. Sometimes you can get a bargain, sometimes not. But it's fun to watch the people and talk to the farmers.

"I'm a neophyte—this is my first time here," said Miss Jane Ward of Cobblestone Dr., Henrietta, who came to the market looking for raspberries. "I had trouble finding them anywhere else so I came here. I found them—and a lot else. I wish I had brought a basket to carry everything.

"When I saw all the flowers and fruit and vegetables here, I said to myself, 'Look what you've been missing all these years!' "

## THE BILL FOR FBI CAMPUS PROBE ROLE

### HON. LAWRENCE J. HOGAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. HOGAN. Mr. Speaker, even before this body has had an opportunity to act on proposed legislation broadening the Federal law pertaining to bombings and giving the Federal Bureau of Investigation jurisdiction, voices are being raised from some quarters claiming that this will afford the FBI the opportunity to infringe upon academic freedom.

As a former special agent of the Federal Bureau of Investigation, I am well aware of its policies and of its careful attention to preserve the rights and privileges of all citizens. I have no doubt that the FBI will handle its responsibilities, should this proposed legislation become law, thoroughly, impartially, and with the utmost professionalism. It is ludicrous to attack the FBI before it has even been assigned the obligation to conduct such investigations.

A recent column by David Lawrence places this matter in proper perspective. I would like to call the attention of my colleagues to these comments, and I include it at this point in the RECORD:

[From the Washington Star, Sept. 29, 1970]

THE BILL FOR FBI CAMPUS PROBE ROLE

(By David Lawrence)

Contrary to some published reports, the Federal Bureau of Investigation will not—under legislation now before Congress—station agents on the campuses of the universities and colleges of the country. The agents will make investigations only when there are bombings or terrorist incidents, and their inquiries will be confined to those colleges which are the recipients of federal aid.

The FBI doesn't have enough agents to maintain a police force on the nation's campuses, nor does it desire to do so. It has its hands full merely conducting investigations in cases that develop as a result of the acts of terror which not only baffle local police but appear to have been originated by persons who are not connected with the colleges.

The extent of the terrorism generated by influences outside the campus has never been revealed. But J. Edgar Hoover, director of the FBI, in his open letter to college students, written recently for United Press International, said:

"There is real ground for concern about the extremism which led to violence, lawlessness, and disrespect for the rights of others on many college campuses during the past year.

"The extremists are a small minority of students and faculty members who have lost faith in America. They ridicule the flag, poke fun at American institutions, seek to destroy our society. They are not interested in genuine reform. They take advantage of the tensions, strife, and often legitimate frustrations of students to promote campus chaos. They have no rational, intelligent plan of the future either for the university or the nation.

"The extremists are of wide variety: Adherents of the Students for a Democratic Society (SDS) including the Weatherman; members of the Young Socialist Alliance (YSA); the Trotskyist Youth Group; the Communist party's Young Workers Liberation League (YWLL). Or they may be associated with the Student Mobilization Committee to End the War in Vietnam (SMC), a Trotskyist dominated anti-war group.

"Many are not associated with any national group. The key point is not so much the identification of extremists but learning to recognize and understand the mentality of extremism which believes in violence and destruction."

In order to investigate the elements that are in contact with the militants, it is necessary for detectives to work on information given them by students concerning outside persons who have come to the campuses and helped to organize the disturbances. The local police or college officials do not have the time or resources for such wide inquiries. The FBI, on the other hand, is adept at carrying on intensive studies, which may require visits to other localities. This is one of the reasons why Congress now appears ready to authorize FBI agents to aid in the close examination of campus disorders, especially bombings and arson.

A favorite device of the extremists is to denounce the FBI and try to prejudice the students against the federal government itself. As Hoover says in his letter:

"They'll encourage you to disrespect the law and hate the law enforcement officer. Most college students have good friends who are police officers. You know that when extremists call the police 'pigs' they are wrong. The officer protects your rights, lives, and property. He is your friend and he needs your support."

President Nixon was so impressed with the letter that Hoover wrote for UPI that he ordered a copy sent to 900 college presidents, to be distributed to students wherever possible.

It has been apparent for a long time that outside elements have often been responsible for the destruction of property belonging to the federal government, such as federal research centers and the premises of the Reserve Officers Training Corps.

By bringing the FBI into the investigative side of the problem, it is believed that conspiracies will be more promptly disclosed and participants subjected to punishment under federal laws which apply to acts designed to damage or destroy federal property.

## RAILROAD TRANSPORT PROBLEMS

### HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. WEICKER. Mr. Speaker, regarding the extension of the High-Speed Ground Transportation Act passed earlier today, I wish to say that it pained me to see the amendment to increase the appropriation by $15 million defeated.

I come from a State where a significant number of commuters look desperately for some improvement of the rail system. The turbo trains between Boston and New York have been a ray of hope for Connecticut residents of what good train service can be like. More money is needed urgently to continue such brave ventures into new concepts of rail transport.

Beyond this, I want to briefly look at the feasibility of putting rail transportation on the same sort of financial basis as road, air, and water transportation.

As we all realize, the present condition of rail transportation is deplorable. This is nowhere felt more strongly than in those areas where large numbers of persons have to rely on trains for commuting to and from work every day. Repeated failures of overaged track and signalling equipment make the daily trips on the train an ordeal.

We can take the atttiude that the railroads have gotten themselves into this mess and they should be the ones to pay for improving the service. But that sort of attitude not only creates more problems, but is also unfair.

If we stand by while railroad service deteriorates to the point of standstill, we will have created a worse problem for the environment. It will put more people into cars trying to jam into already crowded highways. More highways would despoil our disappearing green areas, while the increased number of cars would poison the air even more rapidly than now. These would not be the only problems created by a neglect of the railroads. There would be many more.

On the other hand, keeping the railroads functioning and encouraging greater use of them as alternate ground transportation would relieve many of the same problems. It certainly would benefit our environment since the railroads operate over already existing roadbeds and do not nearly create as much pollution per passenger as private automobiles or even buses produce.

Second, let us examine how fair a continued laissez-faire doctrine would be. The present arrangement is that the railroads own and maintain their own rights-of-way. They pay local property taxes. The highway, waterway, and airway users operate on or off publicly owned and financed facilities. The charges imposed upon those users do not cover the cost of the facilities provided. For example, air carriers pay only about half of the cost of the airports and flight control systems provided them. Generally speaking, users of public transport facilities also do not pay property tax or their equivalents on the facilities they use. The user charges they do pay are deductible from Federal income tax in the year they are paid. The railroads, on the other hand, must capitalize improvements by themselves and obtain money on the private capital market. Yet they must spread the depreciation deductions over many years.

I could go on listing specific disabilities or handicaps that apply to the railroads but which do not apply to the other transportation carriers. What they all amount to are disincentives against capital investment to improve both the equipment and the service.

This is not to say that the railroads should not have done a better job in managing—I think some have done poorly and have not acted in the public interest—but it is to say that the economics of the present arrangements have encouraged the poor management practices prevalent in some companies.

In conclusion, let me state that the essential component of high-speed ground transportation is a healthy rail transportation system. If we wish to keep the railroads operating and provide much needed services, we have to examine new ways to insure that the financial disabilities presently operating against the railroads do not cause a breakdown of the whole rail transportation system. One way would be to put rail transportation on the same financial footing as other modes of transportation. Those carriers are now assured the guaranteed flow of public money to maintain their facilities. I have repeatedly advocated that we should urgently examine the advantages of the acquisition, operation, and maintenance by the Federal Government of all railroad tracks, rights-of-way, and signalling equipment as perhaps the only way to get good rail service.

---

## COMPETITION IN GASOLINE PRICING—RETAILING'S CHOICEST JOKE

**HON. FRANK J. BRASCO**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. BRASCO. Mr. Speaker, the ongoing scandal known as gasoline retailing gets worse constantly. Everyone points to it with dismay. Gasoline dealers are being squeezed like so many pips, going under with a frequency that grows daily. Oil companies responsible for this unbelievable situation calmly gaze back at the American motoring public and outraged retail gasoline dealers. In so many words, they are saying, "Well, so what? What do you propose to do about it?" So far, this Government has done nothing at all.

The Federal Trade Commission has recently stirred itself into something resembling action. But only so far as to allow one of its officials to charge that major retail gasoline companies do not appear to believe in competition. That is putting it mildly. That is like throwing an anchor to a drowning man.

It is an open scandal in my home borough of Brooklyn. Everyone openly acknowledges that price fixing, gouging and discrimination in pricing is a daily occurrence. Retail dealers are told in blunt terms by major suppliers to charge what they are told to, or lose supplies of gasoline and other products—or lose franchises—or lose everything, including livelihood.

In one part of Brooklyn, a retail outlet will be charged so much per gallon for its gasoline supply. Next week he may be charged another price completely. Price tickets substantiating these charges are available for inspection. Yet, the Federal Trade Commission periodically deplores the situation, promises investigations and does absolutely nothing. In the meantime, the average operator of a retail gasoline outlet is annihilated economically. The motoring public is robbed openly and outrageously and nothing is being done.

The gasoline and oil industry, already a tightly held field, is narrowing its competitive range constantly. The wave of mergers of the past year or so has placed greater economic power all down the line in fewer corporate hands.

What it boils down to is that the entire petroleum industry is not structured in a way that results in maximum benefit to consumers and retailers who depend on it for a living. The small businessman and the public are being picked to pieces calmly by a coterie of large corporations, merciless in their greed and shortsighted in their vision. The oil industry looks upon us as a biologist contemplates his laboratory animals.

Twenty firms control over 80 percent of the value of all shipments. The top eight account for 55 percent. Rivalry between them is based on false advertising claims, such as mileage additives, engine additives, quality of station services, and the like.

Yet, in spite of our knowledge of all this, nothing is being done. I feel discriminatory pricing structures within metropolitan areas are eviscerating the small business foundations of entire areas. Here is where immediate action must be taken by the FTC. Yet, even as the FTC announces its awareness of what is going on, it openly admits its helplessness or unwillingness to bring suit and do something about it on behalf of the public. When the premier champion of the consumer admits its helplessness, how can the average American retain belief in anything his Government promises to do?

This situation is such an open scandal as to surpass ordinary illegal situations. The entire retail gasoline structure of the Nation knows it. Millions of families know they are being robbed openly. Government admits it. Yet nothing is being done.

Private gasoline retailers have been urged by the FTC to file private antitrust suits against oil companies in order to obtain greater freedom in retail pricing and in operation of gasoline stations.

In another related area, the FTC has announced it is concerned over acquisitions by major oil companies of smaller independents. This is putting it mildly. As smaller independents sell out to the majors, the majors immediately snuff out the area of competition these small operators have kept alive. Instantly, one pricing policy is replaced with another, penalizing the small retailer and driving him to the wall. His old source of supply is gone. He is helpless.

Retailers of any kind should be free to price as they wish without present coercion. They should be able to switch brands if they wish and refuse to participate in the outrages that pass for consumer "games"; which are simply cheap "come-ons" rather than legitimate contests. In instance after instance, these have been proven to be frauds. Yet major oil companies force them down the collective throats of retail operators. "Use them or else" is the instruction. The public pays the end price.

Without such a parasitical free rider on the consumer's back, our prices at the pump would be much lower. The average service station man could hire another person with money he now is forced to

pay for promotional games. Instead, we have illegitimate nonsense foisted on us instead of open competition in the marketplace.

The sole competition comes into being when major oil companies create price wars at the expense of retail operators. They move in like so many predators, selling excess-capacity gasoline products at distress prices. This annihilates the tiny profit margin of the retailer. Almost always, the retailers absorb cost of such cuts. It is "eat slim rations at the best of times," and "starve whenever the oil companies decree it." Either that, or have your franchise lifted.

Such domination even extends down to lines of accessories and other items dealers are forced to carry. Interests of the retailers simply do not matter.

Mr. Speaker, I find this situation incredible. The record of oil industry outrages makes Bocaccio's "Decameron" look like a child's coloring book. This is the most privileged industry in the Nation, milking tax benefits from the public as if it were a milch cow.

On every side, we are taking a series of beatings because of corporate irresponsibility by the oil industry. Our air is being polluted by their products. Our waters are being ruined and fish life killed by the same. No one can easily forget the disaster they pleaded guilty to in the Gulf of Mexico recently.

Their tax payments, when compared to income, are the lowest proportionately in the Nation among major industries. To top it off, they are deliberately following policies toward the motoring and retailing public I have just cataloged.

Worst of all, they are squeezing the life out of the small businessman. They get a gas station operator in their grasp and drain the life's blood out of him. They overbuild stations and outlets. Their franchising structure is a scandal. Their games are false and fraudulent. Their discriminatory price structure makes Boss Tweed look as if he took a lifetime vow of poverty, chastity, and obedience. And, in the end, the FTC admits all these charges. Then it follows through by telling the public it cannot do a blessed thing about it. Surely we have arrived at a state of corporate anarchy that makes the Gilded Age seem tame. Truly, it is "the public be damned."

## THE TRANSATLANTIC CLEAVAGE—THE TECHNOLOGICAL GAP

---

### HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. ROBISON. Mr. Speaker, I am including in the RECORD the third in the series on Atlantic Union written by Aurelio Peccei. In this article Mr. Peccei indicates that the growing technological gap between Europe and the United States presents some serious impediments to Atlantic Union. His suggestions offer food for thought.

I commend this article to my colleagues:

THE TRANSATLANTIC CLEAVAGE—THE TECHNOLOGICAL GAP

The time has come to examine the dangerous turn of events in this latter part of the 1960's, to try to make projections into the future of the present disquieting situations, and to determine what we must do to retain control of our destiny in a time of precipitous change.

I am prompted to write this book by the conviction one gets traveling far and wide in the world and observing the growing confusion and complexity of the problems and expectations of our age. This conviction is that mankind is galloping in the direction of assured and possibly total disaster. It follows that a radical change of azimuth and saner control over its course are both imperative and urgent. As man himself has embarked on this reckless course, it is possible for him to correct it. The correction, however, will have to be radical, and the hour is already rather late.

I am not a pessimist. But I see the threat and challenge components looming so much larger in the diagram of forces that dominate the future that I feel priority attention needs to be given to them—urgently.

With this as my broad frame of reference, I will in Part I of this book examine the Western world, using technology—the vector of change—as the focal element. I propose to concentrate on the *Chasm Ahead*, the split that is rapidly widening among the Atlantic nations, and which threatens to divide them into two segments—American society and European society—divergent, and evolving in different ways.

In Part II, I will attempt to present in perspective the entire world system, as I see it—at the crossroads. Its condition is serious. Tensions are growing, conflicting tendencies clash. On the one hand, its outdated and inefficient socio-political organization is patently incapable of coping with the new pattern of forces which have emerged in the modern age, and which tend to disrupt the system outright.

On the other hand, equally new but weaker factors are working in the opposite direction—toward shaping a universal conception of the human family, and a planetization of our interests—and thus tend instead to transform and coalesce the system. Still dominant, however, are the uncontrolled and convulsive situations we witness exploding from time to time, and which may eventually get out of hand and play havoc with mankind and civilization.

These are threats and challenges of a novel kind, which need to be faced squarely. To do this we must take an active forward posture, based on a deeper understanding of our peculiar epoch and leading to new forms of long-range coordinated action on a world scale.

Finally, I will also examine some of the *Macro-problems* of our time, this new category of very large problems of a complex nature, demographic, societal, political, or ecological, or of a composite character, which incisively affect the life of most of the world's peoples, and require a global attack.

My intention in this review, first of the state of Atlantic affairs, and then of the situations and ills of our old planet, is to try to give a true, even if cursory, picture of human society's present predicament. And from this analysis I will, in Part III, go to outline a *New Approach* to the world and its problems, which I submit it is now imperative to adopt if we are going responsibly to prepare ourselves for tomorrow's world. This New Approach entails a courageous departure from current thinking and policies, and the adoption instead of the forward posture I have mentioned. It means applying all our knowledge and capacity actively to shape the future. Because of its traumatic novelty and extreme complexity, I think it ought to start with a broad feasibility study—*Project 1969*—to be undertaken by the most advanced countries, using objective and scientific methods.

My conviction is that the inevitable outcome of this hard, comprehensive and compassionate new look at man and society in our tempestuous age will be that a *Great Change of Direction* in our course is both imperative and urgent, to head it off from very probable catastrophe in the coming decades.

To start our discussion, we may recognize the cleavage between the United States and Europe is surely not the widest. But it is the one that may have the most far-reaching consequences.

What may be called the *Atlantic platform* is the world's most important geopolitical area and the home of the most advanced civilization. More than 100 nations—big and small, old and new—are grouped around that platform or look to it for aid, progress, and leadership. Should the present cleavage continue to widen and become—as many signs indicate—a chasm irretrievably sundering this platform, there is great doubt whether the world will enter the golden age men expect as a result of our technological progress. Indeed, it seems that the entire human society might be heading for an era of disorder and crisis.

Ironically, this cleavage in the middle of the Atlantic is being brought about by one of the most extraordinary events of worldwide consequence in man's history, an event the Western peoples themselves have unleashed but no longer seem able to control—the technological revolution. It is a revolution so sweepingly new that we are patently unable to understand all its implications. It is also so radical that, although the Atlantic peoples are still its major protagonists, they are becoming at the same time the unwilling and largely unwitting agents of many negative developments in its side effects.

Carried along as we are in the maelstrom of this revolution, it is difficult to assess its wider effects.

My general objection is that we seem unable to get rid of our slant toward things economic. It is misleading to judge the impact of technological disparities from this angle only. Their consequences do not affect only economic activities, they overflow to all other fields, and interact with the entire texture of society.

It is precisely by taking stock of all the phenomena affecting modern society that we ought to assess the revolution under way, and try to understand where it is leading us. The task is made somewhat easier, because certain of its unwanted consequences, far from lurking in some distant time, ghosts of the future, are already apparent now and seem destined to grow to intolerable proportions during our lifetime. One of the most relevant negative elements, and one which I will use to unfold my thesis, was first perceived a few years ago and is often—if somewhat superficially—called the *technological gap* between the United States and Europe.

THE DISPUTE ABOUT THE GAP

In the broad sense used here, technology means the organized application and utilization of knowledge to make products, services, processes, and techniques available on the market and to society in general. Its impact on modern life is very great. It has been estimated that technical progress made a 52 percent contribution to U.S. economic growth during the 30-year period 1927–1957.

To speak of the gap with this wide connotation is to assume that there actually exists a significant difference in technological performance between the two sides of the Atlantic, a capacity of American society to innovate and progress which cannot be matched by Europe. As this may be considered a bold assumption, two major pertinent questions may be anticipated. Is there, in fact, a technological gap between the United

States and Europe? And if it does exist, what is its real meaning?

Many Americans, especially those in official circles, have until recently denied that the two continents were moving so far apart technologically as to create this new problem across the Atlantic. This American refusal to admit the gap—which in the minds of many Europeans was evident—has been a point of contention at the countless meetings and conferences devoted to the subject in the last few years.

The existence or importance of the gap was belittled by many American participants at the Symposium on Technology and World Trade, held in November 1966 at Gaithersburg, Maryland, on the occasion of the dedication of the huge new laboratories of the National Bureau of Standards. Yet these ultra-modern, impressive facilities, dependent upon a Federal agency, were there for all to see. They were a monumental demonstration of what the United States can do and actually is doing in the field of applied research to stimulate the growth and competitive edge of American technology and economy. The stage was properly set on that occasion to show how powerful America promotes ever more research and innovation, recognizing that they lie at the heart of the process by which America has grown and renewed itself—and outstripped all others, including slower-moving Europe.

The participants in the symposium knew this effort could not be duplicated by any nation, not even by all the European countries acting together, should that continent become united. When the then Assistant Secretary of Commerce, J. Herbert Holoman, said that "we believe that technology, appropriately understood, morally and ethically applied, is the best hope for a peaceful, prosperous society," they knew also that he was opening a door whose keys are indeed in the hands of the United States. They were left wondering whether Europe, let alone the lesser countries, could ever obtain these keys, or if the United States was willing to use them to give others equal access to the paths of technological prosperity and so make the world's gaps less blatant. The impression of hopelessness was increased, however, when the then Secretary of Commerce, John T. Connor, added:

"We need to change our approach to the fact that there are differing levels of technology in various fields among the nations of the world. Our thoughts and actions should not be directed toward compensating for these differences artifically. Rather we should try to assure that each nation has access to the particular technology most appropriate to its own goals as defined by that nation."

Foreigners in the audience were convinced that the United States not only was setting its course toward private exclusive technological frontiers but would also be lost from sight by all the others much sooner than they had previously feared.

Yet the gap was denied or decried. I admired these two forthright and outspoken gentlemen. They were voicing current U.S. thinking—that those crying at the gap were alarmists of a sort, because although it was true that the United States was setting the pace, the gap, if any, could be offset by Europe and others if they were really determined to catch up.

This tune was played time and again by most American officials. It was not merely an official posture. They were really unconvinced that the two halves of the Atlantic were becoming progressively separated by a widening gap, and that the gap was to be a permanent feature of the Atlantic landscape. You cannot expect, they said, the same level of technology between firms in industry, or industries in one country, or between countries. Indeed, they pointed out, disparities within the United States may even exceed those between the United States and Europe, and technological leads and lags are natural and fluctuate from time to time.

Many Europeans, standing on the low side of the gap, perceived its dangers better and sooner. They admitted that in fundamental science Europe probably equaled America. But, as Professor Jerome B. Wiesner said, "Science is the quest for more or less abstract knowledge, whereas technology is the application of organized knowledge to help solve problems in our society." These Europeans argued that, as the central challenge is not so much gaining new knowledge as learning how to use it effectively, and that, as America is unexcelled in the capacity to swiftly bring techno-scientific progress to the marketplace and into our daily lives, the gap is inevitable.

If it was undeniable that Europe was ahead in some sectors, they pointed out that the United States lead was very great precisely in the areas that the French call *porteurs d'avenir*, the key science-based industries and techniques on which the future hinges: Computer technology, jet aircraft, satellite communications, micro-circuitry, rocket and space science, automated machine tools. And they maintained that the United States lead was even greater when one also considered the capacity to handle giant technical programs by systems analysis and other advanced methods, which in the American experience have already proven themselves in military applications. In conclusion, the technological scales have become irrevocably tilted, according to these Europeans, and the lopsidedness across the Atlantic was not only here to stay but to grow continuously.

The issue remained controversial, however.

The turning point for a more objective view of the problem was reached, I believe, at the Conference on Transatlantic Technological Imbalance and Collaboration, held at Deauville, France, in May 1967, with the sponsorship of the Scientific-Technological Committee of the North Atlantic Assembly and the Foreign Policy Research Institute of the University of Pennsylvania. Opinions still varied but as the conference progressed, a consensus was reached.

The conclusion—which in my view is still a mild expression of a stark phenomenon—was that although in a number of specific industries and in certain areas of pure science Europe enjoys parity and even superiority, the number of such sectors is relatively small, and *there exists an over-all imbalance* in favor of America. I quote from the conference's final report:

"The United States was seen to have a decided edge, not only in the overall conditions, asserted to result in technological growth, but in the specific results themselves, especially in the critical industries of aerospace, electronics and computers. Thus, defining gap as an uneven distribution of technologically relevant resources, it was agreed that such a gap existed. There was also a sentiment that, even in the local circumstances where now the gap was not pronounced, the future was threatening because of the large-scale impetus to technology which the Americans were able to stimulate in their society."

A similar conclusion had already been reached in a report prepared by an outstanding American executive and a recognized authority on this matter, Dr. Antone T. Knoppers, who had been requested by the Atlantic Institute to assess the situation. He had no hesitation in saying, "The leadership in technology held by the United States over Western Europe is even greater than is generally thought in Europe, and is increasing. The long and short range consequences to Europe—and thus to the Atlantic economic relationship—are dangerous if the trend is permitted to continue."

At present, it is no longer disputed among knowledgeable people that a new concern has entered our lives—the serious technological gap dividing America from Europe. It is also generally conceded that the over-all gap in its present form is a *relatively recent phenomenon*. It was in the 1950's that Europe started lagging dangerously behind. Today, the same Europe that until World War II was a healthy contender for techno-scientific primacy, running neck and neck with the United States toward progress, or at least trailing behind her at a visible distance, no longer belongs in the same heat.

DIFFICULTY OF SIZING UP THE ISSUE

What the experts know, however, has not permeated public awareness in this country. The American public has not yet grasped what actually is this laceration occurring in the body of Western society.

Understandably, in Europe people are more aware of the existence of the technological gap. The press, the radio and TV tell them that the secret lies in the capacity to innovate and translate scientific and technical knowledge into products and processes, in which the United States is far more advanced than Europe. Capital is more plentiful and freely available and bolder in accepting risks; the educational system produces better scientific and engineering skills in greater number; management is sharper; the domestic market is much larger and in many ways three, five, or ten years ahead of the European markets; a small number of giant firms are better placed to undertake the risks of R and D [Research and Development] investment and of innovation than a large number of small firms.

They know also that of determining importance have been the United States defense outlays, of a magnitude that—fortunately, they believe—is without parallel in Europe. They are, however, afraid that the technological effort spurred by defense requirements, which has already stimulated a number of breakthroughs in electronic circuitry, telecommunications, propellants, exotic metals, instruments, and an incredible profusion of gadgetry for the conquest of space, etc., will have increasing effects on everyday life in the future.

All these impressions have already ingrained themselves in the European public's mind. They exist alongside the image of the United States as the spearhead of human progress (only here and there challenged by the Russians). This mythologizing of U.S. technology has probably gone so far beyond reasonable marks that its breathtaking advance is given the credit or blame for much of the revolutionary transformation taking place in everything important in society: Values and habits, economic growth and potential for destruction, expansions of industry and decline of traditional activities, new jobs or unemployment, newer communications media and lesser capacity of understanding one another. The United States image is not only one of standard-bearer of this great upheaval of change, but also one of the only nations capable of absorbing and utilizing its impact and deriving ever new strength from it.

Assuming that the gap really exists, it is important to awaken the same consciousness in the American public. The issue ought to be clearly stated for it to judge.

How can outlines of this divisive phenomenon, I asked myself, be conveyed in terms convincing, not to the expert, who no longer needs to be convinced, but to a select public, the readers of this book, who might then convey the message to wider circles? I am writing the book in faith that the reader is a cultivated individual, modern and open-minded, somewhat puzzled and concerned by what happens in the world, and therefore desirous of better understanding the problems of our time.

It is written by an industrial manager, not a scholar. It does not set out to present a full demonstration of the gap—which, I am sure, eventually can be given. This work

intends to be one of synthesis, bringing forward some ideas about the extremely serious world situation, and suggesting possible avenues for the future. I would like to be in communion with the reader and assess with him in broad historical terms what is happening before our eyes in the Atlantic region.

From the avalanche of information daily pouring on the public, the portion which deals with this subject is uncoordinated, and most of it goes unnoticed. To extract the gist of it and to build a true and meaningful scenario of the transatlantic technological imbalances, I have asked my friend, Mario Rossi, Special Correspondent of *The Christian Science Monitor* at the United Nations, to assist me in following the phenomenon for one year—roughly the year 1967—as it emerged from the mass media.

THE GAP IN COMPUTERS

The technological gap between the United States and Europe is a subjective as well as an objective phenomenon, something that we can calculate in certain aspects and just feel in others. When we travel from southern Italy to southern California—or, for that matter, to southern England—we need no production figures or income scales to tell the difference between styles of life.

Any understanding of the problems posed by the technological gap must therefore begin with the fundamental recognition that we are dealing not only with quantitative but especially with qualitative factors.

To bring this sharply into focus, take the crucial case of computers. About 40,000 computers. About 40,000 computers are already in operation in the United States as opposed to about 10,000 in all Western Europe. It is reliably estimated that by 1970 there will be about 50,000 computers in the United States and by 1975, 80,000 and only about 20,000 in Western Europe. In all these comparisons, keep in mind that the population of Western Europe's is more than half again as large as that of the United States: 355 million as opposed to 206.

The United States has thus a commanding lead in the new field of electronic data processing which is probably the most pervasive development, affecting more industries in more ways than any other. It is acknowledged that computers are the star protagonists of the technological revolution under way.

Another aspect appears to be more significant: In Europe the computer is being used for limited specialized applications in industry, government, and universities. It cannot be otherwise, considering that in 1965 the computer-per-man ratio was 386 for every million non-agricultural workers in the United States, compared to only 125 in Switzerland, 95 in Sweden, 67 in West Germany, 60 in France, and 48 in the United Kingdom.

When I visit the United States, I often clip newspaper articles about computers. Some headlines:

Computers Assist a Brooklyn Birth
Computer Tested as Weather Aid
Computers Guide Pupil Integration
U.S. Computers Help Thwart Vietcong
Computer Orders Parts for an Airline
Computer Chess Won by Stanford: Machine Takes on Russians After Beating Carnegie
Quick, Compute Me a Nice Tapestry
U.S. Urged to Use Computer in Language Study
6th Grade Taking Computer Course
15 Police Departments to Link with F.B.I. Computer
Computer Now a Wall Street Guard
Computer Jumps to Ski Conclusions
Computers to Aid Legal Research
Computer Hookup to Home Foreseen

The last quotation is enough to underline my contention that computers are fast becoming a built-in feature of American life.

Computers are not simple gadgetry, the kind of gimmickry Americans are so often accused of spawning. They alter man's mental environment. They enhance and multiply his thinking capacity and open up new vistas and heretofore undreamed-of opportunities for the solution of the increasingly complex problems of an industrial society.

The computer revolution is altering the fabric of society in the United States to an extent unparalleled in Europe. Computer technology and applications require a sophisticated approach at all levels, from producers to customers. Suffice it to mention that computers have brought about a new and revolutionary art of management in the conduct of both business and public affairs, which leads to the more efficient use of materials and personnel, faster results and better products, and greater profits.

Computers accomplish a spectrum of qualitative changes that are at the core of the technological gap between America and Europe. They reflect and dramatize technological changes brought about by the explosion of science-based industries.

Electronic components are tightly linked with computers. Here, fantastic prospects are opening up through the development of such advanced technology as minute integrated circuits. American companies. (Texas Instruments, Fairchild, Motorola) account for 90 percent of the European market and are practically the sole depositories, through their international subsidiaries, of know-how in this breakthrough development sector.

To quote my friend, Christopher Layton, "to bridge that gap would be for Europe about as easy as boarding a moving express train."

FROM NUCLEAR ENERGY TO AEROSPACE AND TELECOMMUNICATIONS

In other frontier industries one witnesses the emergence and widening of gaps. Such is the case of the nuclear industry in spite of Europe's earlier start. With military applications, it is common knowledge that the United States holds an overwhelming position. Even in peaceful applications, the United States has easily succeeded in outclassing Europe, which was paralyzed by an inane proliferation of national approaches and even nationalistic feuds.

Today, the total installed nuclear power in Europe, some 6,000 MW, may be greater than that in the United States, about 200 MW. But when one looks beyond the surface figures, United States dominance is clear, buttressed by [its control of] the market for enriched uranium fuel. And 32,000 MW power stations are now on order in this country. U.S.-made nuclear reactors—by General Electric and Westinghouse—have begun to sweep world markets.

This seeming inability to meet the nuclear power challenge fills Europe with gloom, especially the British have found it galling, since they had a head start in design and cost efficiency. Despite the fact that British and German laboratories seem to be ahead, so far, in the next generation prototypes, uncoordinated, ineffectual policies may already have produced the sterilization of the initial European lead.

The same story of the dramatic decline of great European industries can be recited for the aircraft industry. The record here is one of bold initiatives, gambles, fiascos, and self-defeating feuds. Suffice it to mention the failure of the European attempt to produce a variable geometry aircraft and the airbus. This failure has probably decreed the final dominance of U.S. aircraft in world markets. The Americans have taken the initiative in the construction of the "jumbo jet", with the Boeing 747, and have a strong time lead in the airbus category, with the Lockheed L1011 and the McDonnell Douglas DC10. These airplanes are due to go into operation in 1970, and will again revolutionize civilian air transport. Europe's only entry so far is the Rolls Royce engines powering the L1011.

The airbus case illustrates the limits and failures of production by European-style coalition: Two or more governments, two or more managements and two or more production lines trying to simulate the unified industrial process contracted out to a single [U.S.] company—which, moreover, has at its disposal a very large domestic market.

The Americans, meanwhile, have been perfecting "fleet standardization," with its rational planning, and cost saving. These are some of the reasons why civilian airlines and military air forces are, with a few exceptions, adopting U.S. material. Only in the race for supersonic aircraft does Europe seem in a position to win eventually, if the Anglo-French *Concord* maintains its present decisive lead and proves itself operationally satisfactory.

Space is just another example of the gap in effectiveness. There is also a huge gap in scale: $4-billion spent annually in the United States during the past years (more than Europe's entire civilian R and D effort in all industries) compared with $200-million on Europe's space programs, national and international.

NASA has some 500,000 employees, as against 20,000 in government and international space research centers in the whole of Western Europe. This overwhelming ratio may probably be reduced. Many [U.S.] voices are criticizing such expenditure as lavish. Europe seems about to revise its programs, and the Causse Report, on behalf of the minister-level European Space Conference, suggests an investment of $400-million in 1970. Even on these optimistic assumptions the ratio would still be 8 or 10 to 1.

The time-lag is also great: The first American *Explorer* was flown in 1957, approximately 500 [U.S.] satellites have been flown since, against 11 by Europe, the first in 1964. What matters most is that the organization behind is so different. Against the American concentration of effort, there are presently three main multinational space organizations in Europe. Then there are 10 separate national programs and a number of bilateral combinations.

Aero-space has become one of the largest U.S. manufacturing employers, with a 1.2 million payroll, including 20 per cent of the nation's scientific and engineering talent. Cooperation among government agencies, space-oriented industries, universities and a wide circle of knowledgable professionals is easy and rapid. In Europe, the dissemination of information is difficult and slow. Some times it seems as if communication on space and the universe was better at the time when Kepler and Galileo used to compare their results by writing each other in Latin between Prague and Florence.

Europe has not fully understood that space is not a vague competition for "pie in the sky," a race for prestige. Space research is part and parcel of the new scientific revolution and has started a new era of discovery, comparable to the one [opened by] the telescope. It has some very real, immediate results, not to mention spin-off effects on industry as a whole. Application satellites, such as communications, meteorology, navigation and earth resource survey satellites, are bound to play a fundamental role in the future of mankind.

But, except for participation in a 50-odd-nation venture, the International Tele-communications Satellite Consortium (Intelsat)—in which the United States has more than half the stock—Europe has still to take a step in this area. In 1964 it started to set up its own communications satellite network, but has failed to come up with a concerted plan.

Communications at large are one of the main avenues of the technological revolution. The new communications theory is

developing systems which include satellites and computers connected by telephone, telegraph, and microwaves. Yet if we scale down from spectacular satellite communication to the down-to-earth telephone system, the gap in both quantity and quality still exists.

Half the growth of calls in the next 10 years will be for data transmission from computer to computer. In the United States it is already possible to get through central computers by using telephone lines. Europe is still way behind. In 1966 it had only one telephone for every six people, compared with one for two in the United States, and the quality is rarely up to American standards.

The Bell Telephone Company experimental laboratories are known throughout the world as the very model of the most advanced and progressive kind of commercal research laboratory. Though Europe spends more on telephone research and development than the United States, its efforts are dispersed in national approaches with quite insufficient, if not inefficient, results.

It is in such a complex of interlocking factors that the technology gap lies. Individually considered, these factors are evidence that the United States has a dominant lead over Western Europe in most crucial areas of applied science and marketable technology. In combination, they exert such a formative influence on the societies of America and Europe that they portend a phenomenon that will widen as time passes.

THE GREATER U.S. EFFORT IN RESEARCH AND DEVELOPMENT

Competition by innovation is rapidly taking the place of competition by productivity. Investment of capital and talent in R and D is at the base of the innovative process and constitutes one of the necessary driving forces of future growth. It may be argued that R and D expenditures are simply inputs, and provide no measure of output, that is, of actual results. However, there are enough cases to prove that the R and D effort is concomitant with over-all growth.

According to the latest data available, R and D expenditures in the United States—one-third of the world total—were 24 billion dollars (3.5 percent of the gross national product [GNP]) in 1967 as against about 7 billion dollars (1.3 percent of the GNP) in Western Europe. The resources annually deployed by the United States are ten times greater than those of Great Britain, 15 times those of Germany and France. Her R and D expenditures are expected to reach $53-billion at current prices in 1980, when in all Western Europe they will probably be nearing only $20-billion. In the number of people employed on research and development, which probably provides a more significant indication of the real effort devoted to this activity, the United States dominance is again undeniable: about 1,250,000 to about 500,000 in Europe.

The U.S. government pays nearly three-fourths of the national R and D bill. This centralization of funding, intelligent use of a new tool invented to give it more leverage, practically nonexistent in Europe—the Federal R and D contract—and its coordination with government purchasing, plus the American capacity of managing highly complex research projects cannot but help solidify its overall technoscientific superiority.

The advantages accruing from this policy are shown by the U.S. technological balance of payments, namely the net flow of money for patents, royalties, licenses, and technological know-how at large she sells to other nations and buys from them. The trend with Western Europe shows a growing [U.S.] surplus which more than doubled the receipts from 1958 ($132-million) to 1965 ($454-million).

COMPARATIVE SIZE AND PRODUCTIVITY

Since optimal dimensions vary, size in industry is a controversial factor. Nevertheless, in automobiles, electronics, rubber, steel, oil, and chemicals the largest firms are American; the gap between them and their European competitors is considerable. The far greater size of the American domestic market accounts partly for this disparity.

The oligopolistic structure of American industry is favorable to innovation. Large American firms are better placed than their European counterparts to undertake risks. But also profit-wise the latter trail behind.

Differences in profits are far more important than differences in the volume of sales or turnover. They are an indicator of the great productivity achieved by firms in the United States. In 1966 Britain's National Economic Development Office calculated that the number of men required to produce the same output as one American was 2.3 for Britain in steel, 3.4 for Britain and 2.6 for Germany in chemicals, 4.2 and 3.8 respectively for Britain and Germany in electrical machinery.

This means that, besides advantages of scale, American industry enjoys a productivity edge over European competition. Very different opinions can be gleaned as to the main factors contributing to this difference in performance. One thing, however, seems to me certain. Just as for innovation, cost performance, profit growth, etc., productivity too depends very much on the quality and drive of management. And one field where America excels, certainly, is managerial capacity. Hence, the tendency to speak of the managerial gap.

The argument has been brought forward that in the United States the small innovating industry committed to science-oriented sectors has often played a role greater than that of the large corporations. Xerox, Polaroid, Varian, Hewlett-Packard, and other electronic components industries are well-known cases. This is true, but small, pacesetting firms thrive better when they live among a population of giants, and when the market offers them unlimited opportunities to grow, as in the United States.

The statement in a memorandum of the Common Market Commission is not mistaken: "It is the widespread feeling that European companies are not big enough at present either to take full advantage of the Common Market, or to compete with powerful outside concerns—particularly American companies—which are able to set themselves within the Community itself and because of their greater financial and technical resources built up in a vast home market, can easily outweigh those European companies which do try to adapt themselves to the scale of competition appropriate to the Common Market."

BRAIN TRAINING—AND DRAINING

Probably the main factor influencing technology is education. The relative availability of qualified personnel is the key element in the technological disparities between the United States and Europe.

Examine, first, the great mobility, most of it one-way, of human elements between the two sides of the Atlantic, and then, how the brainpower of the two societies is upgraded, educated, and trained by each.

A good deal of public attention is directed toward what is commonly known as the brain drain, which depletes Europe—and other areas too—and generally enriches America with high-value brainpower.

According to the National Science Foundation, 43,500 scientists and engineers emigrated to the United States during the 13 years from 1949 to 1961. The total does not include the many other related specialists—from doctors to lab technicians. Seventy percent of the 43,500 came from countries with a relatively high standard of education—Canada and West Europe.

In 1966 official reports in Britain caused considerable concern: 37 per cent of the physicists who received doctorates between 1958 and 1963, were working abroad—mainly in the United States. Again in 1966 Britain's Action Committee for European Aerospace reported that the United Kingdom's whole aerospace program was in danger of collapsing due to American "pirating" of brains.

The flow of European scientists to the United States averages 2,000 annually. The peak year was 1966—more than 2,700. Almost half came from Great Britain, while the Common Market countries provided only a relatively small proportion. Physical and life sciences are the greatest field of interest (45 per cent of the total). Of the 40 scientists living in the U.S. awarded the Nobel Prize for physics or chemistry between 1907 and 1961 15 were foreign-born.

It is in the less measurable sphere of quality that the brain drain makes its ultimate impact. Generally, those who migrate are motivated, enterprising people.

Here we may turn to the most pertinent study, that of Raymond Poignant, a leading French authority on education, undertaken for the Institute of University Studies of the European Community. Its results, made public in 1965, indicate that, in all the relevant areas, the nations of Western Europe lag behind the United States in production of trained personnel in general, and scientific technological personnel in particular.

According to the French Raymond Poignant study and OECD data, in 1964 the United States spent 6.18 per cent of its GNP on education, compared with about 4 per cent in the main European countries. School enrollment as a percentage of the population in the age bracket between 5–24 years was 77 in the United States, 65.3 in France, 60.5 in the United Kingdom and 56.3 in Germany.

This is reflected in the higher proportion of high-level manpower in the United States-17 per cent of total labor force, compared to 11 per cent in the United Kingdom and 10 percent in the Common Market. Kaufman notes that over 40 per cent of the U.S. university-age population are in colleges or universities, compared with 10 per cent in Britain, 15 per cent in France, and 7 per cent in Germany and Italy; about 20 per cent of the university-age U.S. population earn degrees, compared with about 4 per cent in the Common Market; and there are over 2,000 U.S. institutions of higher learning compared with 40 in France and 48 in Germany.

The Poignant study showed that the European Economic Community nations were not changing their secondary education setups fast enough to achieve any substantial increase in their percentage of college-age population receiving higher education. Behind these figures, of course, lies: the social inequality in educational opportunities within European nations. Working-class children are not getting their share, and Europe is thus wasting the brainpower, not to say the lives and future, of many of these children.

Wherever we look in the United States—from the introduction of the "new math" in the lower grades to the establishment of the Harvard University Program on Technology and Society—we see that U.S. educational institutions are in the vanguard of those who wish to come to grips with science and technology.

FACING THE GAP

Whatever the shortcomings of this review of causes and symptoms of technological and related disparities between the United States and Europe, the picture is unfortunately clear enough. I believe little doubt remains even in the layman's mind about the presence, in our Atlantic platform, of an ugly crack that has started to drive us apart.

To move from this preliminary conclusion and consider the second basic question relative to the meaning and consequences of the gap, we must start by realizing that this is far from being a minor issue. Its dimensions, dynamics, and nature cause the technologi-

cal gap to be one of the major problems confronting the Atlantic community.

To drive home this concept finally, I quote the very valuable and well-balanced opinion which emerged from the previously mentioned Deauville Conference. It is an expression of statesmanship, because it compels serious reflection; let us hope it will lead to action. It says:

"Large scale European-Atlantic differences in values, mobility, institutional structures, size, and rigidity were seen to account for the discrepancies. Values or attitudes which might foster behaviour leading to technogical growth were found to be relatively weak in Europe. . . .

"Mobility was another common theme. . . . Some stressed the relatively greater capacity of Americans for geographic mobility, while others stressed the relative ease with which Americans enjoyed occupational mobility between universities, research institutes and the industrial sector . . . the relative dynamism of American society was underlined as a major cause of technological superiority deemed to be dependent on the free exchange of individuals and information throughout the society. Special attention was paid to the link between the generator of science, the university, and the applicator of science, industry. The link was seen to be highly productive in the United States and relatively weak in Europe. . . .

"Communications between institutions or within institutions were deemed better in the United States . . . In the new pragmatic political environment of the United States, government is allowed and even encouraged to play a major role in developing the U.S. technological base. Government aids industry by subsidizing research in the early nonprofit stage. Industry profits from spin-offs from government initiated projects. Mutual benefits accrue from the structural relations which industry, government, and the university have evolved with each other.

"The relative absence of structural barriers against trade and the relative ease with which the different economic, political, and intellectual institutions can communicate with each other and adapt to changes in the needs of one or the other partner, all these assets of the dynamic environment were considered by many to be at the root of technological disparities.

"For others, size was counted as a major asset in favor of the United States: Size of firm, to allow for capital formation, and size of production facility, to allow for small unit cost. The size of market was judged especially important and, perhaps, critical . . .

"Mention was made of the relative rigidity of European social and economic institutions in the United States was deemed production. The flexibility and adaptability which characterizes as a useful asset. Unpredictable demands of a rapidly developing technology are most readily met in a society which is flexible and willing to evolve new forms of person-to-person, institution-to-institution relations. The relatively larger sector of American society which has been educated on the college and university level, contributes to that flexibility and mobility which enhances employment opportunities."

The factors viewed at Deauville as the most serious were the disparities of values, mobility, structure, size, and rigidity. We should not fail to understand their importance as factors perpetuating and widening the cleavage that now divides the Western society. Their influence is great, because they are related to each other in an interacting system in which the multiplying effect of the American assets makes the potential of the United States look enormous compared with that of Europe, in a period in which the latter seems to be caught up in a vicious circle of desultory performances which in turn stifle the will to try harder. In the words of Dr. H. B. G. Casimir, the highly respected Dutch scientist and research director:

"If America really wants to do something about the gap, start introducing a different currency in each of the 50 states, and impose other serious boundaries among all the states, You have enough Italian, Greek, and German and Dutch people to create * * * make a state with an official Italian language, be sure to make a state with an official Italian language, be sure to incorporate minorities with another language or two. Otherwise it won't work or create the full effect.

"It would also help to have several of these states drive on the right side of the road and others keep to the left. It would be a nice project in operational research to work this out in such a way that you would get the maximum number of collisions. If this experiment were done, and we then, 10 or 15 years from now, compared your America with Europe, we may well have bridged the gap, whatever it is!"

This witty aphorism helps us to realize the truth of the existence of a disturbing and baffling gap right in the heart of the Atlantic community. What is its true meaning, and what are its short- and long-range consequences on the Atlantic system itself?

---

## MILTON SHAPP JOINS IN FIGHT FOR AN OPEN RULE TO THE TRADE BILL

### HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. DENT. Mr. Speaker, the International Union of Electrical Workers and others are vitally interested in the serious crisis in our importation of foreign made products.

The candidate for Governor of Pennsylvania, a longtime advocate of free trade, is greatly disturbed over the effect of our present trade policies, and the loss of U.S. jobs.

As Chairman of the Committee on the Impact of Imports, I welcome the assistance of Milton Shapp in my fight for an open rule on the trade bill.

A letter to me from Mr. Shapp follows:

Hon. JOHN H. DENT,
*2430 R.H.O.B.,*
*Washington, D.C.*

DEAR CONGRESSMAN DENT: As you know, the Trade Act of 1970 will shortly come before the House of Representatives for a vote. When the Bill reaches the floor, I urge you to support an open rule so that the full membership can consider adjustments to the Bill which would give fuller protection to American industry.

The backbone of America's economy lies in those industries most directly threatened by the tremendous increase in imports which we have experienced during the past few years. Especially at a time of economic slowdown, I believe it is doubly urgent that we do everything possible to keep the jobs we have and encourage the creation of new ones.

As you know, the Bill already imposes quotas on textiles and footwear articles. It should be opened up, so that steel, electrical, machine products and other items which threaten American jobs receive the same consideration, specifically spelled out.

One recent estimate placed at 70,000 the numbers of jobs in steel which have been replaced by foreign imports.

Only last week, in Pittsburgh, warnings were issued that foreign competition from American businesses operating overseas plants threatened to cut deep into employment at Westinghouse Corporation's Rotating Apparatus Division in East Pittsburgh.

Equally as serious, public utilities are purchasing generating equipment outside the United States for the first time in history.

Last year foreign competition captured 78% of the waterwheel generator business in the United States. The year before it was 2%. Last year, the turbine generator market in this country included only an 8% share held by foreign competition. But, by the first of 1970, the foreign share of the American market had risen to an astounding 40%.

These trends present a clear and present danger to the economy of Pennsylvania. We have more than 280,000 steel workers and 170,000 employees in the electrical industry. These workers, and the industries they work in, are increasingly threatened, often from nations who see nothing wrong in discriminating against American goods.

In addition, the situation is worsened by the general sluggishness in the economy, increasing unemployment and the steady rise in the cost of living.

I urge you to take the initiative and be at the forefront of any move on the House floor to strengthen the Trade Bill of 1970.

Sincerely,

MILTON J. SHAPP.

---

## EPSTEIN AGAINST RESOR—OPERATION KEELHAUL

### HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. PUCINSKI. Mr. Speaker, on September 24 I placed in the RECORD, "The Story of Forced Repatriation—Operation Keelhaul," which appeared on page 33720.

I should like to place in the RECORD today Mr. Julius Epstein's article about the miscarriage of justice in Epstein against Resor. His article points out that the Freedom of Information Act has become emasculated by administrative and judicial fiat in his legal battle to get the Department of the Army to declassify the top secret documents known as Operation Keelhaul, a code name used in World War II to forcibly repatriate 2 to 5 million anti-Communists back to the Soviet Union.

The arguments used by the courts and the Army lawyers in denying Mr. Epstein access to these documents are specious and capricious, and smack of the doubletalk of 1984.

Mr. Epstein has performed a public service by suing the Army under the Freedom of Information Act and pointing out the capricious interpretation of said act by the Army and courts. It now is up to the Congress to amend the act so that there can be no question that a citizen can legitimately have access to documents that have nothing to do with national security or our foreign relations, particularly after a lapse of 25 years.

Time and again this Congress has found that the legislative intent of both bodies has been thwarted by bureaucrats who are elected by no one and certainly not responsible to anyone.

Therefore, it is incumbent upon this Congress, as the duly elected representatives of the people, to curb the acts of wrongdoing by bureaucratic "Big Brothers" and make them responsive and responsible to the taxpayers by amending the Freedom of Information Act so there is no doubt in anyone's mind about the right of our citizens to have access to public documents that are not under the purview of defense or diplomacy.

Only an alert and informed citizenry can help prevent the recurrence of an Operation Keelhaul and keep sound the principles on which this great Nation was founded.

Mr. Speaker, the illuminating and excellent article by Mr. Epstein follows:

EPSTEIN VERSUS RESOR, OR THE EMASCULATION OF THE FREEDOM OF INFORMATION ACT

(By Julius Epstein)

The "Freedom of Information Act" was signed by President Johnson as Public Law 89-487 on July 4, 1966. It became effective one year after its enactment on July 4, 1967.

The Act is an amendment of Section 3 of the Administrative Procedure Act of June 11, 1946.

As Congressman Dawson wrote in his report:

"It gives an aggrieved citizen a remedy by permitting an appeal to a U.S. district court. The court review procedure would be expected to persuade against the initial improper withholding and would not add substantially to crowded court dockets." [1]

The origin of the Freedom of Information Act goes back to 1953, when Dr. Harold L. Cross published for the American Society of Newspaper Editors, the first comprehensive study of growing restrictions on the people's right to know the facts of government. The reason why ASNE commissioned Dr. Cross to write his paper was the obvious fact that journalists, historians, legislators, lawyers and government officials had been concerned about the growth of Government secrecy. Fundamental to Dr. Cross' study, as James S. Pope explained in his foreword to Cross' book, "The People's Right To Know," was "the conviction that inherent in the right to speak and the right to print was the right to know. The right to speak and the right to print, without the right to know, are pretty empty." [2]

As Dr. Cross outlined, there were three areas where through legislative inaction, improper secrecy had been allowed to blossom and, therefore, to choke the basic right to know: the "housekeeping" statute, the "executive privilege" concept and, most important, section 3 of the Administrative Procedure Act which deals with and affects public access to government action.

Not before 1958 did Congress correct the constant abuse of the government's 180-year-old "housekeeping" statute. The correcting bill was introduced in the House by Congressman John E. Moss and in the Senate by Senator Thomas E. Hennings. The Moss-Hennings bill stated, as Harold Cross pointed out, "that provisions of the 'housekeeping' statute (5 U.S.C. 22) which permitted department heads to regulate the storage and use of Government records did not permit them to withhold those records from the public." [3]

As already mentioned, the most important reform brought about by the Freedom of Information Act concerns section 3 of the Administrative Procedure Act, adopted in 1946. Section 3 of this Act has been the major excuse for withholding improperly classified government records from public view.

Footnotes at end of article.

Section 3(c) states:

"Public Records.—Save as otherwise required by statute, matters of official record shall in accordance with published rule made available to persons properly and directly concerned except information held confidential for good cause found." [4]

According to this statute, the government was entitled, even if no "good cause" could be found for secrecy, to restrict information to "persons properly and directly concerned." The Administrative Procedure Act never defined who was to be considered a person "properly and directly concerned." Besides, the Act did not provide for any remedy available to a person who has been wrongfully denied access to official government records.

Since Congress ultimately realized that improper denials of information occur again and again, the climate for a new law became favorable. This favorable climate led to the enactment of the Freedom of Information Act which, for the first time in American judicial history, gives every citizen the right to obtain information from the government.

In the context of this article, the most important amendment to section 3, chapter 324 of the Act of June 11, 1946 (60 Stat. 328) reads as follows:

Exceptions. "(3) Except with respect to the records made available pursuant to subsections (a) and (b), every agency shall, upon request for identifiable records made in accordance with published rules stating the time, place fees to the extent authorized by statute and procedure to be followed, make such records promptly available to any person. Upon complaint, the district court of the United States in the district in which the complainant resides, or has his principal place of business, or in which the agency records are situated shall have jurisdiction to enjoin the agency from the withholding of agency records and to order the production of any agency records improperly withheld from the complainant. In such cases the court shall determine the matter de novo and the burden shall be upon the agency to sustain its action. In the event of noncompliance with the court's order, the district court may punish the responsible officers for contempt. Except as to those causes which the court deems of greater importance, proceedings before the district court as authorized by this subsection shall take precedence of the docket over all other causes and shall be assigned for hearing and trial at the earliest practicable date and expedited in every way." [5]

The progress made possible by this amendment is self-evident. Now, records must be made available to "any person" not only to the undefinable "persons properly and directly concerned." Any person denied access to information has now the right to lodge a complaint in the district court. And the district court has jurisdiction to determine the matter de novo. The court has the power to force the agency to release information which, in the court's opinion, has been improperly withheld. The agency has the burden to prove that maintenance of classification is justified.

It was this provision of the Freedom of Information Act which caused me to test the new law in court. Since 1954, I had unsuccessfully tried to get access to the Army's documentary file "Operation Keelhaul." This file, three volumes of official American-British documents concerning the forced repatriation of anti-Communist displaced persons during and after World War II, has been for twenty-three years classified "Top Secret."

The Top Secret classification has been based upon Executive Order 10501 which provided the standard for classification of government records. According to President Eisenhower's Executive Order 10501,

"the use of the classification Top Secret shall be authorized, by appropriate authority, only for defense information or material which requires the highest degree of protection. The Top Secret classification shall be applied only to that information or material the defense aspect of which is paramount and the unauthorized disclosure of which could result in exceptionally grave damage to the Nation such as leading to a definite break in diplomatic relations affecting the defense of the United States, an armed attack against the United States or its allies, a war, or the compromise of military or defense plans, or intelligence operations, or scientific or technological developments vital to the national defense." [6]

President Eisenhower's Executive Order 10501, as amended by President Kennedy in Executive Order 10964, protects government records classified in the interest of foreign policy and/or national defense. That the collection of documents, entitled "Operation Keelhaul", compiled in 1948 but comprising documents, dated 1946 and possibly earlier, could in the year 1970 endanger U.S. foreign policy or national defense, seemed to be absurd.

On March 20, 1968, I filed through the offices of McCloskey, Wilson, Mosher & Martin of Palo Alto, California a complaint in the United States District Court in San Francisco.

Based upon the Administrative Procedure Act of 1946, as amended, Section 3, 60 Stat. 238, U.S.C., Title 5, Sec. 1002, the complaint stated: "Defendant has improperly withheld said file from plaintiff contrary to the provisions of said Act."

Concluding, the complaint read:

"Wherefore, plaintiff requests judgment enjoining the defendant from withholding from plaintiff the file entitled 'Forcible Repatriation of Displaced Soviet Citizens—Operation Keelhaul'; and for costs incurred in this action."

The case was first heard in the District Court of San Francisco by Judge Oliver J. Carter on August 19, 1968.

A "Defendant's Memorandum in Reply to Plaintiff's Opposition to Defendant's Motion to Dismiss" was filed a few days before the hearing by the defendant's attorneys, U.S. Attorney William B. Spohn and Cecil F. Poole.

The Army's attorneys stated:

"Defendant has moved to dismiss plaintiff's action upon the ground that the file sought is classified as 'top secret' and is, therefore, specifically exempt from the Act's provision.

"In his brief filed in opposition to defendant's motion to dismiss or, in the alternative, for summary judgment, plaintiff agrees that the jurisdiction of this Court under 5 U.S.C. § 552 'does not apply to matters that are specifically required by Executive Order to be kept secret in the interest of national defense or foreign policy.'" . . .

"Plaintiff likewise agrees 'that documents requested by plaintiff have been classified "Top Secret" pursuant to the provisions of Executive Orders 10501 and 10964.'"

The Army's argument is based upon the wording of the Freedom of Information Act but not upon the intent of Congress. It is true that the amendment to section 3 of the Administrative Procedure Act states as follows:

"(e) Exemptions.—The provisions of this section shall not be applied to matters that are (1) specifically required by Executive order to be kept secret in the interest of the national defense or foreign policy;"

There can be no doubt that these exemptions are only valid, provided they have been *properly* applied and not improperly or arbitrarily. This evolves from paragraph (c) of the amendment which clearly and unequivocally declares that the District Court "shall have jurisdiction to enjoin the agency from the withholding of agency records and

to order the production of *any agency records improperly withheld*[7] from the complainant."

Government records, classified under Executive Orders 10501 and 10964 may be in the category of "agency records improperly withheld" in the meaning of the Freedom of Information Act. The Act itself would indeed make no sense if it had excluded Government records whose classification had been based upon improper application of Executive Orders 10501 and 10964. The history of declassification has shown time and again and especially in Epstein v. Resor, that meaningless purely administrative documents had been Top Secret for more than twenty years, although it must have been obvious to the classifying authority that disclosure could never have resulted in the grave consequences mentioned in President Eisenhower's Executive Order 10501.

In addition to the Army's attorneys' brief, the Adjutant General, Major General Kenneth C. Wickham, submitted a sworn affidavit.

General Wickham introduced a new argument for the maintenance of the classification of "Operation Keelhaul." In his affidavit, General Wickham stated:

"The documents in question are photographic reproductions (photoprints) made from microfilm copies of records generated by the Allied Force Headquarters (AFHQ), an international organization (combined headquarters in World War II parlance) directing the allied military operations in the Mediterranean Theater of Operations. By direction of the Combined Chiefs of Staff, the original AFHQ records were released to the United States Government (the War Department).

"The files of these documents as originally received bore an overall classification of TOP SECRET. This classification was required because the files contained many individual TOP SECRET documents of combined or British origin. They have retained the TOP SECRET classification because as combined or foreign records they are categorized as Group 1 documents under AR 380–6 (Executive Order, as amended by Executive Order 10964) and are not subject to unilateral regrading action by the United States. Pursuant to Executive Order 10501, as amended by Executive Order 10964, the record here sought by plaintiff is specifically classified as 'TOP SECRET' in the interest of national defense or foreign policy."

The argument concerning the combined British-American origin of the file as justification for continued classification of purely American documents is, of course, subject to serious doubt. If one would accept it, it would amount to the admission that a foreign government, in this case the British government, still has the power to prevent the American people from receiving information about actions taken by the American government and documented by purely American records. Such recognition would be a violation of the American Constitution. It would deprive the government itself of freedom of speech and of the press as stipulated in the first amendment to the Constitution.

After having heard arguments for both sides, Judge Carter continued the case. He wanted time to learn what the intent of Congress was when it created the Freedom of Information Act.

To help the court in determining the intent of Congress, I asked Congressman John E. Moss, sponsor and main-author of the Act for his opinion. In a telephone conversation of August 19, 1968, Congressman Moss told me: "I am ready to testify in court if subpoenaed, provided the House gives me permission. *The statute gives the court the broadest discretion to investigate the contents of the document. 'Top Secret' classifications because of national defense and security are not exempt from investigation.*"

I asked Congressman Moss to put his opinion down in a sworn affidavit to be submitted to the court. He immediately promised to do that and a few days later my lawyers received the Moss affidavit.

I quote the following passage:

"It was the overriding concern of Congress that disclosure be the general rule, not the exception, that the burden be on the agency to justify the withholding of a document and not the person who requests it, that individuals improperly denied access to the documents have a right to seek injunctive relief in the Courts, and that in general the statute be a disclosure statute and not a withholding statute; specifically, it was the intent of Congress to grant the District Court the broadest latitude to review all agency acts in this regard, including the correctness of a designation by an agency bringing documents within an exemption found in Section '(e)' of the Act; and that the powers granted to the Court and the burden placed upon the Government in Section '(c)' were meant to include rather than exclude the exemptions."

The Moss affidavit, written only two years after the enactment of the law and only one year after it became effective, should have laid any doubt Judge Carter might have had to rest. It was not so.

The United States attorneys, representing the Secretary of the Army, countered the Moss affidavit in a "Supplemental Memorandum in Support of Defendant's Motion to Dismiss." It was filed on September 26, 1968.

In it, the government made the distinction between "contemporaneous utterances of a legislator" and *"ex post facto"* testimony in the form of affidavits or otherwise."

The Supplemental Memorandum cites, among others, *National School of Aeronautics* v. *United States*, 142/Supp. 933 (Ct. Cl. 1956) in which the plaintiff had produced a witness, ostensibly for the purpose of showing legislative intent, a former member of the Senate who had been chairman of the Senate Sub-committee which had considered the legislation then before the court for review. In this case the court commented, as quoted by the Supplemental Memorandum:

"At first blush it might seem that this would be the ideal way to learn the intent of a legislative body, to get it straight from the mouth of a responsible member of the legislature. Second thought leads to the conclusion that the practice would be intolerable. A legislature speaks through statutes, and, in cases where the statutes require interpretation, through committee reports and debates. No member of a legislature, outside the legislature, is empowered to speak with authority for the body. If he may testify voluntarily, other members of his legislative body with different views or different recollections may be summoned to give their differing versions. The debate, which, so far as the lawmaking body is concerned should have been ended by the enactment of the statute, would be transferred to the court, with disturbing possibilities of embarrassment and friction." (142. F. Supp. at p. 938)

This argumentation is subject to grave doubt. It asserts, but it does not prove. Why should a chairman of a legislative body who is in addition the sponsor and main-author of a bill which became law, not be able to inform the court about the intent of Congress, in addition to Committee reports and minutes of debates? In a "Memorandum in Support of the Moss Affidavit." Michael Klynn, then a member of McCloskey, Wilson, Mosher & Martin, showed that this had been the practice of the courts when he stated:

"Statements by the author of a bill have been held proper for consideration as showing the conditions or history of the period or the 'mischief which it was intended to remedy and thus, throw light on its proper interpretation.' *Jennison* v. *Kirk* 98 U.S. 453; *Helvering* v. *Griffiths*, 318 U.S. 371; and *N.L.R.B.* v. *Wine, Liquor and Distillery Union*, (2nd Cir.) 178 2nd 584."

Judge Carter disregarded Mr. Klynn's reasoning and never admitted the Moss Affidavit in evidence. On the other hand, he did not satisfy the Army's motion "to dismiss . . . since the court is without jurisdiction" either. He found the court has jurisdiction.

On February 1, 1969, Judge Carter filed his "Memorandum and Order." He denied the Army's motion to dismiss the complaint but granted its motion for summary judgment in favor of the defendants.

The following parts of Judge Carter's judgment are worth quoting:

"Plaintiff contends that the Top Secret classification on the file he seeks, is unwarranted and that this Court has the power to hold a trial de novo on the merits of this classification. He contends that such power is based on Section 3 of the Administrative Procedure Act. The Court is of the opinion that Congress did not intend to subject such classifications to judicial scrutiny to that extent."

Then, Judge Carter deals with the Moss Affidavit. He cites *Bindczyk v. Finucane*, 342 U.S. 76 (1951) in support of the thesis that statements made by legislators in debate can be a part of the legislative history "which guides courts in statutory construction.", a fact nobody has never doubted. Judge Carter obviously made this statement in order to develop his argument for the non-validity of statements made by legislators about the intent of Congress after enactment of the statute. He says:

"On the other hand, statements made by legislators after enactment of a statute and not a part of the records of the legislative body are entitled to little or no weight at all . . . Such statements are not offered by way of committee report and are not offered for response by other members of the lawmaking body. The intent which is helpful in interpreting a statute, is the intent of the legislature and not of one of its members. For purposes of statutory construction, a legislative body can only speak through a statute, with the words that are used in light of the circumstances, surrounding its enactment. For this reason, the court has not considered the affidavit prepared and submitted by the Honorable John E. Moss solely for purposes of this lawsuit after the legislation in question was enacted."

In disregarding the Moss Affidavit, Judge Carter followed, almost verbatim, the arguments brought forth in the Suppplemental Memorandum submitted by the Army's attorneys.

Judge Carter then elaborates upon the crucial problem of the case, the "exemptions." He states that:

"this jurisdiction does not apply to information that falls within the exemptions set forth in subsection (b) of Section 3. To hold that the agencies have the burden of proving their action proper in areas covered by the exemptions, would render the exemption provision meaningless. If a determination de novo is made by this Court on whether the Top Secret classification by the Department of the Army is proper, with the burden on the Secretary to sustain its action, the Court would be giving identical treatment to information withheld by an agency whether it fell within the exemption or not. Apparently, Congress did not intend such a result."

Judge Carter supports his argument by section *does not apply* to matters that are citing Subsection (9b) of Section 3: "This [listed below]." In addition he cites Con-

Footnotes at end of article.

gressman Gallagher's statement on the floor of the House:

"There has been some speculation that in strengthening the right of access to Government information, the bill, as drafted, may inadvertently permit the disclosure of certain types of information now kept secret by Executive order in the interest of national security.

"Such speculation is without foundation. The committee, throughout its extensive hearings on the legislation and in its subsequent report, has made it crystal clear that the bill in no way affects categories of information which the President—as stated in the committee report—has determined must be classified to protect the national defense or to advance foreign policy. These areas of information most generally are classified under Executive Order No. 10561." CONGRESSIONAL RECORD, vol. 112, pt. 10, p. 13659.

Nobody, of course, has ever denied the government the right and even its duty to keep secret information affecting national defense and foreign policy. But it must be information whose disclosure would indeed affect national defense or foreign policy. The question which is basic to Epstein v. Resor and which did not enter Judge Carter's mind, is the question: What about abuses of Executive Order 10501? Judge Carter's denial to distinguish between the proper use of Executive Order 10501 and its improper and therefore illegal application, makes the Freedom of Information Act a dead letter. He argues that, if a determination de novo is made, the Court would be giving identical treatment to information withheld by an agency whether it fell within the exemption or not and that this could not have been the intent of Congress. This argument does not hold water.

If the Court decides—after examination in camera—that the document in question had been rightfully classified under Executive Order 10501, it would still remain classified and no harm could result in respect to foreign policy or national defense. The progress, brought about by the Freedom of Information Act, consists exactly in the fact that from now on nobody has to take the word of the government or its agencies that classification was made in the interest of foreign policy or national defense. The burden to prove the rightful application of Executive Order 10501 is on the agency.

Judge Carter may have had his own doubts because he quotes in his "Memorandum And Order" the statement made by Senator Long prior to the amendment of Section 3 in which he described the un-amended Section as:

"Full of loopholes which allow agencies to deny legitimate information to the public. Enumerable times it appears that information withheld only to cover embarrassing mistakes or irregularities.

"It is the purpose of the present bill . . . to establish a general philosophy of full agency disclosure unless information is exempted under clearly delineated statutory language and to provide a court procedure by which citizens and the press may obtain information wrongfully withheld. . . ." Senate Rep. No. 813, 89th Cong. 1st Sess., CONGRESSIONAL RECORD, vol. 111, pt. 20, p. 26821.

There is, of course, not the slightest doubt that information improperly classified falls under the category "information wrongfully withheld." That this was also the opinion of the creator of the Freedom of Information Act is beyond any doubt. He affirmed this opinion in his affidavit, quoted above.

Indeed, the Act would make no sense if it had excluded information from disclosure whose classification came about by wrongful, arbitrary, and therefore illegal application of Executive Order 10501. The Executive Order was not created as a legal umbrella for administrative violators of its precise meaning. That it had been used as such does not establish legality.

That the Keelhaul file does contain documents improperly classified Top Secret was revealed by the Army itself when its Secretary suddenly declassified and released four documents to me.

One of these documents originated in August 1946 and has remained Top Secret for more than twenty-three years. One should think that its disclosure would have resulted in breaking of diplomatic relations, in outbreak of war or in compromising technological or intelligence data, the prescribed valid reasons for Top Secret classification.

The document is a request by ALCOM, Rome for more Russian interpreters! Why did the Army consider this document so sensitive that it could not be released in the years 1954 to 1968 and why did the Army suddenly consider it fit for disclosure in 1969?

It is true that the Freedom of Information Act does not spell out expressis verbis that it was the intent of Congress to prevent the improper application of Executive Order 10501. The weakness of the Act was seized upon by Judge Carter in pronouncing his summary judgment in defendant's favor. But this weakness should certainly lead to the amendment of the Act in order to prevent its future misinterpretation.

In his conclusion of his summary judgment, Judge Carter says: "The Court . . . finds that the circumstances are appropriate for the classification made by the Department of the Army in the interest of the 'national defense or foreign policy.'

"Accordingly, the motion to dismiss the complaint is denied, and the motion for summary judgment is granted in favor of the defendants."

The question whether the documents were properly or improperly classified is, of course, the foremost question in determining the "circumstances" of the classification. How Judge Carter could find them "appropriate" without having seen the documents in question will remain a puzzling question in the judicial history of the United States.

Judge Carter's summary judgment was appealed in the United States Court of Appeals for the Ninth Circuit. The brief was filed on July 22, 1969. It concentrated on the question: "Must the Department carry the burden of proof to show the documents sought were *properly* classified within one of the exceptions to the statute not requiring their disclosure to the public, or is the mere classification itself sufficient to withhold documents?"

The appeal stated:

"The Freedom of Information Act requires the Defense Department to prove its classification within an exemption was reasonable and proper and not merely that the material has been so classified."

The appeal points out that "the Department of Defense has not followed the rules set by Executive Order 10501." It continues:

"The Department has not attempted to show that the classification of the file sought as 'Top Secret' satisfies the requirements of Executive order 10501."

It cites Section 3 of the Executive Order which categorically states: "Unnecessary classification and over-classification shall be scrupulously avoided." (CT 68)

The appeal then analyzes the Army's assertion that the "Operation Keelhaul" file was originated by an "international organization" over which the United States has no jurisdiction. (The Army obviously used a double-track in denying de-classification of the file. First, it argued that the file is exempted from disclosure in the interest of foreign policy and national defense. But then it asserted that it cannot be released because it originated by the Combined Chiefs of Staffs, an "international organization" over which the United States has no authority.)

The appeal continues:

"The Department relied on Section 4(a)(1), Group 1, (of the Executive Order as amended (CT 82–83)) which states that information originated by foreign governments or international organizations and over which the United States has no jurisdiction cannot qualify for automatic downgrading. Plaintiff denies that 'Operation Keelhaul' falls within the above Section. The Department did not prove that any of the information was 'originated by a foreign government or international organization over which the United States has no jurisdiction.' It has stated merely that a joint allied command was responsible for these documents, and apparently for 'Operation Keelhaul' itself. The Department has arbitrarily designated the Allied Headquarters as an 'international organization', but no definition, authority or convincing argument is set forth to justify this arbitrary designation. It is suggested by Plaintiff that that phrase refers to an agency such as UNESCO, the International Red Cross, or similar agencies."

The appeal's brief calls the Court of Appeals' attention to the fact that the Department's allegation cannot mean that the United States government was not part of the Combined Chiefs of Staff and that it cannot mean either that the file does not contain documents of purely American origin. "In fact," the brief states, "one must presume that the greater part of the 'Operation Keelhaul' file consists of American documents dealing, as the title indicates, with American participation in forced repatriation of Soviet nationals, prisoners of war, and displaced persons."

The brief further states: "It cannot be assumed that the British Government should have any legal power to prevent the American people from learning the truth from the American documents. These documents have been under American Administration and were classified 'Top Secret' by our government. *If the Department has sole authority to classify it must have sole authority to declassify and to release the file.*[8]

"Unless the Department can prove that its de-classification and release could result in 'a definite break in diplomatic relations affecting the defense of the United States, an armed attack against the United States, or its allies, a war or the compromise of military or defense plans, or intelligence operations, or scientific or technological developments vital to the national defense', the 'Operation Keelhaul' file must be de-classified and released pursuant to Section 1(a) of the Executive Order (CT 68)."

The appeal then goes on to criticize the "illogic of" the "circular definition" in the Wickham affidavit ("the 'Operation Keelhaul' file was . . . classified 'Top Secret' because it contained documents which were 'Top Secret'.") Then it spells out the real reason for the classification:

"The only reason set forth for the continued classification as 'Top Secret' is bureaucratic red tape—these documents are 'Top Secret' now because they were classified within Group 1 long ago—or is the reason because their disclosure could be embarrassing to certain people, which is not a ground for non-disclosure according to the Department's own regulation (AR 345–20, 1967, page 1—'Information from Army files will not be withheld . . . because it may reveal or support error or inefficiency'.) This approach is a blatant effort to circumvent the intent and purpose of the *Freedom of Information Act* and is the very reason why the United States District Court has been empowered to grant injunctions after a trial

Footnotes at end of article.

*de novo* and force disclosure of documents into public realm which no longer need to be classified."

The conclusion of the appeal's brief states:

"It is clear from the legislative history that the *Freedom of Information Act* was intended to have the broadest and most liberal interpretation to achieve its goal of full disclosure to the public. To hold that the District Court must accept without review a Department's classification of documents so that it falls within one of the exemptions of the statute totally emasculates the statute's effect and thwarts its intended purpose. The history of the Government agencies in opposing this legislation is well known and the specific documents sought herein seem to be withheld more to avoid embarrassment to the Government than for legitimate reasons.

"The opinion of the District Court should be reversed with instructions that it conduct a trial *de novo* to determine if any of the documents have been properly and reasonably classified 'Top Secret' and, if so, which of them, if any, are subject to exemption and non-disclosure."

The American Civil Liberties Union of Northern California joined the lawsuit by filing on October 7, 1969 its "Brief of Amicus Curiae on Behalf of Appellant."

ACLU's Amicus Curiae Brief, written by Michael Traynor, is the most penetrating judicial analysis of Epstein v. Resor so far written.

ACLU's brief is based upon two arguments: 1) "The Judgment must be reversed because the trial court applied an unauthorized and overly restrictive test of judicial review of an agency's claim of exemption and failed to discharge its statutory responsibility to determine whether the record requested was improperly withheld."

This, indeed, is the core of the problem as we have seen. It is the question of the scope of judicial review of an expected agency's claim that the withholding is justified by a statutory exemption.

ACLU stresses its opinion that "the trial court erred, first by holding that it did not have jurisdiction to review de novo the Army's claim to an exemption and, second, by fabricating and applying a stringent and special jurisdiction, not found in and precluded by the statute, to reject the Army's claim only if the court could find that the Secretary of the Army acted capriciously."

That the Secretary of the Army acted capriciously had been proven by the Secretary himself when he suddenly de-classified the four documents, one of which was the request for more Russian interpreters. If maintenance of Top Secret classification of this memorandum from ALCOM for more than twenty-three years was not "capricious", it is, indeed, impossible to understand what "capricious" means.

The brief notices that the court should have rejected the Army's claim of exemption, "or at the very least, required the Army to produce the Operation Keelhaul file for review in camera and independent judgment by the court."

The second argument states:

"The summary judgment of the trial court must be reversed because the Army did not sustain its burden of establishing that every document in the Operation Keelhaul file is specifically required by Executive Order to be kept secret in the interest of the national defense or foreign policy and because there is a substantial issue of fact whether the exemption claimed by the army is available."

Since the President of the United States had not specifically determined that every single document in the "Operation Keelhaul" dossier must be kept secret—his delegate acted under a general Executive Order—ALCU pointed out that the agency must show *"at the very least not simply that it labeled a document top secret but that its classification meets the requirements of the Executive Order.*[9] The Army has made no such showing in this case."

Referring to the harmless document requesting more Russian interpreters, held top secret for more than twenty-three years, ACLU says: "It bears asking whether there might be similar documents in the file, the disclosure of which the Army feels might 'result in exceptionally grave damage to the Nation.' Are the courts supposed to defer to the military judgment on such matters without even looking at the documents?"

ACLU's brief states that the Army has never shown that it has complied with Executive Order 10501. "Instead, the Army has shown that it appears to have violated the President's order."

To the Army's argument that the file cannot be released because it contains British documents, ACLU has this to say: "It would be ironic indeed if the Freedom of Information Act, which became effective on a day celebrating nearly 200 years of independence from the British, were interpreted to mean that British consent to the release of a 20-year old file is required before Congress' purpose of making United States records public can be served." The brief also reminds the court that the far more sensitive Top Secret Yalta Papers have been released to the public 15 years ago.

The conclusion of ACLU's brief reads:

"The judgment below must be reversed because the trial court did not discharge its statutory responsibility to determine the propriety of the Army's withholding of the requested information and because the Army did not sustain its statutory burden of establishing its claim to an exemption. The express language and the fundamental purposes of the Freedom of Information Act require a reversal."

The Court of Appeals for the Ninth Circuit rejected the appeal and affirmed the Judge Carter's judgment. The Court (Circuit Judges Merril, Koelsch and Hufstedler) found that "the function of determining whether secrecy is required in the national interest is expressly assigned to the executive. The judicial inquiry is limited to the question whether an *appropriate*[10] executive order has been made as to the material in question . . .

"The District Court ruled that under (b)(1) it had authority to determine whether classification was arbitrary or capricious. It held that upon appellees' showing, classification could not be so characterized.[11] In both respects we agree with the court's ruling. Further we agree that judicial inquiry into this narrow area does not, at least in this case warrant *in camera* examination of the file.[12]

"The origin of the file's contents itself is sufficient to dispel any suggestion that the original classification was arbitrary or capricious. While the passage of time may cast doubt on the continuing need for secrecy, appellees have made more than a sufficient showing that questions bearing on that need persist and require resolution by the executive.[13]

"We conclude that subsection (b)(1) has been shown by the Army to apply and to justify withholding the material in quection.

"Judgment affirmed."

The Court of Appeals disregarded the arguments brought forth by my own trial lawyers as well as those presented by the Civil Liberties Union of Northern California in its Amicus Curiae Brief. It equally disregarded the Moss affidavit. It confirmed the miscarriage of justice in the District Court which amounted to a complete emasculation of the Freedom of Information Act.

There was only one avenue left: a petition for a writ of certiorari to the Supreme Court of the United States.

The petition was filed on May 4, 1970.

In it McCloskey, Wilson, Mosher & Martin stated:

"The Ninth Circuit opinion upholds, in theory only, the statutory provisions for de novo review of the conditions of exemption. The court proceeded to distinguish the exemption based on national defense or foreign policy in such a way as to emasculate the Freedom of Information Act. The Ninth Circuit, in essence, holds that the only prerequisite to a claim for such exemption is the Army's own good faith belief that it is entitled to it. The opinion narrows the permissible scope of the court's inquiry, in express contradiction to the language of the Act, to the question of whether the Army's claim for exemption is 'arbitrary or capricious'. In sum, the Court abdicates its responsibility, under Section 552(a)(93) to determine whether records have been "improperly withheld.' "[14]

The brief castigates the Ninth Circuit for having given "lip service to the statutory requirement of *de novo* judicial review by holding in principle that 'judicial review *de novo* with the burden of proof on the agency should be had as to whether the conditions of exemption in truth exist'. . . . The court's subsequent discussion and holding, however, confines the scope of judicial review to the narrow question of whether a claimed exemption is 'arbitrary or capricious.' . . . The court purports to create its own exemption to the explicit statutory standard of *'de novo'* review by distinguishing the exception provided in the interest of national defense or foreign policy from the other exceptions provided in 552(b)." With respect to the other exemptions, the Ninth Circuit holds that they are open to review. But (b)(1) exemption based on national defense or foreign policy is not open to judicial review. This, the brief states, "conflicts with the constitutional principles of judicial review."

ACLU followed suit by submitting its own "Brief of Amicus Curiae in Support of Petition of Petition for a Writ of Certiorari." In it, ACLU maintained: "This case affords opportunity to articulate rules that will prevent the Freedom of Information Act from being vitiated by indiscriminate claims for exemptions.

"This case affords an opportunity to harmonize the secrecy exemption under the Freedom of Information Act with this court's rules on Executive Privilege." In its conclusion ACLU states:

"A rational determination of the issues in this case is essential to ensure that citizens will have access to information that the Freedom of Information Act was meant to give and to prevent the Act from being vitiated by indiscriminate claims to secrecy and administrative delay. The petition for a writ of certiorari should be granted and the judgment of the Court of Appeals reversed."

On June 15, 1970, the Clerk of the Supreme Court informed Paul N. McCloskey, Sr. as follows:

"RE: Epstein v. Resor, etc., et al., No. 1533, Oct. Term, 1969.

"The Court today entered the following order in the above-entitled case:

"The petition for a writ of certiorari is denied. Mr. Justice Douglas is of the opinion that certiorari should be granted. Mr. Justice Marshall took no part in the consideration or decision of this petition."

The Supreme Court of the United States has confirmed the emasculation of the Freedom of Information Act.

## THE LATE HONORABLE MICHAEL J. KIRWAN

---

## HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, September 30, 1970*

Mr. McMILLAN. Mr. Chairman and Members of the House, the entire Congress was saddened when we learned of the passing of our good friend, Mike Kirwan. I do not know of any man who has ever served in the U.S. Congress that took a greater interest in the welfare of the House of Representatives and the individual Members than our friend, the late Congressman Michael J. Kirwan. He was always eager and willing to take the part of the underdog and see that every person received equal and just treatment.

He came up from his boyhood days knowing how necessary it is for a person to work in order to make a livelihood. He was always interested in assisting the poor man and always interested in assisting everyone in securing an education since he was not financially able to get the education he desired when he was a young man.

I want to join my colleagues from the State of Ohio in expressing my deepest sympathy to his family. Also, I want to state that the Congress of the United States will greatly miss this great statesman. He was a power on the Appropriations Committee and very seldom during the time I have been a Member of Congress have I known anyone to question his appropriation bills when they were reported to the floor of the House for consideration.

I feel that I was extremely fortunate to have an opportunity to serve in the House of Representatives with this great man and I learned a great deal from him.
